In the meantime the party of the "Readjusters"—the enemies of the bondholders—had been growing in power in the state. The leaders of this party demanded that the $20,000,000 of 6 per cent. bonds already issued should be surrendered and brought into hotchpot with the rest of the debt, and that in place of the whole there should be issued new bonds for $20,000,000 bearing interest at only 3 per cent. and without any guarantee whatever for the payment of interest. This party came into full control of the state at the elections of 1881, securing the governorship in that year as it had previously secured the legislature. The latter body lost no time in attacking the tax-receivable coupons against which their previous efforts had been mainly directed. The legislation then enacted and the subsequent proceedings in the courts have given rise to considerable controversy. In particular the decision rendered by the Supreme Court of the United States in March last and the recent decision of Judge Bond have been much and variously commented upon. To enable us to present as accurate an exposition as possible of the effect of those decisions and of the present state of the controversy we have procured the following statement from Mr. William L. Royall, counsel for the Council of Foreign Bondholders of London, England:

In 1871 the state of Virginia funded a large part of her debt in bonds which are payable in 1905,

and which bear 6 per cent. interest, with semi-annual interest coupons which were made by the Funding act, receivable for all taxes. Subsequently, in 1879, a part of these were refunded into forty-year bonds, bearing a smaller rate of interest, but having the same coupons attached.

In the winter of 1881–82 the legislature passed an act forbidding the collectors of taxes to receive the coupons, and placing obstacles in the way of making any use whatever of the coupons, which made them practically valueless. I was employed by the Council of Foreign Bondholders of London, which represents a very large part of the debt, to contest the validity of this legislation, upon the ground that it impaired the obligation of the contract, and was therefore void. I carried a test case to the Supreme Court of the United States, where it was decided last March. It was an application for a mandamus to compel the collectors to receive the coupons in payment of taxes, notwithstanding the state's legislation. The court decided that the taxpayer had no vested right to compel the state to receive the coupon; but it held at the same time that the state could pass no law to forbid her officers to receive the coupon. In other words, it held that the coupon was a legal tender for the tax, but that the state might do without her revenue if she pleased.

As soon as I saw the decision I perceived that the bondholder had won the important part of the contest. If the coupon was a legal tender for the tax, then the officers could not compel payment of it, after tender of the coupon, in anything else. I at once filed bills in the United States Circuit Court to enjoin the collectors from levying for taxes after a tender of coupons, and Judge Bond, the judge of that circuit, has decided that the effect of the Supreme Court's decision is that the coupon is a legal tender for the tax, and that the officers of the state will be enjoined from levying on the taxpayers' property after tender of a coupon.

At the same time he held another most important proposition. The judiciary act of 1875 extends the jurisdiction of the United States Circuit Court to all cases arising under the Constitution of the United States without regard to the citizenship of the parties. As the questions to be determined in these cases are whether the legislation of the state of Virginia is contrary to the Constitution, Judge Bond holds that they arise under the Constitution, and that his court consequently has jurisdiction of the cases, even where all the parties are citizens of Virginia.

The whole purpose of the Virginia Readjuster party has been to fill the judicial offices in the state with judges who would nullify the effect of the Constitution, and thus destroy the coupons. This last ruling of Judge Bond completely heads off all the aims of their party politics by transfering the litigation from the state courts to the United States court.

Judge Bond's decision will be reviewed by the Supreme Court of the United States, and I have great reason to hope that that court will pass it in review during its ensuing term. If he is sustained, the state of Virginia will be compelled to pay full interest on her debt or, as an alternative, do absolutely without revenue.

As will be seen, the question is yet in an undecided state, though a hint of the ultimate ground of settlement is to be found in the decision of the Supreme Court of the United States in March last. In the case then before the court, that of Antoni vs. Greenhow, a note of which appeared in our columns at the time, Chief Justice Waite, speaking for the majority of the court, assumed the point as settled that in issuing the bonds under the Funding act the state of Virginia entered into a valid contract with all persons taking the coupons to receive them in payment of taxes and state dues, and declared that "any act of the state which forbids the receipt of these coupons for taxes is a violation of the contract, and void as against coupon-holders." The court refused the application for a mandamus on the ground that the oppressive regulations imposed by the state in respect to the payment of taxes by means of the coupons amounted to only a change of remedy on a contract, and that the state might make such a change. A further reason was supplied by Mr. Justice Matthews in his concurring opinion, in which Justices Bradley and Gray joined. He took the view that no remedy is provided by the Constitution of the United States for a breach of its contract by a state, and that the only remedy which the courts of the United States are authorized to administer is the remedy which the state has chosen to give. That is to say, the court will not aggressively interfere to compel the performance by a state of a contract entered into by it. The question whether the power of the United States courts can be interposed to defend the contracting party in such a case against compulsory process of the state after he has performed the contract on his part is a different one, and that this can be done Judge Bond has distinctly held. His ruling is to the effect that when a holder of one of the state bonds has offered in payment of taxes a coupon or coupons which the state has agreed to receive for that purpose, the state may be prevented from taking other property of the bondholder to satisfy its claim for taxes. This ruling does not seem to be in conflict with the decision of the Supreme Court, and if upheld will certainly afford some degree of protection to the bondholder, and give at least a negative value to his coupons. The decision of the Supreme Court on the matter will be awaited with much interest.

THE LAND QUESTION IN ENGLAND.

II.

In a previous communication I spoke of the tendency of recent land legislation in Great Britain and of the perils which surround the relations of landlord and tenant. I stated, and without fear of contradiction, that those relations were rapidly becoming historical, and that the old country was on the eve of changes infinitely greater than we at first sight implied in the letter of the legislation which has just been enacted. For in every civilized country where the first step in legislation is a compromise nicely balanced, and professedly final, shrewd people foresee a future from which the agents of the first change would have recoiled with horror had they also foreseen it. Nothing, in short, hoodwinks a practical politician so much as a successful compromise. He dreams that he has made a treaty, but the belligerents who are constrained to accept the facts for a time have changed ground. One of them defends feebly, for he knows that the outworks are captured; the other assails vigorously, for he knows that the defence is dispirited.

The soil and the climate of England are, on the whole, excellent for agriculture. The variation of the seasons is the least known in the civilized world. The winter is generally open and mild, hence root crops suffer little from the risks of excessive frosts. The summer is generally moist, and therefore, even when vegetable growth is not energetically stimulated, it is seldom unduly parched. The English farmer fears rain more than he does drouth, though even in wet seasons the rainfall is not excessive, and damp more than cold, though frost is rarely long continued and destructive to exposed crops. He can build a corn or hay rick in the open, so secure that no rainfall, however drenching, will penetrate his thatch. He can grow great crops of Swedes and turnips, and, on the whole, feel safe against excessive frost in winter. No insects plague his cattle in the summer; no insects come like a visitation on his green crops. He knows nothing of pestilent flies, of army worms, of locusts, of potato bugs. Blight and mildew, rust and smut, plant-lice and fly he knows in a limited degree; of certain American plagues he has no experience. His crop is never devoured in a night. His cattle are not rendered frantic by the stings of venomous insects.

Nothing struck me more in the eastern states of the Union than the sterility of the soil. Fertile land may exist, but I never met with it. A coarse black gravel is the staple soil on which the eastern farmer toils. It is plain to those who look at it, how sturdy, laborious and thrifty the men must have been who drew their existence from so ungrateful and barren a country. The husbandman must have always held the wolf by the ears in his effort to keep him from the door. Hence the thrift of the New England farmer, his shifts, his economies are incessant and instinctive. He economises his yard manure in a fashion which is entirely commendable. He takes care that his tough coarse hay shall keep all the nutriment it ever had in it, and he houses it tenderly. He knows that if his cattle get out of condition he loses prospectively, and he houses them too. He makes the most of everything, and with good reason, for he can afford to lose nothing. The agriculture of the eastern states is subjected to a host of stepmothers, and the husbandman strives to baffle their malignant influences.

The English farmer has a soil which is generally good and always improvable. Some land is of indefinite and profound fertility; almost all will give back more than it receives. An American farmer knows that the basis of his agriculture is farm manure, and he saves and shelters the great engine of such fertility as he can induce on his land. The English farmer turns out this precious fertilizer—precious even to him—to the sun and rain, and destroying half its soundness wantonly, surrenders himself to agricultural quacks, who induce him to believe that artificial manures are the most important fertilizers in existence, and fleece him. He has abundant means within easy reach with which he can work his land, marl for sand, lime and chalk for stiff clays, but he is afraid to do that which experience proves is best for fear his landlord should rob him of his outlay, and therefore he prefers such dressings as promise him a quick and rapidly exhausted return. Even the Agricultural Holdings act gives no security for the tenant who brings his farm into a thoroughly sound condition by natural dressing, while it offers to reward him if he adopts the nostrums of the worst of quacks, the dealer in chemical manures.

He has, I repeat, a climate which is all that could be wished for the growth of crops. The rainfall is uncertain, capricious and vexatious. The raw material of his hay is excellent, the hay but imaginable. But the climate is so precarious that when the grass is cut it may be three weeks or a month before it can be carried, during which time it is losing its virtue and poisoning the aftermath. He knows that a barley crop is the better for not having a drop of rain after it is cut till it is carried, and he is slothful enough to let it wait on the land till it is blackened by the rain or even sprouted. He has heard of the preservation of poor crops in silos, and he does not believe that such a crop can be kept from heating and firing, or at least becoming mildewed and rotten. He is a conservative in the worst sense, for he is impenetrable to light. Most stupid and servile people are suspicious, and the British farmer is the most suspicious, grumbling, cantankerous creature under heaven. To his landlord he is stupidly complaisant. The most painful thing to see about him is the way in which he truckles to his landlord's agent, who generally has the worst vices of both landowner and farmer, and is the greatest hindrance and make-bate from which English agriculture suffers. The vices of the tenant's own habits, the vices of the English land system, and the malignant influence of the land agent are, I believe, a pretty equal counterpoise to the bad soil, the army-worms and grasshoppers of American farming.

His cattle are excellent. The English farmer has supplied, as he has developed, pedigree stock in horses, cattle and sheep to all parts of the civilized world. The landowners have done a good deal, but they imitated and followed on their tenants. The fact is, a landlord could, under the construction of law, rob a tenant of his agricultural outlay, but he could not plunder his stock. Here then he could hold his own. The sales of pedigree stock in tenant farmers' holdings is a feature in English agriculture. But the best results are denied the farmer. His stock, as a rule, is wretchedly housed. An English cattle barn would be disdained by an intelligent New England farmer. The cattle stand on the ground, or damp stone, brick or earth, in the steam of their own droppings, without proper air or light, and with every neglect of such sanitary conditions as must be advantageous to cattle as well as to human beings. I have scarcely ever seen in England a decent cattle barn, such as can be found by hundreds in the New England and the central states, clean, roomy and well ventilated. The animals contract foot diseases in such dirty dens, and licking their hoofs add the disease to the mouth, and then intriguing and dishonest landowners in the House of Commons clamor for protection against that mischief which they have forced their stupid tenants to submit to, and the cause of which they seek to assign to a totally false origin. I am not surprised that foot and mouth disease is endemic in English cattle barns. I only wonder that it is ever absent from them. The condition of the loose stock is even worse. They are thrown in winter into a straw-yard, with insufficient food, with impure water, and with little shelter. During the winter such cattle lose more in condition than months of spring pasture will restore, though a little cost and forethought would keep them constantly in good condition.

For years past sheep-rot has been a perfect plague in England. The disease, always present in low, wet pastures, has latterly invaded the drier meadows. The sheep are kept out in all weathers—on pasture as late as possible; on turnips till spring; on early spring crops afterward. Our forefathers were wiser, for they kept sheep under cover from November till March, and never allowed them to go into wet pastures. There is, I am persuaded, nothing so fatally mischievous as the English method of herding sheep, except perhaps it be the Scotch method. But so inveterately stupid and unreasoning is the British farmer that it will take, I believe, generations before he learns that animals require the satisfaction of health conditions as well as men do.

The farmer has no doubt lost his money. He has driven away his laborers, to whom he was in the habit of giving more curses than shillings weekly. He is everlastingly crying for the morn. But if he could pluck up courage and realize his advantages beside his difficulties; if he could resolve to abstain from bowing and cringing to his natural adversary he has the best of opportunities. Meanwhile he is under the impression that he owes low prices and bad seasons to the Americans; that other people ought to pay his rent and taxes; that he has nothing to learn from anybody, and that anybody who tries to help him on the right road has some sinister purpose. The only hope for him in the future is that a process of natural selection has weeded out the stupidest of his order, and that some among his fellows are beginning to see that they must be alive to the true interests of their calling.

JAMES E. THOROLD ROGERS.

Oxford, England, September 7.

TRADE IN THE SOUTH PACIFIC.

Elsewhere we present a summary of Australian and New Zealand commercial and industrial views compiled for BRADSTREET'S from reliable sources. The South Pacific colonies appear to be passing through a period of commercial depression, but nearly all of them have touched bedrock except New South Wales. It is hardly probable, however, that it will work out its commercial salvation by the ordinary method of expiation this time, because it has secured a loan of $15,000,000 on favorable terms in London, and the expenditure of this credit will once more inflate business. The time will come, probably, when the Australian group of colonies will face their financial obligations and stop borrowing, but that time is in the future.

Meanwhile, London warehousemen will repeat their old practice of exporting old surplus stock to compete with orders received from colonial houses, taking their chance to realize at auction sales. The general calculation of these speculative consignments to the colonies has been that if full returns are obtained from one shipment the consignor can afford to lose heavily upon two, if, indeed, not to wipe out one entirely. This practice creates periodic commercial embarrassment in colonial towns, although the general result is not disastrous, inasmuch as it cheapens supplies to the great body of consumers. Furthermore, it has the effect of shutting out foreign competition, except in special commodities, the ground being so fully occupied generally as to leave no room for the introduction of foreign goods. While colonial borrowing continues this loose business method will prevail. And it is well that American manufacturers should understand the fact, because it may help them to avoid loss and disappointment. By establishing agencies in the chief towns, and slowly pushing the sale of suitable goods, American products may be profitably introduced in the Australasian markets, but speculative shipments should be avoided. It is better to grieve over, than after, one's merchandise.

This is a phase of Australian trade which we fail to see noted in the consular reports, but it is one of very great interest to all commercial men doing business with those countries. A knowledge of the business methods of a trading community is essential to any one intending to do business with it, and therefore our consular reports should throw light upon this point. As a general thing, British colonists are anxious to trade direct with the United States, but our tariff keeps out their raw products which England admits free of duty, flooding their markets in return with its old, unsalable and unfashionable goods. It is a wonder, under the circumstances, that we do so much satisfactory business with them. In this connection it may be stated that the last Australian mail steamer brought up nearly $1,000,000 in gold, which went to the San Francisco mint.

OCCASIONAL NOTES.

The wisdom of abolishing the tolls on the canals seems to be borne out by the statistics of the traffic thereon thus far during the present year. It will be remembered that last year the canals were opened on April 11th, while the opening was delayed this year until May 7. Notwithstanding this difference of nearly a month in favor of last year, however, the amount of merchandise transported on the canals up the end of the third week in September this year was 46,156 tons more than was carried up to the same time last year. If we omit from the comparison the last two weeks of April and the first week of May (during which time the canals were not opened this year) the total for 1883 shows a gain of over 800,000 tons as compared with the same period in 1882. Looked at in this way the difference is striking and is plainly not to be accounted for on any theory which ignores or seeks to belittle the influence of the canals. An idea of the extent to which the inland commerce of the state is benefited by the canal may be gathered from the fact that during the present season there were transported in way freights between the cities and villages along the line of the canal 1,458,205 tons which but for the canal would be subject to local non-competing railroad rates.

Of late the center of naval store production has drifted toward the south, and a controversy has arisen between the two leading southern cities in this trade as to which occupies the first place. Some time since a New York commercial journal, in some comments upon the *Morning News'* annual review of the trade of the port of Savannah, gave the first place in this trade to that city. This statement has aroused much criticism in Wilmington, N. C., and Colonel J. L. Cantwell, the secretary of the Produce Exchange in that city, has furnished some statistics which seem to sustain the claim of the Wilmingtonians that their port surpasses Savannah in the trade in naval stores. According to Colonel Cantwell's figures, Savannah received 536,976 barrels and casks of naval stores during the year ending August 31, 1883, and Wilmington during the same period received 647,117 barrels and casks, showing an excess in favor of Wilmington of 110,141. The same gentleman places the total stocks at Wilmington on September 1 at 92,716 casks and barrels and those in Savannah on the same date at 78,969. The stocks in Wilmington at the end of the last naval stores year, April 1, 1883, he places at 90,717 and those in Savannah on the same date at 49,115. The stocks received during the naval stores year ended on April 1, 1883, he places at 663,558 in Wilmington and 478,440 in Savannah.

The new London journal, *The Steamship*, in a recent issue, devotes some space to a consideration of the question of foreign competition in the shipbuilding trade—a subject which has begun to agitate many among the British ship-builders. The journal mentioned, while conceding that foreign competition is slightly on the increase in iron shipbuilding, arrives at the conclusion that the balance of testimony is to-day, as it has been for years, in favor of British ship-building as against foreign competition. The fact is pointed out that while the low rate of wages on the continent of Europe is an advantage to the ship-builders there, in almost every other respect their outlay is large, most of their material, their machinery, their chief managers and their engineers coming from Great Britain. The *Steamship* admits that orders to a small extent have been prevented from coming to England, but is confident that it will require a remarkable change to drive Great Britain from the position which she has so long occupied. On the other hand, the British ship-builders are counselled not to let the feeling of security degenerate to the point of indifference, and are urged to meet every movement abroad with a corresponding movement at home. One statement made by the London paper is significant. It says that the only thing that can make foreigners dangerous to the English builders is the management by themselves of their own iron ship-building and marine engineering, that this stage is bound to be reached sooner or later, and that when it is reached the pinch of foreign competition will be felt.

The *Engineer* lays more stress on the importance of the element of wages in the matter of foreign competition than does the *Steamship*, and deprecates the ideas of those English laborers who demand high wages and strike often. It says that the best possible way to deal with foreign competition is to make the British workman understand what it is, and this can only be done by taking him abroad. If he could be brought to observe the conditions of labor on the continent of Europe, says the *Engineer*, he would overcome his contempt for his foreign competitors, would see the difficulties of his employer in a new light, and would learn that nothing but the enormous natural advantages and great wealth of Great Britain enables her to maintain her position against foreign competition.

Justice prints in a supplement this week the testimony given by Mr. F. B. Thurber last week before the Senate Committee on Labor and Education. Mr. Thurber portrayed vividly the evils of corporate management in this country, with especial reference to the indefensible operations of railroad directorates. Referring to the control exercised by corporate power over the productive forces of the country and over its political agencies, he said that he regarded the political aspect of the subject as even more important than the economic one. The remedies for existing evils must, he said, come through legislation or violence. Mr. Thurber dealt with a great variety of topics in the course of his remarks, and advocated a long list of measures of reform, directed for the most part against corporate abuses. Among the safeguards for the future which he proposed was a provision limiting the life of corporate charters to a fixed period, so that the people of each generation could revise these charters as the public interest might dictate.

SPECIAL CORRESPONDENCE.

FROM AUSTRALIA AND NEW ZEALAND.

San Francisco, September 21.—I condense the following from Australasia:

Sydney dates are to August 8. Insolvencies during July were numerous. Money continues tight and dear, with the import market overstocked in every line. The commercial banks pay 6½ per cent. on fixed deposits for two years, and 4, 5 and 6 per cent. per annum for deposits of three, six and twelve months respectively. This is doubtful banking policy. Discount rates are 7, 8 and 9 per cent. on gilt-edged securities for three, four and five months. Great expectations have been raised, however, by the floating of the £3,000,000 government loan in London, the colony of New South Wales adding this amount to its already large indebtedness. However, the expenditure of the loan will stimulate trade for the present, and the future can take care of itself. The trade of New South Wales for the first half year of 1883 has been exceptionally dull.

Melbourne advices mention signs of renewed commercial activity. Credits are sound; failures unimportant. Money stringent. Harvest prospects excellent, and all productive industries are in a healthy condition. The past half year was decidedly dull. Up to July 21 exports fell off £694,528 compared with the corresponding period of 1882, and similarly contrasted imports declined £304,209. In July last the decrease was £238,329 on imports and £87,136 on exports.

It is believed in conservative quarters that the revenue of Victoria for 1883-84 has been overestimated, and that the financial outlook is not assuring. The government is trying to put the railroads upon a commercial basis by taking their management out of politics. The completion of the railroad between Melbourne and Sydney must in time revolutionize the fiscal relations of the two colonies, and lead to federation. The main obstacle to federation is the protective tariff of Victoria, which it insists shall be made the basis of a federal tariff. The spread of sound economic truth will, however, overturn the artificial barriers of interested politicians.

Colonial manufacturers are practically monopolizing the supply of oilmen's stores; imported articles are sold at auction. Over 10,000 cases kerosene were sold in July; American shipments advised for all Australia and New Zealand for the four weeks ended June 30, 40,920 cases, of which Melbourne takes 5,675 cases; Sydney, 2,900; Adelaide, 12,230; New Zealand, 10,965; Brisbane, 4,000; Western Australia, 1,650; and Tasmania, 3,500.

Wool transactions light for July. In the greater part of Riverina and sections of New South Wales the outlook for the wool crop was not good. The weather has been unfavorable, light showers only with occasional frost.

South Australian advices show that it has suffered less from over-imports than other colonies. Business generally is in a healthy condition. Wool and wheat are its staple exports.

Brisbane advices report the industries of Queensland in a flourishing condition, with the exception of tin, which is depressed from local causes. The sugar crop is estimated this season at 35,000 tons, approximating in value to £1,000,000. Nine new mills are near completion. In this connection it may be stated that New South Wales also reports its sugar crop heavy and well cultivated, an extraordinary output being expected.

Auckland, New Zealand, advices are five days later. Trade is brisk. Settlement is steadily progressing in Auckland province by immigration from England. The immigrants are of the better class of English yeomen and their families, who bring from £2,000 to £10,000 each, and are able to make a start at once in farming. The city of Auckland is growing rapidly. Commercial relations with the United States are strengthening, and the future outlook for a profitable trade with New Zealand is promising. In other provinces of New Zealand there is stagnation. Business is suffering a reaction from undue speculation, but the conservative policy of the banks, and the facilities offered by other financial associations handling English capital, prevent a crisis. The country possesses so many natural advantages that it will soon recuperate. Money is to be had on safe investments. Doubtful speculations meet no encouragement.

The export of wheat to England is checked, owing to late unfavorable advices, but as there is a large supply of medium grades on hand preparations are being made for shipment on farmers' account, buyers not caring to take the risk.

Government returns of live stock in New Zealand make the total number of sheep 12,408,106. Wool heretofore has been the staple export of the colony, but now frozen mutton is becoming an important one. Up to date 84,141 carcasses of mutton have been exported to England, and there are 24,000 carcasses frozen ready for shipment. There are two refrigerator companies in operation, one at Dunedin and one at Christchurch, and five new companies are floated or in course of formation. The most important is that at Auckland, which has a capital of £200,000 ($1,000,000). The manager of this concern recently passed through the United States, and has telegraphed from London that he can sell average New Zealand carcasses at 8d. (16c.) per pound wholesale. When these companies are in full operation they will have a capacity for handling 50,000 to 60,000 sheep per month.

The output of gold is on the increase; new finds are reported. Coal mines are being developed. The manufacture of woolen cloth and blankets is a paying industry. Iron reduction works and a large sugar refinery are in course of erection in the vicinity of Auckland. Coöperative dairying on the American plan is being established, and by the aid of the refrigerating process it is expected to ship butter and cheese to England, trial shipments having paid. Lumber companies pay large dividends.

THE DUTY ON BEER BOTTLES.

St. Louis, September 4.—The new tariff imposes a duty of 1c. per pound on imported green glass bottles, such as are used by brewers for putting up beer. Before July 1 the rate was 35 per cent. ad valorem, or only about half as high as at present. The new rate will forbid importations by the brewers of this city and of Milwaukee, for even under the old duty supplies were seldom bought abroad for use in western breweries. The increase of the duty on bottles is not likely to make beer cost more at retail, but it enables the glass-works to hold their goods at an advance, takes the difference out of the pockets of the brewers and seriously cripples the export trade.

When the tariff was under debate in the House of Representatives last winter it was virtually admitted that a higher duty on bottles than that then existing would give, and that it was designed to have it give, a monopoly of furnishing brewers' supplies to the domestic glass-blowers. To promote this object the duty was changed from an ad valorem to a specific rate. The Tariff Commission recommended

a rate of 1½c. per pound, declaring that to be "as low as it can be put, and permit the continuance of the manufacture here." The representative of the bottle-makers, F. L. Bodine, declared in "evidence" that a duty of at least 2c. per pound on pints and quarts was "necessary to continue the home production and its beneficial competition." The Commission, it appears, did not believe Mr. Bodine, while Congress, in turn, did not believe the Commission.

It is not easy to get at the exact cost of imported bottles laid down in this market, duty and freight paid. A gross of quarts weighs 216 pounds, each bottle weighing a pound and a half. The lowest rate of freight from New York (on car-load lots at the owner's risk) is 42c. per 100 pounds, or 91c. per gross. Some, if not all, of the importations made by brewers here come over the all-water route, by way of New Orleans, at a lower rate. But the freight from the seaboard, be it more or less, obviously gives the glass-works of St. Louis, for sales in St. Louis, natural, and by no means inconsiderable, protection.

With regard to New York prices, Representative Deuster, of Milwaukee, armed with figures from some of his constituents, who are the largest brewers in the country, submitted the following calculation in the House last winter:

Cost of 1 gross quart bottles	$3.09
Commission, 2½ per cent	.08
	$3.17
Duty at 35 per cent	1.11
Total cost	$4.28

or 2.97 cents per bottle.

The above statement makes the cost of imported bottles, duty off, 2.2 cents each. Mr. Bodine, and representatives Bayne and Errett, claimed on one hand that undervaluations were practiced, and on the other that foreign manufacturers sold their product cheaper in this country than at home. There seems to be, however, no reason to doubt the correctness of Mr. Deuster's statement of prices at that time, confirmed, as it was, by representatives Guenther and Haskell, the latter having in hand an importer's invoice. A similar table showing the effect of the new rate is appended:

Cost of 1 gross quart bottles	$3.09
Commission, 2½ per cent	.08
	$3.17
Duty at 1 cent per lb. (216 lbs.)	2.16
Total cost	$5.33

or 3.7 cents per bottle.

A duty of $2.16 on goods costing $3.17 is equivalent to an ad valorem rate of 68 per cent., or almost exactly double the former 35-cent rate. But hereafter, under a specific rate, the per cent. of the tax will of course vary with the price of the goods. The increase in the cost of imported bottles under the new duty, the price abroad remaining as above, is $1.65 per gross. There are brewers who bottle 100,000 barrels of beer annually. For that quantity they require 115,866 gross of bottles, whose cost, if imported, is enhanced by the new duty as compared with the old to the amount of $121,659. Here is evidently a considerable margin for an advance of prices by the domestic blowers.

A glass manufacturer in this city says that under the old duty, when the local price was $5.75 per gross, it was about an even thing for the St. Louis brewers either to import or to buy home-made goods. Even with prices here somewhat higher than the above importations were infrequent, because of the delay and inconvenience involved in sending abroad for supplies. In April, three months before the new law went into effect, quarts cost here $6.50 a gross, and there were no importations. The glass-works stopped as usual during the summer, and the price in this market can now be held at about $7—an advance of 50c. in five months. The contrast between this price and the New York figures quoted above for imported bottles, duty off, is striking.

Whether there is to be a still further advance must depend chiefly on the extent to which the demand is satisfied by the bottles now in the country. Hundreds of thousands of beer bottles are used over and over again. They are not easily broken. In most cases beer is sold by grocers to consumers with a rebate of 25 or 30c. a dozen upon the return of the bottles, which thus get back to the brewers. The extension of railroads stimulates the collection of those that have been thrown aside, and the "visible supply" is now very large. The yards connected with the bottle wash-houses of the largest breweries in St. Louis contain thousands of gross of second or third-hand bottles gathered from every part of the country, and just as good as new.

The most serious thing about the new duty is the obstruction which it offers to the export trade. If our brewers could have their bottles, their corks, their wire, their lumber and their other materials free of tax—whether a tax collected by the government or by their neighbors—nothing could prevent their getting entire control of the markets of Mexico, Central and South America, Canada, and possibly other foreign countries. As it is, they are at a great disadvantage as compared with European brewers in respect to much of their material, and especially their bottles. They are thus heavily handicapped in their race for the export trade, their business is thus curtailed, and the number of men to whom they can give employment is inevitably restricted. As a matter of "protection" the taxation of beer bottles seems peculiarly short-sighted, because the brewing industry is vastly more important in the amount of capital and the number of hands employed than the bottle-making industry. In St. Louis alone, for instance, $9,000,000 capital and 6,000 men are employed in the manufacture of beer, or thirty times as much capital and eleven times as many men as in all the glass-works of the city. The brewers believe that if their supplies were all free of tax their foreign trade might be indefinitely extended.

LETTERS TO THE EDITOR.

THE KNIGHTS OF LABOR.

To the Editor of BRADSTREET'S.

SIR—Public attention has of late been directed to the labor question, to the consideration of difficulties between employers and workmen and the possibilities of harmonizing interests by the efforts of the Senate Committee which has been in session in New York city. The meeting of the annual assembly of the Knights of Labor, the recent widespread strike, and general evidences of unrest among the wage workers throughout the country, have all attracted special attention. Writers, generally, are often at a loss how to treat the question, and frequently ignore it, hoping that by neglect the element of discord will subside. But this is a short-sighted policy. Labor agitations continue to grow in frequency and force. Combinations of laborers are growing in number, and these combinations are strengthened by the growth of intelligence among the members. The almost uninterrupted series of defeats do not check enthusiasm, but rather stimulate the desire for more perfect organization and for contests with employers for higher wages. This is the result of prosperity; it feeds upon it, and strengthens as it increases.

The Knights of Labor were the first to consolidate the formerly isolated labor organizations throughout the country. The result is that after twelve years it has brought within its fold a very large number of men who have had created within them the strong hope that it can procure for them an amelioration of their condition, making it better than it ever was before. The executive board of this organization has been in session this week at Pittsburgh for the purpose of putting into operation a resolution of the national assembly which met recently at Cincinnati. The organization recognizes that it has been a disappointment to the great body of its members. Thus far, of 2,700 assemblies, only 700 remain. The actual membership is in the neighborhood of 65,000. During its existence as an order it has initiated about 500,000 men. The falling off in membership has been due to a lack of results. The chief purpose of the present session is to devise means, if possible, to retain present members and induce former members to return. There are several elements of discord at work which threaten the organization's existence. Among these are, first, the ineradicable hostility of a portion of the order to a protective tarift; second, an equal hostility on the part of conservative American-born members to the theories of the socialists, which of late years have become an important and influential element in the order. These constitute the real trouble at present. The purposes of the order are such as no intelligent man would be disposed to combat, or, speaking more correctly, the theories are correct, but the practical workings fall below the realization of its founders. In short, the intelligence of the organization is not sufficient to enable the ruling spirits to realize its purposes with the material in hand.

This organization was originated in New York by seven tailors on behalf of a society of tailors numbering about one hundred men, most of whom had spent from ten to twenty years in older organizations in attempting to improve their own condition and that of their associates. They devised and put into practice measures deserving of encouragement. The order soon spread throughout New York city and state, and in a few years it spread over the country, gathering in its progress an ignorant element, which had heard of the phenomenal success of the society in improving the conditions surrounding its members. But much of the success previously attained was due to influences and circumstances entirely outside of the society. At present the order finds itself with a white elephant on its hands. It comprises a vast disappointed membership, and the members now realize that unless the disintegrating influences can be arrested and some new spirit and purpose infused into the organization that its career as a "noble and holy order," as it calls itself, will be brief. It is menaced with dissolution, and it will require greater skill and foresight than has ever yet been exhibited by any labor organization to prevent this result. The western membership is largely inclined to free-trade views, and some of the most influential members of the order are secretly advocates of and believers in them. The socialists, who for a while hoped to obtain possession of the organization, have become dissatisfied and withdrawn. The American and Americanized element in the order, while desiring the numerical support of the socialists, and willing to accord them all liberty of thought and action consistent with the fundamental principles and purposes of the order, are opposed to the extreme and impracticable schemes of that element. The demands of this party are considered by the knights as not only dangerous to the success of the order, but revolutionary. While this order looks ultimately to a control of the state and federal governments, it proposes to reach that visionary possibility by means entirely legitimate. The socialistic programme, however, involves a revision of the Constitution of the United States as the result of a grand revolution.

Defections more or less serious have been developed in the past two years. The New York and Baltimore branches are practically out of the organization, one working with the socialistic branch and the other seeking to establish an improved order. Factional disturbances are at work, and practices akin to political ring maneuvering are seeking to gain control. They call into existence opposing factions, and undermine the confidence of members in the power of the order to ever draw together the millions of workers for the unwritten, but yet instilled, purpose of ultimately gaining sufficient power to indirectly control the government.

FACT.

Philadelphia, Pa., September 26.

THE PRICE OF WHEAT.

To the Editor of BRADSTREET'S.

SIR—Never in the history of the grain trade has there been a time when the position of the wheat markets of the world has been so difficult to understand. Mr. E. H. Walker, the able statistician of the New York Produce Exchange, on the 14th inst. estimates the probable wants of the importing countries for the harvest year 1883-4 at 313,000,000 bushels of wheat; he also estimates the available supplies from the export countries of wheat in Europe and the rest of the world at 232,000,000 bushels of wheat, making a deficiency of supply of 81,000,000 bushels. This startling statement is met with the extraordinary fact that No. 2 red wheat was selling in New York market on the 15th inst. at $1.11 per bushel, and English wheat at 43s. 8d. per imperial quarter in the United Kingdom.

In the first place, let us note the position this country holds among the countries exporting wheat. In 1868 the export of wheat from countries that had a surplus to those countries that required to import was estimated at 120,000,000 bushels of wheat and wheat flour, of which, in 1868, the United States furnished in net exports 26,000,000.

In 1880 the net surplus shipped by the export countries was estimated at 300,000,000 bushels, of which in 1880 the United States exported 184,000,000 bushels of wheat. In the coming crop year Mr. Walker estimates that the net surplus that will be shipped by the export countries will amount to 232,000,000 bushels, of which from the crop of 1883 the United States will ship 115,000,000 bushels.

It will be seen from the above that the export of wheat from this country from the crop of 1883 is estimated at 69,000,000 bushels less than what we exported in 1880, which is within 12,000,000 bushels of the estimated deficiency of the world's supply this season, so that if this country was able to export as much wheat as from the crop of 1879-80 there would be nearly enough for the world's supply. Let us see how prices stood in England in 1868 and in 1880, and what the exports were from United States:

	Wheat and wheat flour in bushels.	*Price in United Kingdom per bushel.*
Exports for year ending June 30, 1868, from United States to all countries	26,323,000	7s. 11½d.
Exports for year ending June 30, 1880, from United States to all countries	183,309,000	5s. 6½d.

From the above statement, as English prices are a good criterion to those in other parts of Europe, it will be seen at what prices wheat sells during a bad crop year in Europe when there is a light export from the United States, and at what prices it sells in Europe when there is a bad crop there and heavy exports from the United States. Now, the question is, What will the price of wheat be for the year ending June 30, 1884, if our total exports are only 115,000,000 bushels of wheat?

Before going into this question of probable price let me give a statement of our annual exports of wheat for the years ending June 30 from 1868 to 1883, and prices in England, which may help the solution of the range of prices:

	United States. Wheat & wheat flour in bushels.	*United Kingd'm. Wheat per bushel.*
1868	26,323,000	7s. 11½d.
1869	29,717,201	6 4
1870	53,900,780	5 10⅜
1871	52,574,111	7 1
1872	38,995,755	7 1½
1873	52,014,715	7 1
1874	91,510,398	6 11⅝
1875	72,912,817	5 7½
1876	74,752,682	5 9¼
1877	57,043,936	7 1⅝
1878	93,149,266	5 9¼
1879	148,000,000	5 4⅛
1880	183,000,000	5 6¼
1881	184,000,000	5 8
1882	118,000,000	5 11
1883	145,781,772*	5 3
1884	100,000,000†	

* Estimated to September 1. † My estimate.

It will be observed that I estimate the export of wheat from the United States from the crop of 1883 at 100,000,000 bushels only, and for the following reasons: First, I consider the United States wheat crop of 1882 overestimated at 504,000,000 bushels. It was not, in my opinion, over 480,000,000 bushels, and is accounted for as follows:

		Bushels.
Wheat crop of 1882		480,000,000
Seed for 36,000,000 acres	54,000,000	
Consumption, 55,000,000 people, 4½ bushels each	247,500,000	
Export	145,500,000	
		445,000,000
For reserves		35,000,000

This makes the reserves at the commencement of harvest of 1883 35,000,000 bushels above the normal reserve of August 1, 1882, which, like 1877, were as low as they could be after the bad wheat crops of 1876 and 1881. There must be a normal reserve to be carried over from all crops, whether good or bad. The short wheat crop of 1881 left us at the beginning of the crop year 1882 with as small a reserve as we could hold in any year, which could not have been over 30,000,000 bushels, standing thus:

	Bush. wheat.
Low normal reserve August 1, 1882	30,000,000
Add surplus reserve of crop 1882-83	35,000,000
Total reserve August 1, 1883	65,000,000

I, therefore, in the second place, conclude that as 30,000,000 bushels wheat is the lowest normal reserve we can carry over, that 35,000,000 bushels is as much as can be added to increase the exports from the crop of 1883:

		Wheat, bush.
Crop of 1883 I estimate at		380,000,000
From reserves as above		35,000,000
		415,000,000
Seed	54,000,000	
Estimated export for year ending June 30, 1884	100,000,000	
Consumption of 56,000,000 of people	252,000,000	
		406,000,000
For reserves		9,000,000

It may be here asked, how was it that, although the crop of wheat in 1881 was about 118,000,000 bushels less than crop of 1880, yet the export from crop of 1881 was only 65,000,000 bushels less than that from crop of 1880. That is easily accounted for. On August 1, 1881, the reserves were the accumulation from four first-rate crops of wheat, while in August, 1883, we had only the reserves of one good crop, that of 1882, to draw from. In addition, the reserves in California and Oregon at the commencement of crop 1881 were large, about 20,000,000 bushels, while the reserves on July 1 this year are very low, not 2,000,000 bushels.

The effect of the great increase in our exports of wheat, from 26,323,000 bushels in the year 1868 to 184,000,000 bushels of wheat in the year ending June 30, 1881, has been very great. It has revolutionized the land laws of Ireland, it has reduced the rent of land in Great Britain 30 per cent., it has modified the law of distress in England and of hypothic in Scotland, it has reduced the price of English wheat from 6s. 6d. per bushel (equivalent in our money to $1.57) for fifteen years ending 1875, to 5s. 7d. (equal to $1.35) for the five years ending 1883, and from 7s. 11½d. per bushel in 1868 to 5s. 4⅞d. on August 1, 1883, a reduction of about 32 per cent. in the latter instance, and 14 per cent. on the former or average price. To conclude, it has reduced the area of wheat cultivation in the United Kingdom as follows:

Harvest years, Sept. 1 to Aug. 31.	*Yield per acre, bushels.*	*Crop of wheat, bushels.*	*Area under wheat crop in United Kingdom, acres.*
1868-69	34	134,334,608	3,951,018
1874-75	31	118,773,776	3,830,767
1876-77	27	84,357,232	3,124,342
1879-80	17½	52,487,488	3,050,128
1880-81	19¾	60,509,700	3,065,895
1882-83	27	85,099,144	3,166,635
1883-84 (estimated)	26	70,108,000	2,708,000

From the above tables it will be seen that the acreage under wheat crops has decreased 31½ per cent. in the United Kingdom since the year 1868. The areas under wheat and the yield of wheat of late years in the United States have been:

	Acres under wheat.	*Crop of wheat, bush.*
1874-75	26,967,927	309,102,700
1877-78	27,217,546	361,191,147
1879-80	35,546,950	448,756,030
1880-81	36,037,050	498,840,728
1881-82	36,004,000	380,680,000
1882-83	37,067,194	504,185,470
1883-84 (estimated)	36,000,000	380,000,000

As already stated, and for reasons given, I consider the crop of 1882 overestimated. I also consider the present crop (1883) less than the above estimate, as I consider the price of corn last spring paid the farmer better than wheat, and there was more corn raised and less wheat than usual, and in addition, owing to the freezing out of wheat, there was a great deal plowed up and corn planted in its place, and on that account I think there is less acreage under wheat than is generally supposed. I therefore think Mr. Walker's estimate of the export of wheat from the United States for the year ending June 30, 1884, at 115,000,000 bushels to be liberal, as I doubt from the deficiency in our winter wheat crop if it exceeds 100,000,000 bushels. Believing, also, that the world's supply of wheat is below the demand, I feel confident that prices for wheat must advance very considerably long before the crop of 1884 is reached, so as to economize consumption and make the supply equal to the demand, for in my opinion the wants of Europe are as great as in the harvest year 1879–80, when we exported 183,000,000 bushels of wheat and wheat flour. I feel certain that as we can only export during this harvest year about 100,000,000 bushels prices must advance considerably at no very distant date. I shall not presume to state what price wheat will sell for; I will only here state that after the bad crop of 1879, when Europe's wants were no greater than at present, but when we had, as previously stated, an immense surplus of wheat for export, the price of No. 2 red wheat, which was in August, 1879, selling for $1.03 per bushel, sold on January 2, 1880, at $1.58 per bushel, and for May delivery about $1.66 per bushel. After the crop of 1881 was harvested, although there was a fair harvest in Europe, wheat which sold at $1.22 per bushel at the end of July, 1881, sold in April, 1882, at $1.42. Although Europe's wants were moderate, our own crop of wheat was short. Now what the price of wheat will be next spring and summer, when Europe's wants are as great as in 1879–80, and we have only about the half of the quantity to spare we had then, I prefer my readers to judge for themselves. I shall conclude by stating that, with your permission, at some future time I will show more in detail the reasons why I think this country's crops of wheat, being good or bad, must be in future the principal factor in settling prices of wheat. OBSERVER.

N. Y. Produce Exchange, Sept. 22, 1883.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

A municipal corporation has no implied authority from the powers granted it in respect to highways, or from the general power to enact laws for its government, to charge wharfage for the use of one of its wharves, according to the decision of the United States District Court for the western district of Pennsylvania in the recent case of The Borough of Elizabeth vs. The Steamboat Geneva.

A mortgage given on "all that certain stock of goods consisting of dry goods, groceries, boots, shoes, hats, caps, hardware, notions, and all such other articles as are usually kept in a first-class country store, and all fixtures and utensils in said store belonging to the mortgagor," was held to cover an iron safe, show-cases, platform-scales, a truck, a copying-press, chandeliers, and a cheese-case in such store. McCall vs. Walter, decided by the Supreme Court of Georgia on the 19th inst. The mortgagor in this case was occupying rented premises.

A lessor failed to comply with his contract to complete a barn upon the leased premises by a specified time. The lessee sued to recover special damages for injuries to his tobacco crop occurring by reason of such failure. There was no allegation that the sole or chief use of the barn was for the housing of tobacco, or that it was so understood when the contract was made, and the Kentucky Superior Court held (in the recent case of Smith vs. Taylor's Administrators) that the lessee was not entitled to recover.

In the case of McVay vs. English, recently decided by the Kansas Supreme Court, it appeared that on the 17th of August, 1880, a chattel mortgage was executed to the plaintiff; the mortgagor retaining possession of the property. Ten days later the mortgage debt became due. On September 4 the mortgage was filed with the register of deeds, and two days thereafter the defendant levied an attachment on the mortgaged property. On the day following, the plaintiff, as mortgagee, commenced an action of replevin to recover the mortgaged property. Upon this state of facts the court held that the right of the plaintiff to the possession of the mortgaged property was paramount to that of the defendant. The court said that while it was true that where the mortgagee of a chattel mortgage does not take immediate possession of the mortgaged property, the mortgage if unregistered is for the time being absolutely null and void as against creditors and subsequent purchasers and mortgagees, yet that a mortgage may be made valid at any time after its execution by registering it, and that from and after the time of its registration the mortgage will be valid as against all creditors and subsequent purchasers and mortgagees or persons who did not have any specified interests in or lien upon the mortgaged property prior to the time of such registration.

The Supreme Court of Kansas recently held, in the case of The Semple & Birge Manufacturing Company vs. Detwiler, that where a debtor delivers to his creditor promissory notes as collaterals, under an agreement that the creditor shall collect the amounts due thereon, and, after deducting all expenses, apply the net proceeds to the payment of the debt, the creditor is under obligation to use due diligence in the collection of the collaterals. When, under such circumstances, the creditor takes no active steps toward collection other than to demand payment of the parties thereto, and allows the collaterals to become barred in his hands by the statute of limitations, he does not, in the opinion of the court, use due diligence for their collection, and he should be compelled to account to the debtor for the loss thereof if the collaterals were good and collectable when delivered to him.

In the case of Bagwell vs. Bagwell, recently decided by the Supreme Court of Georgia, the complainant was the surviving member of a firm and also the administrator of the deceased partner. The firm and its members were insolvent. The complainant, as administrator, sold land as the individual property of the decedent. The land was bid off for the defendant, who subsequently transferred his bid to the complainant upon condition that complainant should pay him a note which he held against the insolvent firm. Part of the amount thereof had been paid. Complainant offered to complete the contract, and prayed for a decree compelling specific performance. Complainant's bill was dismissed on demurrer in the court below. The Supreme Court, on appeal, held that the bill was properly dismissed below, for the reason that the contract set up would divert assets from the proper course of administration, and would be a breach of trust and a constructive fraud; partnership assets being primarily liable for firm debts, and individual assets for individual debts, in cases of insolvency and death.

BUSINESS NOTES.

There were 196 failures in the United Kingdom and Ireland reported to *Kemp's Mercantile Gazette* for the week ending September 8, as compared with 212 in the first week in September, 1882, and 214 in the like week in 1881. England and Wales had 174, against 189 and 196 in the weeks named in 1882 and 1881. Scotland had 19, against 21 and 16, and Ireland had 3, against 2 and 2 respectively.

The following national banks have been organized: The National Bank of Brookville, Pa.; capital $50,000; Ira C. Fuller president; B. M. Marlin cashier. The Third National Bank of Lexington, Ky.; capital $100,000; John W. Berkley president; O. L. Bradley cashier. The First National Bank of Rockford, Ia.; capital $50,000; Orlo. H. Lyon president; Harry A. Merrill cashier. The First National Bank of Phœnix, Arizona; capital $50,000; Samuel A. Murphy president; William Christy cashier. The Red Oak National Bank, Iowa; capital $100,000; Justus Clark president; Paul P. Clark cashier. The Consolidation National Bank of San Diego, Cal.; capital $100,000; Oliver Spencer Witherby president; Bryant Howard cashier. The First National Bank of Minden, Neb.; capital $50,000; Lewis Asbury Kent president; Rush Hollis Palmer cashier.

Some time ago an oil-well supply company at Bradford, Pa., forwarded to parties in Roumania a supply of all the most approved appliances used in developing oil territory. Recently word was received in Bradford that a very rich deposit of oil had been found in Campina. It was added that one well was doing 4,000 barrels daily and another 2,000 barrels. "The flow of the first well was of such great volume and force that over 50,000 barrels of the yield ran to waste before it could be brought under control. At the end of ten days the flow began to decrease. The oil was thrown from a depth of 1,000 feet fifty feet above the top of the derrick, so strong was the gas. The two wells are now yielding 3,000 barrels a day." This report has not been corroborated, but if it proves true it will go far to establish the claims made by BRADSTREET'S Vienna correspondent in his letter to this journal on the Roumanian oil fields, published about one year ago.

The British labor market, as reported by the London *Labour News* of September 15, was unsettled, owing to wages disputes in several districts. Building and railway trades were busy, and in the colliery districts work was plentiful. The tin-plate industry in Wales was quiet, and many hands were idle. The iron trade generally was suffering from low prices, although in many departments of manufactured iron the works were very busy; and in Wales the masters at the iron and steel works had given notice of the termination of all contracts at the end of September, which the workpeople, numbering many thousands, believed to mean a reduction in wages. In some lines of textile manufactures there was increased activity and orders for winter goods were being received. The trades union congress at Nottingham had been opened, and important questions were being discussed. Agricultural operations, including hop-picking, were brisk. Emigration was increasing.

Various newspapers in this and other lands, with a degree of enterprise equalled only by their available supply of money, have organized, equipped and sent out expeditions having the secondary purpose of increasing the world's stock of knowledge respecting the Northwest channel, the general features of the North Pole, and the topography, geography and material resources of interior Africa. The primary purpose, if avowed, might be the calling to public notice the wealth and enterprise of the journals which paid the expenses of these expeditions, a not unworthy end, considering the secondary purpose mentioned. The latest affair of this nature has been referred to in its own columns as "The *Times-Democrat* (New Orleans) expedition to the Everglades." Florida, during the past fifteen years, has developed rapidly, agriculturally and otherwise. Its population has increased and its orange culture has grown to a great industry. Nevertheless a large part of that state remains "an undiscovered country." It is now the purpose of the paper named to send an expedition to explore the famous Everglades. Several attempts to explore this tract have been made by the United States government, and during the Seminole war the troops frequently attempted to follow the Indians into the Everglades, but they never succeeded in penetrating beyond the borders of the Everglades proper. The statement is made that though but eighty Indians are recorded by the census as living in the Everglades, that some 700 or 800 in reality reside there. They still hold some negro slaves and stubbornly resist any attempt on the part of the white man to enter their fastnesses. The *Times-Democrat* expedition will assemble at Jacksonville, October 15, and proceed by rail to Cedar Keys, thence by steamer to Fort Myers, and up the Caloosahatchee river, through canals to Lake Okeechobee. A camp will be established for one week on "Observation Island," until preliminary surveys shall have been made. A direct course will be taken for Whitewater Bay, on the Gulf coast. "When the centre of the Everglades shall have been reached" a camp will be established for two weeks, and surveying parties will be sent out in easterly and westerly directions.

MEMORANDA FROM THE SEPTEMBER COTTON REPORT.

[Average date September 13.]

NORTH CAROLINA.

From Lenoir county: The long continued drouth followed by heavy rains, has caused shedding and rust. No top crop will be made. Picking is not yet general.

From Wake county: Since last reports the nights have been cool and dry and the crop has been seriously injured, and now we are having cold rains with winds, which will not prove beneficial to the crop. The prospect is gloomy, and, although reports are very conflicting, I think the yield will be considerably under that of last year.

SOUTH CAROLINA.

From Barnwell county: Picking is progressing very favorably. The turnout from the seed cotton is good, being about 35 per cent of lint. The quality is good. So far it will average strict middling. The yield will be 30 per cent. off from last year.

From Edgefield county: The damage from drouth this year has been very severe. The crop is opening very fast on account of dry weather. In some sections it is nearly all open. The yield will not be over 58 per cent. of last year.

GEORGIA.

From Brooks county: Cotton picking in this county will be done by October 1 to 15, many farms by the 1st. Worms and drouth have hurt the crop badly.

From Burke county: Worms are general in this county, destroying the top crop entirely, which would have given us two-thirds of a crop.

From Campbell county: The prospects are much worse than at the time of my last report. The crop will be short 33⅓ per cent., owing to drouth and rust.

From Forsyth county: There has been no damage except from drouth. This county will not yield more than half a crop.

From Fulton county: The weather for picking is fine, and the farmers are busy. The damage by worms and shedding is great, and we think the crop is short at least 25 to 35 per cent.

From Murray county: The yield, from present prospects, cannot exceed one-half of an average crop. Picking has become general this week.

From Newton county: From interviews with farmers in this county, I am satisfied that the prospects for the cotton crop is by far the poorest in a number of years.

FLORIDA.

From Jefferson county: The yield will be 25 per cent. less than last year, but the quality 25 per cent. better. We have had good weather for picking.

ALABAMA.

From Baldwin county: The crops are damaged materially from drouth, and, to some extent, from worms. Taking it all in all I think this has been the most unfavorable year for cotton I have ever known, and I have been a farmer in Alabama for forty years.

MISSISSIPPI.

From Alcorn county: The drouth is general here, and has seriously damaged the cotton crop. There has been no fruit in since about August 12. Picking is now going on, and all the cotton will open soon.

From Holmes county: It is very dry, and the bolls are being forced open before maturity by the hot sun. The plant is very small, and the yield will be about 25 per cent. from last year.

LOUISIANA.

From Avoyelles parish: This is the worst crop year in this section, old farmers say, since 1840.

From Sabine parish: The drouth has greatly injured the cotton crop. Picking is progressing rapidly, and if the drouth continues two or three weeks most of the crop will be gathered.

From West Baton Rouge parish: We have had no rain since last report, and the crops are short 30 per cent., if not more. Picking is progressing fast. No worms in this neighborhood.

TEXAS.

From Bell county: The weather through this section has continued very dry since last report. Cotton has all opened and will be fully one-half short on last year's crop.

From Bastrop county: This county will not make over one-half of last years's crop owing to drouth.

From Hunt county: The boll and army-worms have done a good deal of injury. The lint is shorter this year than it was last; otherwise the cotton which has been brought to market classes well. The yield will fall 25 per cent. short of last year.

From Hopkins county: Picking is progressing rapidly and the crop is doing well, though it is very dry. The yield will fall 40 per cent. short of last year.

ARKANSAS.

From Arkansas county: The weather since last report has been bad for cotton, though I think with late frosts the crop will be fair in this county.

From Columbia county: The drouth in this locality has been very severe since the 15th of July and the cotton crop has been injured 33 per cent.

TENNESSEE.

From Hardin county: Picking began last week, but only a few bales are in market. Drouth and rust have caused considerable damage, say one-quarter to one-third.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

A turn, or rally, was made in the market this week, which the general opinion ascribes to Mr. Gould, and the usual varied assortment of rumors have been flying about of combinations between the several magnates of the street, having for its object the restoration of prices and creation of public confidence. The turn came just at the time when turns of the kind usually do come—that is, after a severe tumble in stocks, and the expectation, in consequence, that there would be no bottom found. There was quite a large short interest in the market, much of which has necessarily been eliminated by the sudden rally which had its customary terrifying effect on the weak or timid traders who happened to have gone short at the wrong time. On the other hand, it is pretty well known that several of the leading operators who have been engaged on the bear side covered their shorts on the recent depression, and they, of course, would be quite willing to have Mr. Gould or anyone else put up the market again, so that a better level could be had from which to start another bear movement. Stories of combinations between Mr. Gould and the Villard party were quite plentiful, and even such a pronounced bear as Mr. Cammack was said to have joined forces. The accounts were not generally credited, but they had their influence in helping the rise by frightening traders into covering, and doubtless encouraging a good many to buy stocks for a turn. The rally in the market had started on Tuesday morning, and it is safe to say that it started when nearly everybody in the street expected it to start. The surprising thing was that it had not started before, and very many people had begun to wonder if it ever would start. When, therefore, prices began to rise that morning, there was a general disposition of the local public to buy, and this made itself felt in quite a lively advance for a couple of hours. Then came the news of the first of the large dry goods or woolen house failures, and at once confidence vanished, dismay came over every one and the market simply "slumped." Prices went back to where they had started with an ease which seemed to indicate an utter lack of support to everything. Once more it seemed that fate was against anything having the semblance of a bull movement this year, not even a rally being possible; and when it became known at the Windsor Hotel that evening that after the close of business down town another and yet larger house had been dragged down, no one could be found who looked for anything on the morrow but a further and more severe tumble in stocks. But Mr. Gould and those acting with him, whoever they were, had had time to prepare for the storm, and after some depression in the early dealings it became evident that buying orders were in the market in rather unexpected force. The selling seemed, indeed, much lighter than might reasonably have been expected, and very soon the market showed unmistakable symptoms of rising. With occasional reactions it was kept on the rise, and in the last hour on Thursday the "steaming" process of manipulation was applied, and quotations rushed up with breathless haste. Yesterday morning, there was for a short while a repetition of the process, following which came a gradual decline.

One of the assisting causes in lifting the market was the declaration on Wednesday of a quarterly 2 per cent. dividend by the Lake Shore Company, when a good deal of talk had been heard that it would be 1½ per cent., and some selling of the stock done in expectation of such a reduction. It was said by officers of the company that the road had earned 2½ per cent. in the quarter, but as no statement was presented such declarations may be taken for what they are worth. It would be hard to make any one acquainted with the present position of affairs in Wall street believe that if the Lake Shore road had really earned 2½ per cent. for the quarter a report setting forth the figures would not have been presented and given the widest possible publicity. In fact, Commissioner Fink virtually admitted that the dividend had not been earned, but added that the road would earn its 2 per cent. in the next quarter, which is unquestionably true, as the October quarter is always a harvest time with the roads. The commissioner's office has presented a busy scene this week, for most of the large railroads of the country have had their representatives here on matters connected with pooling arrangements. The commissioner has also made his new award of percentages to the trunk lines in the east-bound pool out of Chicago; but of course they were not satisfactory to the roads, and an appeal to the arbitrator has been made. There was more or less secrecy observed about this important matter, because while great dissatisfaction is acknowledged to be felt among the companies at the rate-cutting which one or two of them persistently indulge in, it was yet desirable for its effect on Wall street to preserve an appearance of harmony. Railroad men say openly that there would be a war of rates among the roads now, mainly in consequence of the action of the Erie—an old offender—and of the Baltimore & Ohio; but it happens at this time that there is enough business to go round, notwithstanding the rate-cutting, and so they are desirous to preserve the peace and patch up differences until the time comes for making a more binding settlement. When that time comes the Lackawanna and West Shore roads will have to be considered. It seems conceded that whatever dissatisfaction may be felt at it, Commissioner Fink's award will be accepted by the several companies in interest.

While these affairs were being settled here another body of railroad men were in session in San Francisco, making a pooling arrangement for roads west of the Missouri river, which has become necessary through the opening of the Northern Pacific road. The substance of the agreement, as given in the dispatches, is as follows: San Francisco, Cal., and Portland, Oregon, to be common points, taking the same rates to and from the east. The Northern Pacific to make the same through rates to San Francisco via Portland that the other roads make to San Francisco direct, and the latter to make the same through rates to Portland via San Francisco that the Northern Pacific makes to Portland direct. All the lines are to maintain the present regular rates, except as modifications are hereafter to be mutually agreed upon. The agreement goes into effect on the 1st of next month and expires by limitation on December 31, 1884, but it is terminable at any time on ninety days' notice from any of the companies. "It is," says the dispatch, "the opinion of the railroad managers, outside of Northern Pacific representatives, that the practical working of the arrangement will be to confine the Northern Pacific to its own territory, as that road cannot afford to pay water freights between Portland and San Francisco, which, under the agreement, it will be obliged to do, and, in addition, to break bulk to Portland, it the company seeks to divert business to and from California from the old overland routes." This brings into prominence the changed conditions of transcontinental traffic. It is now almost as much competitive as the traffic between the Atlantic seaboard and Chicago, and though it is agreed to maintain the present high rates, the inevitable outcome is a reduction of these rates just as it has been where competition works between other lines of road. The Union Pacific, with the Central, enjoyed the advantage for many years of an absolute monopoly of transcontinental traffic. The news of the agreement was telegraphed to Wall street, where it was not considered particularly favorable to the Northern Pacific company, but the market was then under the influence of its rally, and the stock was not affected.

The loan market has continued in its state of phenomenal ease for this time of year, money being obtainable in any quantity at 2 to 2½ per cent. on call. Yesterday afternoon there was for the first time a faint indication of the usual fall market in a fractional rise of the rates. Exchange rates rose ½ per cent. on Wednesday to $4.83½ and $4.86½, but the next day, when the Bank of England reduced its discount rate from 3½ to 3 per cent., there was a marking back of half a point by some houses, though not all. The ease in the loan market and comparatively high rates of exchange are unusual at this time of year, but the slow export trade and the diminution of the volume of speculation in the country are held to account for it. The Bank of England has now a heavy reserve of specie, and is fully prepared for a drain from this side, supposing it should come. Governments are steady and quiet. The following are the closing quotations yesterday:

	Sept. 21, bid.	Sept. 28, bid.	Sept. 28, asked
U. S. 4½s 1891, registered	113¼	114	114¼
U. S. coupon	113¼	114	114¾
U. S. 4s 1907, registered	119¼	120¼	120⅜
U. S. 4s 1907, coupon	120¼	121¼	121⅜

Saturday's bank statement showed a decrease in the surplus reserve of $1,831,075, leaving it at $1,907,350. The following are the comparative totals of the statements of September 15 and September 22:

	Sept. 15.	Sept. 22.	Differences.	
Loans	$328,792,500	$331,701,600	Inc.	$2,909,100
Specie	58,879,300	55,360,300	Dec.	3,519,000
Legal-tenders	24,337,000	26,050,400	Inc.	1,713,400
Deposits	317,911,500	318,013,400	Inc.	101,900
Circulation	15,533,400	15,408,300	Dec.	125,100

The proportion of total reserve to liabilities is now 25.60 per cent., against 24.25 per cent. at the same date last year.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

SUMMARY.

The general distribution of merchandise during the week has, on the whole, kept pace with the record of the two or three preceding weeks. There is no reason, to judge from the special telegrams to BRADSTREET'S given below, to believe that there has been any marked gain. The heavy failures in New York, low water in the industrial regions of New England, and a perceptible hesitation to buy in excess of immediate wants in many localities, have conspired to keep the tide of trade at recent levels. The movement of dry goods generally has been well maintained. New York, Boston, Philadelphia, Baltimore, Chicago, and the two chief cities in Minnesota report a conspicuous movement in this line. The industries of the country are fairly well employed. The most interesting feature is in reference to the prices of southern pig iron, which are reported lower from Cincinnati, Ohio, Birmingham, Ala., and Richmond, Va. Tennessee furnaces, however, regard the situation differently. Reports are contradictory, some claiming that furnaces in the south are filled with orders and prices are firm, while others report a drop of 50c. per ton. This is of primary interest to the south and such points in the west as are customers for southern irons. The eastern iron industry remains about as for a month past, No. 1 foundry quoted at $22. The speculative wheat market has declined from the closing rates on Friday one week ago, owing to an unexpectedly large increase in the visible supply and practically no foreign demand. Indian corn has been similarly affected; visible supplies have increased heavily, and both home and foreign buyers have neglected it. Millers are not taking supplies in excess of present wants, and the grain exchanges find trade rather dull. Provisions have fluctuated. The decline has gone below expectations and formed the basis for a reaction which does not promise to last long, owing to continued heavy receipts of hogs and apathy from the home and foreign trade. Anthracite coal is firm at about August rates. The demand is fair, but is expected to improve in October. The excess production as against 1882 amounts to about 2,000,000 tons. Ocean freights are steady. There has been an active consumptive demand for wool and the market has hardened slightly and closes very firm for all descriptions. There were 164 failures in the United States reported to BRADSTREET'S during the past week, 13 less than the preceding week, 9 less than the corresponding week of 1882, and 52 more than the same week of 1881.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Money is easy. General trade is fair, and chiefly confined to immediate wants. Markets are generally firm.

From Boston, Mass.: The fall trade in leading manufactures is up to a fair average, but not rushing. In some departments it is hardly up to expectation, but the volume of general trade for September will compare favorably with the same month last year. Food staples are meeting with a fair distribution, but buyers are more than usually cautious, owing to the unsettled basis of valuations. The scarcity of water in the manufacturing districts has an unfavorable effect on the New England trade, as it interferes with the running of machinery and throws some operatives out of employment for the time being. The wool market has had another active week, and prices are firm. Sales for the past four weeks foot up 13,600,000 pounds, an increase of upward of 2,500,000 pounds as compared with same time last year. The money market is steady at 5@6 per cent. for regular discounts, with some transactions at 6½. The large failures in New York have no apparent effect on our market.

From Philadelphia, Pa.: The general business situation continues fairly satisfactory and is encouraging. The recent heavy failures in New York, and the constantly recurring losses and suspensions in many lines of trade in various localities, have a disturbing effect by retarding the growth of confidence which is an essential feature of a prosperous condition of general trade; but the feeling in commercial circles, as a rule, is improving, and the indications favor the expectation of an active and successful fall and winter season. All jobbing branches show an enlarging volume of business, and manufacturing establishments, as a general thing, are now actively employed. Mercantile collections in most lines are reported prompt.

From Cincinnati, Ohio: There has been a steady improvement in many of the leading lines of business, and one can safely say that we are in the midst of fall trade. Money is easy, and buyers are, in many instances, here in person. Railroad transportation lines are very busy, but the continued low stage of the river is a drawback.

From Cleveland, Ohio: A summary of opinions obtained from representatives of leading branches of business indicates a handsome increase in the volume of trade, with the exception of pig iron.

From Chicago, Ill.: Call for loans at the banks is fair. Those with fancy collaterals are accommodated at 6 per cent.; others 6½@7 per cent. Exchange is 50@60c. discount. Collections are better. Shipments of currency to the interior are liberal.

From Peoria, Ill.: General trade is fairly active.

From Indianapolis, Ind.: The retail trade is brisk, the state fair having attracted a large concourse of people. The jobbing trade has also been active, but collections are still somewhat slow although improving.

From Detroit, Mich.: In the general line of business the volume is larger than last year, and the general outlook appears to be very fair. The farming districts of the state have, however, suffered more by early frosts than has been imagined, the result of which will be felt in business late in the winter or early in the spring.

From Louisville, Ky.: All branches are crowded with orders. Sales cover a wide territory, and the retail business active. The Southern Exposition is attracting large crowds. The freight and passenger business is brisk. Money is in good demand. Loan rates are firm at 7 per cent.

From St. Louis, Mo.: General trade is in very satisfactory volume. The drouth has harmed truck farmers, and has stopped plowing for wheat by hardening the ground. Money continues active at 8 per cent. Banks confine loans to customers and buy no outside paper. New York exchange par.

From Kansas City, Mo.: Activity still prevails in leading lines of trade, and the volume of business fully equals expectations. Collections are good.

From Milwaukee, Wis.: Trade is brisk, and money is in demand. Currency shipments westward have fallen off.

From Minneapolis, Minn.: In all branches of the jobbing trade there is increased activity. Collections are not as good as was anticipated. Owing to the rather slow movement of the wheat crop, they are only fair for the season. A close money market is reported at the banks. Large shipments of currency from the east are required. As a sequence eastern exchange rates at ⅛c. discount.

From Lawrence, Kan.: The general condition of trade is good, with no marked features in any line. A good fall and winter trade is assured. The people here were never in better financial condition than now. Collections are easy and money abundant.

From Omaha, Neb.: No frosts have yet been reported in this state, and all returns are very favorable to trade. Business in most lines is active, and a good demand for fall goods continues.

From San Francisco, Cal.: General business is prosperous, and stocks in first hands are moving off freely. Cereals steady. Prime commercial paper 7 per cent. Exchange 12½c.

From Baltimore, Md.: General business continues quite brisk, and jobbers in particular appear to be doing well. There is some complaint heard in almost every branch against collections, which are slow and not near so good as in September of last year. Money is in demand at full legal rates.

From Wilmington, N. C.: The fall trade outlook is excellent, and weather is pleasant after storms and heavy rains. Crops cotton, corn and rice average loss one-fourth; wheat, peanuts and tobacco prospects are favorable.

From Savannah, Ga.: While there continues a fair demand general trade is not spirited. The end of the month has seen trade decline with retailers.

From New Orleans, La.: The fall trade outlook is excellent.

From Nashville, Tenn.: The jobbing trade is very active.

BREADSTUFFS ABROAD.

The cables have not reported much in favor of higher prices during the week. The customary Tuesday morning's report stated that the English grain trade during the week had been dull, and that trade in foreign wheat off-stands had been dull. Flour was dull and buyers were in command. There had been no better news in the off-coast trade in wheat. Out of eighteen cargoes arrived five had been sold and ten withdrawn. On Wednesday wheat in Mark Lane was still dull. English country markets were steady and French generally firm; that was the best that could be said. Prices abroad would not budge. The essence of the situation there is that supplies are abundant, and dealers are consequently not in a frame of mind to buy. Exports from the United States are not desired; stocks are abundant, and for the time being prices will remain inactive. Illustrative of this the returns as to exports from India to the United Kingdom may be cited as follows:

	1883. cwts.	1882, cwts.	1881, cwts.
Month of June	28,239,664	12,469,240	12,645,712
Three months ending June 30.	61,527,120	34,105,360	28,839,736

There has been an increase of Indian exports to the United Kingdom during the three months ending June 30, of 78 per cent. as compared with 1882, and of 113 per cent. as compared with 1881. Relative to the total supply of wheat in the United Kingdom a foreign authority says: "With available supplies of foreign wheat far above possible requirements, not to mention foreign flour, with heavy stocks, and with the native growth in marketable condition, it does not really matter to the trade (British) whether the home growth is one, two or three million quarters short or not." Whether the British corp is large or small, now that the world is practically all one market, the price of breadstuffs must depend on the proportion which the available supply of any one season bears to the consumptive demand. But while the bulk of the British wheat crop has lost its old influence on the trade, its movement may constitute a very powerful influence on the trade in that it may yet suffice to demoralize the trade by being put rapidly on the market. It is stated that its condition generally is such as to render such a contingency not only possible but probable. These considerations do not point to a revival in prices of wheat abroad in advance of the approximate consumption of stocks on hand in addition to the quantity of wheat held by British farmers. All so-called authorities, however, agree in pointing to a deficit in the world's supply (as gauged by the crops of the current year, irrespective of surpluses from previous seasons) and this foreshadows an ultimate gain in quotations, dependent mainly as to the rate of consumption. It is of interest to note the various estimates made of the quantities of wheat for export, and quantities required by various countries, in millions of bushels, by the leading authorities:

DEFICITS—QUANTITY WHEAT REQUIRED.

	Statistician N. Y. Prod. Exchange.	Beerbohm's Corn Trade List.	Le Fermier (Paris journal).	London Miller's estimate.
United Kingdom	145	120	133 1-3	128
France	75	80	56¾	56
Belgium	18	16	14 1-5	14
Holland	10	6		
Sweden	1	..	..	..
Germany	18	20	7.	8
Switzerland	10	14	8 1-5	8
Spain and Portugal	8	4	11 1-3	..
Italy, etc	20	8	20.	20
Greece, etc	8	..	..	..
*West Indies & China	..	18	*8½	20
South America	..	..	8½	
Totals	313.	286.	267.8	254

SURPLUSES—QUANTITY WHEAT FOR EXPORT.

North America	115.	92.	122.	No details furnish'd
Chili	3½	12.	5¾	
Australia & N. Zeal'd	6.		11 1-3	
British India	35.	44.	42½	
Egypt	½	..	..	
Algeria	1.	..	..	
Austria-Hungary	15.	8.	15 2-3	
Turkey	1.	56		
Russia	55.		28½	
Sundries	..	6	..	
Totals	232	218	225.6	214.

These estimates furnish sufficient variation to suggest a solution over a very wide range.

Placed side by side the totals are as follows:

WORLD'S SUPPLY (WHEAT) ESTIMATES COMPARED.

	Million Bush.
American.	
New York Produce Exchange—total deficits	313.
New York Produce Exchange—total surpluses	232.
New York Produce Exchange—net deficit world's supply	81.
English.	
Beerbohm's Corn Trade List—total deficits	285.
Beerbohm's Corn Trade List—total surpluses	218.
Beerbohm's Corn Trade List—net deficit world's supply	68.
London *Miller's* estimate—total deficits	254.
London *Miller's* estimate—total surpluses	214.
London Miller's estimate—net deficit world's supply	40.
French.	
Le Fermier's (Paris) estimate—total deficits	267.8
Le Fermier's (Paris) estimate—total surpluses	225.6
Le Fermier's (Paris) estimate—net deficit world's supply	42.2

These estimates as to the world's supply of wheat vary then from 81,000,000 bushels deficiency (given by Mr. Walker of the New York Produce Exchange) to but 68,000,000 bushels by Beerbohm, 40,000,000 bushels by the London *Miller*, and 42,200,000 bushels by *Le Fermier* of Paris. The *Miller* (London) consolingly adds that there are, however, of old stocks (altogether) some 95,000,000 bushels to be drawn on, which goes to show that the wheat is on hand to deliver (in the event of any one of the above estimates being true) whenever the necessities of the situation send buyers into the market for it.

The quantity of wheat and maize on passage, as per Beerbohm's London cable, September 27, 1883, was:

	Wheat. Qrs.	Maize. Qrs.
To the United Kingdom	1,875,000	310,000
To continent	520,000	65,000
Total quarters	2,395,000	375,000
Equal bushels	19,160,000	3,000,000

Compared with the previous week:

To the United Kingdom	1,828,000	290,000
To continent	520,000	90,000
Total quarters	2,345,000	380,000
Equal bushels	18,760,000	3,040,000
Increase, bushels	400,000	.....
Decrease, bushels	.....	40,000

AMERICAN WHEAT MARKETS.

The bulls in the domestic wheat market have not had a very encouraging time during the earlier portion of the past week, much as the statistical position of the cereal in the world at large has favored them. Leaving off at $1.11¾ on Friday night of last week for the September option, and $1.17⅜ for the December, quotations closed on Wednesday at $1.12 for September options and $1.17¼ for December. To be sure, figures had gone up to $1.13½ for September and to $1.18¾ for these options respectively on Monday, but the boom was of a transient nature. It had been based apparently on decreasing receipts at the west, the rumors of Russia's taking a hand in possible eastern complications, a decrease in the rye crop on the continent, and somewhat better cables from London and Paris on that day. But these bolsters to the market were of temporary weight. Russian rumors are not a safe basis for any move. The food crop of central Europe, whatever it may be in six months from now, is at present abundant. Foreign cables have since declined, and, worse than all, from the point of view of the bull in wheat exports have sagged off. Without a continned demand for our rapidly accumulating supplies of wheat at the seaboard the market here cannot be sustained, and foreign buyers at present are practically indifferent to our offers. Supplies abroad are too large, and time must elapse before any abiding demand from the other side can set in. For the reasons noted, then, quotations fell away. Recent advices from London express this view as follows: "Published stocks give a whip-hand to buyers in London and Liverpool, for they show an accumulation that is stronger on one side than argument on the other." The heavy visible supply reported on Thursday in addition to continued negligence of buyers resulted in a decline of about 1¼c. There was a better feeling on Friday and an advance of about ⅝c., from which a decline took place, leaving a small net gain on the day.

The Bureau of Statistics' report of the exports of breadstuffs from all ports of the United States for August and for the preceding months shows that the value of all August exports of breadstuffs is very largely below that of August, 1882, and that the deficiency has been increasing over that of July. Comparing eight months to August 31, this year shows a gain of $3,951,147 over last year. Comparing two months to August 31, there was a deficiency of $16,331,479, while in August the deficiency was $10,135,191:

August, 1883	$18,816,129
August, 1882	28,951,320
Deficiency	$10,135,191
For two months to August 31, 1883	$29,088,110
For two months to August 31, 1882	45,419,589
Deficiency	$16,331,479
For eight months to August 31, 1883	$114,237,045
For eight mohths to August 31, 1882	110,275,898
Increase	$3,951,147

The exports of corn show a heavy increase in July and August this year over 1882, 10,619,918 bushels, valued at $6,323,634, against only 614,486 bushels in the same month last year, valued at $535,328. The exports of wheat were only 13,303,068 bushels, valued at $14,943,689, against 31,352,460 bushels, valued at $37,363,066 in the same months last year. The secretary of the California State Board of Agriculture early in August was reported as placing the total wheat crop of that state at 20 per cent. less than in 1882, or 1,000,000 tons—say 33,300,000 bushels. BRADSTREET'S correspondent at San Francisco has made a thorough investigation, and finds that "the best grain authorities on the Pacific coast unhesitatingly pronounce the secretary's estimate erroneous. They are confident that California alone will produce nearer 40,000,000 bushels of wheat than the total previously noted, and that BRADSTREET'S July estimate for the Pacific coast (65,000,000 bushels) will not prove to be over 10 per cent. out of the way.

The receipts of wheat at tide-water for the week ending September 22 decreased to 2,136,005 bushels from September 15, when they were 2,168,708 bushels. The exports from the Atlantic ports for the week ended September 22 amounted to 1,239,177 bushels, against 1,339,794 bushels September 1.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended September 22 amounted to 2,460,528 bushels, against 2,758,662 bushels in the preceding week, and the shipments to 1,615,789

bushels, against 1,748,716 bushels in the week previous.

The visible supply of wheat in the United States and Canada (east of the Rocky mountains) September 22, as against the preceding week, showed an increase of 1,685,264 bushels.

The course of prices of wheat at New York and Chicago (1 P.M.) during the past week has been as follows:

	AT NEW YORK				AT CHICAGO	
	Sept.	*Oct.*	*Nov.*	*Dec.*	*Oct.*	*Nov.*
Fri. Sept 21.....	$1 11¾	$1.12⅝	$1.15	$1.17⅜	$0.95	$0.97
Sat. Sept. 22.....	1.12¼	1.13¼	1.15¼	1.18	.95½	.97⅜
Mon. Sept. 24.....	1.13½	1.14	1.16⅜	1.18¾	.97	.99
Tues. Sept. 25....	1.12¼	1.12⅞	1.15½	1.17⅜	.95¾	.97⅞
Wed. Sept. 26.....	1.12	1.12⅜	1.14⅞	1.17¼	.95⅞	.97⅜
Thur. Sept. 27....	1 11	1.11	1.13¾	1.15¾	.94½	.96¾

At 1 P.M. on Friday, September 28, September wheat at Chicago was quoted at 95⅛c., and October at 97⅜c., against 95⅝c. and 96⅞c. on the preceding Friday.

INDIAN CORN.

There was a slight advance in prices of Indian corn on Saturday and some firmness was manifested. This was due apparently to the increased strength shown by wheat. But it did not last long, for lower figures were recorded during the earlier part of the week. Trading has been light, news from the corn crop regions meagre, and, in fact, the attitude of this market appears to be that of a waiting one. Just what for—unless it be a move on the part of the bulls who have got the corn—is not asserted. Receipts must continue to increase and exports have decreased, which constitute an irresistible bear argument and prices acted accordingly. Options lost about ⅛c. on Thursday, an advance being due to a large foreign consignment, and a greater decline to an unexpected gain in the visible supply—no real improvement in the market. Friday saw some fluctuations, but no material change in prices.

The receipts of Indian corn at the Atlantic ports for the week ended September 22 were 1,814,054 bushels, against 2,152,328 in the preceding week, while the exports from the same points amounted to 978,795, against 1,169,804 bushels. The visible supply of Indian corn in the United States and Canada, east of the Pacific coast, September 22 had increased 1,338,286 bushels as compared with September 15. The total receipts of corn at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis, for the week ending September 22, were 3,453,910 bushels, against 3,398,118 the week preceding, and the shipments were 3,233,407 bushels, against 3,297,437 in the preceding week.

The closing prices of Indian corn daily during the past week at New York and Chicago at 1 P. M. were as follows:

	At New York.			Chicago.	
	Sept.	*Oct.*	*Nov.*	*Oct.*	*Nov.*
Friday, Sept. 21.....	.63	.63⅛	.62⅞	.51	.50¼
Saturday, Sept. 22...	.63	.63½	.62⅜	.51¼	.50⅜
Monday, Sept. 24...	.63	.63¾	.62⅜	.50⅞	.49½
Tuesday, Sept. 25...	.62½	.61⅜	.60	.49⅞	.48⅞
Wednesday, Sept 26	.62	.62⅛	.61⅜	.50½	.49½ .48¾
Thursday, Sept. 27..	.61¼	.61⅞	.61	.60	.49⅜ .48½

Corn at Chicago at 1 P. M. yesterday was for October 49⅝c. and for November 48¾c., against 50⅜c., and 49⅝c. for the options named on the preceding Friday.

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Sept. 21.	*Sept. 28.*
No. 2 flour	$2.60 @3.20	$2.50 @3.35
Superfine flour	3.30 @3.50	3.30 @3.60
Com. extra flour	3.90 @4.00	3.90 @4.10
West India shipping flour	5.60 @5 65	— @5.75
South American shipping flour	5 50 @6.50	5.60 @6.50
Winter wheat, family flour	5.25 @6 30	5.25 @6 30
Winter wheat, patent flour	6 25 @6.80	5.60 @6.25

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: The flour and provisions markets are weaker.

From Philadelphia, Pa.: The late advance in wheat has been lost, and the market is 2c. lower under increasing stocks in sight and continued slow foreign demand. Speculation quite active. Corn has been neglected, and closes about 1c. lower. Oats have declined slightly, but close pretty steady under reducing supplies, with a fair speculative and consumptive demand. Flour has ruled very steady but dull at former rates.

From Cincinnati, Ohio: Flour has manifested more strength, and prices, as a rule, are well sustained. Receipts of wheat have again fallen off heavily, with an upward turn of over 2c. Corn is scarce and firmer.

From Chicago, Ill.: Wheat unsettled; receipts falling off. Shipments moderate. Trading is chiefly local, and outside orders are light. Prices ½@¾c. higher. Corn is quieter and receipts lighter. Shippers are buying more freely. Prices unsettled and higher. Oats are stronger, but trading is limited.

From St. Louis, Mo.: Flour has improved and been active all week, with a heavy reduction in stocks. the movement being both for export and southern. Wheat has been very active on the advance, but is now unsettled and weak. Corn is dull and in sympathy with wheat.

From Milwaukee, Wis.: The grain movement at this point continues light and farmers in the northwest generally prefer holding their wheat to selling at prices ruling in Wisconsin. Considerable wheat is in stock. Minnesota and Dakota have done considerable threshing, but selling has been confined to small farmers or those who have no facilities for storing. Oats, corn and rye are scarce and offering barely enough for local consumption. Barley is moving freely. Receipts are chiefly of No. 2.

From Minneapolis, Minn.: The condition of the market is not such as was hoped for and farmers are not satisfied with prices offered. Considerable wheat is going into store or being forwarded to eastern points to be held for an advance; this reducing sales and deliveries for sale at local market rates. The heavy millers are only buying for present wants. No. 1 hard is bringing $1 to $1.03. There is no change in the situation as to other crops.

From San Francisco, Cal.: Cereals are steady. Eleven wheat cargoes have been dispatched to England, against eighteen in the previous week.

From Baltimore, Md.: Speculation in wheat has been fair and the market has been firm, with choice samples in demand. Stock in elevators is 2,928,000 bushels. Very little is doing with corn, but prices remain steady. Offerings of oats and rye are moderate, and the demand is fair at current prices.

From Savannah, Ga.: The grain market has had a steady demand and some good sales.

From New Orleans, La.: The stock of flour and provisions is small and the market dull. Prices are easy. Fall trade outlook is excellent. Receipts of bulk corn are 365,000 bushels; exports 400,000; stock 335,000. The market is nominal.

From Nashville, Tenn.: Flour is dull and in light demand. Corn is scarce, but firm. Wheat is very weak, with no demand.

THE GROWING GRAIN CROPS.

[By Telegraph to BRADSTREET'S.]

From Peoria, Ill.: There has been quite a heavy frost during the past few nights, but the corn crop is too far advanced to be materially affected.

From Louisville, Ky.: The drouth still prevails and stock-raising interests are suffering. It is impossible to prepare the ground for the fall wheat. A few localities report light rains, but a general rain is needed throughout the state. Three-fourths of the last crop of wheat has been sold. The market is quiet and steady. The corn yield is reduced below last year's crop by the drouth. No damage from frost.

From Minneapolis, Minn.: Considerable rain has fallen throughout the northwest during the week, which caught some wheat in the field, but the temperature was low and little injury was done. Threshers are busy and the result is satisfactory as to yield and quality.

From Milwaukee, Wis.: A light frost Tuesday night did some damage to the late corn and vegetables. The weather generally is fine, with sufficient rain to keep the ground soft enough for cultivation.

PROVISIONS.

On Saturday last dealings in hog products were restricted. Speculation was dull and prices were inactive. The outlook was for a continuance of heavy receipts of hogs and business was quiet. Monday's improvement in prices of grains had an effect on provisions, which also showed more strength. The foreign demand, however, was light, buyers abroad evidently not having much confidence in the stability of existing figures on this side. Tuesday showed a marked decline at the east and less falling away at western points. The home demand was of the most meagre description, and that from abroad was practically nothing. The drop at New York amounted to almost a bear movement. Hogs continued to come in at the west, and doubts were again raised as to whether the bottom had yet been touched. Wednesday, on top of the failures in mercantile circles in this city, was not auspicious for an advance, not to mention the continued absence of orders from the other side and a hand-to-mouth policy from the home trade. Stocks for immediate delivery are but moderate, but no special demand in any direction renders that fact inoperative as to prices. The preceding low figures were maintained on Thursday. Reports of exports of American bacon to this country were used with effect to break the market. Friday saw the market dull and prices practically unchanged.

The Bureau of Statistics report of the total value of exports of domestic provisions during August, 1883, is $12,060,061, as against $6,237,317 in August, 1882. For eight months ended August 31 last the total value of the same was $77,457,670, against $65,922,185 in the like eight months of 1882, a gain in the current year, as to value, amounting to $11,535,485. The total value of the exports of domestic provisions and tallow for ten months ended August 31 last was $84,333,204, against $75,851,679 in the ten months preceding August 31, 1882, showing a gain in value of the same during the past year of over $10,000,000. The total value of exports of dairy products for four months ended August 31 last was $8,686,031, as compared with $7,116,816 in the like four months of 1882.

Exports of hog products from the following places for the week ending September 22, 1883, were:

	Pork, barrels.	*Bacon and hams, pounds.*	*Lard, pounds.*
New York	3,216	4,128,479	4,501,327
Boston	589	976,122	615,178
Portland	..	....	....
Montreal	51	258,000	...
Philadelphia	430	1,010,000	127,375
Baltimore	100	...	129,100
New Orleans	60	800	550
Totals	4,446	6,373,401	5,373,530
Previous week	3,125	8,729,656	5,505,831

The total export of hog product from the abovementioned places from November 1, 1882, to September 22, 1883, was as follows:

	1882-83, pounds.	*1881-82. pounds.*
Pork	42,061,400	41,533,600
Bacon and hams	381,478,169	318,184,963
Lard	259,230,896	221,981,615
Totals	682,770,465	614,700,178

Prices of lard and mess pork at New York during the week were as follows:

	Lard, per lb., October.		*Pork, per bbl., spot mess.*	
	This week.	*Last week.*	*This week.*	*Last week.*
Saturday, Sept. 22...	8.30c.	8.27c.	$12.25	$12.75
Monday, Sept. 24....	8.36	8.16	12.00	12.25
Tuesday, Sept. 25....	8 23	8.34	12.00	12 25
Wednesday, Sept, 26.	8.15	8.25	11.75	12.00
Thursday, Sept. 27...	8.15	8.33	11.50	12 25
Friday, Sept. 28.....	8.20	8.32	12.00	12.00

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: At the present time provisions are still declining a little with a smaller volume of transactions than last week.

From Chicago, Ill.: Provisions are firm, and shorts are covering. Pork is 15@25c. higher. Lard is quiet at 2½@5c. better. Ribs are 5c. higher. Other meats are in fair export demand.

From St. Louis, Mo.: Provisions are quiet on the decline. Hogs are in excellent offering, and active at strong values. Prices of good cattle tend upward, with a lively demand; inferior grades very dull.

From Kansas City, Mo.: The packing-house product is in fair demand, but prices are weak. Shipping grades of cattle are in good supply, and prices are firm. Hog supply is good, and prices are lower. Money is fairly active at 10 to 12 per cent. for prime commercial paper. Eastern exchange is $1 premium.

From Baltimore, Md.: The provisions market is better; the jobbing trade is still active.

THE NEW YORK DRY GOODS MARKET.

The all-absorbing topic of conversation this week has been the failures in the cloth and clothing trade. There has been so much said and written about them that it would be superfluous to do more than mention them. That they had a depressing influence upon the woolen trade is not to be wondered at. In the fore part of the week jobbers were selling very few goods, as more failures were expected and buyers were waiting to see the end of it. With Wednesday, however, business gradually improved and the effect of the suspensions were only momentarily felt. The dry goods jobbers say business for the week has been of the usual good proportions of the weeks previous, possibly not quite as active, but a good, healthy, brisk business. The troubles in the cloth market did not seem to have any effect on the dry goods business.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Dry goods are not so active.

From Boston, Mass.: Almost all kinds of cotton fabrics are moving more freely from first hands, and stocks are considerably reduced. Prices are undergoing a general revision on a rising scale, but the advance is no more than enough to cover the increased cost of production. The jobbing trade is fairly active and as large as last week, but orders are begining to drop off a little. Dress goods for ladies' wear continue to receive particular attention. Woolens for men's wear are moving fairly with a stronger tendency.

From Providence, R. I.: The print cloth market is quiet and steady, sales being moderate. The price of 64s is $3^{11}/_{16}$c., and of 56x60s is $3^{5}/_{16}$c. There are about 111,000 pieces on hand.

From Philadelphia, Pa.: This has been another busy week with most of the local jobbers, who are doing a good trade on orders as well as through personal selections of visiting buyers and the city retailers. Commission houses are getting a good many orders for reassortment, and the general market is fairly active. There is an improved feeling and some advance on certain lines of staple cottons.

From Pittsburgh, Pa.: The dry goods trade continues active and satisfactory. Collections fair.

From Cincinnati, Ohio: The dry goods trade is active. Cottons and woolens are each in good demand in large assortments.

From Chicago, Ill.: Dry goods, millinery and lateral lines are active and orders are large. Heavy sales to buyers in person are reported.

From Peoria, Ill.: In dry goods the sales are reported good, but collections are slow.

From Indianapolis, Ind.: In dry goods trade is good.

From Detroit, Mich.: In dry goods the volume of business is not quite as large as last week, but trade is healthy and quite satisfactory to jobbers.

From Louisville, Ky.: Dry goods is having an active trade in all departments, and houses have difficulty in keeping up with orders.

From St. Louis, Mo.: Dry goods continue in splendid movement at unchanged prices.

From Kansas City, Mo.: Dry goods sales maintain the heavy proportionate increase heretofore reported. Fall purchases still continue, and jobbers' stocks are constantly being replenished.

From Minneapolis, Minn.: The dry goods trade is active and large. Orders are coming in.

From San Francisco, Cal.: The dry goods trade is active. There is a good inquiry from the state and Oregon. Retail trade is improving.

From Baltimore, Md.: The cloth trade appears healthy, and sales for September have been large—much better than anticipated. The dry goods trade is fairly active, and sales for the month have reached satisfactory proportions. Prices are firm.

From Savannah, Ga.: Sales in dry goods are considered fair and demand good. Sales of the week have evidently slackened.

From Galveston, Tex.: The weather has been dry and somewhat cooler than last week. Dry goods jobbing is improving and collections are reported fair for the season.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: There continues to be a satisfactory trade in clothing, and manufacturers are still behind their orders. It is generally admitted that sales for the month will run ahead of September last year.

From Chicago, Ill.: Clothing and boots and shoes are moving fairly, and prices are maintained.

COTTON.

The week's market for spot cotton at New York has been quiet and steady. The takings have been almost entirely by spinners and in small lots; prices remained unchanged until Thursday, when quotations were revised as follows: Good ordinary and below advanced $^{5}/_{16}$c., while other grades advanced ⅛c.; stained middling $^{5}/_{16}$c.; low mid-

dling and strict good ordinary, 3/16c.; good ordinary, 1/2c. New cotton 3/16@1/4c. less than quotations. The quotations for middling upland closed at 10 5/8c., against 10 1/2c. last Friday. The sales for the week were 4,288 bales for consumption and 454 for export, making a total of 4,742 bales, against 13,093 last week. Deliveries on contract amounted to 1,000 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	*Last week.*	*Last year.*
Ordinary	8 3/16c.	8 1-16c.	9 5-16c.
Strict ordinary	8 12 16	8 1/2	9 3/4
Good ordinary	9 5/8	9 5-16	10 9-16
Strict good ordinary	10	9 7/8	11
Low middling	10 1/4	10 3/8	11 3/8
Strict low middling	10 5-16	10 5-16	11 9-16
Middling	10 5/8	10 1/2	11 11-16
Good middling	11	10 7/8	12 1-16
Strict good middling	11 1/4	11 1/8	12 5-16
Middling fair	11 3/4	11 3/8	12 13-16
Fair	12 1/2	12 3/8	13 9-16

STAINS.

	This week.	*Last week.*	*Last year.*
Good ordinary	8	7 1/4	8 15-16
Strictly good ordinary	8 11-16	8 15-16	9 3/4
Low middling	9 3/8	9	10 7-16
Middling	10 1/4	9 15-16	11 3/8

The market for spot cotton closed quiet.

The future market has been steady and inclined to dullness; trading has been light, and the total sales have been only about one-half in volume as compared with last week. Quotations have declined, closing last night 18 points off for near months and 21 for later ones. The heavy failures in the clothing trade during the week seemed to weaken the market, but only temporarily. A full movement is reported at the south, but this fact has but little or no effect upon the market. The total sales aggregate 455,800 bales, against 832,300 last week.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
September	10.35	10.50	11.60
October	10.36	10.52	11.30
November	10.43	10.63	11.08
December	10 53	10.74	11.07
January	10.65	10.85	11.12
February	10.78	10.99	11 22
March	10 92	11.13	11.32
April	11.03	11.24	11.44
May	11.15	11.35	11.54
June	11.25	11.46	11.66

The market for futures closed easy.

The southern markets have been quiet and steady. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year's quotations:

	Week's sales	*To-day.*	*Last year.*
Galveston	11,758	10	11 1/4
New Orleans	13,650	10 1/8	12
Mobile	1,850	10	11 1/8
Savannah	18,000	9 13-16	10 7/8
Charleston	8,089	10	11 1/8
Norfolk	2,485	10	11 1/2
Baltimore	....	..	11 5/8

The total receipts of cotton at the ports since September 1 are 319,032 bales, against 268,229 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	67,892	70,792
New Orleans	95,254	39,283
Mobile	11,531	19,595
Savannah	78,876	76,484
Charleston	58,797	49,089
Wilmington	7,347	7,546
Norfolk	10,265	17,404
Baltimore	838	274
New York	304	1,070
Boston	493	3,516
Philadelphia	2,766	1,218

Below will be found the receipts for each day of the week ending September 28, at eleven leading ports, as compared with last week and the same week last year:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	3,165	5,286	1,277	5,116	3,515	3,256
New Orleans	1,644	8,630	3,762	2,043	6,740	4,109
Mobile	617	1,644	935	253	774	524
Savannah	5,068	6,201	4,408	4,897	4,467	4,365
Charleston	3,231	4,556	1,936	4,257	4,021	4,578
Wilmington	146	888	466	375	574	745
Norfolk	1,748	1,485	1,536	1,927	1,372	1,502
Baltimore	....	....	56	....	....	43
New York	....	...	...	....	40	48
Boston	50	....	49	....	33	40
Philadelphia	40	46	....	878	34	....
Totals	15,709	28,746	14,425	19,746	21,570	19,210
This day last week	11,742	21,878	11,821	15,642	14,087	18,271
This day last year	16,201	27,438	21,616	19,772	24,584	23,196

The total receipts at the ports for the week were 125,053 bales, against 96,398 last week and 136,220 for the corresponding week last year.

The receipts at the twenty-four interior towns usually reported were about 65,179 bales, against 45,132 bales last week and 58,252 bales for the corresponding week last year. The shipments for the week were 40,774 bales, against 30,672 bales last week and 41,110 bales for the corresponding week last year. The stocks for the week were 83,139 bales, against 56,704 last week and 37,629 for the same week last year.

The Liverpool market for prompt delivery uplands has been dull and easier, with a light demand which was freely supplied. Prices dropped a point on Thursday, and closed last evening at 5 3/4d.

The market for futures has been dull, and quotations show a decline of 4 points for near and 3 for later months.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
September	5 50-64d.	5 54-64d.	6 44-64d.
September-October	5 49-64	5 53-64	6 37-64
October-November	5 49-64	5 52-64	6 28-64
November-December	5 49-64	5 51-64	6 23-64
December-January	5 50-64	5 53-64	6 23-64
January-February	5 52-64	5 56 64	6 23 64
February-March*	5 55-64	5 52-64	6 24-64

The market for futures closed easy.

The sales for the week at Liverpool were 49,000 bales (of which 37,000 were American), against 40,000 (of which 26,500 were American) last year. The sales for export were 6,800 bales, against 4,400 bales last year. The sales for speculation were 2,800 bales, against 750 bales last year. The amount forwarded was 13,000 bales, against 3,800 bales last year. The stock in port is 675,000 bales (of which 388,000 are American), against 481,000 bales (of which 194,000 were American) last year. The total imports for the week were 19,500 bales (of which 9,500 were American), against 23,000 bales (of which 20,500 were American) last year, and the amount afloat 71,000 bales (of which 23,000 are American), against 172,000 bales (of which 44,000 were American) last year.

The Manchester market closed dull and lower.

The Havre market closed quiet and steady.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The cotton market is steady and sales are fair. Middling uplands are worth 11c., and middling gulfs 11 1/4c. The stock on hand is small.

From Philadelphia, Pa.: Cotton has continued firm, with a fair inquiry for consumption, but not much trading on speculative account.

From Cincinnati, Ohio: There has not been so much business done in cotton, and prices have, however, advanced under liberal receipts.

From St. Louis, Mo.: Cotton is quiet and a little downward, and not much new crop is arriving yet.

From Baltimore, Md.: Stock of cotton is light and holders are firm, asking full prices. Buyers appear to be holding off, and transactions are very small.

From Wilmington, N. C.: Cotton is in good demand at full figures for foreign shipment.

From Savannah, Ga.: Cotton is still quiet, with some indifference on the part of buyers. Holders are firm for quotations.

From New Orleans, La.: The local cotton market declined until Wednesday, owing to the expectation of large October receipts. The feeling changed Thursday and an upward turn set in, owing to reports of the drouth rendering small streams and tributaries unnavigable. Since Thursday last week, spots dropped 1/8c. to 3/16c. and futures 6 to 8 points, on Octobers to Marchs; Septembers nominal, Mays and Junes off 3 to 4 points. Crop estimates are 5,500,000 to 5,750,000 bales; conservative 5,600,000 bales.

WOOL.

The past week has witnessed a continued good trade in wool in all the seaboard markets. Manufacturers are finding a readier market for their products and are free buyers of raw material to the extent of current requirements and occasionally for future wants. The recent advance of combing and delaine fleeces has been well sustained, and fine clothing wools are fully 1c. and in some cases 2c. higher than a week or ten days ago. The whole market shows an improving tendency, and while not quotably higher than last week is stronger, and business is more easily done at the extremes than asked. The supply of XX clothing fine delaine and quarter and medium washed and unwashed combing is unusually well sold up for the time of year, and few houses have large lines to offer. It is evident from this and the fact that the great bulk of the clip has already passed out of the hands of growers, that a larger amount of wool than usual has this year been bought up by manufacturers in the primary markets. The moderate amount of wool remaining unsold in Ohio, Pennsylvania and other fine-wool sections is generally held at an advance, which makes it impossible for dealers to duplicate stocks for profitable sale at current prices in the eastern markets. The recent failures in the woolen-goods trade in New York have not shaken confidence in the wool trade. The situation is generally regarded as healthy and presents many features of encouragement to sellers.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: There is a good demand for wool, and the market continues to sustain full prices, although buyers pay the recent advance with reluctance. The sales of the week have been 3,713,300 pounds of all kinds. Ohio and Pennsylvania fleeces have been sold at 36@38c. for X and 38@42c. for XX and XXX. Michigan fleeces have been selling at 34@36c. for X, a lot of 100,000 pounds choice selling at 36c., but 35c. is all that can be obtained for good average lots. Combing and delaine fleeces are firm, and have been in demand. Sales of Michigan and Ohio fine delaine at 40@42c. and fine and No. 1 combing at 42@45c. per pound. Unwashed wools are in demand, and have been selling at full prices as to quantity and condition. A lot of 100,000 pounds valley Oregon sold at 27c. and 200,000 pounds eastern Oregon at 25@28c. per pound. California wool has been quiet, and the sales of spring have been confined to small lots. Pulled wools have been in fair demand, and prices are steady. Choice eastern and Maine fleeces have been sold at 40@43c. for super and 25@38c. for common and good. In foreign wool nothing of any consequence has been done.

From Philadelphia, Pa.: An active and improving market is reported for all grades and descriptions. Sales 1,600,000 pounds, including considerable X Ohio clothing at 36@38c., and XX and XX and above at 38@40c., fine delaine at 41@41 1/2c., and medium combing at 43c.

From Cincinnati, Ohio: Wool is more active on demand, principally from eastern buyers.

From Chicago, Ill.: Wool is more active. Offerings are reduced and steadily held. Advanced prices would check sales.

From San Francisco, Cal.: Wool is in large stock. There is some inquiry for scoured for eastern points. The fall clip is coming in.

IRON.

The transactions in American pig iron during the past week have been about the same as reported during the week preceding—in small lots at full prices, and taking place oftener than had been suspected by many in the trade themselves. Prices continue practically at $22 for best grades of American, like Thomas No. 1, although $22.50 has been reported as the asking price for best grades of Crane and Allentown iron. There is, on investigation, however, little reason to call the price above $22. The market is called quiet and the takings steady. Stocks are not increasing. Where several of the smaller furnaces have been blown out, a newer, larger, or more efficient furnace has taken its place, so that the production at the present time quite equals that at the corresponding time in 1882. During the past year southern makers of pig iron have attempted to persuade New York dealers that their product could be handled to advantage in this city for the New England and middle states' trade. Thus far we have been able to learn of no New York houses who have agreed to this view. As a consequence, as reported here, the market for southern irons continues to be restricted to the west, outside of their own particular field. The growth of the southern pig iron industry is attracting considerable attention, but thus far it is not known to have supplanted the Pittsburgh iron (except at some western centers) outside of its own field. A recent decline in the price of southern pig at Cincinnati has called for comment. Special dispatches to BRADSTREET'S, given below, intimate that it may be due to a tendency to overproduction in Virginia. This is not admitted, however, in Tennessee, as in that region furnaces are well sold ahead, are refusing orders, and prices are firmly held. The importations of Scotch pig iron here during the week will aggregate about 1,200 tons, sales being entirely nominal. Prices of Scotch abroad are firm and slightly higher, owing to an advance in freights. Prices here are steady and unchanged on a basis of $23.25 for Coltness. Bar iron is quiet. A fair business only is passing. Prices continue at $2@$2.20 for common, and $2.30@$2.40 for refined. Steel is cheap and in moderately good request. Steel rails are fairly active, although but few new orders were recorded during the week. Prices remain as before.

IRON MARKET REPORTS

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Foundry iron is weaker, but forge is steady. Demand for both is moderate. Muck is under fair inquiry at slightly lower prices; 5,000 tons Bessemer sold at $21. Merchant bars are moving fairly in small lots, but at weakening prices. Plate, tank and shapes are in good demand and steadier. Wrought pipe is under negotiation for large lots. Steel rails are firm for small lots, but buyers refuse to meet sellers' views on large orders.

From Pittsburgh, Pa.: The iron market is in about the same condition as reported last week. Pig is very dull, and last week's prices are fairly maintained.

From Cincinnati, Ohio: Last week there were appearances that the Pantheon iron makers were attempting to force the market. Inquiry to-day develops a more favorable change. Sales last Saturday were 6,000 tons of No. 1 mill coke iron at $17. This apparently relieved whatever pressure there might have been here. Stocks of coke offering from that section are light. The blowing in during the last month of two or three coke furnaces indicate that makers are satisfied with their profits. Sales Thursday in this market foot up nearly 30,000 tons, mostly for immediate consumption. Manufactured iron is in good demand, but makers complain that prices are not profitable.

From Cleveland, Ohio: Pig iron is reported decidedly weaker. A drop in prices at Cincinnati, owing to an increase in southern production, will tend to reduce prices in the west. The only effect on this market is the creation of an uneasy feeling, prices being now fully as low as cost of production will warrant. Railroad freights amply protect this section from competition, being, in fact, almost prohibitory. The demand for bank accommodation still continues.

From Chicago, Ill.: Hardware, iron and nails are freely called for and sales are larger. Stocks are good and the feeling is steady. Sheet iron and tin plate are firm. Pig iron is in fair movement. The supply of Lake Superior charcoal is light and held steadily. Alabama and Tennessee are in larger stocks with more desire to realize, and prices 50c. lower. The market is easy.

From Detroit, Mich.: In iron trade is marked by very dull prices, a low and unprofitable demand, not as good as thirty days ago.

From Louisville, Ky.: In relation to pig iron, the best authorities say that all reports of overproduction or a drop in prices of southern irons are incorrect. Southern furnaces are oversold for several months. Two Alabama furnaces are to-day oversold 20,000 tons, and could sell more but decline further orders. Louisville authorities state that pig irons made in the south are of better quality and better liked than irons made north of the Ohio river, and as they can be produced cheaper are fast crowding out other irons in northern (western) markets. There has been no decline in prices in the last three months. Quotations are remarkably steady, and the demand exceeds the present furnace capacity largely. First-class opinion here claim unfairness in northern reports of the southern iron markets, and it is confidently asserted that northern furnaces are decreasing while those of the south are increasing in number. The general fall jobbing trade is the largest ever done here.

From St. Louis, Mo.: Pig iron is in only moderate demand. Furnaces are beginning to make concessions on big orders. Manufactured iron is firm, with good trade.

From Richmond, Va.: The present production of iron exceeds consumption about one-fifth. Current prices are affected only by orders of consequence, and the market is strongly sympathetic with Cincinnati.

From Birmingham, Ala.: We (the Alice Furnace Company) look upon the market as fully 50c. lower than a month ago.

From Chattanooga, Tenn.: The iron trade here is fairly satisfactory for finished material but dull for pig. No. 1 foundry is not quotable above $19 for large bills. Stocks are low at furnaces, and brokers hold next to none. Nails are lower but not quotable above $2.75. Preparations for a large increase of the output of pig in the southern district are going forward, and furnace men are cheerful, expecting better rates.

COAL.

The movement of anthracite during the week has been fair, although not quite as good as during the preceding three weeks. Dealers now look to October for the activity which they had confidently expected during the current month. Prices are unchanged, continuing of the August variety, except for a few special grades, upon which approximations to the September schedule are obtained. Bituminous is firmer and going into consumption with moderate activity. Stocks, however, of neither variety are disposed to accumulate, and October is looked to for the burden of the domestic demand to come forward. The total product for the previous week was 737,585 tons, against 726,280 tons for the same week of last year, an increase of 1,130 tons. The product for the year, to September

22, is 21,248,846 tons, against 19,280,323 tons for the corresponding period last year, an increase of 1,968,523 tons. In relation to the dispute between the railroad coal miners and their employés, in the Pittsburgh district, as to the rate of wages, the arbiter has decided 3½c. per bushel shall be the wages of railroad coal miners in that district from October 1 to April 1, 1884. The miners wanted 3¾c., and the operators were willing to pay 3¼c., but both sides have accepted the decision and there will be no strike.

COAL MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The coal market is unchanged. Domestic trade is active. The stock on hand is fair. Prices remain the same as last week.

From Cincinnati, Ohio: The low river, the approaching autumn and the demands of factories have reduced the stocks of coal. Prices are firmer.

PETROLEUM.

There has not been much of special interest in the movement of prices of certificates of crude oil during the week. Saturday and Monday witnessed moderate declines, and Tuesday a substantial gain, although the closing price that day was but a fraction above that of Friday of last week. Wednesday and Thursday let the average of Tuesday down again, this, as reported, being due in part to some of the new wells having turned out better than expected.

Friday was characterized by the same inability on the part of prices to make a pronounced move up or down that had been noticed throughout the week. The antagonizing forces which produced this practical deadlock were the undoubted new production by new and redrilled wells on the one hand and the excess of shipments of petroleum from the regions, as compared with receipts of oil from the wells at the pipe-line tanks, on the other. The first named tended to produce lower prices, and the latter, higher. And thus the situation remains unchanged. At the opening on 'change yesterday $1.14½ was bid, and at the close at noon $1.15⅜. After lunch hour the opening bid was at $1.15½, and this was followed at once by $1.15⅝. At the close the price bid was $1.15⅞, as compared with $1.15¾ at the close on Friday night of last week. The market closed firm.

The following shows the fluctuations in prices of certificates of crude petroleum during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, September 22.....	1.15⅞	1.16½	1.13½	1.14⅛
Monday, September 24.....	1.13⅞	1.14	1.13	1.13⅛
Tuesday, September 25.....	1.13¼	1.15⅜	1.13⅛	1.15⅞
Wednesday, September 26 .	1.16	1.16⅜	1.15⅜	1.15⅜
Thursday, September 27....	1.15⅜	1.15⅞	1.14¼	1.14½
Friday, September 28.....	1.14½	1.15⅞	1.14½	1.15⅞

The market for refined oil has eased off during the week, and from an attitude of indifference to buyers, with prices stiffly held at 8¾c. per gallon, supplies can now be obtained at 8½c. when desired. The movement abroad from New York has been fair. That from other ports has been restricted by a scarcity of vessels in addition to other causes. Case oil has continued quiet at 9¾c @ 9⅞c. for plain brands. On Saturday naphtha advanced to 5½c. for prime city, at which figure it has since quietly remained.

Prices for petroleum and petroleum products, with comparisons, on Friday evenings during the past month have been:

	Aug. 31.	*Sept.* 7.	*Sept.* 14.	*Sept.* 21.	*Sept.* 28.
Certih's, crude..	1.08⅝	1.08	1.11⅜	1.15¾	1.15⅞
Refined, 110°....	7¾	8	8⅛	8¼	8⅜
Refined, 70°.....	7⅞	8⅛	8¼	8⅜	8½
Crude, in bbls...	7¼@7⅞	7⅜@7⅞	7½@8	7½@8	7½@8
Case, plain.....	9¼	9⅜	9⅜	9⅝	9¾
Naphtha.....	5¼	5¼	5¼	5¼	5½

The exports of petroleum from the United States, crude equivalent, for the week ending Sept. 22, was 15,852,765 gallons, against 14,473,599 in the preceding week. The total export from the United States since January 1 was 466,867,222 gallons, against 465,073,060 gallons in the corresponding portion of 1882, a gain in the current year of 1,794,162 gallons. The total exported from New York city during the week ended Sept. 22 was 12,480,930, and during the year, to that date, 383,909,337, against 367,547,513 gallons in a like portion of 1882. This shows an increase in shipments on the year from New York alone, as compared with 1882, of 16,361,824 gallons (crude equivalent) as against an increase from the country at large of only 1,794,162 gallons.

It is worthy of note that for the first time in several months the total exports of petroleum (crude equivalent) from all ports has been in excess of like shipments in 1882. In the early portion of last year the exports of oil were very heavy, but they subsequently fell away again. In the current year shipments, after first exceeding last year's exports, fell considerably behind the record, and now by the aid of the liberal shipments from New York city the total once more comes to the front as against 1882 to a like date.

The Bureau of Statistics at Washington reports that the total July exports of petroleum (actual number of gallons) was 47,699,387 gallons, valued at $4,179,237, against 60,914,823 gallons, valued at $5,128,313, in July, 1882. The total for seven months in 1883 (ending July 31) is given at 295,311,400 gallons (actual, all products), valued at $26,688,345, against 306,087,675 gallons, valued at $27,247,416, in seven months of 1882. The following shows the Bureau of Statistics' report of the actual number of gallons of petroleum and petroleum products exported from the United States from January 1 to August 31, as compared with the custom-house reports of the same prepared for the trade reduced to the basis of crude equivalent for the years named:

Reports of exports petroleum.	*7 mos.* 1883.	*7 mos.* 1882
Bureau Statistics—actual No. gallons..	295,311,400	306,087,676
Custom-house reports—crude equivl'nt.	350,207,068	377,856,825
Apparent discrepancy.....	54,895,668	71,769,149

It is needless to add, however, that the "apparent discrepancy" is approximately "apparent" only, "the trade" preferring to calculate the exports on the basis of equivalent number of gallons of crude oil, and which, as just shown, does not necessarily give the figures in actual gallons exported.

OCEAN FREIGHTS.

The striking feature of the ocean freights market at New York during the past week, or the greater part thereof, has been the abundance of room on the berth and moderate rates asked therefor, while offerings were light, and, on the other hand, the scarcity of tonnage available, the demand therefor, particularly for petroleum, and consequent firmness in rates. Later in the week there were notably free shipments of grain by steamer, and rates hardened a trifle. The main pressure to go abroad, however, has been from petroleum, the only persistently steady export for some time past. Grain during the greater part of the week has been practically ignored by foreign buyers, and even cotton has ceased to move out. This, as stated, combined to weaken rates for room on the berth. Charters were maintained through scarcity of unengaged vessels in port and the steady pressure of petroleum to go abroad.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: There has been a moderate business in petroleum and miscellaneous charters at steady rates, but grain tonnage has been neglected and closes weak in absence of demand, although there are few vessels in port seeking cargoes.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The fall trade is steadily drawing to a close, but factories have enough orders on hand for a few weeks more. Salesmen are out with samples of spring work, and a few contracts have been made with Boston jobbers. The season is closing up a little earlier than usual, but a spell of wet and cold weather would probably cause a renewed demand for heavy goods. Shipments have run considerably ahead of last year, and the trade as a whole has been satisfactory. There is every prospect of an early opening of the spring trade. Shipments from Boston for the week, 67,802 cases.

From Savannah, Ga.: Boots and shoes show a little animation, but sales are not reported as heavy as last week.

From Chicago, Ill.: Leather is quiet and orders are small. Calfskins are firm, and the supply is light. Sole is ample and steady. Hides are dull and arrivals good.

WHISKY MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Whisky is unchanged.

From Louisville, Ky.: Whiskies have a steady and firm feeling, and are improving in distribution.

TOBACCO REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Tobacco has fluctuated during the week. There appears to be an impression that the frost last week caught the burley, but inquiry to-day fails to justify such an impression.

From Louisville, Ky.: Leaf tobacco is strong and active throughout; leaf tobacco quotations are being advanced.

From St. Louis, Mo.: Tobacco is active and higher, but the sales are mostly private.

LUMBER.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio. Lumber and builders' materials are in good demand and stocks light.

From Minneapolis, Minn.: There is more lumber moving, with a steadier market. A slight improvement in the stage of water in the upper streams is reported.

NAVAL STORES.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: Naval stores are held for better prices, and business is fully up to that of average years.

From Savannah, Ga.: The naval stores market is without animation, and spirits are dull with few buyers for immediate wants only. Prices are poorly supported. The stock on hand is 15,028 barrels of spirits of turpentine and 82,938 barrels of rosin.

THE HEMP CROP.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Hemp is in fair demand. From the growing regions we learn that cutting is progressing favorably, with prospects for a better crop than last year.

PACIFIC COAST HOPS.

[By Telegraph to BRADSTREET'S.]

From San Francisco, Cal.: The estimated yield of the hop crop on the Pacific coast is 40,000 bales, being 15,000 bales increase over last year. The new crop is coming forward quietly, and is fair in quality; 1,150 bales of old crop remain in first hands. The market is dull, and buyers and growers are apart.

SPECIAL CHICAGO TRADE REPORT.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Stocks of sugars are reduced and held firm, with the tendency higher. Coffees are strong. Mackerel are scarce and higher, and orders are larger. Lake fish are steady, and the supply is good.

SPECIAL NEW ORLEANS TRADE REPORT.

[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: There is no stock of sugar or molasses here. First receipts of new sugar expected next week. A conservative estimate of the crop is 200,000 hogsheads. Rice is dull and weak. Receipts and stock are large. Fair to prime is 5 to 5½. Coffee is strong and the supply small. Fair 10¼. Cotton-seed products are dull, owing to the small supply of new stock.

TRADE EMBARRASSMENTS.

The feature of the week in commercial circles has been the large failures in the cloth and clothing trades in the order named: Bronner & Co., Siedenbach, Schwab & Co., F. Mayer & Co. and Levy Brothers & Co. These failures hinged one upon another on account of the close relations of the firms and their exchange of paper. They were virtually the result of trying to carry on such an enormous and extended business in that way and the locking up of surplus capital in real estate which, although valuable, could not be made immediately available to meet the emergency. Outside of these failures there were none elsewhere of any great importance There were 164 failures in the United States reported to BRADSTREET'S during the past week, 13 less than the preceding week, 9 less than the corresponding week of 1882 and 52 more than the same week of 1881. Compared with the previous week the middle states had 31, a decrease of 7; New England states 24, a decrease of 13; southern states 23, an increase of 2; western states 50, a decrease of 2; Pacific states and territories 36, an increase of 7; Canada and the Provinces 31, an increase of 5. In the principal trades they were as follows: Grocers 31; general traders 24; liquors 21; clothing 9; manufacturers 8; shoes 7; hardware 6; tobacco and cigars 5; lumber 5; furniture 4; hotels and restaurants 4; bakers and confectioners 4; grain and flour 4; dry goods 4; jewelry 4; drugs 3; stationers 3; carriages 3; hats 2; fancy goods 2.

ALABAMA.

MOBILE.—C. F. Horst & Brother, liquors, have failed. Liabilities $2,000; assets $300.

ARIZONA.

TOMBSTONE.—A. T. King, liquors, is reported to have left town.

TOMBSTONE.—Joseph Lenoir, furniture, has assigned to Leo Goldsmith.

CALIFORNIA.

FRESNO.—J. Brownstone, general store, has called a meeting of creditors.

GILROY.—Henry Daily, liquors, has gone into insolvency.

GRASS VALLEY.—Frank Morse, mining, has filed a petition in insolvency.

MANCHESTER.—Savage & Co., general store, have assigned.

MOUNT VIEW.—Thomas Chester, laundry, is reported to have left town.

OAKLAND.—Eugene Taylor, liquors, has been closed by creditors.

SACRAMENTO.—Bartels & Gregory, liquors, offer 25 cents.

SACRAMENTO.—A. McIntosh, liquors, has been closed by attachment.

SAN FRANCISCO.—Michael Becker, baker, has filed a petition in insolvency.

SAN FRANCISCO —C. J. Holmes, dye works, is advertised to be sold out by the sheriff.

SAN FRANCISCO.—J. McMahon, dry goods, has assigned,

SAN FRANCISCO.—Robert A. Marden, photographer, is in insolvency.

SAN FRANCISCO.—Sophie Molitor, liquors, has sold out and been attached.

SAN FRANCISCO.—O'Connor, Wo Hah & Co., contractors have failed.

SAN FRANCISCO.—S. Rosenfeld, corsets, has been sold out by the sheriff.

SAN LUIS OBISPO—Sittenfeld & Schlesinger, general store, have filed a petition in insolvency.

SUSANVILLE.—M. Nathan, clothing, has been attached and closed.

TULARE.—D. McDonald has gone into insolvency.

VISALIA.—L. A. Johnson & Co., hotel, have called a meeting of creditors.

VISALIA.—William R. Ray, varieties, has filed a petition in insolvency.

WESTPORT.—John Erickson, liquors, has sold out; no assets.

COLORADO.

DEL NORTE.—Edward Heitler, general store, has settled with his creditors and will resume.

DEL NORTE.—T. A. McConnell, grocer, has assigned to Thomas A. Good. Liabilities about $2,000; assets $1,200.

GRAND JUNCTION.—Sarah Young, saloon, has been attached.

LEADVILLE.—Jennings & Smith, saloon, have assigned.

LEADVILLE.—Mrs. C. H. Jones, grocer, has assigned.

CONNECTICUT.

ROTON POINT.—A. R. Ackert, hotel, has assigned.

BRIDGEPORT.—J. T. Patterson, proprietor of The Bridgeport Organ Company, has obtained an extension of six, twelve and eighteen months.

DANBURY.—Byron Dexter, hat manufacturer, has failed.

DANBURY.—D. W. Green, grocer, has assigned.

DAKOTA.

ELLENDALE.—The Dickey County Bank has assigned. Liabilities $10,000; assets $2,500.

WALHALLA —Loring & Mayo, general store, have been attached for $6,000 in favor of P. H. Kelly and others.

DISTRICT OF COLUMBIA.

WASHINGTON.—George McCarthy, shoes, has assigned.

GEORGIA.

ENTERPRISE.—Booker & River, general store, have assigned.

SAVANNAH.—G. S. Van Horn & Co., grocers, have assigned to C. H. Dorsett.

IDAHO.

BELLEVUE.—Martin Madel, clothing, has assigned, preferring Mr. Lippman for $10,000, who takes all the assets. Other liabilities $12,000.

RATHDRUM.—Thomas Ford, general store, has failed. Liabilities $12,000; assets $10,000.

ILLINOIS.

BENTON.—Montgomery & McGuire, general store, have assigned, and are settling at 75 cents, 40 cents cash and the balance on time.

CHICAGO.—H. F. Tripp & Co., wholesale jewelers, have been closed by the sheriff.

CHICAGO.—Upham & Purington, tailors, offer 50 cents, one-third cash, and the balance in three, six and nine months.

COLFAX.—William T. Tucker, grocer, has been closed by the sheriff. Liabilities $1,200; assets $300.

DANVILLE.—J. A. Webster & Co., grocers, have failed. Liabilities $3,412; assets $650.

STONE FORT.—C. S. Blackman, grocer, has been closed by creditors.

STONE FORT.—T. E. Slankard, general store, has been closed by the sheriff.

INDIANA.

BLOOMINGDALE.—D. G. Carter, dry goods, has been closed by the sheriff.

EVANSVILLE.—Jacquess Brothers & Co., wholesale dry goods, have failed. Liabilities $100,000; assets $50,000. The firm was in business many years.

FORT WAYNE—Rogers, Lewis & Co., wholesale carriage and saddlery hardware, have been placed in the hands of a receiver.

GREENBUSH.—Hindman & Son, grocers, have assigned.

HARVEYSBURGH.—F. M. Hathaway, general store, has assigned to W. H. Lewis.

INDIANAPOLIS.—Clement Zbinden, cigars, has assigned.

NEW HAVEN.—Burgess, Coleman & Co., hub and spoke manufacturers, have failed.

SULLIVAN.—E. H. Leman, grocer, is reported to have left town.

VEEDERSBURG.—Marshall Nixon, lumber, has assigned.

WALLACE.—J. R. Murphy, general store, has assigned.

IOWA.

AMES—M. W. Quick, tinware, has assigned. Liabilities $2,000; assets $800.

APLINGTON.—C. M. Cotton, hardware, has failed.

DES MOINES.—J. A. Wilson, carriage maker, has assigned. Liabilities $4,596; actual assets $3,500.

STRATFORD—Blain & Lindroth, general store, have failed.

KANSAS.

LEAVENWORTH.—David Staiger, cigars and tobacco, has had a mortgage foreclosed.

KENTUCKY.

LOUISVILLE.—Patrick Sharkey, saloon, has been attached and is out of business.

LOUISVILLE.—Execution has been issued against John A. Specht, saloon, for $1,500.

PADUCAH.—A. J. Leigh, grocer, has assigned.

PRINCETON.—L. M. Longshaw, banker, has assigned. Liabilities $25,000; assets $31,000. It is thought he will be able to pay in full in about sixty or ninety days. He was also the capitalist of Myers & Longshaw, woolen mills.

LOUISIANA.

NEW ORLEANS.—Forcheimer Brothers, wholesale grocers, are advertised to be sold out by the sheriff.

MAINE.

HOULTON.—Silas W. Tabor, blacksmith, is reported settling at 40 cents.

LA GRANGE.—Creditors of F. L. Hackett, general store, are accepting 15 cents.

LISBON.—J. M. Corbett & Son, general store, have gone into insolvency.

MOLUNCUS.—M. Johnson, general store, has assigned. Liabilities $27,000; nominal assets $47,000. It is thought he will be able to pay in full.

MARYLAND.

BALTIMORE.—Application has been made to force J. W. Esler & Co., oils, into insolvency.

BALTIMORE.—Louis Oest, butcher, has filed a petition in insolvency. Liabilities $2,746.

EAST NEWMARKET.—J. H. Andrews, general store, has assigned.

TANGIER.—B. T. J. B. Jones, general store, offers 50 cents Liabilities about $3,200; nominal assets $2,500.

MASSACHUSETTS.

BOSTON.—Bartlett Brothers & Co., flour and grain, have failed. Liabilities reported at $25,000, largely to banks.

BOSTON.—John J. Hillman, silver plater, has failed and will settle in insolvency. Liabilities about $6,000, of which $1,550 is secured; nominal assets $1,840.

BOSTON.—Benjamin Howard has waived his mortgage and guaranteed to Messrs. Bean and Stevens, of the late firm of Howard, Bean & Stevens, in which his son was a partner, that he would pay creditors in full, and it is understood he is doing so as the claims become due.

BOSTON.—Joshua F. Lamson, flour and grain, offers 35 cents—8 cents in three months, 9 cents in six months, 9 cents in nine months and 9 cents in twelve months, all indorsed.

BOSTON.—Morse & Barrett, hides, have failed and assigned to T. King. Their indorsements and notes given to Young, Thayer & Co. amount to $37,653. Direct liabilities $33,650; contingent $34,845; nominal assets $24,533, of which $15,000 is doubtful accounts, $3,070 notes and $6,463 merchandise.

BOSTON.—Rice, Jones & Hammond, manufacturers of wooden boxes, have failed and assigned. Liabilities said to be about $48,000, of which $4,000 is secured by mortgage on machinery and teams, the machinery and teams being assessed for $17,000, and the other assets consist of lumber, which cost about $10,000, and $3,000 in accounts. The firm recently received a large order for packing-boxes for petroleum, and, to guard against interruption of the firm's business by attachments, an assignment was made.

BOSTON.—C. O. P. Ross, shoes, has failed and gone into insolvency. Liabilities about $3,400; nominal assets $2,100.

BOSTON.—Jerome Savage, jeweler, has failed and gone into insolvency.

BROCKTON.—Henry Cross, shoe manufacturer, is reported to have failed.

GLOUCESTER.—A. M. Glidden & Co., grocers, have assigned.

HAVERHILL.—Jona Dow, hotel, has failed.

HOLYOKE.—Carpenter & Holmes, bottlers, have been closed by creditors.

HYDE PARK.—A. & E. Simpson, tea store, are in insolvency. Liabilities about $1,800; assets small.

NATICK.—William Richards & Co., drugs, have assigned. Liabilities about $10,000, of which $3,700 is secured by mortgage on stock. They will settle in insolvency.

NORTH ADAMS.—Harris & Scott, books, have been closed by creditors. Liabilities about $1,100. It is thought they will pay about 50 cents.

NORTH ATTLEBORO.—John Betz, tailor, owes $3,300; nominal assets $900.

ROCKPORT.—George W. Currier has filed a petition in insolvency. Liabilities $2,000, of which $500 is secured by mortgage.

SALEM.—Roberts & Biglow, provisions, have gone into insolvency.

SOMERVILLE.—S. Armstrong & Co., coopers, offer 50 cents.

SPRINGFIELD.—F. J. Johnson, stable, has been attached.

WALPOLE.—At a meeting of creditors of Bradford Lewis & Son, cottonwaste, the statement showed liabilities about $59,000, of which $5,000 was secured by realty mortgage. The assets consist of factory property and plant, which cost about $35,000, and stock and accounts $11,000. A committee was appointed, and business will go on without interruption.

WEBSTER.—J. D. Kingsbury, market, is settling at 50 cents, and insolvency proceedings have been stopped.

WORCESTER.—L. C. Clark, organ case manufacturers, have been attached. Liabilities about $24,000; nominal assets $14,000; actual assets $7,000.

WORCESTER.—Thomas H. Townsend, grocer, has failed. Liabilities $2,600; nominal assets $700.

MICHIGAN.

ADDISON.—E. M. Wilson, grocer, has been closed by creditors.

ALPENA.—William Bloom & Brother, grocers, have assigned to S. L. Carpenter.

ANDERSON.—E. J. Boynton, general store, has been attached.

CUSTER.—The Custer Stave and Heading Company has been attached.

DETROIT.—W. J. Green & Co,, flour, have failed.

DETROIT.—The Hammond Medicine Company has failed.

HOLTON.—E. R. Burrows & Brown, lumber manufacturers, have been attached.

LUDINGTON.—C. H. Fralick, flour and feed, has been attached.

MINNESOTA.

DULUTH.—Charles Chambers & Co., grocers, have assigned.

MINNEAPOLIS.—N. P. Liljengren, furniture, has been closed out on a mortgage.

MISSISSIPPI.

MERIDIAN.—S. Loeb & Co., general store, have failed and been attached.

MISSOURI.

CARL JUNCTION.—The Marshall Mercantile Company has been attached. Liabilities $7,000; preferred claims $2,000.

JONESBURG.—P. Buchanan & Co., stoves, have failed and offer 75 cents, which has been accepted by nearly all the creditors.

ST. LOUIS—Jacobus & Wiener, wholesale notions, have assigned. Assets reported at $35,000.

ST. LOUIS.—The Price & Austin Tobacco Company has been protested. Liabilities $12,000; assets $8,400.

MONTANA.

HELENA.—C. L. Vawter & Co, agricultural implements, have assigned.

TOWNSEND.—Bullock & Co., lumber and furniture, have been attached.

NEBRASKA.

BLAIR.—M. Robinson, jeweler, is reported to have left town.

LINCOLN.—G. H. Lighty, confectioner, has failed.

ODELL.—L. D. Whittaker, saloon, is reported to have left town.

OMAHA.—W. E. Hahn, stationer, has been closed by mortgagee.

PALMYRA.—W. H. Botsford, hotel, is reported to have left town.

NEW HAMPSHIRE.

MANCHESTER.—The liabilities of Goodwin Brothers, wheel manufacturers, are now reported at about $12,000; assets $5,000.

MANCHESTER.—The unsecured property of Jacob Morrell, grocer, has been sold out by the sheriff for $100, and he goes out of business. Liabilities $1,000. There was a mortgage on personal property for $600.

MANCHESTER (Isola.)—De Saulniers & Co., shoes, are advertised to be sold out by the sheriff. Liabilities about $1,500; assets $500.

SALEM.—Gilman C. Dow, general store, has been closed by attachment.

NEW JERSEY.

CAPE MAY.—Stillwell Hand, grocer, has been closed by the sheriff.

SEA ISLE CITY.—Whitney & Co., general store, have failed.

NEW MEXICO.

DENING.—Louis Altman, cigars, has assigned.

LAS VEGAS.—Frank Sturgess, saloon, has been closed on chattel mortgages.

SILVER CITY.—Dennis & Conner, lumber, have turned all their property, estimated at $30,000, to secure $14,000 to C. P. Crawford.

NEW YORK.

BROCKPORT.—The schedules of Daniel Paine, furniture, show liabilities $14,053; nominal assets $26,001; actual assets $20,869.

BROOKLYN.—The Caledonia Shoe Company has been sold out by the sheriff on a judgment for $828, and the sale did not realize enough to satisfy it. Liabilities about $1,800.

BROOKLYN.—Joseph J. Hillis, grocer, has assigned.

BUFFALO.—N. D. Batterson, manufacturer of berry and fruit crates, has been attached.

CANISTEO.—Baker & Vandelinder, wagon manufacturers, have indorsed heavily, and are protecting their own creditors.

CANISTEO.—Mary M. Summer, grocer, has assigned.

MECHANICSVILLE.—Arnold Palmer, clothing, is reported to have assigned.

NEW YORK CITY—Bronner & Co., retail clothing, assigned on the 22d inst. to Abraham Smith, giving preferences for $165,852 as follows: August, Bernheim & Bauer $38,337; August Brothers $28,202; Emma J. Becker $16,000; Samuel Goodman $18,400; M. Beeber & Co. $28,500; Caroline Bronner $8,650; Bronner Brothers $9,762; Pacific Bank $10,000; Joseph J. Schiffer $5,500; H. W. Cane $2,500. It is said that they preferred all their creditors except Levy Brothers & Co. and A. Levy & Brother. Levy Brothers & Co., by a subsequent arrangement, at once took all the assets of Bronner & Co., and agreed to pay off the preferences and give security for the debts thus assumed. The Bronner Clothing Company was incorporated on the 24th inst. with a capital stock of $200,000, which continues the business. Messrs. Bronner and Schiffer state that having a copartnership quarrel they assigned to bring matters to a quick close, and the business was sold out to the Bronner Clothing Company on the 24th inst., with which they remain. Bronner & Co. owed $249,000, which they will liquidate, and, it is said, pay in full. They began business March 1, 1882, claiming a capital of $100,000.

NEW YORK CITY.—Charles W. F. Dare, baby carriages, assigned on the 25th inst. to Charles A. Fuller, giving preferences for $29,262, the largest being to Benjamin L. Ludington $6,800; Chester N. Johnson $5,751; North River Bank $4,347; Oscar Barnett $3,000. He is said to have indorsed largely for J. S. Ludington, lumber, who recently assigned.

NEW YORK CITY.—Engel & Clark, wholesale jewelry, assigned on the 25th inst. to Julius Kaufman, giving preferences for $9,264. Liabilities $42,253; nominal assets $23,949; actual assets $15,482.

NEW YORK CITY.—Levy Brothers & Co., wholesale clothing, assigned on the 25th inst. to Solomon H. Kohn, giving preferences for $707,985, of which $600,652 was on notes and $107,333 for borrowed money. No merchandise debts were preferred. The preferences are as follows for borrowed money: Josephthal Brothers $10,000; A. Steinauer & Co. $9,950; Louis Stein $3,500; L. Haas $8,000; Louis Cohn $3,000; A. Kohn $2,000; Lesser Brothers $2,000; S. Rawitzer & Co. $11,000; Rawitzer & Brother $4,983; Julius A. Weil $2,000; J. House $4,000; J. Rodecker & Co. $10,000; F. Greenwood $5,500; O. M. Bogert & Co. $5,000; David May $1,400; Solomon H. Kohn & Brother $15,000; M. Silverstein $10,000. On notes: Stich Brothers $34,607; A. Levy & Brother $251,898; M. Samter & Sons $15,820; Frankel & Butler $55,586; Marcus Cane $1,016; J. Rodecker & Co. $5,474; Hermann, Sternbach & Co. $62,438; Bronner & Co. $84,096; Levy Brothers & Co. (indorsed by A. Levy & Brother) $55,000; Sanger Brothers $14,599; M. Kohn & Co. $12,989; Lockwood Banking Company $1,143; Nathan, Littauer & Co. $5,000; Henry Herrman $21,600. The liabilities are estimated by the firm at $1,500,000, and nominal assets $2,000,000, consisting of stock, outstandings and real estate. The failure was brought about by the assignment of F. Mayer & Co., to whom they had lent accommodation notes for upward of $300,000. They were largely interested in Bronner & Co., and upon the latter's assignment they took his stock, assuming the payment of his preferred debts. They owned the building occupied by Bronner & Co., which cost $300,000, and also their store premises No. 472 Broadway, valued by them at $150,000. The business has been established since 1864, and the firm have pushed ahead rapidly during the past five years. It is said they may be able to resume under an extension with good indorsed notes.

NEW YORK CITY.—F. Mayer & Co., wholesale cloths, assigned on the 25th inst. to Simon Danzig, giving preferences aggregating $810,513, nearly all for money loaned or on notes and indorsements of the firm and accommodation paper made for the firm's benefit by various parties. The principal preferences were as follows: Lewis Brothers $55,612; M. Feuchtwanger & Co. $81,147; Pomeroy & Plummer $179,934; W. L. Pomeroy individually $66,529; Leopold Mayer $47,692; Mack & Co., St. Louis, $47,842; Simon Mack & Co. $63,800; James T. Swift & Co. $25,000; Martin Claybrugh $11,000; Rindskopf & Brother $25,000; David Mayer $15,170; Mark Samter & Sons $9,902; Einstein, Longini & Co. $12,129; Rosenberg & Co. $12,469; Levy Brothers & Co. $31,582; Isidor Rosenheim $35,000. The failure was attributed to the failure of Siedenbach, Schwab & Co., both firms having exchanged paper to a large amount, and banks and private persons immediately called upon F. Mayer & Co. for loans against what they had deposited as collateral other firm's paper, one of which had already failed and others were likely to follow. The failure of F. Mayer & Co. was a great surprise, as the house was recognized as the head of the Jewish woolen trade of the country, had always stood high in trade circles, and was supposed to have a large capital. The business was established in 1857, and since 1874 has been carried on by Ferdinand Mayer and his son. The senior partner was a large operator in real estate. He owned the elegant apartment houses called the Strathmore, Newport, Interlaken, Adelphi and Adelphi Hall, the building at the southwest corner of Bowery and Hester street, and other property, valued altogether at about $1,250,000 and mortgaged for only $130,000, all of which he has assigned to the creditors. The liabilities of the firm, both direct and contingent, are estimated at from $1,500,000 to $2,000,000, and the assignee is of the opinion that there are sufficient assets to pay in full. The nominal assets consist of the real estate $1,200,000; stock $350,000; and accounts receivable $400,000; total $1,950,000. These figures are approximate and were given by the assignee to the court to fix the provisional bond for $500,000. The assignee gave a provisional bond for $500,000 on the 28th inst., the sureties being W. L. Pomeroy, Meyer Feuchtwanger, Henry Newman and Joseph Danzig.

NEW YORK CITY.—The schedules of Vernor C. Murray, restaurant, show liabilities $5,486; nominal assets $5,910; actual assets $110.

NEW YORK CITY—Mortimer Opler, manufacturer of worsted and lace goods, assigned on the 27th inst. to Charles Strauss, giving preferences to Ludwig & Co. $1,761; Minnie Opler $375.

NEW YORK CITY.—H. Rothstein's Sons, manufacturers of cloth caps, assigned on the 28th inst. to Nathan Zemansky, giving preferences for $3,012, of which $1,500 was to the Tradesmen's National Bank.

NEW YORK CITY.—Siedenbach, Schwab & Co., manufacturers of clothing, assigned on the 24th inst. to William Salzbacher, giving preferences aggregating $118,297, of which $58,401 was on notes indorsed by William Frankenthal $5,350; Friedman Brothers $10,000; William Siedenbach $11,031; S. Hedelsheimer $9,780; Isidor Valentine $10,340; B. Blum $2,900; accommodation paper made by F. Mayer & Co. $44,441; Siedenbach & Co., Philadelphia, $15,000 on due bills. They state they have a stock on hand of about $175,000 and good collectable accounts $250,000, and estimate the value of their assets at $425,000. Of their liabilities $270,000 is paper drawn by them and indorsed by Ferdinand Mayer for his accommodation, which was the primary cause of their failure. Besides this they owe $430,000, making a total indebtedness of $700,000. The firm have had an excellent reputation in the trade. They started originally at Memphis, Tenn., during the war, and a few years later began manufacturing in New York. They gave up the Memphis business about two years ago and removed it to St. Louis, which they also gave up on January 1, 1883, to Jacob and Isaac Schwab, who retired from the New York firm. The assignee on the 28th inst. gave a provisional bond for $150,000, the sureties being James Seligman and Emanuel Lehman.

NEW YORK CITY—Stephens & Kellam, iron pipe and fittings, assigned on the 27th inst. to John J. Spowers, Jr., with preferences. Liabilities $50,000; assets about $35,000. The assignee says they are out to the extent of $17,000 by their business with E. J. Dunning, Jr., the note broker.

NEW YORK CITY.—Toddings & Mosher, successors to Toddings, Colt & Mosher, printers, assigned on the 28th inst. to William I. Washburn, giving preferences for $1,931. A month ago they claimed assets $12,000 and liabilities $7,000. The assignment is ascribed to a partnership difficulty.

NEW YORK CITY.—The schedules of Stephen Weickert, shoes, show liabilities $2,484; nominal assets $1,529; actual assets $905.

PHILADELPHIA.—W. T. Holmes & Co,, general store, have assigned, giving preferences for $17,305. Liabilities $23,000; assets about $15,000.

SYRACUSE.—Mrs. M. N. Bunnell, millinery, offers 40 cents.

WELLSVILLE.—Anderson, Otis & Co., hardware, dissolved on the 18th inst., and L. S. Anderson, the senior partner, assigned on the 22d inst. It is thought that he took this step to gain time, and will probably pay up.

NORTH CAROLINA.

GUM NECK.—N. E. Owens, general store, has failed.

WILSON.—Thomas H. Selby, liquors, has assigned.

OHIO.

ARCANUM.—H. E. Spangle, baker, has assigned.

CINCINNATI—Foppe & Longland, shoes, have assigned to Joseph Molker, and Mr. Longland has assigned individually.

CINCINNATI—George Gildea, shoe manufacturer, has assigned to Louis Utz.

CINCINNATI.—H. Kassen & Co., shoes, have assigned to Powell Crossley.

CINCINNATI.—Schuette & Becker, furniture manufacturers, assigned on the 24th inst. and previously gave a chattel mortgage for $2,580.

CLEVELAND.—Fovargue & Neuman, brewers, have assigned to J. H. Schneider. They previously gave chattel and realty mortgages for $3,000 each.

DEFIANCE.—J. M. & M. E. Ryder, grocers, are reported closed under a chattel mortgage.

TOLEDO.—Crabbs, Miller & Co., commission, have suspended.

OREGON.

PENDLETON.—J. E. Carden, cigars and tobacco, has been attached.

PORTLAND.—N. Kofoed, liquors, has been sold out by the sheriff.

PENNSYLVANIA.

ALLEGHENY—George P. Barber, planing mill, has had execution issued against him for $9,600.

ALLEGHENY CITY.—W. C. Kurch, wagon maker, is advertised to be sold out by the sheriff.

ALTOONA.—The liabilities of D. F. Beegle, jeweler, are $2,661; preferred claims $1,296; nominal assets $1,600.

ALTOONA.—Execution against H. R. Hooper, drugs, for $1,200, in favor of his sister, has been placed in the hands of the sheriff.

DALLAS.—James Garrahan & Co., general store, has been sold out by the sheriff.

HARRISBURG.—Philip Dougherty, grocer, has been sold out by the sheriff.

PHILADELPHIA.—W. E. & N. H. Camp, cracker and cake bakers, who assigned in November, 1882, are said to have made, through the assignee, an offer to compromise at 5 per cent. cash, and 5 per cent. in six months. Liabilities are said to be $390,000.

PHILADELPHIA.—George M. Hess, hats, was sold out by the sheriff. Everything was bought in by his sister, Mrs. Carrie P. Miller, who held judgment against him for $1,600 for borrowed money. Mrs. Miller will carry on the business in her own name, he acting as manager. His liabilities amounted to about $4,000.

PHILADELPHIA.—I. G. Miller & Co., bookbinders and printers, who were advertised to be sold out by the sheriff on the 27th inst., are making arrangements to settle with creditors, and sheriff's sale has been postponed.

PHILADELPHIA.—John B. Nelson, manufacturer of cotton goods, has been closed by the sheriff. There is a mortgage of $35,000 against the mill. Execution was issued on mortgage bond judgment of $15,600.

PHILADELPHIA.—The Reen Lithographing & Printing Company was advertised to be sold out by the sheriff.

PHILADELPHIA.—The sheriff's sale of Elias Rosenweig, hats, realized about $1,900. The unsecured creditors will, it is thought, realize little or nothing. Liabilities $13,000. He is said to have lost $25,000 in bad debts.

PHILADELPHIA.—S. D. Sollers & Co., shoe manufacturers, it is said were sold out by the sheriff on the 23d inst. and bought in by judgment creditors.

PHILADELPHIA.—Benjamin Weiand, card designer and manufacturer of carpet specialties, was sold out by the sheriff on the 25th inst. It is said the business was bought in by James Pollock, of James Pollock & Son, carpet manufacturers, who was a judgment creditor. Liabilities thought to be about $2,500.

PITTSBURGH.—Jacob B. Hubley & Co., confectioners, have called a meeting of creditors.

SHAMOKIN.—The liabilities of Benjamin J. Price, jeweler, are about $3,000; actual assets $1,700. No settlement has yet been made.

SPARTANSBURGH.—W. M. Major, lumber, has been closed by the sheriff.

UNIONTOWN.—James Miller, grocer, has been closed by the sheriff.

WILKES BARRE—The liabilities of Richard Preusser, jeweler, are about $6,550; actual assets $2,500.

WILLIAMSPORT.—John B. Cassebeer, flour, feed, etc., has been closed by the sheriff on confessed judgment for $871.

SOUTH CAROLINA.

CHARLESTON—D. McPherson & Co., cotton factors, have suspended. The senior partner has been in business for nearly twenty years, and the present partnership was formed January 1, 1881.

CHARLESTON.—Louis Stielitz, clothing, is reported to have left town.

TEXAS.

CORSICANA—Quest Brothers, tailors, have been attached by local creditors.

ROAN'S PRAIRIE.—E. C. Easley, general store, has been attached for $925.

SAN ANTONIO.—Theodore Schleuning, grocers and liquors, has assigned. There were several suits against him and judgments were frequent.

TEMPLE.—J. I. Bolton, general store, has closed up.

UTAH.

OGDEN.—John G. Chambers, stationer, has assigned. Liabilities $2,000; assets $1,200.

VERMONT.

RUTLAND.—R. B. Gary, teas, has been closed by attachment.

ST. ALBANS.—F. L. Brainard & Co., grocers, owe only about $1,000 outside of $30,000 accommodation paper given to Lawrence Brainard. F. L. Brainard has given up his property and gets a discharge.

VIRGINIA.

BERKLEY.—G. W. Williams, grocer, has been closed by the sheriff.

WASHINGTON TERRITORY.

SEATTLE.—M. Murphy, contractor, is reported to have left town.

SEATTLE.—N. Portman, grocer, has transferred his business

WALLA WALLA—James Wheelan, harness, has been attached for $5,000.

WEST VIRGINIA.

PARKERSBURG.—D. T. Broughton, dry goods, has assigned.

MANITOBA.

BRANDON.—Arthur W. McLean, hardware, is reported in the hands of the sheriff.

BRANDON.—Quigley Brothers, dry goods, is reported to have failed.

CRYSTAL CITY.—Robertson & Smith, general store, have assigned.

WINNIPEG.—G. P. Bryant, wholesale cigars, is reported to have assigned.

WINNIPEG.—The stock of E. Friend, tobacco, has been sold out at auction for 47½ cents on the dollar.

WINNIPEG.—Malcolm McClarty, shoes, has assigned.

NEW BRUNSWICK.

GIBSON.—Sewell & Boyd, grocers, who recently failed, bought the stock of Benjamin Close, who took a confessional judgment of $4,000 to secure payment, and is now selling the stock under the judgment. There will be nothing, it is said, for outside creditors.

ST. JOHN.—William Stephenson, flour, has assigned. Liabilities about $15,000.

NOVA SCOTIA.

HALIFAX.—Blakely & Co., dry goods, have assigned.

TANGIER.—Joseph W. Ferguson, hotel, has assigned.

PROVINCE OF ONTARIO.

APPIN.—Hyndman & Hamilton, dry goods and stave factory, etc., have assigned. Mr. Hyndman was also in the grain business individually.

BELLEVILLE.—William Brinkeman, agent musical instruments, has assigned.

BRANTFORD.—James McLaren, dry goods, has assigned.

BRIGHTON.—J. F. Rolls, drugs, is asking an extension.

BURLINGTON.—Alex. Cardenhead, planing mill, has failed.

DELAWARE.—H. C. Garnett, saw mill, is reported in financial difficulties.

BURTCH.—George Ormandy, general store, has been sold out by the sheriff.

GALT.—Neill & Heslop, shoes, are in the hands of the sheriff.

HAMILTON.—Frank Dean, brickmaker, has assigned.

HAMILTON.—Pennington & Co., paints, have assigned.

KINGSTON.—W. J. Anis, clothing, has failed.

LONDON.—The Ontario Toy Company, manufacturer of children's carriages, is in the hands of the sheriff.

PRESTON.—Joseph Roth, brewer, is reported to have left town.

ST. CATHARINE'S.—Mrs. Felix Goodwin, grocer, has assigned.

SOUTHAMPTON.—William Wallace, grocer, has assigned.

TORONTO.—Julius Kamm, tobacconist, has failed.

TORONTO.—C. T. Mead & Co., manufacturers of furs, have confessed judgment for $10,000.

WINDSOR.—Laing & Twatt, grocers, are being sold out by creditors.

PROVINCE OF QUEBEC.

NOTICE.

OFFICE OF THE

OHIO CENTRAL RAILROAD COMPANY,

No. 110 BROADWAY, NEW YORK, September 22, 1883.

The undersigned is instructed by the Directors of the Ohio Central Railroad Company to make the following statement regarding an advertisement which has appeared in the city press recently, in which certain persons ask holders of the securities of this road to submit to assessment for the purpose of procuring an examination of its administration.

The Directors wish such holders to understand that these persons have not made any application to the officers of the Company for information; that none of them were present, either in person or by proxy, at the meeting of stockholders and bondholders held last week at Toledo; that all those who are entitled to an examination of the books and papers of the Company will cheerfully be given facilities for so doing at all times at the Company's offices, without the payment of any assessment; that the Directors are in daily consultation over the affairs of the Company and are exerting themselves to the utmost to devise some plan to extricate it from its recent difficulties, and that they will receive gladly and consider with care any suggestions which may be offered the holders of the Company's securities.

Under these circumstances it is hoped that those interested will not act hastily in submitting to assessment or in giving powers of attorney to persons who have yet to prove their right to ask for them.

BRADSTREET'S:
A Journal of Trade, Finance, and Public Economy.
PUBLISHED BY THE BRADSTREET COMPANY,
279, 285, 283 BROADWAY, NEW YORK.
Terms, $5.00 per year in advance, including postage.
SINGLE COPIES, TEN CENTS.
SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.
Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.
The synopses of recent legal decisions constitute an exceedingly valuable feature.
As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle-men.
THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

Nos. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 6, 1883.

NOTES OF THE WEEK.

The stock market has been quite excited at times through the week, the movement of prices being downward with occasional rallies. The Villard stocks were as usual the leading objects of attention and attack; but the Vanderbilt stocks were also subject to a great deal of unpleasant attention from the bear combination, who discovered that certain junior members of the Vanderbilt family had sold or were just finishing the selling of the last of their "speculative line." On Friday morning a great rally in the market was looked for on the "point" distributed very freely the evening before that Mr. Gould had come to the assistance of Mr. Villard and a bull movement was to follow immediately. That morning, however, there was a break in the coal stocks, which had a very demoralizing effect. It looks as if a turn would come soon. The Western Union decision on Tuesday last was without effect on the market.

In the last week of July the last of the 3½ per cents or continued 5s were called, and on September 19 the beginning on the 3 per cents was made by a call for $15,000,000. In the first quarter of the fiscal year debt reduction and the calling of bonds have proceeded at the rate of nearly $30,000,000 and exactly $47,000,000; on the other hand, the surplus for the year may be estimated as variable, either way, around $100,000,000. Of the 3½s, now closed, the banks held less than $5,000,000 against circulation a month ago; of the 3s, whose withdrawal is now begun, they then held not quite $202,000,000; of the 4½s, not quite $41,000,000; of the 4s, a little over $102,000,000. In 1907 the government can reach the $737,000,000 of 4s, and the $229,000,000 of 4½s can be reached in 1891, but until the latter year only the 3s are within call. The trifling Pacific 6s held by the banks are out of consideration; the 4½s and 4s, as shown by the small proportion of the issue now in banking hands, are put out of reach by their price. Only the 3s, therefore, appear to be an available basis, and unless the government suspends its work of redemption now begun upon those, the extinction of national bank notes, or their transfer to another foundation, is very near. If the 3s are to be left undisturbed the surplus must accumulate, or the higher bonds must be bought at market prices, or else taxation must be further lowered. The appearance, in political conventions and talk, of the preposterous scheme of "distribution" among the states, is only the most vivid example yet of the power of the demagogue and the ease with which the wrong course in finance gets the start of the right one. A numerically respectable number of persons will quickly echo the outcry already set up by such journals as the Brooklyn *Eagle* that "the people" must arise to prevent the perpetuation of the public debt in order to retain for the banks that old "monopoly" of note issuing, and the result is past foresight. We can only hope for the best, and renew warning that the currency question is only a bare second (if it be a second at all) to that of the tariff, and that the silent second thought should not delay beginning.

The following is from the cotton market report of last Saturday's New York *Evening Post*:

BRADSTREET'S of this date publishes the result of inquiries respecting the crop. The items as given have been calculated by some members of our exchange to point to a crop of 4,500,000 to 4,600,000 bales. This, of course, cannot be expected, although popular ideas of a deficiency of 30 to 50 per cent. have been started and repeated over and over again until people, strange to say, are found to believe in such an enormous loss. The possibility of a very small crop certainly cannot be denied, but the probability runs a contrary direction. As shown on 26th inst., experience teaches that estimates at this period always fall short of the result.

The *Post's* reporter is strangely forgetful of the fact that from the outset of our work as cotton reporters the custom has been to publish returns as received, barring obvious exaggerations and distortions. Early in this cotton season we pointed out that on the basis of five previous reports the men of business in the south uniformly underestimated in advance the outturn of a year's crop. What further and wider experience will show remains to be seen. A journal of the *Evening Post's* standing should exercise greater care in extracting from statistics their true meaning.

We are glad to notice that the New York Chamber of Commerce is again giving attention to the subject of a national bankruptcy law. At a meeting held on Thursday a committee was appointed to prepare and submit to the chamber such amendments to existing laws regulating assignments in bankruptcy as will prohibit any and all preferences and place all creditors upon the same basis in the distribution of the assets of a bankrupt. Mr. Charles S. Smith stated, on behalf of the Executive Committee, that that body did not propose to abate its efforts to secure the passage of a national bankrupt law at as early a date as possible. The committee, he said, entertained the firm conviction that recent prominent failures in the woolen trade in the city of New York had again demonstrated the urgent necessity of a bankrupt law, and that the mercantile honor and character of the city and state of New York was likely to be soiled by the exhibition of such preferences as had been shown in the recent assignment of one of the firms referred to. The committee expressed the further opinion that the chamber should not wait for the slow action of Congress to prevent scandals upon fair dealing in the community, but that the state legislature should be asked at its next session to pass a law which should prohibit like cases in the future. The difficulty with the proposed measure is one which applies equally to all attempts to regulate the matter of insolvency by means of local enactments, namely, the impossibility of affecting in this way any but a comparatively small proportion of the unfair dealings complained of. The evil is too great to be adequately met save by a national law, and the agitation for such a measure should not be allowed to halt until a well-considered bankruptcy act has been placed upon the statute book.

During the last two years Brooklyn has been as a city set upon a hill for the example of its sister cities throughout the country. The administration of the affairs of the municipality under Mayor Low has been throughout characterized by singular ability and cleanliness. He assumed office with the intention of doing what lay in his power to divorce municipal business from politics, and, speaking always with reference to human limitations, he has succeeded admirably. Indeed, so marked has been the degree of his success that even among his political antagonists no opposition worth mentioning has been able to form. The independent citizens are naturally particularly well pleased with the spirit and results of Mayor Low's administration, and have taken measures to forestall the politicians of both the great parties by setting on foot a movement looking to a citizens' nomination. A preliminary meeting with this end in view was held in Brooklyn a few evenings ago, at which it was resolved to present Mayor Low's name to the people on the platform upon which he entered the field as a candidate two years ago. The Mayor has consented to stand for the suffrages of his fellow-citizens on condition that he is to be entirely free from pledges of any kind. The result of this action of the citizens will be to make Mr. Low's rëelection highly probable. The outlook for a continuance of decent municipal administration in Brooklyn is, it will be seen, very favorable.

At length, after a session of forty days, the Senate Committee has finished its work in New York and has adjourned to meet in New England. During the sittings in New York over a hundred witnesses of all kinds and classes have been examined. The sessions of the Committee have not been as fruitful as was to have been expected. It may well be questioned whether its investigations thus far have thrown much light on the actual condition of labor throughout the country, or on the cost of living, or on a variety of other matters germane to the purpose for which the committee was constituted. The difficulty has lain in great part in the nature of the evidence received by the committee. Most of the "testimony" produced before it has consisted of the expositions by theorists of one kind or another of the schemes which they deem calculated to advance the well-being of the race. These are all very well in their way, but they have usually only a very slight connection with facts, and these, it was generally understood, the committee was expected to gather. Besides, a knowledge of the theories currently advocated can be gained by the senators at much less expense to the government and the people than is involved in their present method. To acquire such a knowledge they have only to cultivate a limited acquaintance with current literature, where they will find all kinds of schemes for social regeneration presented and discussed.

King Alfonso's hostile reception by the populace of Paris for accepting the nominal colonelcy of a German regiment is not unlikely to develop into an event of considerably more consequence than was at first thought possible. It seems to have raised a genuine and certainly much needed sentiment of loyalty toward his person among his own subjects, and has almost precipitated a ministerial crisis at the French capital. The last accounts are to the effect that the Spanish ambassador has delivered to the French Premier and the Minister of Foreign Affairs a note setting forth the grievances of Spain in connection with the demonstration in Paris and demanding the punishment of the authors of the outrage and satisfaction in proportion to the gravity thereof.

MERCANTILE FAILURES FOR THE QUARTER.

The mercantile failures in the United States for the third quarter of 1883, as reported to BRADSTREET'S, number 2,062, against 1,658 for the corresponding quarter of 1882. The disasters reported for the first and second quarters of 1883 were respectively 3,189 and 2,107. The following table shows the total failures for each of the three quarters of 1883, with assets and liabilities compared with the corresponding quarters of 1882:

	Number failures.	Actual assets.	General liabilities.	Percentage assets to liabilities.
1st quar.—1883	3,189	$23,763,000	$42,235,000	56
1882	2,140	15,323,000	29,210,000	49
2d quar.—1883	2,107	16,126,000	31,560,000	43
1882	1,523	12,006,000	23,372,000	52
3d quar.—1883	2,062	23,375,000	49,460,000	48
1882	1,658	9,122,000	18,779,000	50
Total 9 months—				
1883	7,358	63,264,000	123,255,000	52
1882	5,307	30,451,000	71,101,000	51

The following table shows the geographical distribution of the failures in the United States and Canada for the last quarter compared with the corresponding period:

For the last quarter the average liabilities of each failing trader were $23,986, and the percentage of assets to liabilities 48. For the first quarter of 1883 the average liabilities of each trader were $13,240, and for the second quarter $14,979. The failures for the third quarter of this year were 1,127 less than for the first quarter, and 45 less than for the second quarter. For the first, second and third quarters of 1882 the average of liabilities to each failing trader was respectively $13,244, $10,232 and $11,321. The distinctive feature of the quarter's return is the surprising increase of liabilities in the eastern and middle states, caused largely by the disasters in the leather trade at Boston and in the clothing trade at New York. These disasters and those directly dependent thereon went far to bring up the weekly average of failures for the third quarter of the year to 158, against 162 per week for the second quarter, and 245 per week for the first quarter. The immediate cause of this increase in mercantile failures exists in the over-trading made possible by the apparent ease with which the traffic in commercial paper is carried on. The abuse is serious. To check it two things need to be done. First, the organization of trade should, in some way, be carried further, to the end that the sale and purchase of mercantile paper may be carried on more openly than now. Second, a general bankrupt law should be enacted speedily with severe penalties for such abuses as have been shown to exist.

THE TARIFF ON PACKAGES.

One of the most vexatious questions connected with the old tariff was that which arose out of the provisions as to charges and commissions. The same is already true of the new tariff in an even greater degree. Congress last winter was not clear upon this subject. The only thing which was made certain was that the outer covering should be duty free; but the law was left very ambiguous as to the inner covering. The new tariff law had not been many weeks in operation before it was discovered that there was a great diversity of opinion and action among customs officials in construing the seventh section. Some of the officials interpreted the law with the greatest liberality, while Judge Folger himself—in his letter of July 19—complained that others "have gone beyond the principle embodied in the circular, and added charges which were clearly exempt from duty under the law." A commission of experts was appointed to undertake to secure harmony of action. The commission consisted of the following persons: A. P. Ketchum, United States Appraiser at New York; T. G. Rice, United States Appraiser at Boston; J. M. Fiske, Deputy Collector of Customs at Boston; E. B. Moore, United States Appraiser at Philadelphia; H. H. Goldsborough, United States Appraiser at Baltimore; an official of the New York custom-house, and H. B. James, Chief of Customs, United States Treasury.

The commission spent some weeks in the consideration of the subject, with the result that its members found themselves unable to agree on the law governing the case, and submitted two reports. The two reports submitted express the views of the members of the commission on the extreme limits of the law. There is a middle ground which might have been taken, in which certain kinds of inner packages might be considered as exempt from duty, these being mainly such as are readily separable from the goods they contain. But this was not done. The only thing as to which the commission has agreed is, that in any event the value of the exterior package covering, whether it contains the goods in bulk or whether it contains a number of smaller packages in which the goods are packed, should be excluded under section 7 of the new act from the category of dutiable value, and that, too, without reference to the question whether the goods were bought in bulk and packed by the purchaser or were bought in the packed condition by the party making the shipment to the United States.

Messrs. James, Goldsborough and Treloar held, as a matter of law, that the purpose of section 7 of the new law is to repeal only that portion of the prëexisting law which added to the actual market value or wholesale price of the merchandise the costs and charges incident to the shipment of the goods after they were put in a condition for the market as usually sold.

Messrs. Ketchum, Rice and Fiske maintained that section 7 of the act of March 3, 1883, "throws us back for assessment of ad valorem duty upon the value of what we may call the naked merchandise alone."

And now Secretary Folger has undertaken to make the crooked paths straight. He has made a ruling which reads like a judicial opinion. It is as long as a decision of the Court of Appeals. The substance of it is this:

The dutiable value of the goods is the actual market value or wholesale price thereof in the condition of finish and preparation for sale in which they are finally offered by the foreign merchants to negotiating customers, and for which they will and do sell them, though that value or price be enhanced because of that finish and preparation, and though a part of the preparation consists in the placing in or upon or about the goods boxes, cartoons, paper, cards or other like things.

He decides, in short, that the outer covering is duty free; that the inner covering—ornamented boxes, cards on which buttons are mounted, wood on which ribbons are rolled, boards on which cloths are put—are not free; that the cost of the inner covering is not necessarily the measure of the duty that is to be assessed upon it; that the rate to be imposed upon the inner coverings is to be equal to the value which they give to their contents, whether that value is greater or less than their actual cost.

The decision is a strictly legal one. It affords very little relief to the importer or to the appraiser. It is difficult to see in what particular it changes the situation from the position taken by the Treasury Department in its circular of May 15. For all practical human purposes the value which the inner coverings give to merchandise is their cost. The value of the thing to importers will generally be taken to be its cost, but the decision of Secretary Folger opens the door to a great many difficulties. The appraisers may raise the point that certain inner coverings give to the goods a very much greater value than the actual cost of the coverings; the importer may insist that the coverings add much less to the value of the goods than the real cost of the material. Who shall determine this then? Neither the law nor Treasury regulations, nor the decision of Judge Folger furnishes any solution to the problem.

Practically the custom will remain as it is: The cost of the covering will be its dutiable value. It will be easy for Congress to correct this ambiguity by trying to find out what was intended, and then by stating its meaning in the simplest terms.

Meanwhile there are upon the desks of the customs officials 3,000 appeals from decisions under the seventh section of the Tariff act.

PROGRESS OF THE BUILDING INDUSTRY.

The following analysis of building statistics returns, made by correspondents of BRADSTREET'S at the cities named, is mainly of value in that it forms a basis for more thorough work in the same direction in the future. The details are too widely scattered to permit of any generalization beyond the central fact made apparent that the building industry has made enormous strides in 1882 and thus far in 1883. The main difficulty in obtaining satisfactorily complete details as to the extent, cost and character of building operations at over fifty cities since 1880 is confined largely to the absence of statistics of this nature at the cities themselves, and the want of success by our correspondents, within the time allowed, in securing complete estimates from those best able to judge. With such material as has come to hand, however, we have attempted to deal. From sixteen cities there are practically complete returns as to the number and cost of new buildings built in the calendar years each 1881 and 1882 and in eight months of the current year. These are (cost, in thousands of dollars):

	1881		1882		8 *months* 1883	
	No. bldgs.	*Cost.*	*No. bldgs.*	*Cost.*	*No. bldgs.*	*Cost.*
Pittsburgh	1,400	$2,250	1,452	$2,294	1,092	*$1,421
Minneapolis	1,733	5,064	2,155	8,375	3,063	8,316
Kansas City	960	1,839	950	2,057	915	2,000
Grand Rapids	750	1,000	1,000	1,300	1,400	2,000
Terre Haute	155	185	142	151	88	70
St. Joseph	950	400	533	700	400	250
Louisville	624	1,384	821	1,153	683	1,073
Columbus	507	1,050	941	1,500	589	*1,000
Cleveland	916	1,266	1,832	1,702	2,200	3,751
Indianapolis	547	789	660	1,000	658	1,250
Detroit	1,555	2,159	2,148	3,124	1,402	2,589
Toledo	400	600	550	775	950	1,490
Dallas	312	368	472	724	400	675
Augusta	162	480	165	1,400	156	800
Norfolk	123	254	140	348	132	196
Savannah	120	360	180	400	40	24
Totals	11,150	$19,400	14,141	$27,006	14,068	$26,908

* For six months only.

Complete returns from the following cities have been received for the year 1882 and eight months of 1883:

	1882		8 *months* 1883	
	Number of buildings.	*Value.*	*Number of buildings.*	*Value.*
Chicago	2,637	$15,832,800	2,421	$12,785,440
Nashville	343	1,102,940	362	1,052,266
St. Paul	2,511	8,470,500	1,935	9,580,000

The exhibit from Nashville is for the year ending September 1, 1882, and for the eleven months succeeding that period, which indicates no material excess of expenditure during the twelve months last reported as compared with those ending with September 1, 1882. St. Paul's return for 1882 is for the calendar year, as indicated, but the second column contains the report for but six months of 1883. The estimated total for 1883 (12 months) at St. Paul ($10,500,000) points to about 20 per cent. gain. The percentages of gain in the amounts invested and contracted for during the current year, as per the rate for eight months past, as compared with 1882 and for 1882 as against 1881 (see table first given), are approximated as follows:

	On amounts expended.	
	Inc. per ct. (est'd) of 1883 over 1882.	*Inc. per ct. of 1882 over 1881.*
Minneapolis	20	60
Pittsburgh	22	same
Kansas City	25	11
Grand Rapids	100	30
Terre Haute	40 Dec.	20 Dec.
St. Joseph	50 Dec.	75
Louisville	22	15 Dec.
Columbus	15 Dec.	50
Cleveland	300 nearly	40
Indianapolis	60	25
Detroit	10	50
Toledo	40	25
Dallas	23	100
Augusta	20 Dec.	300
Norfolk	60 Dec.	60

The first column of percentages is calculated on the basis of the probable totals for the whole of 1883, gauged by the rate of investment thus far in the year.

The order in which the cities ranked (so far as reported) in 1881–82 and during eight months in 1883, based on the gross amounts expended by each in building, is shown as follows, the figures denoting millions and fractions of a million of dollars (eight months of 1883, in following tables):

1881.	*Million dollars.*
Minneapolis	5.06
Denver	3.80
Boston	3.14
Milwaukee	2.94
Pittsburgh	2.25
Omaha	2.20
Detroit	2.15
Kansas City	1.83
Louisville	1.38
Cleveland	1.26
Columbus, Ohio	1.00
Grand Rapids	1.00
Troy, N. Y.	1.00
1882.	
Chicago	15.83
Cincinnati	9.50
Boston	8.91
St. Paul	8.47
Minneapolis	8.37
St. Louis	5.33
Denver	4.00
Detroit	3.12
Peoria	3.00
Omaha	3.00
Milwaukee	2.86
Pittsburgh	2.29
Kansas City	2.05
Cleveland	1.70
Columbus	1.50
Augusta, Ga	1.40
Grand Rapids	1.30
Louisville	1.15
1883.	
Chicago	12.78
Cincinnati	11.00
St. Paul	9.58
Minneapolis	8.31
Cleveland	3.75
New Orleans	3.00
Denver	3.00
Des Moines	2.75
Detroit	2.58
Kansas City	2.00
Grand Rapids	2.00
Toledo	1.49
Pittsburgh	1.42
Memphis	1.30
Indianapolis	1.25
Burlington	1.10
Milwaukee	1.07
Nashville	1.05

Reports from the following cities furnish the totals only of sums expended for new buildings during the periods specified, thus showing the rate of investments in this line at those centers:

	1881.	1882.	1883.
Troy, N. Y.	$1,000,000	$800,000	$750,000
Burlington, Iowa	550,000	865,000	1,000,000
Denver, Col.	3,800,000	4,000,000	3,000,000
Richmond, Va.	449,305	635,535	25 p. c. inc. est.
Atlanta, Ga.	600,000	800,000	1,000,000

For two years the increase in the amount expended in the construction of new buildings was at the cities named as follows:

	1882.	1883.
Cincinnati	$9,500,000	$11,000,000*
Memphis	600,000	1,300,000
Leavenworth	600,000	800,000

* Estimated.

Ten cities report the number of new buildings constructed during the periods under discussion as follows:

	No. buildings constructed.			
	1881.	1882.	1883.	*Total.*
Boston	1,095	1,076	831	3,002
Philadelphia	2,761	2,930	3,334	9,025
New Haven	276	315	285	876
Albany	75	92	63	230
Newark	387	629	452	1,468
Evansville	343	405	243	991
Topeka	1,150	1,248	821	3,219
San Antonia	138	791	876	2,105
Salt Lake City	250	300	400	950
St. Paul	1,161	2,511	4,000	7,672
Totals	7,936	10,297	11,305	29,478

The apparent decline in building at Boston as per above exhibit is apparent only, as the cost of the structures completed in 1882 was $8,918,969 against but $3,144,260 in 1881, although the number built last year is given at nineteen less than in 1881. A like showing may be found in a record of New York's building operations, an elaborate account of which has already appeared in these columns. An abstract of the same to compare with above exhibit is as follows:

	Cost.
Number new buildings 1881, 2,682	$43,391,300
Number alterations 1881, 1,497	4,142,070
Total	$47,533,370
Number new buildings 1882, 2,577	44,793,186
Number alterations 1882, 1,691	4,267,181
Total	$49,060,367
Number new buildings 1883 (8 months), 1,905	$33,804,214
Number alterations 1883 (8 months), 1,430	3,402,898
Total	$37,207,112

The detailed reports are as follows:

BOSTON, MASS.

There has been a steady advance in rents of stores and dwelling houses. In the business sections every store is accepted, and eligible sites are eagerly sought. Dwelling houses never were in better demand. New houses are taken as fast as completed. The largest amount of building this year has been on the Back Bay and in the suburbs. A few large blocks of stores have been completed.

In 1881 the number of permits issued for brick, iron and stone buildings was 308, and for wood and frame 787, a total of 1,095. In 1882 the number of permits for brick, iron and stone buildings was 235, and for wood 841; total, 1,076. For eight months of 1853 brick, iron and stone permits number 160, and wood 671; total, 831. This shows a decided increase this year, and, as the demand for residences is still in excess of the supply, particularly of the medium class, there is every indication that the increase will be larger during the coming four months. In 1881 the cost of brick, iron and stone buildings was $1,521,852; wood and frame $686,643, and of improvements $936,765, a total of $3,144,260. In 1882 the expenditures were much larger, although the number of buildings erected was nearly the same. The cost of brick, iron and stone buildings was $4,932,640; wood $2,379,278, and improvements $1,607,051, a total of $8,919,969.

NEW HAVEN, CONN.

During 1881 there were 276 buildings erected in New Haven, from January 1 to December 31. In 1882, 315 buildings, and during 1883, 285 buildings have been built to date. About two-thirds in each year were dwellings, one-half remainder business property. As a rule, the buildings were built by owners for their own occupancy. There has been for several years a scarcity of houses at reasonable rents. The building industry is therefore enjoying a healthful activity.

ALBANY, N. Y.

In Albany, N. Y., there were 75 building permits granted in 1881, 92 in 1882, and 63 permits have been granted in eight months of 1883. There are now in course of construction eight first-class buildings without the capitol, the total to cost (without ground) about $420,000. The remainder of the buildings for which permits have been granted this year will average about $3,500 each.

TROY, N. Y.

No building permits are issued in Troy, nor is any official record kept. The cost of new buildings and improvements for 1881 was $1,000,000, in 1882 it was $800,000, and in 1883 it is estimated that the total cost will amount to $750,000.

NEWARK, N. J.

From January 1, 1880, to September 1, 1883, there have been 1,672 buildings of all kinds erected in Newark city, as follows: 1880, frame buildings 101, brick 103, total 204—of which 130 are dwellings; average per month 17. 1881, frame buildings 232, brick 155, total 387—of which 291 are dwellings; average per month 32 3/12. 1882, frame buildings 470, brick 159, total 629—of which 480 are dwellings; average per month 52 5/12. 1883, to September 1, frame buildings 339, brick 113, total 452—of which 373 are dwellings; average per month 56 4/12. This shows an increase of over 300 per cent. in number of buildings erected. The figures as to values are not obtainable, but the increase in value is proportionate to numbers.

PHILADELPHIA, PA.

Building operations in this city have been very extensive during the past few years, and all branches of the building trade continue active. Railroad extension aided builders' operations by making the more remote outlying districts, the scene of greatest activity, immediately and cheaply accessible. The improvement has been more rapid in the northern and northwestern sections of the city, where row after row of large and small dwellings have been erected and are rapidly filling all the available sites. New streets will be pushed rapidly, as soon as the progress of building northward shall demand it. Nearly all the desirable dwelling houses erected within the past few years are occupied, generally at paying rentals. In the business portions of the city there have been extensive alterations and a number of new operations. The more recent are the post-office building, the *Record* building, and several handsome store and office buildings. A dozen or more fine rows of dwelling houses are in course of completion on South Broad and Fifteenth and Sixteenth streets, in the neighborhood of Reed and Wharton streets, and a number of handsome residences are being added to recent extensive improvements in West Philadelphia. The following figures show the number of permits for new structures, additions and alterations issued:

1881—New buildings	2,761
Alterations and additions	1,489
Total	4,250
1882—New buildings	2,930
Alterations and additions	1,427
Total	4,357

1883.	*All kinds.*	1883.	*All kinds.*
January	60	July	569
February	235	August	583
March	841	September 1 to 15	327
April	811		
May	655	Total 1883 to Sept. 15.	4,734
June	640		

PITTSBURGH, PA.

The building statistics of Pittsburgh during the past three years are as follows:

1881.	
Permits issued	409
Buildings erected	1,400
Cost	$2,250,000
1882.	
Permits issued	1,179
Buildings erected: Brick 560, frame 892	1,452
Cost	$2,204,750
1883.	
(*Six months to August* 1.)	
Permits issued	917
Buildings erected: Brick 437, frame 655	1,092
Cost	$1,421,437

This shows a marked increase, that from 1881 to 1882 being in number erected nearly 300 per cent., and for the half year (1883) indicating (with a like gain in the current half year) a gain over 1882 of nearly 200 per cent.

CINCINNATI, OHIO.

Building interests in this vicinity have largely increased during the year. Last year the tabulated reports fix the amount paid out for buildings, exclusive of the real estate upon which they stand, as $9,500,000. To illustrate the class of material which enters into these buildings the records show that brick and brick-laying cost $2,000,000, carpenter work $2,500,000 and lumber $3,500,000. The plumbing amounted to over $500,000. The foregoing is exclusive of the amount expended by the national government on its building now in course of erection. Of the buildings completed last year it is estimated that 60 per cent. were residences, while 40 per cent. represents the amount paid out for business places. This is not a small proportion when it is remembered that this locality is circumscribed and business men are forced to occupy limited quarters. There has been a difficulty in securing a sufficient number of hands to do the work this year, and builders claim that they have been compelled to reject work offered them. From estimates made, it appears that the amount expended in Cincinnati for buildings during this year will be $15,000,000, of which 75 per cent. will be for residences.

CLEVELAND, OHIO.

The number of buildings erected during the past three years in Cleveland was as follows: in the fiscal year 1881, 916 buildings, valued at $1,266,000; in the fiscal year 1882, 1,832 buildings, valued at $1,702,410, and in the fiscal year 1883 (ending August 15), 2,200 buildings, valued at $3,751,510. The great increase in the valuation of buildings erected in the year 1883 is apparently out of proportion with the increase in number of new structures over previous years, but is owing entirely to the fact that the buildings erected and now building are far superior in size, architecture and cost to any heretofore known in the history of Cleveland. The figures for 1881–82 cover new buildings in the entire county, and cannot well be separated. The number, however, outside of Cleveland is very small. The figures for 1883 are for Cleveland only.

COLUMBUS, OHIO.

From April, 1881, to April, 1882, the number of building permits issued in Columbus, Ohio, was 507, and the cost was about $1,000,000. From April, 1882, to April, 1883, there were 941 permits issued, and the estimated cost was $1,500,000. From April, 1883, to the present time (6 months) there have been 589 permits issued; the estimated cost is about $1,000,000. There is good authority for the statement that the cost of buildings completed by April, 1884, will be $2,000,000, double that in 1881. Above estimates do not include public buildings. More brick is being used this year, and more costly styles of architecture. Building is active.

SPRINGFIELD, OHIO.

By the reports of the Boards of Equalization, for the years 1882 and 1883, it appears that during those years there were built in the city 1,472 new buildings, the value of which is estimated, including manufacturing establishments, at $4,232,000.

TOLEDO, OHIO.

A comparative statement of building operations in Toledo, Ohio, is as follows: from January 1 to September 1, 1881, number of buildings erected 400; cost $600,000. In 1882, January 1 to September 1, number of buildings erected 550; cost $775,000. In 1883, January 1 to September 1, number of buildings erected 950; cost $1,490,000. The building in Toledo during the past eight months is unprecedented in its history.

CHICAGO, ILL.

Seldom, if ever, have Chicago builders been compelled to contend with so many adverse influences as during the first half of the current year. The winter was severe and prolonged, and scarcely had favorable building weather become an assured fact and builders got fully ready for active work when they were met by an exorbitant demand for wages from bricklayers which resulted in a strike of many weeks, during which work was almost suspended. Many who contemplated building abandoned the idea and made other investments; hence the strike terminated and work was actively inaugurated; builders who had not previously secured supplies of bricks found it difficult, and at times impossible, to procure the same as fast as wanted, so work was again delayed. In spite, however, of the discouragements, the year so far has witnessed far more than an average activity in building operations. The total permits taken out for permanent buildings from January 1 to September aggregated 2,421, the estimated cost of the structures being $12,785,440, against a total of 2,637 permits, with an aggregate cost of $15,832,800 for the entire year in 1882. The latter year was largely increased by the Board of Trade building, on which the bulk of the work was done this year. That deducted from last year's account, the current year's showing would balance the entire year of 1882. Architects report a large number of plans, including many expensive structures on which work will soon be commenced, and it is safe to estimate that the returns at the close of the year will show large gains on 1881 and 1882. The number of alterations and additions has been large. Building material is now in ample supply, and as the demand for buildings responds to, and for some classes of structures exceeds, the supply, there are reasons to look for great activity next year. In fact, many property owners who anticipate improving in 1884 are already availing themselves of the present abundance and cheapness of materials to secure supplies in advance of their necessities. A feature of the current year's operations is the large number of dwellings of moderate cost that have been built by the laboring classes out of their savings, and at the present time there is almost unprecedented activity in constructing that class of building. There is also a marked increase in the number of houses costing $5,000 to $8,000. These are chiefly built by well-to-do mechanics and business men for homes.

PEORIA, ILL.

During the year 1882 there were 500 buildings begun and completed, at an estimated cost of $3,000,000, of which 55 to 60 were for business purposes. The cost (estimated) of the latter was $1,750,000. The others were mostly residences.

Peoria contractors are of the opinion that the building of private residences will fully equal that of last year, but will show a falling off in business blocks. Many of the structures begun last year are or have been completed this year—depot buildings, hotel, and elevators.

SPRINGFIELD, ILL.

No record is kept at Springfield, Ill., of building permits. Contractors, builders, lumber merchants and hardware dealers there give it as their opinion that the building operations of 1882 exceed those of 1881 by about 25 per cent. Those of this year will exceed 1882 about 18 per cent. The excess this year is more in the quality and cost than in the number of buildings.

DETROIT, MICH.

The Detroit public records show that the number of permits for new buildings issued in 1881 was 1,555, estimated cost 2,159,369; in 1882 2,148, estimated cost $3,124,764, and in 1883, 1,402, estimated cost $2,589,335. The permits for additions in 1881 represented a cost of $442,413, in 1882 $334,217, and in 1883 $425,490. Builders have contracts on hand to keep them busy until January 1, and the prospects for the coming year are very good. Mechanics and laborers are all well employed at good wages. Considerable new work to be carried over until spring, builders being unable to take more work this season.

GRAND RAPIDS, MICH.

In 1881 it was estimated that 750 buildings were erected, at a cost of about $1,000,000. In 1882 the estimated number was 1,000, costing $1,300,000. In 1883 about 1,200 to 1,400 buildings have been built, costing nearly $2,000,000. As a rule, a better class of dwelling houses have been erected this year, and a number of substantial brick business buildings and factories.

EVANSVILLE, IND.

There were granted in 1881, 343 building permits; in 1882, 405, and for the first eight months of 1883, 243 permits. Leading architects are of the opinion that there has been a considerable decrease in the amounts expended in building in the city, the buildings being mostly of the cheaper kind, but few large buildings having been let this season.

INDIANAPOLIS, IND.

Building operations in Indianapolis are quite active. Permits were issued in 1881 for 547 buildings, estimated to cost $789,575; in 1882, 660 buildings, estimated to cost $1,000,000; in 1883 (to date) 658 permits, and estimated cost $1,250,000. Recent building operations are mostly on residences. Contractors say the fall industry promises to be more active than usual.

TERRE HAUTE, IND.

The building permits issued at Terre Haute show the following:

	No. buildings.	*Cost.*
1881	155	$185,624
1882	142	151,475
1883 (to September 1)	88	70,755

It is added that Terre Haute does not require builders to take out permits, and our correspondence refers to buildings now constructing.

LOUISVILLE, KY.

In 1881 the number of building permits was 624, and the value of structures completed was $1,384,089; in 1882 the number of buildings was 821, and the value $1,153,540; in 1883 (to September 1) the number of buildings completed was 683, and the value $1,073,687. In 1881 the number of permits for alterations was 441, and the value $208,841; in 1882 the number was 418, and the value $170,625, and in 1883 (to September 1) the number was 234, and the value $105,590. The city engineer of Louisville estimates that the actual cost of buildings and alterations there is fully one-third greater than the totals given above. Fearing taxation, etc., applicants for permits are inclined to undervalue. The Louisville building industry is brisk and will probably continue so to the end of the year. Of the past eight months' work completed 236 were brick buildings and 447 all, or partly, frame. The real estate market is fairly active and firm.

ST. LOUIS, MO.

An official abstract of building permits, issued in St. Louis from April 11, 1882, to April 9, 1883, shows the following:

1,591 brick buildings, estimated cost of	$4,969,684
609 frame buildings, estimated cost of	305,041
Total 2,200 buildings, estimated cost of	$5,324,725
Additions and alterations to old buildings, estimated cost of	764,294
Total	$6,099,019

There have been 1,838 building permits issued between April 9, 1883, and September 11, 1883.

KANSAS CITY, MO.

The number of building permits issued in Kansas City during 1881 was 906. The valuation of buildings erected in 1881 was $1,839,355. The number of permits issued in 1882 was 950, and the value of buildings erected was $2,057,500. The number of permits issued from January 1, 1883, to September 15 was 912, and the value of buildings erected is (estimated) $2,000,000. Transfers of real estate for 1882 amounted to $8,097,700.

ST. JOSEPH, MO.

There were about 950 buildings built in St. Joseph in 1881, at a cost of about $400,000. In 1882 buildings constructed were mostly business blocks, and though the number was only 533 the cost was nearly $700,000. This year the improvements are generally of residences and small buildings. An estimate is made of 400 buildings, costing $200 to $250,000.

BURLINGTON, IOWA.

Actual figures as to building operations are not at hand, but the following are the result of special inquiry:

1881.		1882.	
Public buildings	$250,000	Business improvem'ts	$365,000
Dwellings & improvements	300,000	Dwellings	500,000
Total	$550,000	Total	$865,000

The approximated value of general building improvements in 1883 to date is given at $1,100,000. This year has been one of lively interest in building operations in business houses as well as in residences. It is thought the year will show a total of $1,500,000.

DES MOINES, IOWA.

During the first eight and a half months of 1883 there were 758 residences erected in Des Moines, at an estimated cost of $1,750,000. The number of business houses built in the same period is 67, and the estimated cost is $1,000,000. The estimated cost of public buildings erected in the same time is also $1,000,000. Building operations generally are believed to be 25 per cent. in excess of a like record in any preceding year. Five hundred residences under contract remain to be built and fifteen business buildings.

MILWAUKEE, WIS.

The value of new buildings and improvements in Milwaukee begun with the opening of the year to September 15, amounts to $1,071,000, against $2,852,000 for the year 1882, and $2,942,085 in 1881.

MINNEAPOLIS, MINN.

A summary of building statistics for Minneapolis for eight months, 1883, shows marvelous activity. Over 3,400 dwellings had been erected in two years, at the close of 1882, and this was thought to indicate a falling off. The same was true of business houses. But it became evident early in the year that the supply of both was inadequate to meet the demand. The request for dwellings was such that during the extreme cold of last winter carpenters were engaged on the woodwork of houses, and a large number were erected and enclosed during the winter months. As soon as spring opened work begun in earnest, and has since been energetically pushed. The character of the buildings erected is much better than in former years. Among the new structures building is the West Hotel, to be completed in the spring at a cost of $1,000,000. Three new bank buildings have been erected. The Chamber of Commerce have a new building, to be completed during the winter, costing $165,000, exclusive of ground. Most of the business blocks are four and five stories high, massive and spacious. The large increase in population has driven residences outside the old limits, and the framed business buildings are mainly erected in these districts where the trade centers are not definitely established. This accounts for the large number of wooden business buildings. An unusual number of fine and some elegant and very costly houses are being built, costing from $10,000 to $250,000 each. There has been a larger number of comfortable and tasteful dwellings built and owned by tradesmen, mechanics and others, with moderate incomes. This class of building promises to continue. The Minneapolis Union Railroad has nearly completed a stone arch bridge or viaduct over the Mississippi river in the center of the city, at a cost of $1,000,000. It will be completed this year. (Is not included in statement.) The following is a summary of building operations for eight months of 1883: Brick business houses, 215; street frontage, 6,984 feet; value, $2,717,840; wooden business houses, 312; street frontage, 8,640 feet; value, $525,128; total business houses, 527; street frontage, 15,624 feet; value, $3,242,968; dwellings, 2,536; value, $5,074,400; total value, $8,316,368.

Comparative statement for three years, with first eight months of 1883:

	No. Dwellings.	*Stores.*	*Frontage, feet.*	*Value.*
1880	553	53	1,411	$2,080,600
1881	1,561	172	5,185	5,064,506
1882	1,847	308	9,081	8,375,075
1883 (8 months)	2,536	527	15,624	8,316,368

The outlook is also for very great activity in building this winter and in 1884. A new hotel (the Arcade) to cost $1,000,000, a United States building to cost $175,000, an enormous union railway depot, freight houses and offices of the Northern Pacific Railway, also a bridge over the Mississippi by the same company. A large number of business blocks are projected, two schools will be built, and probably more dwellings than in any preceding year.

ST. PAUL, MINN.

It is only recently that the city of St. Paul elected a building inspector and required the issuance of building permits. The records of the building at that city are therefore taken by our correspondent from the columns of the St. Paul *Pioneer Press*, and which are given as follows: In 1881 there were constructed 139 business houses, 1,009 residences, and 13 public buildings—in all 1,161 buildings. No estimate of cost of the same is mentioned. The total frontage of the 139 business houses was 6,521 feet. In 1882 the record was as follows:

	Number.	*Value.*
Brick stores	144	$2,520,000
Frame stores	87	163,500
Public buildings	29	953,000
Miscellaneous buildings	73	888,400
Residences	2,178	3,946,600
Totals	2,511	$8,470,500

The total frontage of the 144 brick stores built was 7,716 feet, and of the frame stores 2,500 feet, or 10,216 feet in all. On the first of June last the record of new buildings (since January 1, 1883) was printed:

Buildings.	*Number.*	*Feet front.*	*Value.*
Brick business	200	9,000	$5,645,000
Public	22	....	1,535,250
Frame business	145	3,500	435,000
Dwellings	1,568	....	1,967,100
Totals	1,935	12,500	$9,582,350

The outlook for the year 1883 has been given as promising about 4,000 new structures, costing about $10,500,000.

LAWRENCE, KANS.

Building operations at Lawrence for the fiscal year last passed were as follows:

Dwelling houses	84	Government buildings and Indian school	3
Business houses	25		
Depot	1		
Manufactories	4	Total number structures	117

These improvements are valued at over $500,000. Building operations the past year have been very brisk, and still continue. The outlook is for a continuance thereof. The character of the improvements is first class, all business houses being of brick or stone.

LEAVENWORTH, KANS.

So little was done in Leavenworth in the way of building in 1881 that no report was kept. In 1882 the amount expended in building was about $600,000. So far in 1883 the amount is not far from $800,000, and will probably reach $1,000,000 to $1,250,000.

TOPEKA, KANS.

The number of building permits granted in Topeka, Kans., during the year 1881 was 1,150; for 1882, 1,248, and from January 1 to September 12, 1883, was 821.

OMAHA, NEB.

In 1881 $2,207,300 was expended in Omaha for 619 new buildings, of which 504 were dwellings and 57 business houses, hotels, churches, schools and factories, and 58 carriage houses. Among the business houses was an opera house, the most costly structure. Of the amount expended $404,840 were for public improvements, 696,150 for dwellings, $698,800 for new business houses, hotels and churches, $220,000 for factories and factory improvements, and $188,000 for reconstruction; 1882 showed a very large increase in business property, while about the same number of residences were erected, but involving a more costly style of architecture. During 1882 one large bank and two large hotels were finished. This investment amounted to $650,000. The foundation for a $300,000 county court house was also laid, and work on this building is still being pushed forward. The aggregate expended in 1882 was $3,000,000. Thus far this year no records have been compiled. The increase in business property this year is very large, and valuations in real estate are advancing rapidly. The city is now expending large sums for paving, additional sewerage and other valuable improvements.

SALT LAKE CITY, UTAH.

A carefully prepared estimate of the number of new buildings built in Salt Lake City in 1881 places the total at 250, or 7 per cent. to the whole number; in 1882, 300, or 8 per cent., and in 1883 to date, 400, or 9 per cent. The buildings are above the average also in value. The increase shown is unexcelled in the history of the city.

DENVER, COL.

In 1881 the building permits issued in Denver represented buildings costing $3,800,000; in 1882, $4,000,000, and so far in 1883 about $3,000,000. This is for buildings within the fire limits. A great many valuable buildings are put up outside, not included in the above. During 1883 no public buildings have gone up. Next year, it is expected, a state capital, to cost from $1,000,000 to $2,000,000, and a custom-house, post-office, etc., costing also from $1,000,000 to $2,000,000, will be erected. The outlook is for a brisk building season, new work to cost about $300,000 being in sight.

BALTIMORE, MD.

Building operations have been very extensive since 1880. According to the census of that year Baltimore had 50,883 dwellings. The increase in population from 1880 to May, 1882, estimated by police census, was 76,207, and the majority of the dwellings find tenants almost as soon as completed. The prospect for a continuance of activity this fall is good. The price of labor has increased of late years, and some contracts are delayed thereby. Few warehouses are going up this year. Rents are good.

NORFOLK, VA.

The number of buildings erected in Norfolk during the periods called for has been: In 1881, 123 buildings, costing $254,000; in 1882, 140 buildings, costing $348,000, and in 1883 (six months), 132 buildings, costing $196,000. This, however, includes construction and the value of the land. The Norfolk city engineer is of the opinion that at least 10 per cent. should be added to the total for buildings erected that did not come under his official notice.

RICHMOND, VA.

The building industry of Richmond for 1881, 1882 and 1883 has been noticeable. The assessed value of new buildings and improvements in 1881 aggregated $440,365; in 1882, $635,535, and it is estimated that to September 15, 1883, the increase is at least 25 per cent. over the like period of 1882. Brick manufactories is very active. The demand for houses is on the increase.

ATLANTA, GA.

The value of new buildings constructed in Atlanta thus far for the year 1883 is estimated at $1,000,000 by the more conservative authorities, $800,000 for 1882 and $500,000 to $600,000 for 1881. Building last summer was very active, and it is estimated that the next six months will show a more rapid increase than ever known in Atlanta. Among the largest undertakings are the rebuilding of the Kimball House, to cost $400,000, and the state capitol, to cost $1,000,000. Some fine wholesale stores, cotton warehouses, and many handsome and expensive private residences have recently been constructed.

AUGUSTA, GA.

In 1881 there were 162 building permits issued in Augusta, and the estimated cost of the buildings was $480,000; in 1882 there were 165 building permits issued, to cost $1,400,000, and (8 months) in 1883, 156 building permits were issued, to cost $800,000. There is said to be more building going on in Augusta now than at any time since the war. Last year The John P. King Cotton Manufactory was built at a cost of $700,000. The Enterprise Manufacturing Company was improved at a cost of $350,000. This work was begun in 1882, and cost is credited to that year, although most of it was built in 1883. This explains difference in total values in 1882 and 1883.

MACON, GA.

William Lee Ellis, a very competent judge of the relative rate of progress in Macon, reports that no city of its size in the south has made the same strides that has Macon in the advance of values in real estate and the number of buildings erected, and the amount paid therefor, within the past few years. Fully 90 per cent. of the dwelling houses reported, that is, about 1,200, are owned by the occupants. The following figures are based on an actual count of the city: Cost of 1,412 buildings erected during the years 1881, 1882 and 1883, to September 10, $2,764,300; improvements on other buildings $213,000; total cost of buildings and improvements $2,977,300. Centrally located lots have, during this time, advanced 50 to 100 per cent., and suburban lots have advanced 100 to 500 per cent. in value.

SAVANNAH, GA.

The number of buildings built in Savannah in 1881, was 120, estimated to cost $360,000; for the year beginning January 1, 1882, it was 180 buildings, estimated to cost $400,000, and during 1883 (to September 15) 40 buildings, estimated to cost $24,000—a total during the period noted of $784,000. Indications point strongly to a steady increase of buildings to be erected. Local loan associations have added largely in building up the city. Lots have doubled in value within a few months past. Houses for rent are scarce.

NEW ORLEANS, LA.

New buildings erected in New Orleans during the past year, repairs, etc. in stores and dwellings have cost over $3,000,000. Contractors are rushed with orders, and in some instances have been com-

pelled to refuse work necessitating immediate execution. The supply of competent workmen is inadequate to the demand. It is also reported that 50 per cent. more work has been done this year during the busy season than at the corresponding time last year. Buildings for manufacturing and commercial uses have absorbed over $1,000,000. About fifty elegant residences have been newly built, besides extensive repairs made upon many costly houses. An encouraging feature of the past year's house building is a marked increase in the number of attractive cottage homes erected at a cost each of about $2,500. This fact shows the increase of independence attained by those of moderate means.

DALLAS, TEX.

In Dallas building permits were issued as follows: in 1881, 312 permits, aggregating a cost of $368,000; in 1882, 472, $724,000, and in 1883, 400, $675,000. Building operations are unusually active. The demand for business houses is great, and the permits for 1883 will probably aggregate 500. The houses erecting are almost wholly of brick, larger in dimensions and more substantial than heretofore. Some very fine buildings have gone up in the past few months. The Cotton Exchange, in course of construction, will cost $40,000. The improvements in northern Texas towns are rapidly increasing, especially in Tyler, Corsicana, Sherman, Denison, Fort Worth, Greenville, McKinney and Texarkana.

HOUSTON, TEX.

The aggregate value of buildings erected during the year ending September 1, 1883, exceeds the total amount so expended during the two preceding years. Real estate prices for city property are about 25 per cent. in advance of last year's. The total cost of new buildings erected during the past year is estimated at $1,250,000. The buildings are mostly of brick, with artificial stone trimmings. The demand for domestic brick has been very active. The lumber used is mostly the Texas long leaf, yellow pine. Artisans and bricklayers at Houston have been receiving $6 per day; carpenters receive from $3 to $3.50, plasterers from $4.50 to $5, and unskilled labor $1.50 to $2. Lumber finds a ready market at $15 to $18 per 1,000, and bricks $10 per 1,000, delivered. California red wood is used at Houston for finish work and shingles, selling at $80 per thousand. The Capital Hotel, one of the finest hotel buildings in the state, has been recently completed at a cost of $200,000. A new $100,000 courthouse is now in course of construction, and a fine new Cotton Exchange building is projected and work is about to be begun. Two handsome brick churches are now nearing completion, and numbers of small storehouses have during the past year given place to more pretentious structures.

SAN ANTONIO, TEX.

The number of building permits issued in San Antonio in 1881 was 438, in 1882 791, and in 1883 (eight months) 876. The total cost of new buildings and improvements already made and of those in course of construction since January 1, 1883, is $1,000,000.

CHATTANOOGA, TENN.

By actual enumeration the buildings exceeding $5,000 in value erected during the year and now being constructed in that average are worth in the aggregate $760,000, to say nothing of the number of buildings of less value than $5,000 now going up and already completed during 1883. Competent judges say building operations for 1883 exceed by 50 per cent. those of 1882.

NASHVILLE, TENN.

The number of building permits issued in 1881–82 was 343 and the cost of the buildings was $1,162,940. The number of permits issued from October 1, 1882, to September 1, 1883, was 362, and the cost of the buildings was $1,052,266. Quite a number of handsome buildings are being erected now.

MEMPHIS, TENN.

More buildings and improvements have been begun and completed in Memphis within the past year than for many years. Thus far in 1883 it is estimated that four times the number of buildings have been erected at probably twice the expense as were completed in a corresponding period of the preceding year. The following estimates as to improvements made for twelve months ending September 1, 1883, are approximately correct: cost of railroad improvements, $400,000; new buildings, $1,700,000; repairs on buildings, $100,000.

MONTREAL, QUEBEC.

There is no compulsion to give notice to build in Montreal. The following figures, furnished by that city's building inspector, may, therefore, not be complete: Number of buildings constructed in the year ending March, 1882, 248; in the year ending March, 1883, 231; and in the current year (March to August) 104. The inspector has prepared a report to lay before the committee to make it compulsatory to obtain permits to erect new buildings or to make alterations. No figures as to values can be obtained. There have been some fine warehouses and private residences built within the past three years, and at present there is considerable activity in building. Montreal is perhaps one of the finest cities in America as regards its buildings, being largely built of excellent stone obtained within an easy distance of the city.

TORONTO, ONT.

During the past two years there has been a large increase in building in Toronto. The figures given represent the number and value of buildings erected within the fire limits of the city only, not including operations carried on by builders elsewhere in the city and suburbs. Last fall a very careful estimate was made of the value of buildings erected in the city and outskirts, and it amounted to $2,500,000, more than double the amount that permits were granted for. A large proportion of the houses last year were rough-cast and brick-fronted, and built chiefly for renting. Owing to the large increase in population the past few years houses have been rather difficult to obtain, and the real estate market has been fairly active lately. The following are the number of permits granted within the city fire limits, and the value of buildings erected during the time specified:

	Number.	*Value.*
1883, first six months	120	$149,000
1882, whole year	217	865,000
1881, whole year	175	695,000

GEOGRAPHICAL DISTRIBUTION OF FIRES.

The *Chronicle* of this city, an insurance journal, has for some years past made a specialty of collecting and collating fire losses, and its "fire tables" have come to be acknowledged as the best statistics of that most important subject. How far, if at all, they are mixed with estimates we do not know, but there must necessarily be some estimate in the sources whence they come, although it is only simple justice to state that the *Chronicle* incurs the risk of being called tardy for the sake of accuracy and completeness. Estimates on one side of the actual fact, in the matter of losses and insurance losses both, may also be fairly held to approximately offset those on the other; and, while it cannot be supposed that it will ever be possible to cover the entire fire loss by any statistics, these are complete enough, or at least large enough. Of course, we need hardly allude to the conventional notion that fire loss is "covered" and made good by insurance, instead of being merely distributed. The actual loss by fire it is impossible to ascertain, even if it were possible to obtain the actual figures of market value destroyed in every fire without exception, large or small, for the reason that there are enormous indirect—or, rather, direct and secondary—losses following, in the form of lives of workers destroyed, personal injuries received, labor running idle by being thrown out of employment, business failures, and so on.

The *Chronicle* foots up its loss table for the first half of each year thus, the returns of the months being compressed into one by us:

	—*United States*—		—*Canada*—	
	Losses.	*Ins. losses.*	*Losses.*	*Ins. losses*
1879	$47,026,800	$27,602,600	$3,816,500	$1,978,200
1880	37,770,800	21,686,000	2,886,000	1,201,520
1881	34,780,200	19,883,800	4,858,900	2,128,900
1882	42,193,794	25,042,386	3,027,795	1,652,621
1883	44,739,761	24,902,714	2,957,328	1,643,233

BOTH UNITED STATES AND CANADA COMBINED.

	Losses.	*Ins. loss.*	*No. of fires*
1879	$50,873,300	$29,580,800	7,047
1880	40,026,800	22,947,500	5,605
1881	39,648,100	22,012,700	5,362
1882	45,221,589	26,695,007	5,073
1883	47,697,089	26,545,947	6,175

With this the *Chronicle* gives something unique in its way—a graphic chart of the ratio of loss to total valuations by states. Fire ratios are represented by the coloring: over $1 of loss for $100 of valuation, from 75c. to $1 for $100, from 50c. to 75c., from 25c. to 50c., and under 25c. In the highest-burning class—showing reddest on the chart—are Nevada, Florida, Arizona, Dakota and Utah. In the 75c. to $1 class are Arkansas, Colorado, Minnesota, Oregon, Vermont and Washington Territory. In the 50c. to 75c. class are Maine, New Hampshire, New York, Michigan, the two Carolinas, Georgia, Tennessee, Louisiana, Texas, Missouri and Montana. In the 25c. to 50c. class are Massachusetts, Connecticut, Pennsylvania, New Jersey, Delaware, Virginia, Kentucky, Ohio, Illinois, Indiana, Wisconsin, Iowa, Kansas, Nebraska, Alabama, Mississippi, Wyoming and New Mexico. Under 25c.—showing plain white on the chart—are Rhode Island, Maryland, West Virginia, Idaho and Indian Territory, the last, however, not being reported as to valuation. The following are the figures of total valuation, fire loss, for the five years 1878–82, and the average annual tax per $100 therefor:

UNDER 25 CENTS PER $100.

	Total valuation, by census of 1880.	*Fire loss, 1878-82.*	*Av. annual percentage of fire loss, on valuat'n*
Rhode Island	$252,536,673	$3,040,550	.24
Maryland	497,307,075	4,557,060	.19
West Virginia	130,022,705	1,665,050	.24
Idaho	6,440,876	62,500	.19
Indian Territory	Not reported.	2,815,200	...

25 TO 50 CENTS PER $100.

Massachusetts	$1,584,756,802	$26,714,750	.34
Connecticut	327,177,385	6,899,070	.42
Pennsylvania	1,883,459,516	36,401,330	.43
New Jersey	572,518,361	11,497,780	.39
Delaware	59,951,643	1,017,360	.34
Virginia	308,155,135	4,805,900	.31
Kentucky	350,561,971	6,169,960	.35
Ohio	1,534,360,508	19,824,750	.26
Illinois	786,816,394	19,331,775	.49
Indiana	727,815,131	13,858,250	.38
Wisconsin	438,971,751	10,646,430	.48
Iowa	398,071,251	7,702,760	.39
Kansas	160,891,689	3,100,250	.39
Nebraska	90,585,782	1,929,700	.42
Alabama	122,167,228	3,020,830	.41
Mississippi	110,628,129	2,650,500	.48
Wyoming	13,621,829	300,500	.44
New Mexico	11,363,406	148,000	.26

50 TO 75 CENTS CLASS.

Maine	$235,978,716	$7,521,450	.63
New Hampshire	161,755,181	4,445,600	.53
New York	2,651,940,006	68,466,315	.52
Michigan	517,066,359	15,189,810	.58
North Carolina	156,100,202	3,587,790	.50
South Carolina	133,560,135	3,982,550	.59
Georgia	239,472,599	7,299,510	.69
Tennessee	211,778,538	5,303,240	.50
Louisiana	160,162,439	5,878,350	.73
Texas	320,304,515	10,329,660	.69
Missouri	532,795,801	15,131,815	.57
Montana	18,609,802	500,000	.53

75 TO 100 CENTS CLASS.

Arkansas	$86,409,364	$3,280,050	.76
Colorado	74,471,693	3,381,280	.91
Minnesota	258,028,687	10,294,260	.79
Oregon	52,522,084	2,610,335	.99
Vermont	86,806,775	3,359,850	.77
Washington Territ'y.	23,810,693	1,091,500	.90

OVER 100 CENTS CLASS.

Nevada	$29,291,459	$3,538,300	2.41
Florida	30,938,309	1,817,670	1.19
Arizona	9,270,214	1,061,600	2.29
Dakota	20,321,530	2 249,220	2.22
Utah	24,775,279	1,148,920	1.17

It will doubtless be a surprise to most persons to learn that the fire-waste ranges from 0.20 to 2.41 per cent. of all property, assuming, as we are compelled to assume, the census figures as the estimate nearest to correct; and yet these are not the full figures for the loss ratio, because the land itself, and a large part of the personal property, are non-combustible. If the property practically exposed to destruction by fire could be separately valued, the ratio of waste would thus be considerably increased. This $80,000,000 of annual waste, which does not include the phenomenal great fires, is properly described as a tax. It is levied by greed and carelessness, mingled with some dishonesty, and is paid by productive industry, to the benefit of nobody, not even of productive industry, since it is in every sense the fact that "wilful waste makes woful want," and this makes mankind the poorer, putting luxuries and comforts just so much farther away. Such taxation is worse than that levied to maintain really useless tax-eating officials, for it has not even the pretense of buying any service. Very little of it can be classed as non-preventable.

The geographical distribution of fire-loss in the ratio of intensity as compared with the total value at risk is a phenomenon which does not follow any apparent law. Why it is so much lighter in Rhode Island than in New York, for example, is not discoverable, and if the statistics were found to yield similar results over a longer term, the explanation would be a problem to tempt study. This comparison not being one of losses of insurance companies, absolute or relative, insurance cannot affect the result, unless by being less discriminating in some states than in others, which is not at all the fact in any such degree as these ratios would indicate. The question whether insurance makes as well as distributes fire losses is not so much suggested by them as is the vastness of the abominable, because needless, sacrifice.

PIG IRON PRICES.

On Monday last the Thomas Iron Company reduced the price of No. 1 foundry iron from $22 to $21 per ton. No alteration was made in the price of No. 2, which remained at $20. The cut was not expected, and the announcement caused some talk. It was explained that the action of the company named was forced upon them by efforts of rival furnaces to secure certain relatively large orders then in the market. It was expected also that the drop might be followed by others in the trade. This, however, will have but little effect on the general pig-iron market, as these prices have been made solely to old customers whose annual takings have aggregated large quantities of iron. On the general run of small lots, such as have been called for during the greater part of the year, the previously current rate of $22 and $20 for Nos. 1 and 2, respectively, are still in force. In fact, we have heard of the refusal of one furnace within the week to make a plump offer of 100 tons of No. 1 at $21.50. There is, therefore, less significance to be attached to the concession on pig iron made Monday than the mere announcement of the new rate would indicate. A careful canvass of leading members of the trade, as represented at New York, quite corroborates the views in relation to the present condition of pig iron and its outlook which have from week to week, for some time past, been put forth in our regular commercial reports. Consumers of raw iron, as a rule, have been and are still buying for immediate wants only. They doubt any advance in rates in the near future, and appear to prefer to let the furnaces carry the stocks, inasmuch as prices are so low that concessions have not been gained by offers to increase orders. September is usually the busiest month in the latter half of the year, but while it showed a respectable aggregate of small orders (as did August also) the conservatism of buyers was opposed to any expectation of a distinct revival prior to the coming season. Some extra orders may come in just prior to the close of canal navigation, but beyond that a moderate trade only is looked for.

The variation in prices of pig iron during the past five years, from just prior to the great boom in the iron and steel industries to the present time, is characteristic of the general-trade movement itself. On December 20, 1878, No. 1 foundry iron was quoted at $18 per ton. Until about the middle of the following year no material change was noted. The advance in price began in July, 1879, and in six months the price had jumped up $15 on a ton. General business had revived. The exceedingly low prices of the raw material induced makers of the finished iron to purchase heavily, and a very general demand in all lines of trade stimulated prices, as mentioned. Some sample prices (No. 1 foundry) of the latter half of 1879, as compared with $18 in June that year, are:

October 1	$30 00	November 8	$31 50
October 15	33 50	December 27	33 50

Renewed exports from Great Britain were induced by this advance, and the November quotation shows the effect. The close of the year, however, found consumers anticipating their wants, and enormous sales were made and prices again advanced, touching $35 per ton in the early part of 1880. The excessive production was again met by very full imports early in 1880, and, as an added depressing influence, consumers had overstocked themselves in many instances. The range of prices of No. 1 foundry during 1880 will illustrate:

May 15	$25 00	August 15	$25 00
June 19	22 00	September 15	25 50
July 17	24 50	December 4	25 50

As here shown, the late fall in 1880 brought a renewed demand, but excessive production at that time had resulted in greatly oversupplying the even large demand. All or nearly all the large blown-out furnaces had been put to work, and pig iron was of necessity some cheaper during the earlier portion of 1881. The following illustrative prices at intervals during that year are given: In June, $23 per ton; in July, $24; in September, $25, and in November and December, $26.50. The enormous increase in railway building that year was fully realized as early as July, and prices for raw iron began to appreciate in direct ratio to the new requirements made for it on every hand. The quotations advanced in 1882, and remained moderately firm well into that year. The then growing tariff agitation, the long strike during the summer, and the declining volume of general trade combined to affect prices of pig iron as shown in the following quotations for 1882:

February	$27.50	September	$26.50
May	27.00	October	27.50
July	20.50	December	26.50

The opening of the current year saw the already established decline continued. On January 6 the rate was $25.50, and on February 3, $25. On March 10 season delivery contracts were offered for $24 per ton, marking a distinct cut of $1 per ton. Contracts were not readily made, however. Buyers were loth to take more than they wanted for the immediate future, and on April 28 prices were again cut to $22 for No. 1 foundry iron. On May 19 the nominal quotation was $22, but this figure was known to have been shaded by many of the smaller furnaces in their desire to do business. The Thomas Iron Company thereupon took the bull of competition by the horns and deliberately cut prices again to $20 for No. 1 and $19 for No. 2 iron, the third reduction of this kind during the year. On June 30 the old price was put in force, viz., $22 for No. 1, and it continued to be the nominal rate during July, August and September, although several special grades of iron brought $22.50, and occasional talk of $23 was heard. October 1, however, as stated above, the fourth cut in rates was made by the company named, in which they marked the price of No. 1 down $1 a ton to $21. For reasons already stated, it is not

generally believed that this move carries special significance beyond the competition between some of the larger furnaces with respect to the custom of some larger buyers. It is, however, useless to attempt to outline the result. The fact is made apparent that pig iron is lower now than it has been since the middle of 1879—for four years. It averaged in the latter half of 1879 over $32; during 1880 nearly $24; in 1881 about $25; in 1882 about $27, and has been thus far in 1883 at an average nominally of about $22.50 per ton. Imports are at a low ebb, and prices are as low as they are likely to be marked for any length of time. The extension of the southern iron trade south and west naturally becomes a factor of some importance in considering the outlook for Pittsburgh pig-iron makers; and, after another period of increased production and consumption, is likely to assume still more formidable proportions.

LIVE STOCK AND FRESH MEAT EXPORTS.

The late shrinkage in the general export trade from the port of New York to British and other European ports not only attracted the attention of the general observer, who regarded it solely from a financial point of view, but it became a special source of uneasiness to herd-owners and to dealers in cattle, whether shippers or slaughterers. The severe winter of 1881–82 caused wholesale losses among the herds in the west and northwest, so that, although the older cattle-growing states did not suffer so seriously, beeves advanced rapidly in price from January, 1882, until June of the same year. The highest price was realized in that month, 17½c. per pound on net weights, 56@57 pounds being allowed, according to the excellence of the quality of the animal, which also frequently commanded during that month 58 pounds allowance and $1 per head on every beast. In July, 1882, 16c. per pound was the highest rate paid; again, in August, 1882, 15½c. per pound was the highest figure reached. During this year of scarcity Spanish and Colorado herds advanced in prices under the pressure of absolute need. In the month of June, 1882, such herds sold at 8@13¾c. per pound, in July at 9@12c. per pound, and for the three first weeks of August at 9@12c. per pound, dropping, in the course of the last week of that month, to 8@10½c. per pound. Early in September, 1882, grass-fed beeves became plenty and values steadily declined until they returned to their normal range. As soon as a margin of profit was found the export trade revived, for a European market is always open at certain prices.

The British workingman eats beef when it can be obtained at low prices, and rarely has American-dressed beef fetched over 6d. British currency per pound; frequently, in years of abundance and consequent cheapness, American beef has sold in Glasgow, Liverpool and London at 4d. per pound. When a glut has occurred 2d. per pound has been accepted. Early during the past summer (1883) the export trade took an upward bound, and the volume increased until in August 14,353 beeves were exported, the appraised value of which was $1,529,028. During the month of August, 1882, 788 beeves were exported, the appraised value of which was $81,505. In 1881 (August) 4,093 beeves were exported, the appraised value of which was $418,095. The export trade in dressed beef varied also for the period under review, as prices controlled the extent of business. For the years 1881, 1882 and 1883 the export trade in sheep did not experience like uncertainty, whereas mutton ran down the scale, so that in June and August of 1882 there were no exports of mutton. In July, 1882, 9,804 pounds were exported, the appraised value of which was $980; for July, 1881, 125,104 pounds were exported, the appraised value of which was $11,825. July, 1883, fell far short of this, the exhibit being 69,195 pounds, and the appraised value $5,630.

American-bred sheep are as yet not so good in mutton as to command the trade in Great Britain, while, on the other hand, American-bred cattle can challenge the world as to excellence both of grain and flavor. American grade herds are also quick to mature, especially so the shorthorn stock. From this it is believed that with our breeders and herd owners rests the control of the foreign market by the exercise of due care and sound judgment. Our climate affords grass, winter keep and the diversity of temperature necessary to produce good beef at such a cost as will enable exporters to secure a reasonable profit. On the other hand, our flock owners must improve their flocks, if the United States are to advance in supplying mutton for Europe.

The export trade in live hogs was for the months of June, July and August of the years 1881, 1882 and 1883 totally insignificant. We subjoin comparative tables:

HORNED CATTLE.

	Head.	Appraised value.	Per pound.
1881.			
June	4,233	$405,678	9 @12¾c.

SPECIAL CORRESPONDENCE.

TORONTO'S EXPOSITION.

Toronto, September 25.—The fifth exposition of the Toronto's Industrial Exhibition Association, which was brought to a close on Friday, the 21st of September, has been the most successful financially and otherwise of the series. The total receipts for admissions amounted to $32,930.21, being an excess over the previous exposition of $4,636.31. A comparison with the receipts for the previous expositions may be of interest. In 1879, the first exposition, they were $25,448.53; 1880, $23,484.30; 1881, $22,304.15; and 1882, $28,293.20. There will be a gratifying result in the success of the recent exposition in the fact that the estimated profits will clear the association from all outstanding debts incurred in erecting new buildings. The total attendance, including free admissions, for the ten days is estimated at 180,000, or an average of 18,000 per day. On one day the attendance exceeded 40,000. The directors, who, to their credit be it said, perform their arduous duties gratuitously, are naturally jubilant at such a brilliant success, and have already expressed their determination of making next year's fair more attractive than ever. The board has in their president, Mr. J. J. Withrow, one of the ablest and most energetic business men in the city, but taking the board as a whole it would be difficult to find a better. They are all prominent men in their different spheres, and take a warm personal interest in the affairs of the association. The display of horses was the best ever seen in Canada, the number of entries in all classes exceeding 600. The heavy classes attracted the greatest attention, and interest was greatly divided between the Clydesdales, English shires and Percherons. The same remarks apply to the exhibit of cattle, there being upwards of 400 head on the grounds. The shorthorn breed was largely represented, and there was by far the largest representation of Jerseys ever shown in the Dominion. There was also a large exhibit of imported Holsteins, the first attempt ever made in Canada to show this class to any extent. The industrial portion was, if anything, more attractive than formerly, and the display of machinery and agricultural implements called forth expressions of surprise and admiration from American visitors. The whole industrial department formed a satisfactory demonstration of the great development of our manufactories within the past few years. Among the most interesting of the exhibits was the extensive display of honey. A large building was packed to the ceiling with this Canadian product of bees, and the delegates to the International Beekeeper's Association, admitted that there never had been to their knowledge such a display on this continent. Altogether the fair was a most pronounced success. The weather was most propitious, there being only one day in which rain fell.

OCCASIONAL NOTES.

Earl Granville, in England, has found it necessary to instruct attachés of the British Foreign Office located in France to exercise greater care in the correct translation of French official documents they may forward. Our own Secretary of State, with advantage to the public service, might instruct some of our consuls abroad, who persistently continue in their reports to give moneys, weights, and measures in foreign denominations, to go to the trouble of computing and presenting these in American equivalents, thus facilitating the work of reference. Even some of our journalists at times make strange mistakes in the unfamiliar efforts to accomplish this.

The progress of the principle of international arbitration formed one of the chief topics of discussion before the eleventh annual conference of the Association for the Codification and Reform of International Law, which met at Milan recently. It was shown that of late the reference of international differences to arbitration has been made much more frequently than formerly, and that the indications point to a still more general adoption of the principle. A long address on the subject of the neutralization of the Congo was read by Sir Travers Twiss. Mr. Nabuco, president of the Brazilian Anti-Slavery Society, proposed some resolutions strongly condemnatory of slavery, which were adopted by the conference. A committee appointed to consider the question of the execution of foreign judgments in civil and commercial matters reported a series of rules upon the subject, which, after providing for the regularity of the judgment and the competence of the officer pronouncing it, propose to give a foreign judgment fulfilling the conditions imposed the same effect as a national judgment, leaving the forms and means of execution to be regulated by the law of the country where execution is demanded.

A learned and imaginative writer has somewhere said that many a dramatic story is buried in the old law reports. There can be no doubt that many a strange chapter of romance and many a stirring tale of ambition has been brought to light by the proceedings of the courts. Even the saving salt of humor has, at times, not been wanting from the dull and tedious formalities which give the judge his cherished opportunities for nodding. To such an extent has this been true that a witty and clever legal writer of the present day has been able to collect from the reports material for a book on the humorous phases of the law. A bankruptcy court, however, is perhaps the last place in the world where one would expect to find a trace of humor, and yet, as would appear from a recent instance, humor is not entirely banished from those forbidding precincts. A cutlery manufacturer recently appeared before the Sheffield bankruptcy court to pass his public examination. In applying for an adjournment the solicitor for the trustee said that among the creditors were the subscribers to a fund called the "Tara Trust Fund." The bankrupt, it appears, was a member of the "Anglo-Israel Society," which was established to look after the lost Ten Tribes, and this fund had been subscribed for the purpose of encavating the Tara Mount, County Meath, in Ireland, to recover the deeds that were given to the prophet Jeremiah when he purchased the land of Palestine. The scheme seems to have commended itself to a select number of investors, for the fund amounted to £227.

A correspondent of the London *Times* says that the climate of Ceylon has latterly undergone a very marked change, and that while the old accustomed products no longer thrive as formerly, others, such as tea and cocoa, are found to succeed admirably. It appears that there are now 10,000 acres of land under tea cultivation, all of which is, without exception, paying well, and it is expected that 50,000 acres will be under cultivation in two years. The writer asserts that double the quantity per acre that is obtained in India can be produced in Ceylon, and can be grown at a much lower rate. It is admitted that it will be some time before the new products of the island will compensate for the old ones, but that time, it is said, is not very distant. Estimates of the yield of coffee, tea and cinchona for the season of 1883–4, it is said, indicate an increase in the value of the shipments of those articles of 7,500,000 rupees (about $3,487,500) over those of the current season.

The prevalent spirit of competition which, by the way, has led to some important movements in the journalistic world of late, receives another illustration in the appearance of *Macmillan's English Illustrated Magazine*. This new periodical is somewhat less than half the size of *Harper's* or of the *Century*, and is offered at a correspondingly cheaper rate. The contents of the magazine are varied and are intended to appeal to a large circle of readers. No lack of talent is apparent in the number before us, Mr. Swinburne contributing a long poem, Mr. Huxley an article on oysters and Mr. Grant Allen a paper on natural history.

In the *North American Review* for October Senator N. P. Hill, in an article on "Gold and Silver as Standards of Value," maintains that silver should be coined, as well as gold, not for the purpose of inflation nor in the interest of the silver-mining industry, but for the purpose of preserving uniformity in the value of metallic money and of preventing such a contraction of the volume of money as would produce financial disaster. The article is distinctly a plea for silver. Mr. A. V. Dicey essays to show, in "Some Aspects of Democracy in England," how, in spite of the existing forms of monarchy and aristocracy in England, the democracy or public opinion controls almost absolutely the action of the government. In a paper on "Coöperative Distribution" the Rev. R. Heber Newton gives a sketch of the rise, progress and vicissitudes of coöperative enterprises in the United States during the past fifty years. Mr. Van Buren Denslow, in a strongly-written paper on "Board of Trade Morality," defends with much force the practices of commercial bodies, and, in particular, replies to the strictures of Mr. Henry D. Lloyd contained in the *Review* for August. Mr. Frederic Harrison contributes a well-written article on "Histories of the French Revolution," in which he calls attention to the defects of the historians who have essayed to deal with a movement the end of which, he says, we have not yet seen. The Rev. E. E. Hale has an unsatisfactory article on "Social Forces in the United States."

The October *Century* is at hand, and is, as usual, bright and attractive. The present number closes the twenty-sixth volume and thirteenth year of the magazine. The first article gives an account of the "Outdoor Industries of Southern California," in which are contained descriptions of the methods of irrigation practiced in mountain and valley districts. The paper also gives much information concerning cattle raising, and grain, fruit, and wine culture. The author expresses the opinion that the sheep industry is, on the whole, decreasing in California. Among the literary articles may be mentioned a critical estimate of the poet Longfellow, by Mr. E. C. Stedman, and a paper on Luther, by Mr. George P. Fisher. A strong local interest attaches to the article on "Old New York and its Houses," by Mr. Richard Grant White. The editor of the *Century* is of the opinion that, notwithstanding the increased attention lately given to questions of political reform, there is a real lack of earnestness in American politics. He finds a striking evidence of this in the fact that it has taken twenty years to awaken popular interest in the reform of the civil service. He points, also, to the fact that party lines do not correspond with the lines of opinion. There is much force in his argument that if the people were really in earnest party lines would quickly yield to their determination, and that new parties could be easily organized if the old ones would not serve the popular will. Perhaps, however, the characteristics of this period are beginning to be recognized only as it is passing away. Nobody who has carefully watched the course of recent events can fail to see that a new phase is already beginning to make itself apparent. Were it otherwise, indeed, the prospects of the country would be melancholy in the extreme.

The London *Ironmonger* states that Russia is moving ahead industrially with rapid strides and that the material wealth of the Czar's territory is being developed in a most striking manner. Although the empire may be unsettled politically and unsound financially, there are declared to be great industrial movements at hand. A correspondent of the journal named points out that in many lines importations have almost or quite ceased, steel rails (once an enormous item of import from England) being now exclusively made within the country, which also produces good spring steel as well as tool steel. The manufacture of locomotives at home has quite put a stop to the import trade. In fact, some depression exists in the Russian locomotive works owing to excessive production. But the outlook, owing to the railway development in Siberia,

promises an outlet for this surplusage. The short line between Ekaterinburg and Tumen, now being constructed, is the pioneer railway in Asiatic Russia, and will open out direct communication between Europe and Asia in a manner which may have the most important commercial effects. It will enable travelers and goods to reach Tomsk, Tobolsk, and the other Siberian cities, by steam on rail, river or lake, with ease and certainty, and may even open up new routes to China and the khanates of central Asia. The distances between these points are great, and it is likely that for nearly a year the routes may not be made fully available. In the end, however, the rather sanguine opinion is advanced that Siberia "may become a formidable competitor in wheat, etc.," as well as a valuable market for European manufactures. On many of the rivers and lakes steamers are already plying, and it only needs about 200 miles of railway to complete the chain of communication between the capital of Russia and the least known but not least fertile parts of the Czar's vast dominions. Quite as well advanced are the districts surrounding the petroleum region of the Caspian sea. The oil and naphtha trades are fast assuming important proportions, and "may shortly become serious competitors with the petroleum traffic of the United States." Large quantities of kerosene are being sent to India from Batoum, masouta (residual products) to Mediterranean ports, and oils to England. The correspondent notes the dispatch of over 3,000 tons direct from Pooteeloff (St. Petersburg) to London, and the *Ironmonger* records the receipt of 6,000 barrels in one cargo, at Liverpool, from Batoum. This traffic, it is stated, bids fair to grow in volume yearly, and may quite revolutionize the mineral oil trade.

Mr. Goldwin Smith's *Bystander* for October is a hand. With this number the editor and sole contributor to this unique review bids farewell to his readers, announcing that he will make way for a weekly journal called "The Week," which is to be entirely independent of party. Mr. Smith, in some remarks upon a bill reforming the franchise, to be pushed at the coming session of the Dominion Parliament, discusses the whole question of female suffrage, taking strong ground against the extension of the franchise to women. His remarks upon the Irish question would be merely amusing were it not that Mr. Smith's general reputation gives weight to his remarks upon almost any subject he discusses. This circumstance renders it the more to be regretted that at a time when judicious and temperate treatment of a very troublesome question is above all things to be desired Mr. Smith should indulge in a style of writing which, in this latitude at least, cannot but be regarded as wild, and, assuming the writer's influence, extremely mischievous. Mr. Smith charges a leading English statesman with fostering the "Irish Revolution," speaks of Mr. Parnell as a "terrorist," and says that "of military force the rebellion (sic) has not an ounce; it could not stand in the field against a brigade of volunteers. Its sole chance of success rests on the treasonable factiousness of the House of Commons." Further on he declares that the Irish Catholics "would massacre the English and Scotch Protestants now if British protection were withdrawn." Writing of this kind can do no sort of service, least of all to Mr. Smith's reputation.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

In the recent case of Green vs. Humphreys, Baron Pollock, in the Chancery Division of the High Court of Justice, held that the words "Next Christmas both principal and interest will have been paid in full," contained in a letter from a debtor to his creditor, revived a debt barred by the statute of limitations.

A condition printed on a telegraph blank in use, "that no claim for damages shall be valid unless presented in writing within twenty days from sending the message," is reasonable and valid, according to the decision of the Supreme Court of Wisconsin in the recent case of Heiman vs. The Western Union Telegraph Company.

The release of one joint obligor on a note releases the other obligor from liability upon the note, but not from liability upon a mortgage given to secure its payment when the mortgage contains an independent stipulation to pay the debt, the released obligor not being a party to it. So held by the Supreme Court of Indiana in the case of Walls vs. Baird, decided on September 26.

Where a maker of a note, which was signed by other accommodation makers for the purpose of a certain use, used the note for a purpose not intended, the Supreme Court of Nebraska held (in the recently decided case of Morris vs. Morton) that the accommodation makers were liable. The court said that the mere fact that a note was intended to be discounted at a particular bank will not prevent the party for whose benefit it was given from making other use of it.

In the case of Seaman vs. Aschermann, recently decided by the Wisconsin Supreme Court, it appeared that the defendant agreed to hire premises from plaintiff, if she would make improvements in the building, for five years from the first of May, 1878. The defendant went into possession on that date, the plaintiff having made the improvements. The defendant refused to execute the lease, but paid rent according to the stipulated price until May, 1880, when he quit possession. On the 18th of that month plaintiff commenced an action for specific performance. On a review of all the circumstances the court held that the plaintiff was not guilty of such a degree of laches as would defeat her action.

The case of The Gulf, Western Texas & Pacific Railway Company vs. Levy, decided lately by the Texas Supreme Court, was brought under singular circumstances. It appeared that the appellee's son, being at a distance from home and in great need of money, delivered to the appellant for transmission to appellee a telegram setting forth his need and the fact that his wife and child were dead, and requesting appellee to come immediately to his assistance. A delay occurred in the delivery of the telegram, in consequence of which appellee's son was put to great inconvenience and distress. The appellee, upon this state of facts, brought suit against the company for damages for the disappointment and grief suffered by him in consequence of the delay in the delivery of his son's telegram. The appellee recovered judgment in the trial court. This, however, was reversed on appeal by the Supreme Court, which held that mental suffering alone does not constitute such character of injury as will entitle a person to damages in an action against a telegraph company based on negligence in not delivering a telegram.

The question as to the extent to which evidence of custom or usage may be admitted in aid of the interpretation of a written instrument was under consideration in the case of Maud et al. vs. Trail et al., decided by the Indiana Supreme Court on September 20. It appeared that the appellees bought of appellant five cars of wheat, of which appellant failed to deliver four, whereupon the appellees brought suit for damages. The contract was made by telegram. The appellants telegraphed to the appellees as follows: "Terre Haute, Ind., September 9, 1879. To Trail & Gambril, Baltimore. Will sell you five cars No. 2 red September at 92c. here. Signed J. W. Maud." To this appellees replied: "We accept your offer of five cars at 92c." The appellees averred that it was a long-standing custom in Indiana for the seller to obtain cars and deliver the wheat on the track of the railroad company, to receive from the company a bill of lading to the point of destination, and to attach a draft or drafts to such bill of lading, drawn by the consignors on the consignee, payable at sight, and that the contract was made in reference to such custom. It was urged on the other side that the complaint did not aver that the appellees were ready to pay for the wheat at Terre Haute; that that was the point where the contract called for delivery and payment, and that the provisions of the contract could not be varied by custom. The Supreme Court, in affirming the judgment of the court below in favor of appellees, held that as the contract contained no express stipulation that the money was to be paid in Terre Haute, in the absence of such stipulation custom might fix the place of payment at Baltimore, and that it was proper to interpret the contract in the light of such custom. In support of their position, the court cited the well-settled rule of evidence that while a custom cannot prevail where it has the effect of changing or modifying a contract, it may be resorted to where there is no express stipulation to the contrary, for the purpose of explaining that which is not expressed.

The cases of Williams vs. The Western Union Telegraph Company and of Hatch vs. The Same, decided by the New York Court of Appeals on the 2d inst., were suits originally brought in the New York Superior Court by the respondents, stockholders in the Western Union Company, to prevent the consolidation with that corporation of the American Union and the Atlantic & Pacific Telegraph companies, and to restrain the company from issuing $38,926,590 of stock, $23,400,000 of which was to be in payment of the stock and franchises of the other two companies, and $15,526,590 of which was to be distributed among the stockholders of the Western Union Company. The respondents alleged that the contract of purchase and the contemplated issue of stock were fraudulent; that the property and franchises of the American Union and the Atlantic & Pacific Telegraph companies were not altogether worth more than one-third of the stock to be issued therefor, and that the Western Union Telegraph Company did not have surplus property over and above its capital stock sufficient to represent the stock dividend of $15,526,590. The facts in dispute were found in favor of the company by the trial judge, who refused to find the fraud and conspiracy alleged, and who held as matter of law that the purchase by the Western Union Company of the property, privileges and franchises of the other companies was valid and lawful according to the laws of the state of New York. He held, further, that the stock dividend of the Western Union Telegraph Company was not a division, withdrawal or payment to its stockholders, or any of them, of any part of the capital stock of the company, and that it was a proper and lawful exercise of the power of the corporation to issue to its stockholders certificates which afford evidence of the investment, with the consent of its stockholders, of its surplus earnings in property necessary and useful in and about the transaction of its business; that the agreement had so far been executed; that no stockholder of the Western Union Telegraph Company had any right to bring an action to restrain their complete execution, and that the plaintiff had not sustained and was not likely to sustain any injury from the execution of the agreements, and had no right to restrain their execution. The judgment entered at Special Term was upon appeal reversed at the General Term, on questions of law only. The decision of the Court of Appeals reverses the decision of the General Term and sustains the opinion of the trial judge. The court holds that ample authority for the increase of the capital stock of the Western Union Company is furnished by chapter 317 of the laws of 1875, which is an amendment of the general act of 1848. This act provides that "it shall be lawful for any association of persons organized under this act by their articles of association to provide for any increase of their capital and the number of shares of the capital stock of the association," or, if the corporation shall have omitted to provide for such increase in its articles of association, an increase may be lawfully made after compliance with certain conditions laid down in the act. The court said that it might be that a distribution of stock gratuitously to the stockholders of a company based upon no value—a "watering" of stocks—would be condemned by the law, but that when stock has been lawfully created and is held by a corporation then a stock dividend may be made, provided that the stock always represents property. The dividend largely increased the capital stock of the company, but that, in the view of the court, was not against the policy of the laws of the state, since it was expressly permitted by them. The court lays down the proposition that, under the laws of the state of New York, the questions as to when a corporation has a surplus whether a dividend shall be made, and if made, how much it shall be and when and where it shall be payable, rest in the fair and honest discretion of the directors, uncontrolled by the courts.

BUSINESS NOTES.

A cable dispatch from London, dated Tuesday last, states that 15,000 steel and iron workers employed in Glamorganshire county (Wales) and in Monmouthshire (England) have struck against the 10 per cent. reduction in wages. The employers claim that both English and American competition compel them to either close their works or reduce wages.

The total number of failures in the United Kingdom and Ireland reported to *Kemp's Mercantile Gazette* during the week ending September 15 was 187, against 177 in the corresponding week in 1882 and 194 in the like week in 1881. The total for England and Wales was 158, against 166 and 172 respectively in the weeks mentioned in 1882 and 1881. For Scotland it was 25, against 9 and 13, and for Ireland 4, against 2 and 9.

The following national banks have been organized: The State National Bank of Denison, Tex.; capital $100,000; Jesse Newport Johnson president; Wilmot Saeger cashier. The First National Bank of North Bend, Neb.; capital $50,000; James Sloss president; George C. Hickok cashier. The Jones National Bank of Seward, Neb.; capital $50,000; Claudius Jones president; Edward O'Keefe acting cashier. The Oskaloosa (Iowa) National Bank has elected W. H. Seevers president in place of N. E. Cutts. The First National Bank of Winsted, Conn., has elected D. Strong president in place of E. E. Gilman. J. B. Williams, president of the First National Bank of Ithaca, N. Y., is dead.

Last winter some interest was manifested in the noticeably increasing importations at New York of eggs from Germany, Denmark, Belgium and Italy. It is stated that two houses here are engaged in the trade. The eggs cost about 7@8c. per dozen on the other side, and about 50c. per barrel for freight to New York, an added cost (with 70 dozen eggs in a barrel) which permits a fair profit after arrival here. This trade is, of course, practicable only in the winter. Arrivals are placed in cold storage, and as the eggs will stand two months of cold weather without serious deterioration, the project is said to work well. The loss from breakage is said to average less than on consignments from Chicago. The outlook is for increasing importations of eggs this winter.

France is using more fuel than is produced there, and, as a result, since 1872 the French importations of coal have been steadily increasing and her exports of the same have been falling away. The production of coal, anthracite and lignite, in France in 1881 was 19,766,000 tons (about equal to our production of anthracite in Pennsylvania during the first eight months of 1883), an increase of but 582,000 tons over the production in 1880. But two districts in France increased their output, while all the smaller ones produced less. The import of fuel into France for 1881 was 10,221,000 tons, of which 5,396,000 came from Belgium, 3,569,000 from England, and 1,255 from Germany. The exports of coal were 603,000 tons in 1880, and 601,000 in 1881. The peat fuel industry is also on the decrease, for in 1872 the working of peat bogs amounted to 325,000 tons, and in 1881 to but 233,000. Peat is, however, still largely used, there being upward of 1,073 known peat beds in France, on which are 8,400 separate workings, employing about 26,000 hands.

The London *Labour News* of September 19, in repeating its oft-printed remark that labor is still in an unsettled condition, explains it by saying that no sooner is one strike arranged than another springs up. The North Staffordshire colliers' strike had been practically ended, but the miners in Yorkshire were agitating with a view to demand increased wages, and decided to hold a conference this month at Manchester in order to secure the coöperation of Derbyshire, Lancashire, Staffordshire and other counties in the same way as last year. The Lancashire weavers' strike then showed no signs of termination, but it was much to be desired that the judicious plan suggested at the Trades Congress of arbitration might be adopted. The contents of a recent cable dispatch, mentioned elsewhere in this column, corroborate the statement as to the succession of strikes. Building and railway operations continued active, and coal prices were stiffening in anticipation of the winter demand. Shipbuilding was active, except at Sunderland, where the engineers' strike was a disturbing element. Some improvement was noted at various textile centers. Hop-picking was active. Emigration to the colonies was brisk. The "state-aid to emigration" project was meeting with disfavor.

The Maryland Oyster Commission appointed under joint resolution of the last General Assembly, as composed of Prof. W. K. Brooks, Capt. James L. Waddell and Hon. William H. Legg, recently held a conference at Johns Hopkins University. The subject of districting the bay was first discussed, the object being the protection of its oyster beds with as little restriction as possible upon its present yield. Many of the plans suggested to the commission are impracticable, for the reason that, though they might result in future improvement, they would kill the oyster business for the present. The important point made by the commission is that the plan must not interfere with the oyster beds. It is also proposed, in order to improve the oyster production, that a portion of the bottom of the bay be improved by dressing it with oyster shells. This will give the spat something to clutch as it drifts over the bottom and secure a lodgment of young oysters. While there may be some who will complain at being excluded from dredging in the narrow strips, the greatest good is expected to result to the greatest number in the end. The results of a series of examinations of the oyster beds is reported to have shown conclusively that while the oysters are growing scarce the labor required to capture them is growing greater as the number of dead shells which must be handled for each bushel of oysters is increasing.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

The week in Wall street has been quite as lively as last, and the movements of the market have been rather violent. The rally which was spoken of last week lasted till Friday, on the afternoon of which day there were decided symptoms of decline, and this was continued on Saturday, but on that day most of the brokers and operators left early to attend the great trotting race, and the market became quite stagnant in consequence. It might seem strange that they should go away in such exciting times, but they did, and business dropped with their departure. It is a supposable case, however, that such of the leading operators who went away left orders with their corps of faithful brokers which amply guarded against any sudden movements one way or the other in the market. On Monday there was some improvement in prices, but not much. It was a waiting day. The Court of Appeals was to hand down decisions next day, and among them was to be the famous Western Union case respecting the legality of the $15,000,000 issue of stock. The stock market waited for it. None of the leading operators seemed willing to make a move until it should be known how the decision was to be. Uncertainty about a matter like that would naturally have a paralyzing effect on business; for, until the leaders knew where they stood in respect to such a stock as Western Union, they would do nothing. An indefinable feeling had spread that the decision was to be favorable, and the stock crept up through the day a few fractions, but it was more the firmness with which the other Gould stocks were held which inspired the thought that Mr. Gould had scored another legal victory. After the market had closed it was rumored, in a very decided way, that the decision would be in favor of the company. At the Windsor Hotel that night the rumor had taken such solid shape that ½ per cent above the closing market price of the stock was bid for it. Next morning (Tuesday) soon after the market opened, the news was wired from Albany that the decision had been handed down, and was in favor of the company on every point in dispute. Thereupon there was a rush of buying orders for Western Union which seemed to come from all parts of the room at once. The stock rose a fraction over 1 per cent. under the stimulus. Then it stopped. Soon it began to recede slowly by fractions, and then the trading in it appeared to die out altogether. Never was there a more complete disappointment. Seldom, if ever, has there been seen in Wall street a flatter failure than this long expected and much debated decision. Its effect on the stock was practically *nil*. The buying orders for the stock which appeared simultaneously with the announcement of the decision seemed to be the only buying orders on the floor. When they were exhausted there seemed to be no one wanting to purchase, and for the rest of the week Western Union remained flat. The leading bear operators let it alone; it was maintained by the usual supporting orders, and even the room traders seemed disinclined to have anything to do with it. Of course a great many people who had the stock and were looking anxiously for a chance to sell out at a profit were deeply disappointed. They were assured from the Gould headquarters that the reason why the stock was not advanced was that such a circumstance would reflect on the Court of Appeals. If they would wait, they would see it advanced. A better reason for the failure of Mr. Gould to put up the price is that at this time and in this market it is quite impossible for him, but he is negotiating a sale of a block to an English syndicate and is trying to get it listed on the London Stock Exchange. "All obstacles," it is announced, "are now removed to its listing," by the Court of Appeals decision, "and Mr. Field (son of Cyrus W.) will sail for New York to-day." He has been over there, it is supposed, negotiating the business. When Mr. Gould gets relieved of part of his now too heavy burden of the stock he may be able to lift the price of the remainder.

The feeling of the leading bear operators about the matter was decided. As long as they knew the situation they had no doubts. One of the most active of them said, "The decision is in favor of the company. Now the market's a sale." On that theory they proceeded, and the event certainly justified the prediction. They left the Gould stocks proper severely alone, and attacked with savage vigor the Vanderbilt stocks and the unfortunate Villard properties. From Tuesday afternoon till Thursday afternoon these stocks were unmercifully battered down, and as they sank long stock constantly came upon the market from the uncovering of stop orders and the exhaustion of margins. Good investment stocks were on the decline from this cause. It was said that a prominent western capitalist, who had had a large line of stocks, had been hit so badly that he had to throw his holdings on the market, and the severe decline of Pullman Palace Car stock pointed to the person and seemed to confirm the rumor. It was also said that two other capitalists were in deep water and having a hard time to pull through, with the result doubtful. They were all hit in the same way—the terrible drop in the Villard stocks, which had inflicted on them the most severe losses. The Vanderbilt family were reported to have finally dropped their holdings of stocks, with more or less loss, and the street is now calling those stocks the *ex*-Vanderbilts. Thursday afternoon, in the last hour, there was a sharp rally under the free covering of shorts, and rumors were out everywhere that Mr. Gould had come to the assistance of Mr. Villard, that a plan for helping the Northern Pacific Company had been perfected with the aid of Messrs. Drexel, Morgan & Co. and August Belmont & Co., and that a new blanket mortgage on the whole property of the company, to the amount of $75,000,000, would be issued. It was expected that there would be a general advance of prices yesterday, but it unfortunately happened that the coal stocks developed a sudden weakness, and this hurt so badly that there was no rally beyond what it was evident the bear operators allowed for their own purposes.

It is needless to say that the condition of things in the street has been one of utter demoralization, and discussion of causes has naturally been rife. One of the large commission houses, which sends out a daily circular letter, puts the matter in a shape worth quoting. After speaking of the mere surface fluctuations in the market, it discusses that tide in speculation which ebbs and flows through years, and whose movements are quite irresistible. It illustrates the causes thus: "In 1872 John Smith, iron-maker, reported business booming. He owed a good deal, but was making money. In 1874 he was piling up iron on a declining market. In 1875 he sold stocks and bonds at a sacrifice and put the proceeds in his business. In 1876 his mill shut down and he just escaped bankruptcy. Iron sold below the cost of manufacture. During 1877 and 1878 consumption used up old stocks and overtook current production. Presently somebody wanted iron and could not get it. Then everybody wanted it. In 1879 John Smith ran his mill night and day. In 1880 he built a new mill. He invested his profits in Lake Shore and bought Denver for a speculation. He sold his Denver last year and his Lake Shore last week. His mills barely pay expenses; still production is in excess of demand. This is one case. Multiply it by hundreds and the product by every leading industry, and the result shows why stocks were low in 1878, high in 1880, and why they tend downward in 1883." When a large commission house, which makes its money on the public buying, feels compelled to talk thus plainly, it may be understood how the case stands in Wall street in these times.

The deadness of public speculation in all departments, stocks, grain, provisions and cotton, and the prevailing distrust of people who have money to invest it, contributes to keep the loan market in its quite phenomenal condition of ease for this time of the year, for call loan rates have barely risen at any time this week, when money is moving off west and south, to as high as 4 per cent., while the average rate has been 2½ to 3 per cent. If there had been a "squeeze" in money at this time the stock market would have been more demoralized than it has been. Exchange rates have at last declined, as they should at this time, and the posted rates are now $4.82½ and $4.85. The decline has been due to limited demands from importers and the making of exchange against cotton shipments. There are next to no grain bills in the market, in consequence of the stagnant condition of our grain export trade. Governments are quiet and firm. The closing quotations yesterday were:

	Sept. 28,	—*Oct.* 5,—	
	bid.	*bid.*	*asked*
U. S. 4½s 1891, registered	114	114	114⅛
U. S. coupon	114	114	114⅛
U. S. 4s 1907, registered	120¼	120⅜	120½
U. S. 4s 1907, coupon	121¼	120⅜	120½

The bank statement of Saturday last showed a large movement of money to the interior. The surplus reserve was reduced $1,032,525, leaving it at $874,825 above the 25 per cent. line. This will probably have disappeared this week. The following are the comparative totals of the statements of September 22 and September 29:

	Sept. 22.	*Sept.* 29.	*Differences.*
Loans	$331,701,600	$329,664,000	Dec. $1,937,900
Specie	55,360,300	55,324,400	Dec. 35,900
Legal-tenders	26,050,100	24,077,320	Dec. 1,973,100
Deposits	318,013,400	314,107,500	Dec. 3,90-,900
Circulation	15,408,300	15,198,500	Dec. 209,800

The proportion of total reserve to liabilities is now 25.28, against 24.75 per cent. at the same date of 1882.

From New Orleans, La.: Money is firm, call loans bringing 8 per cent. Securities are fairly maintained.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

SUMMARY.

The general trade situation is less animated. At some western centers, as reported by special telegrams to BRADSTREET'S, the rush of orders has quieted, and a more moderate but satisfactory volume of trade has taken its place. At eastern cities, particularly New York, Boston and Philadelphia, the somewhat unexpected vigor of the fall movement has given place to transactions involving less activity on the part of jobbers and commission agents in dry goods, boots and shoes, and other leading lines. Special advices from over fifty cities as to the progress of building operations leaves no doubt that the investment in real estate and new buildings during the past eight months, as a whole, has seldom, if ever, been excelled. The price of wheat has gone off about ⅜c. per bushel as compared with Friday night's closing price of last week, the result of an increasing visible supply, excessive stocks abroad and lack of export demand. Indian corn is about 2c. per bushel lower on the week, largely due to the efforts of the short interest. Some considerable shipments abroad have been made, and a relatively greater export demand exists for it than for wheat. Provisions have been dull and lower, but a sudden advance at the west yesterday ran prices of lard in this market up about 20 points as compared with Friday's closing figure of last week. The anthracite coal market is somewhat demoralized, owing to the reported cut in prices by the Delaware & Hudson Canal Company. General reports place this reduction in stove sizes at 50c. per ton. The company deny it, but admit a cut of 15c. per ton, and claim it is in order to work off a lot of surplus coal which has accumulated at tide-water, owing to inability to procure cars to carry it west. Well-informed members of the trade declare that the cut amounts to 27c. per ton, and is made to induce Mr. Gowen to consent to the output of coal being reduced. This the company named denies. The iron market is dull at the reduction of $1 per ton for No. 1 pig without new business. Ocean freights are dull. Scarcity of desirable tonnage keeps charters firm. Petroleum tends lower as the new production, shown by the monthly report of operations as well as by the new wells which have come in this week, rather offset the bullish character of the pipe-line companies' reports for September. The consumptive demand for wool has continued good, though not so active as in the closing weeks of September. The market is very strong and favors sellers. There were 160 failures in the United States reported to BRADSTREET'S during the past week, 4 less than the preceding week, 39 more than the corresponding week of 1882, and 74 more than the same week of 1881.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: General trade is satisfactory and most branches are active. The transportation lines are doing more than last season. Manufacturers are all busy.

From Boston, Mass.: October opens with a fair trade in all the leading departments, and the quantity of goods going into distribution is as large as could reasonably be expected, but the situation is not altogether satisfactory. Values of several important articles of merchandise are very unsettled, and the numerous failures which are steadily cropping out tend to create a stringency in the money market that is somewhat embarrassing to legitimate traders. A copious rain on Tuesday has increased the flow of water for manufacturing purposes, but the rivers are still comparatively low and a large portion of machinery is still idle or on short time. The sales of wool are not fully as large as last week, but they show a good business and prices are well maintained. The banks are pretty stift on discounts at 5½ to 6 per cent., and outside paper ranges up to 7.

From Philadelphia, Pa.: Trade matters have presented no new features during the past week. The wholesale markets have continued fairly active as a rule, and in most departments values have been well sustained, The general feeling in commercial circles is hopeful.

From Pittsburgh, Pa.: The weather is favorable, and the volume of business with some houses is 25 per cent. in excess of same period last year.

From Cleveland, Ohio: General trade is reported very satisfactory. The early cold weather has created a demand for fall goods, and greatly increased activity is noticeable.

From Cincinnati, Ohio: The movements of crops and the apparent full supply of money have each contributed to improve trade. The approaching election, which is of vital importance to brewers and distillers, has caused a falling off in demand for barley and corn.

From Chicago, Ill.: Money is active. Time loans are 6@7 per cent. There is a large demand from country bankers for rediscounts. Deposits are gradually decreasing, and the flow of money to the country is fair. Exchange is par@25c. discount. Collections are satisfactory. Carpets, general upholstery, clothing, boots and shoes and hats are selling freely. Groceries are active. Sugars are scarce and firm.

From Peoria, Ill.: In groceries the trade averages fair, with collections backward. Money appears scarce in the country, and slow collections are attributed to farmers holding their grain.

From Detroit, Mich.: The general trade is of fair proportions, but is not spirited. Collections are fairly satisfactory, better than were anticipated, owing to the shortage of corn, fruit, and some other crops.

From Louisville, Ky.: General trade is very active and well supported. Money is in healthy demand and fair supply. The clearings show continued large increase. September shipments of leading articles show the following percentages of increase over September of last year. Agricultural implements 100, provisions 60, produce 75, cotton 100, dried fruits 300, plug tobacco 30, leaf tobacco 150, whisky 25 and flour 25. Boots and shoes, pig iron, hardware, leather and furniture show a slight increase. Grain, wool and staple groceries about the same movement as last year.

From St. Louis, Mo.: General trade has been very brisk, much of the extra activity being due to the influences of the fair, though bad weather has interfered with both fair and business. Exchanges banks and jobbing houses observed Thursday as fair holiday. Money has continued in strong request and the supply of loanable funds is quite reduced.

From Kansas City, Mo.: The volume of general trade is somewhat diminished. The rush of a few weeks ago has changed to a steady trade of satisfactory dimensions, comparing very favorably with same period last year. Collections good.

From Burlington, Iowa: Trade generally is good, but there are no special features to note.

From St. Paul, Minn.: The trade in general merchandise is steadily active, almost entirely on orders, personal buying having fallen off. But the aggregate sales are equal to those of a week ago. Money is close, but not stringent. Currency is flowing to the wheat regions, with the prospect of increased volume. Return receipts are moderate, but greater than usual at this season of the year. Borrowers are making active demands on the banks, but the latter attend only to regular customers, giving short time, and charging at the rates of 8@10 per cent. Outside paper not taken. Eastern exchange abundant, going at shipping rates for discount between banks. Mercantile collections are slow, as currency is not yet fully in farmers' hands. Much wheat is being stored for higher prices, thus lessening the currency circulation in grain sections.

From Topeka, Kan.: General trade is fair and improving. Money is in good demand, and the market is tightening.

From Milwaukee, Wis.: Trade is brisk. Collections are fair. Money is working close, and currency is moving westward.

From Omaha, Neb.: Business holds up in all lines, and collections are improving.

From San Francisco, Cal.: No special feature needs mention in any line of business during the past week. The Jewish New Year interfered seriously in the wholesale trade.

From Baltimore, Md.: The general volume of business has been large, and all branches of trade have a healthy appearance. The weather continues favorable, and trade prospects are bright. Money is easy.

From Richmond, Va.: Business in all lines is good. Country merchants are visiting the city and buying quite freely.

From Wilmington, N. C.: The weather is warm for the season. Continued unfavorable crop reports check general business. Meats, breadstuffs and grain stocks are ample; buyers purchase sparingly.

From Savannah, Ga.: October opened with unusual hot weather, but trade was not unfavorably affected, for all lines show increased activity. The retail trade is not fairly opened. Laborers have been in steady demand, and new buildings continue to go up.

From Galveston, Tex.: The weather during the past week has been hot and dry. Dry goods and general jobbing is reported as only fair. New York exchange ⅜ discount.

From Nashville, Tenn.: General trade is fair.

From Indianapolis, Ind.: Trade is deemed good in most lines, but there has been considerable rain which has interfered some. Manufacturing is a little dull at present, orders having fallen off.

FROM NEW ZEALAND.

From San Francisco, Cal.: Australian advices report a dull trade generally with overstocks. The import of gold by the Zealandia from New Zealand amounts to $1,000,000. Exchange is 10c. premium.

BREADSTUFFS ABROAD.

Foreign cables this week have brought some encouragement to watchers for higher prices on this side. Early in the week they quoted best grades of foreign wheat firm, and a few days after as somewhat better than that—although this was all that could be said. During the previous week cold and wet weather in England prevented the successful gathering of such portion of the wheat crop as then remained in the fields and was, of course, unfavorable for threshing. Newly marketed English wheat was damp and naturally unsalable. Supplies of foreign wheat were very large and prices were then depressed. It is stated also that Pacific coast flour received in London does not appear suited to the English market. Indian corn was weakening. English wheat had touched 41s. per quarter. The slothfulness of the apparent effort for a revival in prices of foreign wheat in the United Kingdom this week is not surprising. Late in September London granaries were so filled that lighters carrying grain could not be unloaded. Thus it is evident that for some little time the British market was destined, owing to supplies far in excess of consumptive requirements, to suffer an impediment to any increase in quotations. One week ago prices for wheat in France, Austro-Hungary and in Russia were lower. In Germany old prices were barely realized, notwithstanding the 40,000,000 bushel shortage which was reported in the rye crop of that country. This was not of course due to great excellence or large crops of wheat in those countries, for the yields have been notoriously deficient, not only in the United States but in France, Germany, Austria, Italy and Russia. Hungary, Spain and the low countries are estimated to have produced a fair average only. But—and here is the key not only to low prices, under short supplies, but to the dragging export request felt on this side—in France, the United States and in the United Kingdom an amount of stock exists which, with old and new supplies, makes "a present plenty" and deters buyers from anticipating future wants for the time being. In relation to the table of estimates of deficiencies in the world's supply of wheat printed last week, the following communication has been received:

To the Editor of BRADSTREET'S: In your article in your issue of the 29th inst. you published a comparative statement of estimates of the world's wants and supplies of wheat, one of which was from *Le Fermier*, a Paris paper, in which the deficiency of supplies under requirements for the campaign of 1883-84 is admitted to be 42,228,200 bushels, equal to 14,900,000 hectoliters of 2.838 bushels each. The *Le Fermier*, in the detailed statement given, credits Belgium and Holland with 5,000,000 hectoliters requirements, equal to 14,190,000 bushels. In this estimate for these two countries there is a very important mis-estimate, as will be perceived from the following statement of the imports of wheat by the two countries named:

HOLLAND.	*Bushels.*	BELGIUM.	*Bushels.*
1879-80	6,558,034	1878 net	11,721,492
1880-81	10,941,234	1879 net	14,063,985
1881-82	11,111,718	1880 net	15,618,345
1882-83	11,080,821	1881 net, about	14,700,000
Total	39,691,807	Total	56,136,822
Average 4 years	9,922,952	Average 4 years	14,034,255

The average net imports of Belgium for the ten years ended with 1880 has been 10,509,041 bushels. It will be perceived that the average net imports of these low countries are 23,957,207 bushels, against *Le Fermier's* estimate of 14,190,000 bushels for the requirements in 1883-84.

The Vienna Congress reports the crop of Holland for 1883 at 90 per cent. of an average against 105 per cent. for her crop of 1882. The Vienna Congress does not give the per cent. for Belgium for 1883, but for 1882 it was given at 115. The commercial accounts of the wheat crop of Belgium do not place it even above the average in 1883. There are other estimates in *Le Fermier* that are quite as much at variance with the facts, and these show that *Le Fermier's* estimate is very far from being a reliable one. Yours truly,

E. H. WALKER,
Statistician New York Produce Exchange.

New York, October 3.

Beerbohm's cable, giving the amount of grain on passage to the United Kingdom and the continent October 3, is as follows:

	For United Kingdom, bushels.	*For continent, bushels.*	*Total, bushels.*
Wheat	15,000,000	4,640,000	19,640,000
Maize	2,320,000	440,000	2,760,000
Previous week.			
Wheat	15,000,000	4,160,000	19,160,000
Maize	2,480,000	520,000	3,000,000
Comparison.			
Increase wheat	.....	480,000	480,000
Decrease maize	160,000	80,000	240,000
Same week 1882.			
Wheat	16,400,000	6,400,000	22,800,000
Maize	440,000	80,000	520,000

AMERICAN WHEAT MARKETS.

Last week the wheat options advanced nearly 2c. per bushel in six days, but left off at the close within a quarter of a cent as high as they opened. The past week has run very much in the same groove, but for the greater portion of the time with more reason. Last Saturday's telegraphic advices from abroad mentioned a better request and more firmness for the best grades, and this, with a moderate though steady buying at home, lifted prices from $1.11½ (close Friday, September 28) to $1.12 (October delivery) on Saturday evening. Monday saw the advance carried on ¾c. a bushel, owing to a speculative demand, which carried it too far. So anxious were buyers to get wheat that they bid the price above that offered by exporters, and the wheat went from hand to hand without getting any nearer to millers or foreign buyers. On Tuesday an advance was made at first, owing to the supposed activity of foreign buyers, but evidence of this not appearing and a weakness in prices at the west left quotations at the close 1c. per bushel lower than on the day preceding. There is considerable reason to believe that some wheat would go abroad, not only from New York, but from other Atlantic ports, were not speculators here too ready to discount the future by bidding for all the wheat offered at the slightest sign of a demand from the other side. Wednesday brought a reaction from the close of Tuesday to $1.12¼ for October, a gain of ½c. Firmer cables induced a disposition to buy, and late bullish crop advices encouraged this and kept the bears from asserting themselves.

Thursday's market was dull and apathetic, buying was spiritless, and prices dropped back. The increase in the visible supply helped this. Trading was dull again on Friday, and the decline amounted to ½c.@1c., leaving prices ⅜c. below those at the close on Friday last week.

The October crop report of the Ohio State Board of Agriculture, based upon returns from about 600 township correspondents, will give the following: Wheat—Acres threshed to date, 606,223; bushels produced for same, 6,060,449; total for state at same rate, 25,508,396 bushels, against 45,450,000 last year. Mr. Walker, statistician of the New York Produce Exchange, has published a carefully compiled statement, by which it appears that the shortage in the wheat crop is 112,639,086 bushels, which makes the total crop 391,576,384 bushels, based on a comparison of the Government Agricultural Department reports of 1882 and 1883. The New York *Commercial Bulletin's* calculations point to 400,000,000 bushels as the minimum. Our St. Louis correspondent furnishes us the following comparative statement of the quantity of grain shipped down the Mississippi river from that city between the dates mentioned:

		Grain, bush.
Jan. 1 to Nov. 1, 1882		11,021,634
Jan. 1 to Oct. 1, 1882—Wheat, bush	1,674,683	
Corn, bush	7,579,055	
Oats, bush	1,870,412	
		10,524,150

The receipts of wheat at tide-water for the week ending September 29 decreased to 2,030,456 bushels from September 22, when they were 2,136,005 bushels. The exports from the Atlantic ports for the week ended September 29 amounted to 1,135,444 bushels, against 1,239,177 bushels September 15.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended September 29 amounted to 1,947,587 bushels, against 2,460,528 bushels in the preceding week, and the shipments to 1,504,635 bushels, against 1,615,789 bushels in the week previous.

The visible supply of wheat in the United States and Canada (east of the Rocky mountains) September 29, as against the preceding week, showed an increase of 792,924 bushels.

The course of prices of wheat at New York and Chicago (1 P.M.) during the past week has been as follows:

	At New York			*At Chicago*	
	Oct.	*Nov.*	*Dec.*	*Jan.*	*Oct.*	*Nov.*
Fri. Sept 28	$1 11½	$1.13¾	$1.16⅛	$1.18¼	$0.95⅛	$0.97⅜
Sat. Sept. 29	1.12	1.14½	1.16⅞	1.19⅛	.95¾	.98
Mon. Oct. 1	1.12¾	1.14⅞	1.17¼	1.19⅝	....	....
Tues. Oct. 2	1.11¾	1.13⅝	1.16	1.18⅜	.95⅛	.97⅛
Wed. Oct. 3	1.12¼	1.14⅛	1.16⅜	1.18⅝	....	....
Thur. Oct. 4	1.11⅝	1.13⅝	1.15⅞	1.18⅞	.95⅛	.97

At 1 P.M. on Friday, October 5, November wheat at Chicago was quoted at 96⅜c., against 97⅜c. on the preceding Friday.

INDIAN CORN.

This cereal has been, to a considerable extent, in sympathy with wheat during this week. It has suffered a much greater decline, however, owing to heavy deliveries by the so-called corn clique on October contracts and the large receipts at this port. By Wednesday evening the October option closed at 60½c., or ¾c. below the close on Thursday of last week. More corn has gone abroad on private terms, which served to lend strength to prices early in the week. Manipulation by the short interest conspired to depress prices of corn on Thursday. On Friday the options were irregular, leaving off ⅛c. under Thursday's closing figures, or about 2c. under the close on Friday night last week.

The October report of the Secretary of the Ohio Agricultural Bureau says that the condition of the Indian corn crop in that state as compared with October 1, 1882, is 76 per cent.; damage done by frost 26 per cent.; probable total about 68,000,000 bushels, against 90,869,000 last year. The damage by frost was very severe in the northern half of the state and light in the southern half.

The receipts of Indian corn at the Atlantic ports for the week ended September 29 were 2,550,500 bushels, against 1,814,054 in the preceding week, while the exports from the same points amounted to 1,389,073, against 978,795 bushels. The visible supply of Indian corn in the United States and Canada, east of the Pacific coast, September 29 had decreased 1,625,792 bushels as compared with September 22. The total receipts of corn at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis, for the week ending September 29, were 2,726,125 bushels, against 3,453,910 the week preceding, and the shipments were 2,712,193 bushels, against 3,233,407 in the preceding week.

The closing prices of Indian corn daily during the past week at New York and Chicago at 1 P. M. were as follows:

	New York.				Chicago.	
	Oct.	Nov.	Dec.	Jan.	Oct.	Nov.
Friday, Sept. 28	.61⅜	.61⅛	.60	..	.49⅝	.48¾
Saturday, Sept 29	.61⅞	.61⅝	.60½	..	.49⅝	.49
Monday, Oct. 1	.61¼	.61⅜	.60½	.59	..	..
Tuesday, Oct. 2	.63⅝	.63⅜	.59⅜	.58¼	.48¼	.47⅝
Wednesday, Oct 3	.63¼	.60	.59⅛	.58	.48⅜	..
Thursday, Oct. 4	.59¾	.59¼	.58¼	.57⅞	.47¾	.47⅛

Corn at Chicago at 1 P. M. yesterday was for November 47¼c., against 48¾c. for the option named on the preceding Friday.

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Sept. 28	Oct. 5.
No. 2 flour	$2.60 @3.35	$2.60 @3.25

The visible supply of grain, comprising the stocks in granary at the principal points of accumulation at lake and Atlantic ports, and on rail and on the Mississippi river, and afloat on New York canals, destined for tide-water:

	Sept. 29, 1883.	Sept. 22, 1883.	Sept. 30, 1882.	Oct. 1, 1881.
Wheat, bushels	26,394,337	26,171,013	13,119,613	19,494,352
Corn, bushels	14,006,269	15,692,061	6,650,504	27,381,974
Oats, bushels	5,702,838	5,700,046	5,510,557	6,408,050
Barley, bushels	784,962	610,238	561,843	1,393 024
Rye, bushels	2,006,673	1,697,213	739,062	901,804
Total bushels	49,677,079	49,871,171	26,623,579	55,639,294

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Flour has ruled quiet, with a weakening tendency on everything except fresh-ground old spring wheats, which are scarce. Wheat has been in good speculative demand, with moderate fluctuations, and there has been a little more inquiry for export, but no general business on foreign orders, as bids are still considerably below current rates. Corn has continued dull and heavy. Oats have ruled quiet.

From Cincinnati, Ohio: Flour is in active demand, in some instances from country millers to supply the home demand. Inquiries are for all grades, but more particularly the better qualities. Receipts of wheat have fallen off, and the demand is easier. Prices are 1c. lower.

From Chicago, Ill.: Wheat is weak and depressed by bad cables from Europe, fair receipts and the absence of shipping demand. The estimated stocks to-day are 7,000,000 bushels. Corn is unsettled owing to less shipping demand, free receipts and increasing stocks. It declined ¾c., later advanced 1c. in sympathy with provisions. Oats are firm. There is a good demand from shippers, but it is not equal to the receipts.

From St. Louis, Mo.: All grain has been unsettled, with the demand dull except for export corn. The flour demand has fallen away again.

From Milwaukee, Wis.: The movement of wheat continues moderate, but a large share of the spring wheat crop is being ground by interior millers, and the receipts of flour are large. Prices of wheat are too low to suit the farmers, and the bulk of the Wisconsin crop will not move before next spring unless the markets improve. The supplies on hand here are large and storage charges are accumulating. Speculators pay 2½c. for carrying wheat into November, and 2¼c. more to December.

From Topeka, Kan.: The wheat and flour trade is brisk. The corn crop this year is very large and in excellent condition.

From Baltimore, Md.: A better demand for and light offerings of wheat have improved the market, and good samples, particularly Fultz and long berry, bring higher prices. Corn is in fair demand and the market quotes firm. The flour market rules steady. Speculation in cotton is quiet with no change in prices.

From New Orleans, La.: Flour and provisions are quiet, and stocks are light. The grain market is nominal; receipts and exports are small.

From Memphis, Tenn.: The grain market is unchanged, except for wheat, which is ¾c. to 1c. per bushel higher. Flour is quiet and steady.

From Nashville, Tenn.: Flour is firm and prices better. Wheat has been active and prices fair. The demand is greater than the supply.

THE GROWING GRAIN CROPS.

[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: The weather is rainy, and the drouth broken. Plowing for winter wheat is now practicable, but owing to the delayed season the acreage must be smaller.

From Milwaukee, Wis.: The weather continues fair and very favorable for fall work. There has been some frost, and late corn and vegetables have been killed.

From Omaha, Neb.: The weather continues mild, and the crops are doing well.

From San Francisco, Cal.: Wheat comes forward slowly. Prices are firm.

PROVISIONS.

Transactions in hog products during the earlier portion of the week were very dull, and fluctuations in prices were within narrow limits. The foreign demand was quite as light as previously, and only a very moderate home trade was passing. Hogs were in full supply, and, in the opinion of some, bringing all, if not a little more, than they were worth. This indicates a bearish feeling yet, but prices have got to where nothing short of something serious will warrant a much greater decline. The stock statement itself, while showing increases in the past month, does not appear to have had much influence on prices.

The statement of stocks at New York shows an increase of 5,771 barrels of pork and 1,439 tierces of lard, compared with the corresponding period last year, and only 4,000 tierces decrease in the latter for the month. The stock of lard at the five continental ports was reported at 36,000 tierces, against 35,000 tierces last month. At Liverpool the stocks are large, as may be seen:

	October 1.	July 1.
Lard, tons	5,900	2,900
Bacon, boxes	22,000	18,500
Pork, barrels	1,200	3,700
Hams, boxes	670	1,150
Shoulders, boxes	2,400	3,500
Beef, tierces	2,300	3,300

The stocks of hog products at Chicago were reported as follows:

	October 1,		September 1,	
	1883.	1882.	1883.	1882.
Mess pork, barrels	104,470	58,680	139,068	146,297
Other pork, barrels	4,369	2,055	5,797	1,780
Lard, prime, tierces	24,700	39,700	48,220	95,779
Lard, other, tierces	2,963	5,960	3,801	5,597
Bacon, S. C., pounds	1,142,624	.....	2,472,557	64,000
Bacon, L. C., pounds	3,862,645	3,496,740	4,580,526	2,148,162
Bacon, S. R., pounds	9,401,345	4,704,133	24,800,022	8,833,370
D. S. shoulders, pounds	4,452,522	450,545	5,688,023	1,203,955
S. P. shoulders, pounds	1,724,400	1,897,227	3,364,440	3,511,140
S. P. hams, pounds	5,370,954	6,282,630	6,877,930	8,937,167
Other meats, pounds	10,341,808	4,162,607	8,682,722	5,544,069

Exports of hog products from the following places for the week ending September 29, 1883, were:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds
New York	3,559	4,997,526	3,248,172
Boston	530	844,781	982,577
Portland	....	....	....
Montreal	404	563,300	423,820
Philadelphia	....	1,000,000	5,000
Baltimore	....	....	87,725
New Orleans	30	1,700	1,486
Totals	4,523	7,207,307	3,888,680
Previous week	4,446	6,373,401	5,373,530

The total export of hog product from the above-mentioned places from November 1, 1882, to September 29, 1883, was as follows:

	1882-83, pounds.	1881-82. pounds.
Pork	42,066,000	45,193,200
Bacon and hams	388,635,476	350,620,313
Lard	263,969,970	227,452,054
Totals	695,621,446	623,336,187

Prices of lard and mess pork at New York during the week were as follows:

	Lard, per lb., October.		Pork, per bbl., spot mess.	
	This week.	Last week.	This week.	Last week.
Saturday, Sept. 29	8.14c.	8 30c.	$12.00	$12.25
Monday, Oct. 1	8.15	8.36	11.75	12 00
Tuesday, Oct. 2	8.10	8 23	11 75	12 00
Wednesday, Oct. 3	8.17	8.15	11.75	11 75
Thursday, Oct. 4	8.15	8.15	11 75	11.50
Friday, Oct. 5	8.45	8.20	11 75	12.00

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The decline in meats has stopped, and the approaching cold weather will, it is thought, witness a far more healthy tone in the provisions market. It is claimed there is less meat in stock than last year, with an improved consumptive demand.

From Chicago, Ill.: Pork for cash and October is excited, and advanced 75c. on free covering by the shorts. Long futures are 20@30c. higher in sympathy. Lard is firm. Cash and October are 35 points higher on demand to cover contracts for this month. The shorts fear a squeeze or corner. Long futures are little affected. Short-rib sides are excited and have advanced $1.15 since yesterday on cash and on October; 50c. on long operations. Long futures show little improvement.

From Louisville, Ky.: Provisions are quiet and easy. Cotton is in very good general demand, and the market is firm.

From St. Louis, Mo.: Excepting pork and bacon, provisions are very active at an advance. Both cattle and hogs tend upward, and are selling lively.

From Topeka, Kan.: Hogs, sheep and cows are offering freely, but there are few steers.

From Kansas City, Mo.: Cattle receipts are 20 per cent. greater than in the previous week, grass Texans comprising the larger portion. The market has ruled very steady and values are substantially unchanged. Hog receipts exceeded last week's by 8,000 head. Values have fallen about 20c. per 100 weight. The general tone of the market is unsteady. Packing house products are in fair demand and prices are firm.

From Memphis, Tenn.: Meats tend upward, and are ⅛c. to ¼c. higher on all classes.

From Nashville, Tenn.: Cattle receipts are liberal and the demand is good, equal to the supply, with good prices.

THE NEW YORK DRY GOODS MARKET.

Business for the week has been of moderate proportions only; this caused no disappointment, as it was expected on account of the Hebrew holidays. There is a lull at present until the regular re-assortment trade sets in. Jobbers are replenishing somewhat, and, in consequence, the commission merchants have had a very fair week. The jobbing trade is quiet, and will probably remain so for a week or two. With the majority of the retailers this has been opening week, and if the present weather continues they ought to have excellent business next week. The clothing trade report a falling off, and sales rather backward, but hope for some improvement with continued cold weather.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The jobbing movement is not as active as a few weeks ago, but there is still a pretty good trade, and we hear no complaints. Cotton goods sustain the recent advance, and all the principal makes which govern the market are well sold up. The outlook for manufacturers is quite favorable, and the indications are that values of cotton fabrics will be maintained during the remainder of the year. Woolen fabrics are moving fairly at about steady prices.

From Providence, R. I.: The market for printing cloths is quoted quiet and steady, though the price of 3¾c. to which they had advanced is not sustained, being held to-day at 3 11/16c. less ½ per cent. Manufacturers, however, have the feeling that the market is in a healthy state, the bulk of the stock being in their hands.

From Philadelphia, Pa.: There has been a fair trade in jobbing lines, but trade has not been so active as during the previous fortnight. Agents are doing a fair business on orders for reassortment. The general situation is satisfactory and the outlook encouraging. Values generally firm and collections prompt. The recurrence of Hebrew holidays has checked trade in clothing woolens to some extent.

From Pittsburgh, Pa.: Dry goods jobbers express entire satisfaction with the condition of trade in their line.

From Cincinnati, Ohio: The dry goods trade continues active, and a number of buyers are here. The demand is not confined to any special line.

From Chicago, Ill.: There is continued activity in dry goods, millinery, notions, fancy and furnishing goods. Sales will come close up to the average of the three previous weeks. The supply of domestic cotton fabrics is reduced, and the prospect is that the season will close with stocks down to the minimum.

From Peoria, Ill.: Dry goods sales are a good average.

From Indianapolis, Ind.: In dry goods trade is good.

From Detroit, Mich.: In dry goods the volume of business is up to a fair average, and fully up to what was anticipated.

From Louisville, Ky.: The dry goods (southern) trade have made their principal purchases, and near-by traders are visiting the market in large force. A brisk movement of large volume is in progress.

From St. Louis, Mo.: The dry goods trade is fully maintaining its heavy volume at unchanged but firm values.

From Kansas City, Mo.: Dry goods continue quite active, but little diminution of sales being noticeable. The general condition in this line is highly satisfactory.

From Burlington, Iowa: Dry goods are moving easily with favorable orders, indicating a good fall business. Collections are fair.

From St. Paul, Minn.: Dry goods sales are less than a week ago, though fair in volume. Buyers, being cautious, made only small bills, and are now selling. Traveling men report good prospects to the holidays. The principal demand is for dress goods, flannels, cloakings, cassimeres, canton flannels, blankets and comfortables. Grain bags are still selling liberally. Cottons are tending up.

From Topeka, Kan.: The dry goods trade is fairly active and satisfactory.

From San Francisco, Cal.: Dry goods continue inactive in jobbing houses, the regular season's trade being 10 to 20 per cent. under that for two previous seasons. The auctions have done an unusually large business.

From Baltimore, Md.: Dry goods jobbers have summed up sales for September, and say they were equal and in some cases larger than last year. The present month has opened well with them, and some duplicate orders are already coming in. Collections, however, continue slow and cause some complaint. Prices are firm.

From Richmond, Va.: Dry goods are keeping pace with other lines.

From Savannah, Ga.: Dry goods jobbers are quite busy in filling orders and report collections coming in fairly. There is no demand as yet for woolen fabrics.

From Memphis, Tenn.: There is only a slight variation for the better in dry goods.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The market for clothing continues in a satisfactory condition. Orders are still coming in freely, and October's trade promises to come up to a full average. September's sales were larger than for the same month last year. The demand from New England has dropped off a little, but the general opinion is that it will start up actively again with colder weather.

From Cincinnati, Ohio: The clothing trade is about over.

From St. Paul, Minn.: Clothing sales are slightly increased, but buyers are cautious.

From Savannah, Ga.: Clothing is steady and unchanged.

COTTON.

The market for spot cotton at New York for the week has been quiet and steady. Sales have been principally to spinners. Quotations remained unchanged until Thursday when prices, based on new cotton, were revised as follows: Middling and below reduced ⅛c., good middling reduced ¼c., grades above good middling reduced ⅜c., old cotton held 3/16c. @ ¼c. higher. The closing price for middling uplands last night was 10½c., against 10⅝c. last week. The sales foot up as follows: for export 500 bales, for consumption 5,207, for speculation 366, and in transit 900 bales. The total sales aggregate 6,973 bales against 4,742 last week. Deliveries on contract amounted to 1,500 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corre-

sponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	*Last week.*	*Last year.*
Ordinary	8¼c.	8⅜c.	8⅞c.

The market for spot cotton closed quiet and steady.

The market for futures has been steady. Business has been slow with the exception of Tuesday, when the sales reached fair proportions. Prices have advanced through the week, and quotations at the close last night show an advance from last week of 26 points for near months and 52 for later ones. The sales aggregate 475,800 bales, against 880,000 last week.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
October	10.51	10.35	11.21
November	10.60	10.39	10.96
December	10.73	10.43	10.96
January	10 88	10.53	11.03
February	11.03	10.68	11.15
March	11.17	10.78	11 25
April	11 29	10 92	11.35
May	11.40	11.03	11.47
June	11.51	11.15	11.58
July	11.61	11.25	11.67

The market for futures closed firm.

The southern markets have been firm and steady. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year's quotations:

	Week's sales	*To-day.*	*Last year.*
Galveston	2,974	10⅛	10¾
New Orleans	.....	....	11¼
Mobile	750	10⅜	10¾
Savannah	3,700	10	10½
Charleston	1,500	10 3-16	10⅜
Norfolk	915	10⅛	10⅞
Baltimore	525	10⅜	11¼

The total receipts of cotton at the ports since September 1 are 483,362 bales, against 436,554 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	94,952	100,126
New Orleans	....	67,229
Mobile	18,349	33,128
Savannah	113,377	115,117
Charleston	85,052	79,142
Wilmington	11,951	13,337
Norfolk	34,516	38,079
Baltimore	1,386	908
New York	622	1,556
Boston	759	6,660
Philadelphia	3,712	1,640

The total receipts at the ports for the week were 164,330 bales, against 125,053 last week and 177,933 for the corresponding week last year.

The receipts at the twenty-four interior towns usually reported were about 82,142 bales, against 67,974 bales last week and 83,799 bales for the corresponding week last year. The shipments for the week were 68,816 bales, against 43,797 bales last week and 65,054 bales for the corresponding week last year. The stocks for the week were 105,564 bales, against 85,652 last week and 57,374 for the same week last year.

The market at Liverpool for prompt delivery uplands has been firm. The closing price last night for middling uplands was 5⅞d., against 5¾d. last week.

The future market has been dull and quiet, except on Monday, when it was strong. Quotations are higher, and show an advance of 5 points for near months and 7 for later months.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
September-October	5 56-64d.	5 50-64d.	6 35-64d.
October-November	5 51-64	5 49-64	6 23-64
November-December	5 53-64	5 49-64	6 20-64
December-January	5 54-64	5 50-64	6 20-64
January-February	5 56-64	5 52-64	6 20-64
February-March	5 60-64	5 55-64	6 21 64
March-April	5 63-64	....	6 23-64

The market for futures closed quiet.

The sales for the week at Liverpool were 83,000 bales (of which 56,000 were American), against 50,000 (of which 37,500 were American) last year. The sales for export were 5,700 bales, against 4,000 bales last year. The sales for speculation were 5,800 bales, against 500 bales last year. The amount forwarded was 3,700 bales, against 5,100 bales last year. The stock in port is 615,000 bales (of which 353,000 are American), against 459,000 bales (of which 163,000 were American) last year. The total imports for the week were 25,500 bales (of which 23,000 were American), against 36,500 bales (of which 14,500 were American) last year, and the amount afloat 76,000 bales (of which 29,000 are American), against 185,000 bales (of which 76,000 were American) last year.

The Manchester market closed firm.

The Havre market closed hardening.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The cotton market is firm at the advance and the week has developed more activity.

From Philadelphia, Pa.: Cotton has advanced ⅛c. and closes very firm with tight offerings and a fair consumptive demand.

From Cincinnati, Ohio: The cotton market is good for middlings and some low grades. The volume of business, however, is not up to last week. Receipts are considerably in excess of last season.

From Louisville, Ky.: Receipts of new cotton are rapidly increasing, and the quality and staple are both good.

From Wilmington, N. C.: Cotton is selling promptly. The bulk of the receipts have been injured in quality by the recent storms.

From Savannah, Ga.: Cotton is more active with an upward tendency in prices, which has been well maintained, and the bulk of holders are pretty well sold up. Wednesday the clearance of cotton for foreign ports was 6,024 bales, weighing 2,876,634 pounds.

From New Orleans, La.: Since Thursday, last week, spot cotton advanced ⅛c. to 3/16c.; futures, 7 to 11 points. The movement of the former has been fair, and of the latter moderate. Crop estimates are now 5,500,000 to 6,000,000 bales. Heavy October receipts are expected.

WOOL.

There has been a very fair trade in wool during the past week, but the market has been quieter than for two or three preceding weeks, as a natural sequence of the previous activity and the general depletion of stocks and assortments in the eastern markets. Large purchases were made during September that have partially supplied the immediate wants of consumers, but there is still a good inquiry and the general position and outlook are improving. Dealers are now realizing 45c. for desirable lots of medium combing against 42@43c. a few weeks ago, and fine Ohio delaine sells readily at 41½@42½c., an advance of fully 2c. from early September prices. Fine and quarter-blood clothing and all grades of washed and unwashed delaine and combing wools show a corresponding improvement. Stocks are closely sold up and offerings are light. There has been a falling off in demand for Jersey yarns, but other grades of worsted yarns are still in brisk demand, and manufacturers are busily employed on orders. Western wool markets have hardened in sympathy with the east, and a good many purchases have been made at figures that indicate a strong feeling of confidence in the future of the markets for wool and woolen goods.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The demand for wool is steady, but there is a falling off compared with some previous weeks. Manufacturers, however, could scarcely be expected to keep up the large transactions we have recently had to notice. The business has been a good average one, and prices remain quite steady. The sales of the week have been 2,691,400 pounds of all kinds. Ohio and Pennsylvania fleeces have been selling at 36@38c. for X, 38@40c. for XX, and choice selections as high as 41½c. per pound. In Michigan fleeces the sales have ranged from 34@35½c., and a lot of 200,000 pounds sold a fraction over 35½c. per pound. In combing and delaine fleeces there is no change. Worsted firm and demand good. The sales have been at 40@43c. for fine delaine, and 43@45c. for fine and No. 1 combing. Unwashed fleeces continue to meet with a good demand, and sales of Texas, territory and western at full prices. The demand for California wool has been quite moderate. A lot of 25c,000 pounds inferior spring sold at 17c., and a lot of choice northern sold at 30c. per pound. Pulled wools remain the same, and have been quite steady. Choice supers are scarce. We quote sales of choice supers at 40@43c., and common and good at 25@38c. per pound. In foreign wool no sales of any importance. Some small lots of Australian and carpet wools have been taken, but the stock of the best carpet wools is held above the views of buyers.

From Philadelphia, Pa.: Wool has been quieter. The week's sales foot up 1,200,000 pounds of all kinds, as against upward of 1,600,000 the previous week. Values, however, have been very strong, with an upward tendency on nearly all descriptions.

From Cincinnati, Ohio: Wool is active, and sales are freely made at advanced prices.

IRON.

The reduction in the price of No. 1 foundry iron from $22 to $21 per ton, made by the Thomas Iron Company, in this city on Monday last, receives adequate treatment in our regular editorial columns in this issue. Thus far during the week no word has been received of like reductions by other leading makers of first-quality brands of iron. And sales have not been stimulated by the reduction. The situation in the American pig iron market therefore remains about as last week. It must be added, however, that the market is, plainly speaking, very dull for September and October, for whereas they should witness an active trade, they have recorded a want of orders which resulted in the cut in prices noted above. No. 2 American continues at $20, and grey forge at $19. Consumers appear to have been led to believe that another reduction is not impossible, for they seem quite determined not to take any more than they need at once—in any event. Still these small orders aggregate a very respectable total when the months are are considered. Bar iron is no better, quotably, than previously. Mills are still soliciting orders, and the demand is light enough to leave no room to increase the margin of profit. The steel rail mills are all employed, and prices are as last mentioned, viz., $37.50@38 per ton, and with considerable work in sight. Imports of pig iron are light, those from Great Britain for eight months having declined over 300,000 tons as compared with a like period in 1882. The opinion appears to be current that a blowing out of some of the smaller pig iron furnaces now in operation would not only prove a needed stimulus to consumers, but a healthful course to pursue from the point of view of the producer. The receipts of Scotch pig iron this week will aggregate about 1,400 tons, the usual quantity, and the sales are, as heretofore, very small. None went into store. Prices are firmly held on the basis of $23.25 for Coltness. Some consignees have gone out of the business, owing to dull trade in this brand of iron.

IRON MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The drop in prices on a number of makes of pig iron has increased the demand, and there are indications of a general covering of requirements at $18 for forge, $19 for No. 2 and $21 for No. 1. Muck is strong and active. Merchant bars are dull and weak. Nails are moderately active, but easier. Construction iron is in good request and steady. Steel rails are quiet and firm. There have been no large transactions.

From Pittsburgh, Pa.: At this period there should be a good demand for manufactured iron of all descriptions, but the reverse seems to be the case, and business can be called dull. It is believed buyers are holding back from a want of confidence. The demand for nails is still good, but owing to the dull condition of other branches purchases are only made for immediate wants, and it is believed if factories continue in operation lower prices will prevail. The pig iron market if anything is not as strong as it was a week ago.

From Chicago, Ill.: Bar iron and nails are meeting a fairly satisfactory sale. Stocks are well under control. Southern pig iron is freely offered and rather weak. Other brands are steady. Stocks are moderate, and sales are in a jobbing way, with no prospects of large improvement in the near future.

From Cleveland, Ohio: Iron is dull and weak, with every prospect of remaining so for some time. Prices are unchanged, though great effort is required to sustain the market, owing to imperative demands by consumers for lowest prices, together with sharp competition.

From Cincinnati, Ohio: The pig iron trade continues good and the demand is for nearly all grades. Makers complain that there is no money in their sales, however. Manufactured iron continues without any noteworthy change.

From St. Louis, Mo.: Pig iron is unsettled, and orders are rather lighter than previously. Merchant iron quotations remain the same, but adhered to as closely as before, though the demand is fair.

From Detroit, Mich.: The iron market continues depressed and prices are hardly as firm as thirty days ago.

HARDWARE.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: There is good steady trade in hardware, metals and tinners' stock.

From St. Paul, Minn.: Hardware sales have increased.

COAL.

Some excitement was caused in the anthracite coal trade yesterday by the announcement that the Delaware & Hudson Canal Company was cutting circular prices on stove coals 50c. per ton. Naturally enough the report speedily found its way into Wall street, where it was turned to good account by bear operators in connection with prices of stocks of the coal-carrying roads—notably the Delaware, Lackawanna & Western. The situation, as understood among the coal trade, is of course not as bad as the operators in stocks have it. Competitors with the Delaware & Hudson Canal Company state that their customers report that the Delaware & Hudson Canal Company is selling stove coal in boat-load lots at tide-water at $4.18 per ton, against $4.45 as per the September circular, which is, at this point, supposed to be still in force among the members of the anthracite coal pool or combination so-called. This, if true, would mark a cut in rates amounting to 27c. per ton as against the 50c. reduction reported in Wall street yesterday morning, which rather eases up on the first-mentioned enormity of the offense. The authorities for this view also state that the opinion is prevalent that the action named on the part of the Delaware & Hudson Canal Company is directed toward Mr. Gowen, of the Reading Company, in order to induce that gentleman to agree to a stoppage of production. The trade in anthracite for some time past has been comparatively dull, and recently has been quite so—in the east—and several members of the combination of heavy producers of anthracite have desired to curtail the output, but, as alleged, have been resisted by Mr. Gowen, on behalf of the Reading Company, that gentleman claiming that he finds a ready market for all he can ship. This version of the situation suggested an interview with the Delaware & Hudson Canal people. The vice-president was not in, but his private secretary, in response to various inquiries, said substantially that it is not true that the Delaware & Hudson Canal Company are cutting rates in order to coerce Mr. Gowen into doing what it is alleged he has preferred not to do. Neither does the Delaware & Hudson Canal Company believe that Mr. Gowen maintains that attitude toward the anthracite coal producers. On the other hand it has no doubt that Mr. Gowen would willingly agree to curtail the production of anthracite if all the other producers wish to do so. For that matter, the gentleman named is expected in New York to-day and can then answer for himself. Furthermore, the Delaware & Hudson Canal Company has not, strictly speaking, cut prices at all. It has for some time past experienced great difficulty in getting cars in which to send its coal west on orders. So scarce have accommodations of this character become that it finds itself with a surplus quantity of coal in the east, and more is piling up here. In order to get rid of this coal the company says it is marketing it at a nominal cut of 12c. to 15c. per ton from the September schedule. This it freely admits having done and that it is still doing it. The cessation thereof is inferentially dependent on the absorption of this surplus coal at tide-water. It is apparent that a curtailment of production would obviate the necessity for this action, which may account for the allegation that the move was made to enforce a reduction in the output. In any event these are the attitudes of the Delaware & Hudson Canal Coal Company, its competitors and "the street." The meaning is plain. Stocks have been accumulating despite reports to the contrary, and the movement west has not been sufficient to absorb the excess production as compared with last year, and which has grown to over 2,000,000 tons. Large operators characterize the anthracite market as demoralized, which probably means that they are acting on the supposition that the alleged 27c. cut by the Delaware & Hudson Canal Company is true. In instances this is known to be the case. This means that the July circular is practically in force, although there have been two advances made since that month. Mr. Gowen's arrival here also means something, and may result in finding cars enough to carry off the accumulation of coal and so arrange matters.

The total production of anthracite coal for the week ended September 22 was 736,561 tons, against 704,025 tons for the same week of last year, an increase of 32,536 tons. The product for the year, so far, is 21,985,407 tons, against 19,984,348 tons for the corresponding period of last year, an increase of 2,001,059 tons.

COAL MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Stocks of coal have increased. The demand is easier, and prices are unchanged.

From Savannah, Ga.: The coal market is opening well, and dealers report sales steady and satisfactory.

PETROLEUM.

There has been no influence in favor of either higher or lower prices for certificates of crude during the week, unless the monthly report of operations in the regions be counted as one. If that inclines either one way or the other it may be said to be somewhat bearish. The report, with comparisons for the year, is:

	Wells completed.	*Wells drilling.*	*Rigs up and building.*	*New product'n, barrels.*	*Average per well, barrels.*
January.....	124	126	131	2,789	22½
February.....	131	150	153	1,991	15 1-5
March.....	146	211	205	4,113	28 1-6
April.....	215	206	212	4,581	21⅓
May.....	235	197	176	3,676	15⅝
June.....	231	230	145	3,415	14 1-3
July.....	260	262	232	3,842	14¾
August.....	309	315	201	4,267	13 4-5
September....	325	328	202	4,700	14½

Higher prices last month, as compared with September, 1882, stimulated producers to exploit the regions and with 325 wells completed in September, 1883, against but 171 in September, 1882, we find the new production daily aggregates for September, 1883, fully 4,700 barrels, against 4,533 in September, 1882, and 4,975 in 1881. Prices have, on the whole, rather sagged away during the week, as every advance was met by a desire on the part of somebody to scalp freely, so that every advance was soon lost.

The petroleum market yesterday was decidedly bearish. The bullish influence of the United and Tidewater pipe line reports, by which a loss of stocks for September was shown, was quite overshadowed by the September monthly report, showing as it did a heavy new production. In addition to this a number of prolific new wells have "come in" within the past week, which rather intensified the bearish aspects of the situation. The price at the opening on Friday was $1.13½, and at the close it was $1.13⅜. At the close in the afternoon $1.13⅛ was bid against $1.15⅝ at the close on Friday of last week, a loss of 2¼c. on the week.

The reports of the United and Tide Water pipe line companies for September show an aggregate of 1,964,522 barrels of oil run into the storage tanks from the wells, and a total of 2,320,724 barrels sent out of the regions. This means a decrease of stock amounting for the month to 356,200 barrels. The oil exchanges belonging to the Conference, mentioned some weeks ago, states that for September the clearances by the various members were: New York Petroleum Exchange, 158,292,000 barrels; Oil City Oil Exchange, 222,800,000 barrels; Bradford Oil Exchange, 127,666,000 barrels, and the Pittsburgh Oil Exchange, 143,314,000 barrels.

The following shows the fluctuations in prices of certificates of crude petroleum during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, September 29.....	1.10	1.16¼	1.15¼	1.15½
Monday, October 1.....	1.14¾	1.15¾	1.14½	1.14½
Tuesday, October 2.....	1.14¼	1.16	1.13¼	1.13⅝
Wednesday, October 3.....	1.13¾	1.14⅜	1.13¼	1.13¼
Thursday, October 4.....	1.13⅜	1.14	1.12⅞	1.13⅛
Friday, October 5.....	1.13½	1.13¾	1.12¾	1.13⅛

Refined oil has been neglected by exporters during the week. Holders, however, have been stiff in their views and have held prices firmly at 8⅜@8½c. respectively for 110° and 70° Abel test oil, notwithstanding the dullness of the market. On the other hand there has been a good demand for crude in barrels in cargo lots, and last week's final figures of 7½@8c. per gallon have been firmly held. There has been only a moderate request for naphtha. Prices are unchanged.

Prices for petroleum and petroleum products, with comparisons, on Friday evenings during the past month have been:

	Sept. 7.	*Sept. 14.*	*Sept. 21.*	*Sept. 28.*	*Oct. 5.*
Certifi's, crude..	1.00	1.13⅜	1.15¾	1.15⅜	1.13⅛
Refined, 110°....	8	8⅛	8¼	8⅜	8⅜
Refined, 70°.....	8⅛	8¼	8⅜	8½	8½
Crude, in bbls...	7⅜@7⅝	7½@8	7½@8	7½@8	7½@8
Case, plain.....	9⅛	9⅜	9⅝	9¼	9⅞
Naphtha.....	5¼	5¼	5¼	5½	5½

The exports of petroleum from the United States, crude equivalent, for the week ending September 29, was 16,298,201 gallons, against 15,852,765 in the preceding week. The total export from the United States since January 1 was 483,165,223 gallons, against 477,248,119 gallons in the corresponding portion of 1882, a gain in the current year of 5,917,104 gallons. The total exported from New York city during the week ended September 29 was 13,820,640 and during the year, to that date, 397,729,977, against 378,576,799 gallons in a like portion of 1882. This shows an increase in shipments on the year from New York alone, as compared with 1882, of 19,153,178 gallons (crude equivalent) as against an increase from the country at large of only 5,917,104 gallons.

OCEAN FREIGHTS.

Aside from the regular consignments of grain and produce by steamship lines, room on the berth has been exceedingly dull during the week. Charters have also been dull, and but for a scarcity of desirable tonnage rates would have gone off. The same general conditions apply to the leading outputs.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Vessels are very scarce, and the general market is strong and higher, although there is not much inquiry either for oil or grain. Liverpool steamer room is engaged ahead at 4d., and is nominally higher in the absence of offerings.

From Wilmington, N. C.: Foreign freights show more life. Spot tonnage is scarce.

From New Orleans, La.: Freights are quiet with a better feeling, and higher prices are asked for oom ahead.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The fall trade is now about closed, and a quiet market is expected for a few weeks. A few orders for spring goods have been placed by Boston jobbers, and the salesmen now out with samples report an active trade in heavy goods throughout the west. They will soon send in orders. The factories are closing up contracts and several cutters have been discharged. Shipments continue on a liberal scale.

From St. Paul, Minn.: Boots and shoes are fairly active. The volume of sales is larger than two weeks ago.

From Peoria, Ill.: In boots and shoes there is some improvement. Assorted orders are coming in freely, showing that country stocks are being broken.

From Memphis, Tenn.: The boot and shoe trade has slightly improved.

WHISKY MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Whisky is unchanged.

From Louisville, Ky.: Whiskies are steady and in moderate demand. Distillery operations this season will be on a greatly reduced scale.

TOBACCO REPORTS.

[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: Leaf tobacco is strong at the advance. Receipts are small, and the demand exceeds the offerings. About four-fifths of the new crop has been cut. Plug tobacco manufacturers are advancing quotations in accordance with cost of leaf.

From Cincinnati, Ohio: Tobacco is in good demand, with fair stocks to select from.

LUMBER.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Lumber is active in all lines. Builders complain of a scarcity of workmen.

From St. Paul, Minn.: Lumber is active. Southwestern shipments are partly restricted by lack of cars, owing to so many being diverted for grain transportation.

NAVAL STORES.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: Receipts are falling off. There is more inquiry for spirits. Rosin is neglected.

SPECIAL NEW ORLEANS TRADE REPORT.

[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: New sugar and molasses are arriving. Prices are nominal. Rice is dull. Coffee is strong, and the market is bare of new cottonseed product.

THE NORFOLK COMMERCIAL SITUATION.

[Special Correspondence BRADSTREET'S.]

Norfolk, Va., October 3.—The general outlook is promising. Dry goods jobbers have done a fair business for the month of September, and the indications are for a good season. Wholesale grocers are, as usual, quite active; this market possesses many advantages; the trade is constantly increasing. Boots and shoes, hardware, fancy goods and notions are experiencing considerable activity. The mechanical industries are looking up, many buildings in progress of erection, and the demand for houses in excess of the supply, indicating an increase of population. The field now open presents an invitation to the profitable investment of capital in several important departments. Cotton is now coming in briskly, the weather being favorable for gathering the crop. Steamers and sailing vessels are engaged daily for cotton transportation to Europe. The lumber business is large and important, the mills are running at full speed and shipments are heavy. Brick-making, with every facility and advantage, does not keep pace with the demand. Black walnut logs and other species of valuable timber from the west (principally by rail) require the engagement of ships for exportation, and is an item of no small magnitude. Tennessee marble in large quantities comes over the Norfolk & Western Railroad, and is principally shipped north to be returned to the south in a manufactured form. The stone is handsome, having a fine grain. Receipts of coal from the New River mines by the Norfolk & Western Railroad are beginning to arrive in considerable proportions, and a very large business is in prospect. The weather is fine. Collections are fair, and the health of the city is good.

THE NAVAL STORES SITUATION.

[Special Correspondence BRADSTREET'S.]

Wilmington, N. C., October 3.—The season for the production of turpentine is drawing to a close. Previous to the opening of the present year's business large contracts were made for May, June and July delivery of spirits of turpentine, based, it was thought, upon a fair estimate of the production and demand. During May, owing to reports of a large increase in the production, London holders accepted a heavy decline, in consequence of which prices on this side were reduced 15c. within six weeks, and sales were made for future delivery as low as 28c. Later and more correct information having reduced the estimates of overproduction the markets gained strength and a reaction took place toward higher figures. This in turn has caused a corresponding depression in the face of circumstances most favorable for full figures. The quotations during September this year were lower than for that month in the past two years. The actual increase of American receipts over last year is 13 per cent., nearly all of which has been consumed, and the supply of American, London and channel for orders is now less than, say, 1,000 casks in excess over that at the same time last year, while prices for September this year are 4¼c. less than last year, and 12½c. less than two years ago. In rosin there has been a long period of dullness, during which the bulk of the higher grades have been placed at low rates, leaving but a limited supply in first hands; with cold weather an improved demand is expected, and an advance in prices is anticipated. The season for crude turpentine has not been encouraging, and the depression in spirits of turpentine has had its effect upon the values of this article. Tar and pitch have held their own very well, prices being at a fair average. There is good reason to expect an advance of prices in the near future, and the outlook is that many producers will abandon the business for more profitable employment, in which event the next crop year will show a deficency.

PACIFIC COAST TRADE.

[Special Correspondence BRADSTREET'S.]

San Francisco, Cal., September 21.—Little can be said in addition to the weekly telegraphic reports from this point on the state of the jobbing trade. In dry goods the volume of business for August exceeded that for the corresponding month of 1882. Stocks are full of seasonable goods. September opened slower than was expected. The northwest trade is not so promising as formerly, owing to the effort by Portland houses to keep the Oregon business at home. The opening of the Northern Pacific Railroad also operates in the same direction. Stocks in country dealers' hands are generally low, and a good fall trade is anticipated. Jobbing grocers did fairly well. There is an abscence of speculation in all branches of business, credits being restricted as much as possible.

In local manufactures there is great activity, especially in foundries, agricultural implements, etc., in which there is steady development. The cigar trade is increasing; so also are the shoe and clothing trades. New manufactures are being established, and in every branch of productive industry there are encouraging evidences of progress. Jobbers, however, as a rule prefer eastern products, the profits on handling which are greater than on local products. All the woolen mills on the coast are working full time. The canneries are also doing well. The exhibits at the State Fair in Sacramento and the Mechanics' Fair in San Francisco evidence the variety and excellence of California manufactures.

THE POPULATION OF JAPAN.

The empire of Japan, according to the returns of the census of January 1, 1883, contains a total of 36,700,110 persons, of whom 18,598,998 are males and 18,101,112 females. The number of inhabited houses is 7,611,750, being an average of five persons to a house. The chief cities collect large populations within their limits, three of these containing over a million each. Osaka has 1,772,333 inhabitants living in 366,060 houses, Hiogo 1,418,521 inhabitants living in 319,910 houses, and Nagasaki 1,204,629 inhabitants living in 257,915 houses. Tokio has a population of 987,887, and Kioto contains 835,215 persons. The Japanese army contains 30 generals, 9,335 officers of all ranks, 109,496 non-commissioned officers and men, 253 officers of administration, 62 military workmen, and 617 apprentices.

TRADE EMBARRASSMENTS.

There were 160 failures in the United States reported to BRADSTREET'S during the past week, 4 less than the preceding week, 39 more than the corresponding week of 1882 and 74 more than the same week of 1881. Compared with the previous week the middle states had 43, an increase of 12; New England states 26, an increase of 2; southern states 15, a decrease of 8; western states 52, an increase of 2; Pacific states and territories 24, a decrease of 12; Canada and the Provinces 32, an increase of 1. Among the firms reported embarrassed were Colman Brothers, clothing, San Francisco and New York; Max Wallstein, knitting works, New York; Hill & Rowe, manufacturers of boots and shoes; Canterbury & Haskell, manufacturers of boots and shoes; Rhodes & Co., auction and commission boots and shoes, and Kimball Brothers, manufacturers of carriages, Boston; Blain Brothers, railroad car manufacturers, Huntingdon, Pa.; Union Iron Company, Portsmouth, Ohio; Prager Brothers, clothing, Portland, Oregon; Exchange Bank, Tupelo, Miss. In the principal trades they were as follows: Grocers 19; general traders 15; shoes 11; liquors 10; manufacturers 10; hotels and restaurants 9; dry goods 7; produce and provisions 6; butchers 6; carriages 6; clothing 5; grain and flour 5; harness 4; hardware 4; millinery 3; tobacco and cigars 3; lumber 3; drugs 3; furniture 3; bakers and confectioners 3; fruits 3; laces 3; banks 2; commission 2; gents' furnishing goods 2; stationers 2.

ARIZONA.

TUCSON.—C. P. Watson, drugs, has been burnt out and attached.

CALIFORNIA.

DELANO.—A. Mandis, hotel, has filed a petition in insolvency.

JACKSON.—T. W. Kelly, saloon, has failed.

OAKLAND.—William Muldoon, saloon, has sold out at auction.

RED BLUFF.—George W. Thompson, saloon, has filed a petition in insolvency.

SAN FRANCISCO.—Bocken & Fidanza, restaurant, have been attached.

SAN FRANCISCO.—J. C. Brennan, dairy, is advertised to be sold out.

SAN FRANCISCO.—A. J. Coghill, stationer, has been closed by attachment.

SAN FRANCISCO.—Collins & Wolpman, restaurant, have been attached.

SAN FRANCISCO.—Colman Brothers, clothing, assigned on the 29th ult. to Henry Newstadter, Peter Banner and Mr. Newhall, without preferences. The business has been established about thirty years, but since the retirement of Solomon Colman in January, 1880, has been gradually declining, and they changed from wholesale to retail about two years ago. They had an office at No. 66 Reade street, New York, where they manufactured goods for shipment to San Francisco. The stock there was attached on the 1st inst. by Hugo Napthali for $13,000; Ballin, Joseph & Co. $8,911; F. Vietor & Achelis $2,342; Adolph Bernheimer $496. In July Abraham Colman made a statement in New York that the firm were then worth over $400,000 over and above all liabilities, which were only $16,000.

SAN FRANCISCO.—Timothy Daly, grocer, is advertised to be sold out by the sheriff.

SAN FRANCISCO.—A. Fettes, fruit, has been sold out by the sheriff.

SAN FRANCISCO.—John Hutchinson, broker, is in insolvency.

SAN FRANCISCO.—Application has been made to force Kohlmoos & Taylor, restaurant, into insolvency.

SAN FRANCISCO.—Louis Kruger, cigars, is in insolvency.

SAN FRANCISCO.—McNally & Hawkins, plumbers and gas fixtures, have assigned to Samuel Newman.

SAN FRANCISCO.—C. A. Newman, boarding, has been attached.

SAN FRANCISCO.—Simon Young, shoes, is advertised to be sold out by the sheriff.

COLORADO.

COLORADO SPRINGS.—O. Hafner, harness, has been attached for $400.

DENVER.—Willis Bristol, wholesale cigars, gave a chatte mortgage for $4,000, and was closed upon it.

DENVER.—Beamont Davis, cigars, has been attached for $1,050.

LEADVILLE.—H. C. Foster, grocer, has assigned to Lewis C. Hermon. Liabilities about $2,000.

CONNECTICUT.

EAST HADDAM.—John Gorman has assigned.

DAKOTA.

HOWARD.—Tuttle Brothers, hardware, have assigned and been attached.

DELAWARE.

MILFORD.—J. W. Cuykendall, manufacturer of fruit cans, has been closed by the sheriff.

GEORGIA.

ATLANTA.—A receiver has been appointed for W. W. Rhodes, dry goods.

LOCUST GROVE.—J. B. Dickson, general store, did not fail, as previously reported, but sold out to George Schaffer.

IDAHO.

HAILEY.—Isaac Culp, hotel, was burnt out, and attached by local creditors.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 13, 1883.

NOTES OF THE WEEK.

The American Bankers' Association has again favored the speedy enactment of a national bankrupt law, while various commercial bodies at Boston and elsewhere have recently added their influence to the movement. Beyond this, dishonest preferences on the part of failing traders have gone far to make the need of such a law more widely known. The difficulty is that the existence of a need is not enough to compel positive action at the hands of Congress. The need must be both general and notorious. The necessity of a bankrupt law is general, but it is not notorious. Therefore organization on the part of men of business with persistent application at the doors of Congress is necessary. Past experience goes to show that the demands of the commercial classes will not be readily granted by Congress until organization is so close and effective as to convey a request unmistakably. It is true that the merchants of the country are not a unit on the advisability of a bankrupt law, but it is sufficiently clear that the great majority of merchants and manufacturers whose operations extend over more than one state are heartily in favor of national regulation of insolvencies. It is this large and very important class which has need of protection from the unfairness which is permitted and in fact encouraged by the laws of particular states.

We have already made clear how the adherence of a large number of members to merely local interests is the obstacle in Congress which must be overcome before the Lowell or any other bill can be passed. The late failures at Boston and more recent disasters in New York have brought very clearly into relief the injustice resulting from the absence of a general law. It is, indeed, probable that the assets of the Shaw estate will be largely wasted in litigation, owing to the attempt to hold them under state laws as against the general creditors. Pointing to abuses under previous general laws is not a sufficient argument against the enactment of a new one. Past blunders give light in correcting future legislation, but they do not obviate its need.

The Bankers' Convention has done only what would have been expected of it in passing resolutions providing for the preparation of a plan, to be submitted to Congress, for the continuance of the national banking system, and calling for the discontinuance of silver dollar coinage beyond whatever is required by the business of the country. The figures presented by Comptroller Knox are interesting. During the eleven months ending with September, 251 new banks have been established, with a total capital of $28,000,000 and a circulation of $7,500,000. These figures bring down later the statistics on this subject given in BRADSTREET'S quite recently, and are in the same line of development and conclusion then stated. It cannot be too emphatically urged that—contrary to the conventional idea—note issuing is only one of the functions of banking, and not the most profitable one necessarily; hence that the question of paper currency is not quite the question of banking, the life of the national banks not being bound up with that of their notes.

Mr. Knox suggested a plan of continuance which we have not seen broached before—the employment and deposit of securities of the European nations as the basis for banknotes. He stated at $8,000,000,000 the combined national debts of England, France, Holland and Germany, and urged that "a currency in this country based on the securities of foreign countries would produce a closer commercial and social relation between us, and any difference that might arise in the future would be settled by arbitration and not by the sword." Neither this scheme, nor any other of the "substitution" schemes, can be discussed in a paragraph, but we hazard nothing in saying that the consideration just stated is much more than sentimental, and is a weighty one. The drawing together of this country and Europe is an inevitable process that is going on every day, and the use of foreign securities as a banking foundation here, other things being equal, would be the best foundation certainly, in the view of political economy and statesmanship. So placed, these bonds would be bonds in another sense—bonds to promote commercial intercourse (for commerce is the great civilizer, after all) and to keep the peace of the world.

Numbers of the newspaper writers on the silver question have need to define themselves more closely. A few are sufficiently explicit, as for instance, the St. Louis *Republican*, which would have silver certificates with free coinage of the metal take the place of the national bank bills. On the other hand, the Galveston *News* writes vaguely about a "war on silver," apparently being unable to realize that since the introduction of a common medium of exchange society has been making war upon all metals for use as money. Silver and gold displaced iron. At one time silver was preferred to gold. Then the more nimble gold got the better of the slower silver, and of late the bank check has largely taken the place of both metals. Naturally silver has been declining relatively to gold. This is an ugly thing as its influence is to disturb exchanges. It is the province of legislation to check the fall in silver. To this end two courses are open to a particular country. First, silver may be made the standard measure of value to the exclusion of gold. Second, the use of silver as a subsidiary coin may be encouraged by withdrawing paper bills of small denomination. Experience teaches that the former course would be extremely pernicious and that the latter should be followed to whatever extent might be thought wise, all the circumstances of the case being taken into account.

Judging from the leading article in the current number of the *Bulletin* of the American Iron and Steel Association the editor of the New York *Sun* will not be permitted to relegate a tariff agitation to the background in the coming presidential campaign as a matter of "theory" of no practical value until "the rascals" are turned out. The *Bulletin* speaks by authority for the protected iron and steel industries in its article on "The Next Battle for Protection to Home Industry." It calls to mind that free-trade agitation forms a conspicuous feature in the Democratic press, and is finding audiences under the guise of "a tariff for revenue only, with incidental protection," which, it is stated, was never known to protect any other than the foreigner. The Tariff Commission, the *personnel* of which was satisfactory to the protectionists, greatly disappointed them in its recommendations—"astonished its friends," it is said, by "the damaging admission" that "the best conservative sense of the country demands a substantial reduction of duties." The *Bulletin* describes the present situation as one in which the people are taking sides on the tariff question. Democrats are classed as free-traders, or as those who want a revenue tariff with "incidental protection" (which the *Bulletin* repudiates), and Republicans are now where they were in 1880. Protectionists are, therefore, called on to unite in demanding of the new Congress, "when it meets in December," that it correct the injuries done to the industries of the country by the new tariff. This will prove of special interest to those of the press who propose to dodge the tariff question until after November, 1884.

It is not easy in the absence of the official returns to determine to what extent the tariff issue was an actively operating influence in the elections of Tuesday last. In Iowa the long dominant political party, with its high tariff leanings, remains apparently in undisturbed control of affairs. The result in Ohio has been far otherwise. The Democrats have succeeded there in electing governor, state officers and legislature. So many questions, however, have been factors in the result that the weight due to each cannot be even approximately ascertained. Even if all other questions save that of the tariff had been eliminated the result would have been practically inconclusive, since the tariff issue was so framed in Ohio as to evade rather than to invite a clear expression of popular opinion upon it. It can scarcely be said that the result in the Buckeye state is indicative of any change in popular sentiment in favor of extreme free trade ideas. So far is this from being the case that the Democrats scored unexpected gains in the wool-growing counties, where the farmers have long been complaining of the insufficient protection accorded to their industry.

There has been no improvement in the stock market during the week except for the bear party. The Villard stocks have continued the chief objects of attention. To authorize the issue of the new mortgage, the consent of the preferred stockholders of the Northern Pacific Company was necessary, and the demand for the stock for voting purposes has caused that stock to remain comparatively steady, while the common stock and Oregon Transcontinental have declined. The market generally has done the same, not in violent drops, but by the steady crumbling away of prices by the constant offering of stocks in a market where there seems to be always more sellers than buyers. Mr. Gould's southwestern stocks have been badly hurt by the injury to the cotton and other crops in the south, and the annual report of the Western Union Company, just issued, is regarded in Wall street as so suspicious a document that the stock declined fractionally immediately on its publication. There is not the slightest public buying of stocks in the market, nor is any expected for some time.

TRADES UNIONS AND THEIR WORK.

An impressive exhibit of the work of the English trades unions during recent years is given by Mr. George Howell in an article in the *Contemporary Review* for September, extended reference to which was made by Mr. Frederick Harrison in his address before the Trades Union Congress, lately held at Nottingham. Mr. Howell prefaces his statistics with the remark that the five years ending with 1880 afford peculiar advantages for the study of the aims and resources of labor organizations and of the results of their work, for the reason that during that severe period of depression these societies experienced a pressure more heavy than had ever before fallen to their lot, their resources were taxed to the utmost, and even their stability as an institution was subjected to a searching test. This pressure was felt not alone in financial matters: the capabilities of the societies for dealing with difficult and delicate problems connected with labor was tested to the utmost. The results arrived at by an analysis of the statistics for this period should, as will be seen, be of particular value, and on this account Mr. Howell confines his attention to the period referred to and the two following years. For the sake of simplicity he further limits his comparisons to seven societies typical of the largest and best of the unions, and having networks of branches throughout the country. The societies referred to are the Amalgamated Society of Engineers, the Friendly Society of Ironfounders, the Boilermakers and Iron Shipbuilders, the Steam Engine Makers' Society, the Ironmoulders of Scotland, the Amalgamated Carpenters and Joiners, and the Amalgamated Society of Tailors.

At the close of 1882 the numerical strength of these seven societies was 131,130, a net increase for the seven years since 1875 of 20,827. The net income of the societies under consideration in 1882 was £329,165, and their expenditure amounted to £259,-641. The aggregate net income of the seven societies for the seven years was £2,113,575, and their total aggregate expenditure during the same period was £2,243,644. This showing, as will be seen, exhibits a deficiency of £130,069, which had to be met in part by drawing on the balances of previous years and in part by additional levies. The above figures will convey some idea of the numerical and financial strength of these societies. In order to discover the application made by them of their resources during the period under discussion it will be necessary to examine the returns of their expenditure in detail. The seven societies mentioned, it appears, paid during the seven years ending in 1882 £960,429 in out-of-work allowances to their own unemployed poor. In 1879, the year of greatest suffering and distress, over 11,550 families, or more than 46,200 persons, were wholly supported from January 1 to December 31 by five societies alone. Six of the societies under consideration paid £448,537 on account of sick benefits during the seven years ended in 1882. During the same time the seven societies paid £190,621 in superannuation allowances and £137,720 in funeral allowances. Other payments less in amount were made on account of accident benefits, benevolent grants, etc. The entire sum expended by the seven selected societies during the seven years for benevolent purposes alone was £1,812,708. The total amount spent by the societies in strikes and labor disputes during the same time was £167,900. It is noticeable that the amount spent in trade disputes was greatest in 1879, the year of greatest distress in the period, when it was £65,090. In 1882 the amount so spent was only £5,675.

The showing made by Mr. Howell is, as we have said, impressive. The fact that seven representative trades unions in Great Britain spent an average of 80 per cent. of their whole expenditure during a period of years for benevolent purposes alone, and only 7 per cent. in labor disputes, is a very striking one, indeed, in view of the opinion widely entertained by those not in sympathy with labor organizations that these bodies exist mainly for the purpose of conducting labor disputes with efficiency. As far as regards the workingmen of Great Britain this notion must be held to be no longer admissible. This implies that the idea which should underlie all successful labor organizations has made signal progress in that country during recent years. That at one time the action of trades unions afforded some ground for the antagonistic view referred to, cannot of course be denied. No new social machinery can be put in operation without friction, and in the case of trades unions, which were organized primarily for the redress of grievances, it was natural that their militant aspect should at first be rendered perhaps unduly prominent. Latterly, however, a salutary change has come over the aims and activities of these organizations, as an analysis of the statistics above given clearly shows. The trades organizations are beginning to see, as a result of time and of the sense of responsibility which active participation in the practical work of the world rarely fails to impose, that they also, as branches of the concrete social organism, have a definite sphere of activity, and have duties to their members and to the whole community which may not be disregarded without the most injurious results to all concerned. These duties the English labor organizations have latterly endeavored to fulfill, and apparently with rare success. The statement has been made that trades unions in the United States are animated by a different spirit from that which guides their British prototypes. To what extent that statement may be taken for granted we are not prepared to say, but we cannot go far wrong in commending to the friends of labor in this country the example of the British workingmen.

To those who are opposed to labor organizations in general the figures above given afford plenty of food for reflection; but perhaps an additional suggestion for the benefit of all such may not be out of place here. In the first place, it concerns the whole community that the extent, the nature and the tendencies of all social forces should be ascertained as nearly as possible, and that the condition of all classes should be known with some approach to exactness. In view of the great and constantly increasing complexity of modern relations, it must be clear that these desirable objects cannot be attained save through the aid of representative organizations; and labor organizations fulfill a very useful end in that they secure some degree of publicity regarding their aims and methods and the condition of the individuals they represent. Moreover, the idea of organization implies the notion of order and of subjection to some law or set of rules. These rules may be narrow or inadequate, yet the influence which they exert must be, in its ultimate effects, a wholesome one, and cannot but make for that general harmony which it is the aim of every well wisher of society to promote.

AMERICAN OYSTERS AT THE FISHERIES EXHIBITION.

A curious instance of that want of appreciation of the value of new methods and appliances which is supposed to be characteristic of the English mind is given in the article on the oyster exhibit at the London Fisheries Exhibition in the August number of *Nature*. While over two columns are devoted to the advances made in Europe in oyster culture, scientific and practical, less than one-third of a column is occupied by a brief and inaccurate summary of the American exhibit and the present condition of the oyster question in the United States. Surely an exhibit the catalogue of which requires nearly twenty pages octavo merits a more extensive notice. Aside from the fact that it illustrates one of the most extensive and valuable fisheries in the world, the exhibit bears conclusive testimony to the advanced position occupied by Americans, whether as scientific investigators or practical oyster culturists. The former have already determined such questions as the following: The sex of the oyster; the age at which it can reproduce its species; the effect of temperature upon reproduction and development; the influence of currents; the method of reproduction and fixation; the manner of formation of beds and the conditions necessary to their successful existence, many of which, according to *Nature*, are yet undetermined in Europe. As nearly all these points are shown in one way or another by the exhibit, the assertion of the English periodical that the Netherlands department is the only one in which the scientific side comes to the front seems hardly just. The total failure to recognize the value of the labors of the practical oystermen in advancing oyster culture is no less surprising than the meager notice of the contributions of American scientific investigators. That the apparatus for canning and packing oysters and transporting them long distances, and the improvements in appliances for prosecuting the fishery, culminating in the steam dredging vessels, should escape all notice is astonishing; but when it is remembered that within the last ten years, through the exertions of practical men, the Connecticut oyster interest has expanded from the fishery of a few insignificant oyster beds to the systematic cultivation of nearly 100,000 acres of hitherto barren and unproductive bottoms, and that in place of a yield of native oysters too inconsiderable to deserve notice the oystermen of the state now breed hundreds of thousands of bushels, it would seem as though a study of the causes which brought about such desirable results would have been more profitable and interesting than the enumeration of a few curious instances of oyster production under abnormal circumstances with which *Nature* has favored its readers. All the more valuable would such a study be at this time, when the Portuguese oyster, a species similar to our own in character, habits and methods of reproduction, is reported to be spreading northward along the French coast, showing a ready adaptability to new climatic conditions and rapidly growing in favor among oyster consumers; for it is more than possible that by the adoption of American methods and appliances both extensive beds of the Portuguese species and an important industry dependent upon them might be developed at many points on the west coast of Europe. It is safe to say, however, that no such result will be obtained by following any of the elaborate and expensive systems of oyster culture now in vogue in France, Holland and England, and so long as they are pursued our oyster dealers need have no fear of any cessation of the growing European trade, which is now a source of considerable profit.

Though the system of oyster culture adopted in the United States is, in its practical features, in advance of all others, it has not yet been applied to a sufficiently large area to compensate for the destructive fishery of natural beds. Advantageous as is our position, and enormous as is the volume of the business, the fishery as an entirety is in a condition calculated to excite grave apprehensions. Those vast and heretofore prolific regions, the beds of the Chesapeake and Delaware bays, are reported by recent examiners to be in a nearly exhausted condition. As it is from those areas that the principal supplies are drawn, and as no adequate efforts have yet been made for supplementing their diminishing yield, the question arises from whence is to come the stock for consumption during the succeeding years. The waters of Long Island sound cannot alone supply the demand, and even now the oysters of that locality are too expensive to be used for canning. The North Carolina sounds and the waters of the more southern estuaries, though teeming with oysters, are too remote from the market to afford any appreciable relief, and if the condition of the Chesapeake beds has been rightly estimated, an increased stringency of the oyster market may be expected during the winter. The Baltimore and Chesapeake bay packers will naturally be the chief sufferers. During the past year the packing and canning houses have frequently been compelled to suspend work for want of material, and, even when oysters were obtainable, such high prices were demanded that the profits of the canning industry for 1883 will be exceedingly small. Coincident with the increased price and diminished supply is the deterioration in both size and quality, only a few localities maintaining their former high standard of excellence. The western market and the large cities of the coast, depending to a great extent upon the supply from the Chesapeake, will feel more acutely than other places the diminution of the Chesapeake product, and, matters continuing as they are, the western trade must pass to Connecticut and Long Island, while the canning industry, depending upon inferior grades of stock, will tend toward the south.

Unless Maryland and Virginia, Delaware and New Jersey make radical changes in the laws governing the fishery and industry they will see the oyster trade depart from them. Much depends upon the course of legislation in the two former states. If the example of Connecticut is followed, and oyster-culture encouraged by substituting a policy which will permit the actual possession of considerable tracts of oyster-ground by the cultivator for the present policy, which holds the entire area as common property, a revival of the oyster business may occur in a few years; but unless some such policy is adopted, all other measures, necessarily of an empirical nature, can afford but temporary relief to the beds and none to the market; and in spite of

legislators and scientists the consumer will be compelled to pay high and increasing prices for oysters, whose abundance and cheapness have heretofore been so great a source of congratulation.

THE ENGLISH DIFFICULTY IN EGYPT.

Very shortly after the brilliant victory of a year ago, by which English ascendancy in Egypt was secured, thinking Englishmen became aware that it was only the dramatic prelude to their real difficulty that had come to an end. The real strength of Arabi's rebellion lay not in the deluded men whom he had induced to follow his military fortunes, but in the debt-burdened peasantry whom he had won over to his movement by endeavoring to identify his mutiny with their grievances and by promising that in case of his success their enemies, the usurers, would be banished. Arabi and his troops have been eliminated from the question, and the original trouble remains. What constituted Arabi's strength still continues to be England's difficulty. The source of that difficulty we indicated at the outset of the struggle. We showed that it lay primarily in the unlimited power of borrowing possessed and recklessly exercised by Ismael Pacha during his ruinous administration and encouraged by European money-lenders who hoped to secure satisfaction of their claims at the expense of the debt-ridden country by the application of political pressure. Ismael thought to modify the economic condition of Egypt through the aid of administrative measures. He flooded the country with European capital, expended large sums of borrowed money on productive and unproductive works, and made foolish modifications in the agricultural system of the country to suit the changes in the markets. The occasions which led him to make these changes were of a temporary nature, and when they passed away the country had to pay a severe penalty for the short-lived prosperity which had been thus induced. But, no matter what befell the country, Ismael's borrowing never ceased. Every deficiency was met by a fresh loan. Year after year bonds were issued which were "secured on the revenues," or to the payment of which that wonder-working financial instrument — a sinking fund—was applied, and with each succeeding year the taxes became heavier.

It was not long before the evil results of this mischievous system began to be felt by the agricultural population. Early in 1878 Mr. Romaine called attention to the fact that the taxes were greatly oppressing the agricultural population, and suggested some modifications which would affect the bondholders. Later on Arabi ostensibly took up the cause of the fellaheen against the bondholders and their European guarantors, with what success the world has seen. The condition of the luckless peasantry has been in no sense improved, and is now simply deplorable. Driven into debt in consequence of the excessive taxation imposed by Ismael, they have since been unable to extricate themselves from the toils of the money-lenders. Circumstances for a year or more have been particularly unfavorable to them. War and the disturbance consequent upon it, the cattle plague and cholera have all contributed to fill up the cup of their despair. The rates of interest charged by the usurers are enormous, varying from 39 to 65 per cent. The peasants are unable to help themselves, and there is danger that, unless some measures of relief are put in operation, the unfortunate debtors will be evicted and the English will be confronted with an outbreak perhaps even as serious as that which was led by Arabi.

The Egyptian legislative assembly, the election of which was provided for under recent regulations, will soon meet, and this question of the indebtedness of the rural population is probably one of the first with which it will be called upon to deal. There can be little doubt that some measures will be enacted with the view of relieving the overburdened peasantry. The necessity of some such action was clearly pointed out by Lord Dufferin in his report to Lord Granville on the reorganization of Egypt. He declared in that report that the intervention of the government would be necessary in order to prevent considerable tracts of territory from passing out of the hands of the present cultivators, an operation which, he added, could scarcely take place without producing an agrarian crisis equally disastrous to the creditors, the debtors and the government. The problem to be met by the government is, as will be seen, a difficult and delicate one. The settlement of the question will be awaited with no little interest. Meanwhile the whole story of Egypt's troubles for years back may serve as a striking and instructive commentary on the evils of anticipating future revenues, whether the process is confused and the taxpayer beguiled by the use of that magical contrivance, the sinking fund, or not. Few more impressive lessons upon the mischiefs of the borrowing system are likely to be seen in our day.

EXPORTS OF HOG PRODUCT AND THE OUTLOOK.

The prohibition of the importation of American pork into France in the spring of 1881 greatly disturbed the domestic provisions trade, and expensive and exhaustive inquiries were made to disprove the charge that American swine were generally affected with trichina. Like action on the part of the German Bundesrath last spring did not excite the American provisions trade to nearly so great an extent, and the export movement of hog products during the year has quite justified the complacency with which this most logical and complete protection granted the German hog interests has been regarded. The United Kingdom, Denmark, Belgium and Holland are taking more of this class of commodities than ever, and the export trade is regaining lost ground rapidly, with France and Germany left out of the account. The reports of "exports of provisions," as prepared by the National Bureau of Statistics, include, besides "bacon and hams," pork and lard, the items salt beef, fresh beef and tallow, of which those first named may be said to represent roughly about six-sevenths in value of the whole. The exports of bacon and hams increased from 695,617,067 pounds in the calendar year 1878, valued at $54,827,455, steadily to 818,137,143 pounds, valued at $60,681,869, in 1880. A like appreciation was experienced by exports of pork and lard. On the former, the gain made was from 83,743,710 pounds, valued at $5,055,573, to 99,979,543 pounds, valued at $6,992,979, and on the latter from 358,749,127 pounds, valued at $28,476,228, to 414,881,996 pounds in 1880, valued at $33,622,057.

Early in 1881 the French stopped taking American pork, and exportations of that class of products were visibly affected. The following gives comparisons of quantities and values sent abroad in 1880 and 1881, calendar years (three ciphers omitted):

	1880		1881	
	Pounds.	*Value.*	*Pounds.*	*Value.*
Bacon and hams	818,137	$60,681	607,754	$54,944
Pork	99,979	6,992	94,435	7,841
Lard	414,881	33,622	310,080	33,478

The decline in our shipments of hog products from 1880 to 1881 may be given, therefore, approximately as follows:

	Pounds.	*Value.*
Bacon and hams	210,383,000	$5,737,000
Pork	5,514,000	*$49,000
Lard	104,801,000	144,000
Decrease in exports, 1881	320,728,000	$5,932,000

* Gain in value.

The value of exports of salt beef in 1881 increased $6,346,000, the quantity shipped increasing from 46,000,000 pounds to 96,000,000 pounds, and the value from $2,904,000 to $9,250,000. Fresh beef exports quite reversed this, the total of 100,622,000 pounds shipped in 1880 dropping to 42,544,000 pounds in 1881, and the values respectively from $8,968,000 to $3,244,000, a loss on the latter of $5,724,000. Tallow also met with a loss, the quantity shipped dropping from 115,000,000 to 69,000,000 pounds, and the value from $8,250,000 to $4,862,000, a loss in the latter of $3,388,000. The net loss in value on exports of fresh and salt beef and tallow in 1881 was, therefore, $2,766,000, which, with that shown in the table last given, exhibits a decline in values of provisions exported, due to the falling off in quantities shipped, aggregating over $7,798,000. In 1882, however, the loss became much more conspicuous, as may be shown by the following comparison:

NINE MONTHS 1881 AND 1882.

	Pounds.	
	1882.	1881.
Fresh beef	35,173,794	79,712,200
Salt beef	20,830,602	28,756,677
Bacon	245,730,531	433,944,129
Hams	22,934,772	47,609,260
Lard	171,297,130	231,577,662
Pork	47,855,942	70,007,178
Tallow	32,010,258	59,323,651
Totals	584,845,029	950,930,757

The decline in quantity exported in nine months of 1882, as against a like portion of 1881, was 366,085,728, equal to about 27 per cent. of the whole quantity shipped from January 1 to September 30, 1881. The decrease in value was from $102,803,051 in the portion of 1881 specified to $73,375,969 in 1882, a loss of $29,427,082, or over 28 per cent.

A more satisfactory comparison may be obtained, however, from the totals for the fiscal years ending June 30, 1882 and 1883, the former beginning three months after the French decree of prohibition:

FOR THE YEAR ENDED JUNE 30.

	Pounds.	
	1883.	1882.
Bacon	294,118,759	428,481,482
Hams	40,110,911	39,546,158
Beef, fresh	81,064,373	69,586,466
Beef, salt	41,680,623	45,899,737
Lard	224,718,474	250,367,740
Pork	62,116,302	80,447,460
Tallow	38,810,098	50,474,210
Totals	788,649,540	964,803,259

The loss in exports of the above was 176,153,719 pounds, or 18 per cent. The value of the exports in the fiscal year ended June 30, 1883, was $86,299,430, against $97,540,181 in the year preceding, or $11,240,751 less, a loss of about 11½ per cent. in value shipped. The increased exports in value were of hams about $1,300,000, and fresh beef about $1,600,000. Bacon dropped over $10,000,000; fresh beef about $1,600,000; lard about $2,300,000; pork about $1,100,000, and tallow about $800,000.

The period included in the above probably marks the lowest ebb in the tide of exports of hog products and beef. In any event a marked gain is conspicuous in the following, which gives in comparison the movement during the ten months, each ended August 31, 1882 and 1883:

FOR THE TEN MONTHS ENDED AUGUST 31.

	Pounds.	
	1883.	1882.
Fresh beef	88,260,267	41,759,083
Salt beef	36,422,869	36,163,895
Bacon	297,902,210	318,556,409
Hams	45,312,674	28,079,669
Lard	234,457,973	202,951,915
Salt pork	58,382,771	60,607,238
Tallow	42,287,516	37,676,250
Totals	803,026,280	726,637,459

The gain in quantity exported for the ten months ended August 31 last, as compared with the corresponding portion of 1881–82, is thus shown to have been 81,388,821 pounds. At this rate the loss shown to have taken place in the fiscal year 1882–83 (ended June 30), as against that preceding, will have been made good in about another year. The gain on the exports of the earlier ten months amounted to about 11 per cent. In value these exports increased from $75,851,679 in ten months ended August 31, 1882, to $84,333,204 in the ten months ended August 31 last, an increase likewise of 11 per cent.

The aggregate shipments of pork from November 1, 1881, to September 29, 1882 (eleven months), was 45,193,200 pounds, and for the eleven months ended September 29 last they were 42,966,000 pounds, a decline of 2,227,200 pounds. The exports of bacon have, however, increased during the eleven months last noted to 388,685,476, or 37,995,143 pounds, and of lard to 263,969,970, or 36,517,316 pounds, a net increase in these three commodities during the past eleven months, against a like portion of 1881–82, of 72,285,259 pounds.

When the shipments during eight months of 1883 are compared with a like portion of 1882, a still more striking improvement is noted:

FOR THE EIGHT MONTHS ENDED AUGUST 31.

	Pounds.	
	1883.	1882.
Beef, fresh	72,407,131	32,646,500
Beef, salt	29,123,421	26,111,695
Bacon	235,029,361	220,496,059
Hams	38,180,694	21,289,458
Lard	187,074,801	149,208,501
Salt pork	43,429,490	44,169,581
Tallow	36,996,184	30,148,793
Totals	642,241,082	543,471,427

The gain in quantity shipped in eight months of 1882, as compared with eight months of the preceding year, was 108,769,655 pounds, or a trifle over 20 per cent. The increase in the value of the shipments of the above was from $65,922,185 in eight months of 1882 to $77,457,670 in a like portion of this year, a difference of $11,535,485, or 17 per cent. The record in August last as against August, 1882, shows an enormous advance:

EXPORTS IN AUGUST.

	Pounds.	
	1883.	1882.
Fresh beef	8,030,705	1,691,013
Salt beef	3,171,362	2,515,660
Bacon	37,504,401	15,660,017
Hams	3,410,514	2,005,052
Lard	32,617,622	8,988,374
Pork	4,580,378	3,216,250
Tallow	6,588,864	2,153,021
Totals	96,522,268	35,705,387

The increase in value was from $6,237,217 in August, 1882, to $12,060,061 in August last, or nearly 100 per cent., a rate far below that of the gain in quantity shipped, which amounted to 270 per cent. as compared with the quantity shipped in August in 1882. In September last, however, the exports of hog products were materially less than in the month preceding. Still the increased requirements from north European countries has amounted to so much as to warrant a continuance of the same. Germany, in particular, has prohibited the importation of American pork in a year of plenty. It is probable that her packers will make but little lard, and that the consumption of pork and bacon will greatly increase, while German exports of the same to the United Kingdom will decline, and the latter be obliged to call on the United States to make good the deficiency. In

the meantime it appears that the authorities at Washington do not propose to remain quiet in relation to the imputation put upon the American hog by the French and German governments. A letter has been addressed to the Commissioner of Agriculture by the Secretary of State at Washington, stating that inasmuch as certain foreign governments have charged that our hog products are affected with disease and not proper for export purposes, the President has appointed a commission to investigate the curing of pork. The members are George B. Loring, Prof. C. F. Chandler, Eliphalet W. Blatchford, F. D. Curtis and Prof. E. D. Salmon. The President adds that while he has no authority to guarantee the expenses of the commission, he has no doubt that in view of the magnitude of the commercial interests involved Congress will meet all bills incurred. The Commissioner of Agriculture, as chairman, is directed to summon the committee and proceed to the work without delay. If the commission find the charges made against the domestic hog unwarranted it is highly probable that the State Department may find it worth while to make a formal protest at Paris and Berlin against the prohibition of imports of American pork.

COPPER SUPPLIES AND PRICES.

The price of copper in this country was lower the past summer than ever before. Even at the lowest previous ebb (in 1879) 15⅜c. per pound was about the minimum figure for the Lake Superior article, while many sales have been made this season at 15c. This is quite in contrast with the 55c. the metal commanded in 1864, and illustrates the vicissitudes of the trade, which has always been one of the most uncertain. The cause of the recent decline, apart from the general dullness of business, is the reduction of the tariff and the large output from the mines of Montana, Arizona and other far-western sources of supply, the increased demand for electrical purposes not being meanwhile up to expectations. Within the past fortnight the market has been stronger, and the feeling among dealers is that prices have reached their lowest point.

The statistical situation alone does not, however, point to a large advance in prices. London is the test market, and the supply in England of fine copper on July 31 was 26,245 tons, against 23,793 July 31, 1882; 31,672 July 29, 1881, and 32,148 July 30, 1880. In this country there were brought over from last year 10,000 tons of 2,240 pounds. The Lake Superior companies will produce this year not less than 26,000 tons; Montana is rated at 9,000, Arizona 8,000, and other sources 3,000, making in all 46,000 tons, or 56,000 with the surplus left from last year. Exports are estimated at 19,000 tons, and consumption at 32,000, making 51,000 to be deducted from the whole supply, and leaving 5,000 tons surplus at the end of the year, or half the excess at the beginning of 1883. The estimate for the lake mines is about the same as the production of last year, while a considerable growth is looked for from other quarters. The far-western mines are largely in the hands of English capitalists, and nearly all the Montana product goes to England. The supply from the far west seems to be capable of almost indefinite expansion. California has large deposits of the metal, and twenty years ago a good deal of it was mined, but the expenses of long ocean voyages to Baltimore and Swansea made the industry unprofitable. The tendency of prices has been downward for years; and, although the expenses of mining have also been reduced, a decline to 15 cents is pretty sure to be followed by a reaction. Even Chili, which has a large import trade with England and can therefore send its copper to that country almost as ballast, cannot afford to mine the metal at these lowest rates. Consumption in the United States has doubled in the past four years, and the multiplied uses of electricity cannot fail to further increase the demand. The Postal Telegraph Company is using a wire that requires 500 pounds of copper to the mile, and only the expense prevents many other enterprises from largely absorbing the products of these mines. And to this country more and more must the world look for its copper. The English mines are fast running out. The sales of copper ore in Cornwall during the year ending June 30, 1883, were only 4,133,700 pounds, against 16,670,700 pounds in 1864. While large quantities come from Chili, Spain, Portugal, Australia, Venezuela and the Cape of Good Hope, in none of those countries is the industry developing as it is in the United States.

The fact that Lake Superior copper is the best in the world gives that region a great prestige, and there is much activity not only in developing the old properties but in opening new mines. The Calumet & Hecla Company laid out $1,250,000 in the purchase of 120 acres of land during its last fiscal year, and claims that the property is worth $5,000,000 to the concern. It is said to have ground enough opened for several years' operations, and that the ore body is as rich as ever. The other dividend-payers are Quincy, Atlantic, Central and Osceola. A large number of the other mines which were opened years ago have resumed operations since the return of good times and are levying frequent assessments. Many new shafts are going down, some of them very near the Calumet & Hecla. A considerable proportion of these enterprises would never have been undertaken if the reduction in the tariff (from 5c. to 4c. a pound on ingot) and the decline in price had been foreseen. Probably only the Calumet & Hecla and Quincy mines can pay a fair return on the capital invested in the metal at 15@16c. In Montana, Arizona and New Mexico some large sales of copper mining lands have been made within a year or two, more are pending, and great activity must be expected in that quarter. A mine which has dropped from the ranks of the producers is the Vermont, at Ely, in that state. It has sometimes yielded 3,000,000 pounds a year, and is the only copper mine of value that New England has ever had, none of the Maine mines having yet proved profitable.

OCCASIONAL NOTES.

There recently arrived in Philadelphia, on the American Line steamer British Prince, Mr. Robert Exley, an English wool manufacturer, who brought with him, besides his family, about forty operatives and several hundred tons of machinery as part of the complement of a new worsted yarn mill soon to be started up in the Quaker City. Mr. Exley had visited this country in the spring, and while here had made the acquaintance of a number of Philadelphia business men, including Dr. Rommel, president of the Mechanics' Bank, and Messrs. Sheble & Hill, wool merchants, who were about organizing a company for the manufacture of fine worsted yarns. The Bradford manufacturer joined fortunes with these gentlemen, and, as the agent and manager of the new company, went abroad to purchase machinery. His return as above announced a week or two ago was heralded by protectionist papers in Philadelphia and elsewhere as a significant illustration of the evils of free trade in England and a vindication of the opposite economic principle in this country; but upon what ground either conclusion was reached it is difficult to determine. Mr. Exley is doubtless well pleased with the workings of the protective system in his particular case, as they narrow the field of competition in the business which he has undertaken. A large class of people, including the American working men and women, in whose interest mainly the system is supposed to be sustained, will regard them less complacently in the light of his arrival with two score or more of skilled operatives from the old world, who will take the places of just so many of their own number. They will be apt to regard the argument in favor of the high tariff doctrine, based upon this addition to the industries of Philadelphia, as a little incongruous, to say the least.

According to the *Railroad Gazette's* report of the August earnings of the railroads the lines running through the south show an increase of business as compared with the same month last year. This is particularly true in the case of the roads south of the Potomac and Ohio and east of the Mississippi, from which quarter an extraordinarily good showing is reported. This would seem to indicate that the south is enjoying a fair share of prosperity. Twelve roads west and southwest of St. Louis and west of the Mississipi report an aggregate increase over last year of 10.1 per cent. in earnings, of 7.3 per cent. in mileage and of 2.7 per cent. in earnings per mile. Twenty-two roads in the south east of the Mississippi report an increase over last year of 15.7 per cent. in earnings, of 3.8 per cent. in mileage and of 11.5 per cent. in earnings per mile. These roads have, it appears, increased their mileage less than any other group. Taking the country as a whole, the *Gazette* finds that the comparison of August earnings with last year's is favorable in the south, quite favorable in the southwest, fair in the east, not good but not very bad in the central territory north of the Ohio, fair in the northwest and decidedly bad in the far west.

The question of the relative rates of wages in this country and in the various countries of Europe is one which attracted much attention at the time of the recent agitation of the tariff question, and the interest in which has not yet subsided. Very positive statements have been made upon the question, though with what degree of accuracy people are not generally agreed. Mr. Joseph D. Weeks, of Pittsburgh, has gone to Europe to examine into the subject, and is to make known the results of his investigations in letters to the Philadelphia *Press*. Mr. Weeks is well and widely known as a student of the labor question, though with the leanings of the Pennsylvania school, and his disclosures regarding the state of labor in Europe will be looked for with interest. Mr. Weeks' letters will, to some considerable extent, treat of the wages of labor and their purchasing power in the two countries. Assuming it to be impossible to inquire in the space of a summer into the wages of the whole list of occupations, Mr. Weeks will, he informs the *Press*, make a selection of leading industries, and investigate these fully. In addition to the important inquiry as to the purchasing power of wages, Mr. Weeks will devote some time to the investigation of such matters as the organization of labor, cooperation, the state of industrial legislation, and other subjects having a practical bearing upon the main subject of his inquiries.

Mr. Frederick Harrison, in a signed article in the *Pall Mall Gazette*, has some remarks upon the project of land nationalization which will be found interesting. He says that the question is no longer one which serious politicians can afford to ignore, and that the Liberals in England must look to it patiently if they would prevent it from embarrassing the party in the near future. The question is closely connected, says Mr. Harrison, with the next great political move, the admission to the franchise of the rural laborer, and threatens to block the way against all reform of the land laws. The question is one, the writer points out, which most closely concerns the actual tillers of the soil, and he urges the workmen of the cities not to commit themselves to any decision whatever in the absence or against the opposition of the rural workmen. There is not the smallest evidence, he says, that the farmers, the laborers or the peasant cultivators as a class understand the plan or in any way approve it. Moreover, he adds, the people should hasten slowly to vote for the nationalization of the land until they discover which of the many different schemes they are ready to declare for. All schemes looking to the nationalization of the land are, he declares, opposed to the principle upon which English unionism as contrasted with coöperation rests, and he asks British workmen whether they are willing to enter on a new policy under new men and new doctrines. Mr. Harrison has all along been a zealous and consistent friend of the workingmen, and they will do well to weigh his suggestions carefully.

The British Association, which lately held its fifty-third annual meeting at Southport, will leave the British isles for the first time next year. The next meeting will be held in Montreal, Canada. Some misgiving was at first felt over the selection of a place outside the United Kingdom, but this has been in large part overcome, a large number of members having signified their intention of being present at the meeting. As an inducement to the scientists the steamship companies offer a reduction of fares to all members of the association. After the meeting there will be an excursion free of cost to the members as regards transit to the Rocky mountains, another to the falls of Niagara and Chicago, and probably one or two shorter excursions. The New World seemingly bids fair to become as fashionable a place of pilgrimage for Europeans as Europe has heretofore been for Americans.

In a paper read before the economic section of the British Association at the recent meeting of that body at Southport, Mr. M. G. Mulhall set forth the propositions that the increase of wealth in Great Britain since the Stuart period has been continuous and much more rapid than the growth of population; that this increase has not been a nominal one, but has been considerably in excess of the rise in prices, and that the diffusion of wealth during recent years has been more general than ever before. Mr. Mulhall said that the study of political arithmetic had been cultivated with such assiduity in Great Britain during the last two hundred years that the wealth of the nation at several distinct periods could be ascertained almost as closely as the tonnage of its shipping or the number of its inhabitants. Thus the researches of well-known economists had shown that at the Restoration in 1660 the wealth of England and Wales amounted to about £250,000,000, distributed among 5,500,000 inhabitants, an average of about £45 to each inhabitant. In 1774 the wealth had increased to £1,100,000,000, and was distributed among 8,080,000 inhabitants, an average of £136 to each inhabitant. In 1812 the wealth of the United Kingdom, including Ireland, was estimated at £2,190,000,000. The population, meanwhile, had risen to 17,927,000. The average for each inhabitant at this time was £127. The wealth of the kingdom has nearly quadrupled since 1812. In 1882 the total amounted to £8,720,000,000. During the same period the population of the kingdom nearly doubled, amounting last year to 35,004,000. The average per inhabitant was £249. The items showing the largest ratio of increase during the period mentioned are houses, railways, shipping, furniture, and foreign loans.

Mr. Mulhall's second point, namely, that the increase of wealth has been real and very much in excess of the rise in prices, seems to be clearly borne out by his figures. Allowing that 20s. under Charles II. went as far as 47½s. at present, he shows that, nevertheless, the effective wealth per inhabitant increased from £109 in 1660 to £249 in 1882. The third proposition advanced by Mr. Mulhall was that the distribution of wealth is becoming more general as it increases, and this also he supported by statistics. Assuming the number of carriage licenses to be a pretty fair gauge of the number of the rich, he showed from the inland revenue returns that the number of carriages per 1,000 inhabitants had risen from five in 1830, to fifteen in 1882, indicating that the ratio of people in affluence in the kingdom is three times as great as it was fifty years ago. These figures are confirmed by the probate court returns. These returns also indicate a ratio of increase in the fortunes of the middle classes nearly equal to that in the case of the affluent. The influence of the increase of wealth on the working classes was shown by reference to the statistics of the savings banks of the kingdom. It appears that the number of depositors in these institutions in 1840 was only 3 per cent. of the population, while in 1882 it was 11 per cent. The statistics of the consumption of food point to a similar conclusion. The results arrived at by Mr. Mulhall deserve the attention of those who complain of the coincidence of progress and poverty.

SPECIAL CORRESPONDENCE.

INDUSTRIAL INVESTMENTS IN GERMANY.

Berlin, September 15.—In my letter of September 1 I expressed an opinion that the comparative inactivity of the Berlin Stock Exchange, at a time when commerce and industry were beginning to revive in almost every section of the country, was explained by the unsatisfactory harvests in Germany as well as in Austria-Hungary, and the progress made in transferring in Prussia the corporate railways to the state, and that to all appearances the exchange would manifest a livelier interest in industrial stocks which have for a long time been rather neglected. About the latter I propose to write to-day. Before proceeding, however, I may be allowed to offer a few more remarks as to the harvest, with reference to recent imports.

The official returns of this year's crop will not be published before the middle of November, yet the estimates now made by competent judges—subject, of course, to later modification—may be considered approximately exact. I subjoin the figures of the principal corn-growing countries of Germany as compared with the yield of last year, 100 indicating a middling good or full average harvest:

	—Wheat—		—Rye—		—Barley—		—Oats—	
	1882.	1883.	1882.	1883.	1882.	1883.	1882.	1883.
Prussia	105	70	105	84	105	94	120	92
Saxony	105	80	95	75	100	85	115	85
Bavaria	120	80	95	70	125	80	125	80
Baden	100	92	92	92	90	85	100	100
Wurtemberg	110	87	100	78	110	95	115	95
Mecklenburg	120	93	120	105	100	85	95	80

Germany imported from the 1st of July, 1882, to the end of June, 1883 (the returns forwarded in my last letter referred only to 1882—figures given in 100 kilogrammes): wheat 7,974,380; rye 5,887,664; barley 3,626,762; oats 1,699,263. As the estimates of this season's yield are much below the crop of 1882 it follows that in 1883–84 we shall have to resort to foreign supplies to a far greater extent than in the preceding year. In other words, a larger amount of coin or goods will have to be sent abroad to pay for the import of cereals. Potatoes are said to yield, on an average, about 25 per cent. less than last year. But this report seems to be

very much exaggerated, as all the bulbous plants, owing to the favorable weather since the middle of August, have apparently recovered. It is true we are exporting some grain, especially wheat and flour, but the amount is of no great consequence, and will be partly balanced by the yearly import of Indian corn, malt, pulse and buckwheat.

To illustrate the close commercial connection between our own country and the Hapsburg monarchy, the simple statement may suffice that, according to the official statistics of 1881, of the total exports of Austria-Hungary, amounting to 715,795,175 florins (100 florins equal to 171 marks, or about $48), no less than 60.7 per cent. entered Germany, whilst of the total imports of that country amounting to 646,990,726 florins, 61.28 per cent. passed the German boundaries. A good or small crop in Austria-Hungary, therefore, cannot but exercise a marked influence upon our trade, and particularly affect the exchange of this city that largely deals in Cisleithanian and Transleithanian stock. The Berlin Exchange Bulletin List quotes 24 state and municipal loans, 69 different railroad shares and preference shares of Austria-Hungary, and, moreover, the stock of four great banking institutions of that country. The capital of these four banks alone reaches 200,000,000 florins, with power to increase to 230,000,000 florins.

The securities of our neighbors in northeast Russia, though not represented to the same extent as those of our ally in the southeast, are nevertheless of considerable amount. The Berlin Exchange Bulletin quotes 28 Russian loans, 41 different Russian shares and preference shares, besides five banking and industrial companies. The harvest of Russia, it is true, seems to have been on the whole satisfactory, and our eastern neighbor will be enabled to export large quantities of grain, by which the national wealth will be in some measure increased. But there has arisen of late a good deal of distrust as to the financial and economical condition of Russia, injuring and curtailing somewhat the commercial intercourse of that country, and especially interfering with the dealings in Russian stock to no small degree; however, the latter may sometimes be pushed by speculators on the exchange.

All these circumstances, in connection with the progress of transferring the Prussian corporate railways into state property (by which, as I set forth in my last letter, favorite speculative stocks to the value of 1,867,399,885 marks—$466,849,971—will have been within a comparatively short time withdrawn from the market) force, as it were, upon the exchange the necessity of diverting unemployed capital into other channels than those in which it has been heretofore employed. To all appearances our speculating capitalists, as well as the professional men of the exchange, are about to direct more attention to industrial enterprises, or, to speak more correctly, to the stocks of industrial companies.

There is, indeed, no lack of stocks of this kind; a glance at the Berlin Exchange list shows that nearly the fourth part consists of them. I have taken pains to calculate the total capital invested in 221 industrial companies quoted on the Berlin Exchange Bulletin. It amounts to 1,009,413,220 marks ($252,353,305). However respectable this sum may be, it is inferior by 382,926,780 marks ($95,731,695) to the value of railway shares withdrawn already from the market. If the projects of the Prussian government in purchasing additional large lines of private railroads be realized, as will probably be done in the near future, the value of stocks of the existing industrial companies will exceed half the value of the consols supplied for the purchase of private railways only by about 150,000,000 marks ($37,500,000). The stocks of the existing industrial companies, therefore, give no adequate employment to the capital looking for investment in consequence of the withdrawal of railway shares from the market.

The question now arises: Does the capital of existing industrial companies admit of being enlarged, or can new industrial companies be established with the prospect of yielding reasonable profits? The actual returns of German trade and commerce seem to justify an answer in the affirmative. The commerce of Germany in 1882 (the official returns of this year are not yet published) reached 6,320,641,000 marks ($1,560,160,250), the exports amounting to 3,191,138,000 marks ($797,784,500), and the imports to 3,129,508,000 marks ($782,377,000). This gratifying result has been achieved in spite of many obstacles and difficulties with which German trade and commerce had to contend. In the first place the German protective tariff, passed in July, 1879, has caused the prices of some raw materials and those of almost one-half the manufactured goods to increase considerably. In consequence of this the German exporter meets with manifold impediments, and is obliged to be content with small profits. To this drawback is added the raising of the import customs by all the states bordering Germany, within the last four years, chiefly by Austria-Hungary, Russia and France. Russia only a year ago raised its tariff so exorbitantly as to nearly prohibit some German manufactured articles from being imported. Considering that, notwithstanding all these obstacles, German commerce has been steadily increasing since 1880, and that there is no reasonable ground for any anxiety on the score of political disturbances in the immediate future, the idea of turning capital in a greater measure than hitherto to industrial enterprises gains additional strength. The unsatisfactory harvest in Germany as well as in most parts of Europe will doubtless affect the economical movement of 1883–84. At the same time it will increase the purchasing power of the countries blessed with more plentiful crops, and in consequence incite the commercial and industrial activity of Germany otherwise less favored this year.

Still, quite a different aspect is presented if one turns from the conclusions drawn from the result of our commerce within the last three years to the consideration of the profits attained by existing industrial companies. I have examined the published dividends of 212 industrial companies, only a few of them referring to 1881, the rest to 1882, and the result is shown in the following table:

Number of companies.	*Dividends paid, p. ct.*
67	None.
11	1
11	2@2½
12	3@3½
22	4@4½
22	5@5½
10	6@6½
10	7@7½
14	8@8½
9	9
9	10
3	11
4	12
2	13
1	15
1	16
1	17
3	20

It is thus seen that nearly one-third of the companies paid no dividend at all, and only 89 out of 211 paid a percentage surpassing that of state or municipal securities, or 4@4½ per cent. This result seems by no means encouraging to such as may be disposed to invest in industrial stock.

Nevertheless, analyzing the accounts of said companies, one arrives at a different conclusion. A good many companies paying no dividend at all, or distributing only a trifle amongst their shareholders, date from the first part of the last decade, when swindling operations were the order of the day, and when the merit of an enterprise was judged more by the amount of capital invested, and the "big men" pushing it, than by the soundness of the undertaking, or the ability or honesty of its promoters. Some of the old companies, established on a solid basis and proving profitable, have been since that time enlarged to proportions not in keeping with the extent of the business done. The stock of goods thus accruing naturally proved unsalable, and thus absorbed part of the profits. Look at the "Dortmund" union: Started by the very princes of finance, with a capital of 35,250,000 marks ($8,812,500), this considerable mining concern, comprising iron and steel foundries and what not, paid in 1872–73 a dividend of 18 per cent., and since then none at all. Another great company in the same line, "Laura-Hütte," started in 1871 with a capital of 27,000,000 marks ($6,750,000), distributed in 1881 no more than 4 per cent., and I might quote some more concerns of the same character showing no better results. On the other hand a great many companies, and amongst them especially those founded some time before or after the "swindling period," under the direction of able and honest men, though, or rather because, they were provided only with a moderate capital, earned a fair and even more than a fair profit. In the three companies together, which paid last year a dividend of 20 per cent., a capital of only 8,000,000 marks ($2,000,000) is invested; the shares of one of them amount to the small sum of 500,000 marks ($125,000). Of the 64 companies which distributed a dividend of 6@17 per cent. there are only 3 provided with the considerable capital of 13,000,000, 15,000,000 and 17,000,000 marks ($3,333,333, $3,750,000 and $4,250,000) respectively. The invested capital of the others varies between 200,000 and 7,000,000 marks ($50,000 and $1,750,000). The latter figure is reached only by two companies, while the greater part of the above 64 companies work each with a capital of from 1,000,000 to 4,000,000 marks ($250,000 to $1,000,000).

These statistics indicate the quarter to which the unemployed capital might profitably turn. It is neither the large amount of money invested, nor the heavy financial men interested in an industrial company, but the soundness of the enterprise, increasing the capital in fair proportion to the gradual extending proportion of business done, and the ability and honesty of the managers that guarantee good earnings.

Among the German industries which have steadily increased since the beginning of the last decade the manufacture of beet sugar takes a foremost rank. In 1870–71 the export of this commodity amounted to no more than the trifling sum of 288,000 cwt.; in 1879–80 it rose to 2,741,260 cwt.; in the subsequent year to 5,726,360, and in 1881–82 to 6,351,640 cwt., the latter quantity being sold for 129,500,000 marks ($32,375,000), while the home consumption came up in 1881–82 to 5,759,620 cwt. Despite this magnificent result, the Berlin stock quotations show only three companies for manufacturing beet sugar, the total capital of which amounts to 10,940,000 marks ($2,735,000), paying last year dividends of 8⅓, 9 and 9½ per cent. respectively. Is not this a good opening for new companies with a pretty extensive capital? Again, the chemical industry is represented only by eleven companies, with an invested capital of 31,250,000 marks ($7,812,500). There is only one among them which paid no dividend, while nine of them earned from 5 to 17 per cent. profits. A similar result is attained by the weaving, spinning and cotton goods industry. Among the eight companies in this branch of business quoted on the Berlin Exchange we find, it is true, one which paid no dividend, and another which distributed only 3 per cent., but the rest earned from 5⅔ to 20 per cent.

These few instances singled out may suffice to prove that there is a fair chance for capital being profitably employed in industrial enterprises, provided they are established on a sound basis and well conducted. Whether the Berlin Stock Exchange will continue its recent policy and encourage industrial companies more than heretofore, remains to be seen. But if our financial men should steadily direct attention to industrial undertakings, it is to be hoped that they will take warning from the past.

THE CLYDE SHIP-BUILDING TRADE.

Glasgow, September 6.—The completion within the last five years of such monster merchantmen as the Gallia, the Arizona, the Orient, the Servia, the Alaska, the Austral, the City of Rome and the Aurania constitute an epoch in the history of ship-building and marine engineering, and bid fair to lead to a period when, according to a well-known Clyde ship-builder, "we shall see steamers of 800 feet long, the ferryboats of two oceans, with America for their central station, and Europe and Asia for their working termini." Thirteen years ago vessels exceeding 400 feet in length were not afloat, with one very notable exception; now there is scarcely a merchant fleet which does not include one or two vessels over 400 feet long, and at the rate at which the length of vessels is increasing it will soon be no boast that ships of 600 feet are in active service. In addition to the change in the size of ships, important modifications in their types and structural arrangements have during recent years been effected, and it is to the constant progress being made in these matters, and the skill which is brought to bear on their execution, that the supremacy of the Clyde as the home of ship-building and marine engineering is largely owing. In the evolution of the steam vessel from the wooden, shallow-draughted ship, which was typical of the early days of steamship-building, to the modern transatlantic steamer, the Clyde has borne an honorable part. For long its supremacy was undisputed, and even now, when several other districts have entered the lists and are striving hard to obtain a share of the building of the great fleets of the world, it can hold its ground with comparative ease.

The iron period of steamship-building dates from about 1821, but the work of substituting iron for wood did not begin on the Clyde until six years later. In 1859 the use of wood in the construction of the hulls of steamers had on the Clyde become a thing of the past, and the output of iron-built ships reached the aggregate of 35,709 tons. These figures are insignificant when contrasted with the results for 1882, when a single firm—John Elder & Co.—alone completed 31,686 tons of new shipping. Since 1859, the growth of the Clyde ship-building trade has been of the most satisfactory character, and the annual output has gone up by leaps and bounds. In 1869 the annual returns of completed work had risen from 35,709 tons to 192,310 tons, or a turn over of nearly $16,000,000. Large though these figure are, they do not mark the limits of the Clyde ship-builders' efforts. In 1874, which was an unusually prosperous year, 262,430 tons, or nearly $21,000,000 worth of new shipping, were constructed by the builders of the Clyde district, while last year the returns rose to 391,934 tons, the money value of which was over $31,000,000. During the past few years steel has been steadily supplanting iron in the construction of ships, and the Clyde builders may be regarded as the pioneers of the "new departure." In 1879 the steel-built vessels constructed on the Clyde amounted to 18,000 tons; in 1880 they rose to 42,000 tons; in 1881 the returns increased to 66,609 tons; while in 1882 no fewer than 60 steel-built vessels of an aggregate tonnage of 108,254 tons were completed by the various firms engaged in the Clyde ship-building trade. The progress and dimensions of this great industry will, however, be clearly seen by reference to the following table which shows the amount of tonnage launched during each of the last twenty-four years:

1882	391,934	1870	180,401
1881	341,002	1869	192,310
1880	241,114	1868	169,571
1879	174,750	1867	108,024
1878	222,353	1866	124,513
1877	169,710	1865	153,932
1876	174,824	1864	176,505
1875	211,824	1863	123,267
1874	262,430	1862	69,961
1873	232,926	1861	66,803
1872	230,317	1860	47,839
1871	196,229	1859	35,702

In treating of the importance and economical value of coal, a high authority (the late Professor W. S. Jevons) drew attention to the circumstance that the chief trades of England were grouped around and stuck to the coal-fields of the country, and in this fact we have a clue to the question under consideration. The great basin of the Clyde yields an immense supply of coal and iron, and at the time that wood was beginning to be abandoned it was undoubtedly the most favorably circumstanced district in the world in which the new industry could be planted. Sixty years ago, when the Clyde builders were making their first rude efforts, the Bairds, of Garthsherrie, had opened up the famous "black hand" ironstone, and for fully a quarter of a century the Clyde had a monopoly of cheap iron. The industry was, in point of fact, planted in suitable soil under the most propitious circumstances, and the Scotchmen had a start in the race which heavily handicapped other districts, and enabled them to obtain a proficiency in the work, the effects of which are being felt under altered circumstances at the present day. And what is true regarding the Clyde must in course of time hold good of other districts similarly situated. Given a locality which yields cheap coal and iron, and ship-building may be expected to flourish in it in proportion to the skill and enterprise brought to bear on the work. The northeast coast of England furnishes a case in point. They have an abundant supply of coal, and since the Cleveland ironfield was opened up they have been better circumstanced for iron than their rivals on the Clyde. For long the builders there felt the want of experience in the work, and even at the present time they are unable to compete successfully with the more experienced Scotchmen for first-class transatlantic steamers. But they followed the right course; they began at the beginning. They built, and are still building, what are known as east-coast steamers, vessels of plain finish for cargo-carrying purposes. In this class of work they are unrivalled, and are likely to remain so for some time to come. The district in question comprises the rivers Tyne, Wear and Tees, and an idea of the enormous dimensions of the trade may be formed from the fact that during last year the output reached the surprising total of 553,985 tons, or 40 per cent. in excess of the Clyde returns for the same period. One firm alone, that of Messrs. Palmer, Jarrow-on-Tyne, turned out 60,379 tons of new shipping. It is only, however, fair to state that the vessels built on the Clyde during 1882, being nearly all passenger steamers of the best class, would probably exceed in money value the large output in tonnage of their English rivals. But it is well not to lay too much stress on this aspect of the question, as the men who were able during a single year to turn out such a handsome amount of tonnage cannot be expected to remain stationary in the contest. That their efforts will be confined in the future to the construction of freight-carrying vessels can scarcely be credited. Great enterprise has of late been shown by these builders, improved methods having been adopted and numerous Clyde-trained officials and Clyde-taught artisans engaged. Indeed, it is becoming apparent to all unprejudiced people that the east coast of England is likely at no very distant date to prove a formidable rival to the Clyde. The town of Barrow-in-Furness furnishes a striking example of what may be accomplished when skill and natural advantages are combined. A few years ago Barrow was a small village; now it is one of the busiest towns in England. So soon as it was discovered that the hills about the town were filled with excellent ore, mines and rolling-mills sprang into existence, and, as was only to be

expected under such circumstances, a ship-building yard was started. Ship-building has flourished in Barrow, and to-day the Barrow Ship-building Company ranks among the leading ship-building firms of the world. They have constructed such monster vessels as the City of Rome, the Normandie and the Furnessia, and they have given ample proof that they have mastered ship-building in its highest branches. Their output last year amounted to 35,057 tons, being more work than was accomplished in the same period by the largest firm on the Clyde; and not a single vessel included in these figures was of a plain, unfinished character.

The collapse of iron ship-building on the Thames also furnishes proof that the trade can only take root in and flourish on suitable soil. When the London ship-builders came to grief a cry arose that the operatives were to blame, owing to the trades-unions having forced up wages beyond the limit that employers were able to pay. But nobody conversant with the facts ever attributed the disaster to that cause. The Thames builders, being far removed from the iron and coal fields, were heavily handicapped in the competition with the Mersey, the northeast coast of England and the Clyde. They had to pay nearly $4 a ton for the carriage of iron to London; while coal, which cost their more favorably situated rivals about $2.50 a ton, could not be purchased by them under double that amount. Indeed, it was a gross mistake to endeavor to establish ship-building in London, where the articles used were so much dearer than in other districts. Probably the action of the workmen hastened a result which in the nature of things was inevitable, and was sure to come sooner or later. During the past two years wages have risen in some departments of ship-building nearly 100 per cent.; but notwithstanding that, the yards on the Clyde and the Tyne are in a healthy state, simply because in these localities the material (coal and iron) can be obtained on the best terms. The London ship-builder was from the first in a false position, and, while we are far from desiring to become the apologists of trades-unions, candor compels us to state that the disaster on the Thames could not be fairly laid at their doors.

The single exception to the rule that ship-building can only flourish in a coal and iron district is that of Belfast, where the firm of Messrs. Harland & Wolff have achieved surprising results. Although carrying on business in a district destitute of coal and iron, this firm has built all, or nearly all, the vessels of the White Star line, the ships of which for style, equipment and finish are second to none on the Atlantic. But this exception, apart from the fact that it is the exception which proves the rule, is more apparent than real. Belfast is within easy reach of the west of Scotland, from which coal and iron can be carried by sea at low rates. Besides, the principals of the firm are Clyde-trained men of exceptional ability and experience, and their case is looked upon as that of a Clyde yard established in a district where labor is cheap and where ground can be obtained on easier terms than it could be on a crowded river like the Clyde.

But before proceeding further it may be well to notice briefly the position of matters in the leading ship-building centers of Great Britain at the present time. As regards labor, all are on equal terms, the number of hours worked per week and the rates of remuneration paid being practically the same on the Clyde, the Tyne, the Wear, the Tees, the Mersey, and at Barrow-in-Furness. In this respect no district can be said to enjoy any advantage over another. The working week is fifty-four hours, and when wages rise in one district the trades-unions at once agitate for the others to follow suit. All are situated in the midst of rich coal-fields, and they are practically on a level so far as coal is concerned. In obtaining iron and steel all are not, however, on the same footing. The English builders have an abundant supply of the cheapest iron in the country, and they can obtain that important article at nearly three dollars a ton less than their Clyde rivals. No doubt the English iron is scarcely up to the quality of the Scotch make, but it is sufficiently good for ship-building purposes. As a matter of fact, it is extensively used in the Clyde yards, for, notwithstanding the cost of freight from England to Scotland, it can be sold to the Clyde ship-builders at rates which are slightly lower than those quoted for Scotch iron. "Mild steel," which is now so largely used in the construction of passenger steamers, is made in immense quantities in the Clyde district, and the Scotch builders can obtain that article on better terms than their rivals on the northeast coast of England. In fact the manufacture of steel of the kind suitable for ship-building purposes has not yet been begun in the Tyne district.

The question which it is the object of this article to answer admits, we think, of an easy solution. The facts we have cited speak for themselves. Just as it would be foolish to expect grapes of thorns or figs of thistles, so it would be absurd to expect that iron ship-building could take root and flourish in a district where the conditions essential to success were wanting. But in every locality in Great Britain which yields the material required, and which is consequently naturally adapted for the trade, ship-building has been successfully established. That the Clyde shipbuilder has distanced his rivals in other districts equally well suited for the trade is owing to the circumstance that he has had longer experience, and has consequently had time to acquire greater proficiency in an industry requiring exceptional skill and experience. He has, in fact, made the most of his start in the race. The dawn of the age of iron found him well adapted for the transition, long experience of building in wood having made him thoroughly acquainted with ships.

The utilization of steam for the propulsion of boats was not new to him, for he had constructed a considerable number of wooden steamers. Besides, iron ship-building on the Clyde was inaugurated under happy auspices. An abundant supply of the material most required for the trade was placed at his disposal at prices which defied competition, and for nearly a generation he enjoyed a monopoly of the industry. During that time he perfected the form, equipment and furnishing of vessels and he improved the marine engine, while his operatives gained a manipulative skill and a dexterity in the work which in course of time rendered the Clyde yards famous. Clyde workmanship and Clyde methods won the markets of the world at a time when in other iron-producing districts ship-building was in a crude state. The Clyde yards are now filled with workmen of the third generation, and an unlimited supply of skilled labor is at present the only advantage which the Clyde enjoys over the other ship-building centers of Great Britain. Knowledge of the work, and the ability to turn it out quickly, have enabled the Clyde builders to hold their own against all comers. But the other ship-building centers are making rapid strides, and that they will in course of time rival the Clyde even in the production of high-class vessels can scarcely be doubted. The builders in the other iron-producing localities have planted the industry in suitable soil, and with time and experience it is bound to flourish. It is precisely because iron ship-building on the continent of Europe is a younger industry than it is in Great Britain that foreign competitors were utterly unable to enter the lists against their English and Scotch rivals. The continental ship-builders can purchase Belgian iron on highly favorable terms, and they have an abundant supply of cheap labor. Their operatives work on an average about ten hours a week longer than British artisans for considerably smaller wages; but, notwithstanding that, foreign competition has not yet had to be reckoned with. And the explanation of this is simple. The foreign operative has had but a limited experience of the work, and his technical skill is defective. He is as yet inferior to the British trained operative, who during his shorter hours of labor can accomplish more and better work than his continental rival. But the foreigner is bound to make progress in the construction of iron vessels, and, as a matter of fact, he is steadily doing so. When, in the course of time, he has gained the requisite experience matters will assume a very different aspect, for should the difference in the hours of labor and the rates of remuneration remain as glaring as they are at present, then the British ship-builder will undoubtedly be placed in a very critical position. But it is unnecessary to draw on the future when the past and the present afford abundant evidence of the truth that, if the conditions essential to success are absent, failure must be the inevitable result; that under favorable auspices success may be expected, and that with rivals who are on equal terms the determining factor is undoubtedly skill. The Clyde district is naturally adapted to such an industry as iron ship-building, and the Clyde builders have distanced those of other districts equally well adapted for the trade simply because they have had longer experience, and have consequently been able to acquire greater skill than their rivals.

NOTES FROM THE PACIFIC.

San Francisco, October 4.—There is no new feature in commercial affairs, and the only incident which created a ripple on the tide of business during the past month has been the failure of the dry goods house of Coleman Brothers. The event was not unexpected in business circles. Trade is profitable without speculation. Credits, on the whole, are well maintained, but money is not going into general circulation as freely as might have been expected from the abundant harvest, owing to farmers holding back their wheat for higher prices. Agricultural products of all kinds sell at remunerative rates, except, perhaps, wool, which is not a specially paying commodity at present.

The Australian mail steamer brought advices of continued depression in Sydney, with every line overstocked. There was abundance of American products in the market. English shippers continue to export to Australia far in excess of its requirements.

Trade is dull in New Zealand, with the single exception of Auckland. In the New Zealand Parliament the leader of the opposition, Mr. Macandrew, called the attention of the government to the United States consular reports from that colony, written by Mr. Consul Griffin, of Auckland, and suggested that they should be reprinted for general information. He thought steps should be taken to have such reports published and widely distributed in pamphlet form. The Hon. Mr. Rolleston, Minister of Lands and Education, said that his attention had been called to these reports, and furthermore that he had had the pleasure of meeting Mr. Griffin personally. The suggestion of Mr. Macandrew would be acted upon. During the recess he would take steps to obtain copies of these reports as issued by the State Department at Washington, and have selections made from them and printed. The reports were exceedingly valuable. This testimony to the commercial and international value of the reports of Consul Griffin by a foreign government is noteworthy. It is the first recognition of the kind that has yet been made public, and should be made known to the Secretary of State. Mr. Griffin is a well-known American journalist.

Late Chinese news does not vary much, if at all, from previous advices. The uncertainty regarding peace or war necessarily disturbs business.

During September last the San Francisco mint coined $3,600,000 gold and $400,000 silver. The internal revenue collections for the same period were $742,627.31, as against $1,027,773.26 in the corresponding month of 1882. The change in the revenue laws caused the decrease.

Merchandise and produce exports by sea from this city during September were $5,049,993, of which Great Britain is credited with $2,809,978; China $609,308; New York $269,877; Hawaiian islands $156,864; Mexico $118,371; British Columbia $175,668; Australia $90,995; New Zealand $20,617; Central America $51,884; Japan $65,348; France $176,057; Belgium $358,658. The German empire only stands credited with $1,050, which is less than the Marquesas islands, $1,717. The Navigator Islands (Samoa) took $24,939 of American products last month. The total value of flour and wheat shipments last month was $3,084,214. Our import trade has been fairly active during the past month.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

There is no patentable novelty in putting two locks on one door, according to the decision of the United States Circuit Court for Massachusetts in the recent case of the Yale Manufacturing Co. vs. The Berkshire National Bank.

From the decision of the Minnesota Supreme Court, in the matter of the assignment of the surviving partners of the Page-Sexsmith Lumber Company, it appears that a general assignment for the benefit of creditors made in another state, and valid by its laws, will be recognized in Minnesota as valid, and as effectually transferring personal property wherever the same may be situated.

A person who has been adjudged a bankrupt and has received his discharge in bankruptcy, and who thereafter allows a judgment to go against him upon a debt properly provable in bankruptcy, is bound by such judgment, and so are all others claiming under him, according to the opinion of the Supreme Court of Georgia in the case of Smith, administrator, vs. Cook, decided on September 19.

Where a bill of sale conveys two distinct pieces of property and it appears by parol testimony that one piece was conveyed absolutely and the other only upon trust, the stipulations respecting the latter do not, by reason of there being but one bill of sale, affect the title conveyed by the former, according to the opinion of the Supreme Court of Kansas in the recent case of Scheble vs. Jordan et al.

A voluntary conveyance to a trustee for the benefit of the grantor's wife and children is not fraudulent as against a creditor whose claim was at the time amply secured by mortgage, according to the opinion of the Ohio Supreme Court Commission in the case of Stephenson, executor, et al. vs. Donohue, executor, et al., decided on September 25. The commission said that the fact that the mortgage security is subsequently lost by the creditor's laches does not make such a conveyance fraudulent.

In the case of Parmelee vs. Williams, decided on the 19th ult., the Supreme Court of Georgia held that where a negotiable draft with a security thereon was accepted by the drawees, who held a mortgage to secure advances and who received property of the drawer sufficient to pay the draft, after negotiation the acceptors were primarily and absolutely bound therefor to the holder; the drawer was bound to pay if the acceptors did not, and his security was equally liable with him.

When a bond is executed to secure the performance of duty by a person as agent in a specified business, and to secure from him a due accounting for all moneys received in such business, it is incumbent on the obligee suing on the bond to show a breach of duty in the business designated in the bond, or a failure to account for money received in the course of such business. So held by the Indiana Supreme Court in the case of McFall et al. vs. The Howe Machine Co., decided on the 28th ult.

The Michigan statute of frauds provides that "no action shall be brought to charge any person upon or by reason of any favorable representation or assurance made concerning the character, conduct, credit, ability, trade or dealings, of any other person unless such representation or assurance be made in writing and signed by the party to be charged thereby or by some person thereunto by him lawfully authorized." Under this provision the Michigan Supreme Court, in the recent case of Bush vs. Sprague, held that the phrase "other person" included a corporation.

The description in a mortgage given with a promissory note ran as follows: "I mortgage, sell and convey all my entire stock of merchandise now on hand and hereafter to be received contained in my brick store west side of Dooley street, between Hill and Shewmate and Vinson and Jarnagan." The Supreme Court of Georgia held that the description was sufficient, and that it covered the goods in the brick store of the mortgagor on the streets named, and between the two other stores named, and included all the merchandise in that store, and to be in it to supply the place of old goods sold.

A contract for work in writing may be waived by a substituted parol-agreement subsequently made, for a good consideration, according to the opinion of the New Jersey Supreme Court in the recent case of Church vs. The Florence Iron Works. In this case the court held that when no fixed sum for labor was named in a substituted contract for melting iron at a reduced price, the acceptance of bi-monthly payments by the contractor for himself and workmen at a certain gross amount per ton, without objection or demand for more until the contract was ended, was such an admission as precluded the contractor from demanding the former contract price.

Where a party contracts to deliver personal property at a given time and place, and is ready and willing to comply with the terms of his contract at the time and place agreed upon, and so notifies the other party to the contract, and where the latter thereupon declares that the property if tendered would not be accepted by reason of an alleged defect therein, the former may maintain an action for breach of the contract without actual tender of the property as required by the terms of the contract. So held in the case of Tullos vs. Rodgers, decided by the Ohio Supreme Court Commission on the 25th ult.

In the case of Mount vs. Richey (ex rel.), decided by the Indiana Supreme Court on the 1st inst., it appeared that the relator while township trustee lost certain moneys by having them deposited in a private banking institution which failed. He reimbursed the township, and the legislature passed an act directing the township trustee to refund said moneys to the relator. The relator applied for a mandate to compel the township trustee to refund the money in compliance with the act. The Supreme Court, affirming the decision of the court below, held that the legislature had a right to pass such an act, and that it was not confined in the appropriation of the public moneys, or of the sums to be raised by taxation, in favor of individuals to cases

in which a legal demand existed against the state, but could recognize claims in equity and in justice, in gratitude or in charity. The court took the view that the granting of relief to individual claimants was not within the provisions of the constitution prohibiting the enactment of special laws, and that reimbursing a public officer for funds lost in the discharge of public duties could not be deemed an appropriation to private purposes.

In the case of Wilson vs. Burk, decided by the Supreme Court of Georgia on the 28th ult., the plaintiff alleged that he purchased of the defendant the furniture and fixtures of a barber shop for $110; that he paid $30 thereof, and that subsequently the defendant came and took the property from him. The suit was brought for the amount which had been paid. The defendant set up that he had sold the property mentioned to the plaintiff for the sum stated; that according to the contract he was to retain the title until payment was made; that the plaintiff had the property over a year, and that the rent or hire when defendant retook possession was worth more than double the amount paid by the plaintiff. The defendant set off the amount of the rent against plaintiff's claim. The Supreme Court held that, under plaintiff's own testimony, when he suffered the property to be retaken by the defendant and affirmed this taking by bringing his action for the money which he had paid, the contract of sale was rescinded, the defendant became liable for the money which plaintiff had paid him, and the plaintiff's claim was subject to a set-off for the value of the hire or rent of the furniture. This result, the court held, would be reached from the testimony of either side.

The disposition made of the first case in England under the new Bankruptcy act would seem to indicate that it will take a little time for the bankruptcy officials to accommodate themselves to the spirit of the new system. In the matter of Craven, which was before Mr. Registrar Hazlitt, in the Court of Bankruptcy, on August 28, it appeared that the debtor had filed a petition for the liquidation of his affairs, stating his debts unsecured at £5,341 and other liabilities £240,000, of which £5,500 was expected to rank against the estate, the assets being estimated at £1,000. A meeting of the creditors had been held, and it had been agreed to liquidate by arrangement. Thereupon an application was made to the registrar for the appointment of a receiver. The attention of the registrar was called to certain sections of the act of 1883, which provided that no composition or liquidation by arrangement should be allowed without the sanction of the court or registrar having jurisdiction in the matter, and that such sanction should not be granted unless the composition or liquidation appeared to the court or the registrar reasonable and calculated to benefit the general body of the creditors. Notwithstanding these provisions, which seem clearly to impose upon the court the duty of deciding upon the reasonableness and beneficial character of the proposed liquidation, the registrar allowed the arrangement upon the assurance by the solicitor moving for the appointment of the receiver that the general opinion of those present at the creditors' meeting was that the resolutions were passed in the interest of the creditors.

BUSINESS NOTES.

The Howe Scale company of Rutland, Vt., has been reorganized, with John B. Page, President, and John A. Sheldon, Treasurer.

The First National Bank of Albany, N. Y., has elected Adam Van Allen president in place of M. H. Read. The German Banking Company of Peoria, Ill., is liquidating, and will be succeeded by the German-American National Bank, with a capital of $100,000. No new national banks were organized since last week.

The traffic on the New York state canals this season continues to make a favorable exhibit as against 1882. The number of tons cleared last week was 227,533, or 12,807 tons more than in the corresponding week last year. The total volume moved since the opening of navigation is 4,181,642 tons, against 3,721,501 tons in a like portion of 1882.

The value of the sponges taken at the Greek sponge fisheries during the past season has been put at $480,000. The fishing season begins in April and ends in August. These fisheries have, it appears, been very much developed within the past two years, there being at present 723 boats engaged in the business, 183 of which are provided with diving bells. The boats carry from five to seven men each.

The total number of mercantile failures in the United Kingdom and Ireland, as reported from week to week in *Kemp's Mercantile Gazette* (London), steadily decreased for more than a month preceding September 22, date of the last received copy. The total for the third week in September was but 135, against 179 and 196 respectively in like weeks in 1882 and 1881. England and Wales had 115, against 159 and 176: Scotland 18, against 15 and 11, and Ireland 2, against 5 and 9.

The increasing use of mahogany in making furniture is rendered conspicuous by the comparative receipts of that wood at New York in recent years. The number of feet has been given:

1876	572,000	1880	4,330,000
1877	630,000	1881	7,370,000
1878	798,000	1882	6,047,000
1879	3,875,000		

The *Furniture Trade Review* believes that the receipts this year will fall off 1,000,000, as compared with 1882, owing to the effect of the drouth in Mexico, whence a good share of the supply is shipped.

The London *Labour News* of September 26 says that the labor market is still in an uncertain condition. Some of the miners are asking for 6d. a day advance, others for 15 per cent. There is considerable agitation in the cotton districts, and there is no abatement in the Lancashire weavers' strike. Building and ship-building are flourishing, as is also railway construction. Most marine industries are doing well. The textile trades are somewhat improved. Boot and shoe trades are more active. Hop picking is about over. Agricultural employment is plentiful, and emigration to the colonies continues to be heavy.

So complete is the quarantine system of Canada, says the Quebec *Chronicle*, that of the number of cattle imported from states west of Ohio fully 75 per cent. are received by way of Quebec. Large numbers of cattle are now being raised in Canada. Below may be seen the number of cattle and sheep exported to Europe from Canadian ports during the last two years:

	Cattle.	*Sheep.*
1881	45,535	62,401
1882	35,738	75,9-7
Total	81,273	138,308

The number of cattle exported from Montreal up to the close of September this year has been 42,519, a large gain over last year, and 80,676 sheep, against 64,479.

The total value of the imports of manufactures o silk at New York in September, reported by the Silk Association of America, was $3,589,162, less than in September in 1882, in 1880 and in 1879, and but $147,954 greater than in that month in 1881. The quantity thrown on the market here last month was, however, of greater value than the total imported, amounting to $3,879,441, owing to the withdrawal of goods from warehouses valued at $902,-301, and the storage of but $612,022 worth of that arriving. Of the quantity imported the portion marketed was valued at $2,977,140. The most conspicuous increase in September silk importations for five years is of gloves, which have steadily increased in value from $4,708 in 1879 to $5,748 in 1881, to $22,785 in 1882, and to $23,909 last month.

The building trade of San Francisco, and generally on the Pacific coast, is brisk, and it is ascertained that in number and value the new buildings to be erected this season will exceed those of any former year in the history of California. In the first nine months of 1882 there were 582 new buildings erected in San Francisco, at a cost of $2,655,-726. For the corresponding period of 1883 the total is 635 buildings, at a cost of $4,579,878. This is a very substantial increase. Only three buildings this year cost over $100,000 each, the bulk being residence flats and private residences, averaging from $7,000 to $8,000 each. The demand for good residence property is on the increase. The revival in the building trade dates from the spring of 1882, little having been done before then for several years.

The relatively prosperous condition of some lines in the finished-iron trade, as compared with pig, suggest the inquiry whether prices of the latter have not touched bed rock, and whether the past season's moderate inquiry and small takings may not prove to be elements essential to a healthful revival in the late-winter trade and to higher prices in 1884. While the tendency of prices of iron has often been considered an index to the course of general trade, the present situation appears to limit it to the outlook for a decline in quotations. The price of pig iron was the first to signalize the period of depression and partial stagnation in business circles beginning a year ago. But at present we find general trade measurably revived, the transportation companies doing a very large business, and, nevertheless, prices of pig iron at almost if not quite their lowest ebb since the middle of 1879. It may be fair to infer, then, that while prices of iron are the first to go off in the face of impending business depression, they are slow to react after the disappearance of the commercial calm.

Prof. Clifford Wilson, of the Washington Agricultural Bureau, has analyzed nearly 2,000 specimens of wheat from various parts of this country and Europe. He concludes that the main failing in the native berry is in albuminoids, a most valuable portion. Among our wheats the highest percentage of albuminoids was 17.15, while a Russian wheat from Minnesota contained 24.56 per cent., 24 different specimens averaging 19.48 per cent., the lowest having 10.68 per cent. In the east our wheat is the poorest, falling below the general average in albuminoids and ash and in the size of the grain. A regular gradation of improvement from east to west is found until the Pacific coast is reached, where there is a most remarkable falling off in everything but the size of the grain. It is in the country between the Mississippi and the mountains that the best grain is produced. The middle west, represented by Michigan, Kentucky and Tennessee, holds an intermediate position between this district and that on the Atlantic coast. This points to the exhaustion of the plant's food, nitrogen, etc., at the east, with a gradual gradation to richer soils as one goes west.

The frequency with which new applications of the electric current are being recorded is evidently greatly in excess of the number which capitalists and others have perfected and introduced. The latest is exceeded in novelty perhaps only by Edison's phonograph, which, while it promised to revolutionize the art of recording vocal utterances, has proved of no practical value beyond exhibition purposes. Gentilli's glossograph, now at the Vienna Electric Exhibition, is a little instrument by which speech is automatically reproduced as soon as uttered. There is an apparatus which may be placed in the mouth of the speaker so as to come in contact with the roof, lips and tongue "without inconvenience," and which when connected with an electro-magnetic registering appliance "commits the sounds to paper." It reproduces the whisper as well as a shout, and works five times as rapidly as the fastest shorthand writer. It differs from the phonograph in depending on a law of acoustics, and the characters made in recording sounds are of a size to permit easy reading—that is, so soon as they have been translated. The *Pall Mall Gazette* expresses the view that a second instrument may be constructed to translate the characters of the glossograph into type-writing. The only essential to the successful operation of the glossograph is distinct articulation.

The Cincinnati *Price Current* estimates that the peanut crop for the year compares with that of previous years, in bushels, as follows:

	Virginia.	*Tennessee.*	*North Carolina.*	*Totals.*
1876-77	780,000	500,000	125,000	1,405,000
1877-78	405,000	325,000	100,000	830,000
1878-79	875,000	425,000	90,000	1,390,000
1879-80	1,350,000	750,000	120,000	2,220,000
1880-81	1,500,000	750,000	120,000	2,370,000
1881-82	825,000	250,000	75,000	1,150,000
1882-83	1,250,000	460,000	140,000	1,850,000
1883-84	1,250,000	600,000	150,000	2,000,000
Totals..	8,235,000	4,060,000	920,000	13,215,000

On October 1, 1883, stocks of peanuts were light, with an available supply of about 130,000 bushels. Stocks are now practically exhausted, the surplus being but about 10,000 bushels. Stocks on hand at the beginning of the past crop year, added to the amount produced, made the total supply as shown:

	Bushels.
Stocks in all markets October 1, 1882	130,000
Virginia crop	1,250,000
Tennessee crop	400,000
North Carolina crop	140,000
Total	1,980,000

Deducting the surplus September 30, 1883, 10,000 bushels, and the total consumption for 1882-83 is shown to have been 1,970,000 bushels. For a series of years the consumption has been (in bushels):

1876-77	1,187,000	1879-80	1,927,000
1877-78	1,066,000	1880-81	2,108,000
1878-79	1,380,000	1881-82	1,520,000

The supply for the year, from October 1, 1883, to September 30, 1884, is estimated:

	Bushels.
Stocks on hand October 1, 1883	10,000
Virginia crop	1,250,000
Tennessee crop	600,000
North Carolina crop	150,000
Total	2,010,000

There have been no foreign peanuts received at Atlantic ports during the year. The price has advanced from 6½c. to 10c. or 11c. a pound, and, it is thought, will continue high.

A Washington telegram of the 8th inst. states that the Commissioner of Patents has made a decision in favor of Sawyer and Mann against Thomas A. Edison, in the claim of the former for a patent for the use of carbonized paper as an electric conductor in incandescent electric lamps. This reverses the decision of the Board of Examiners in Chief (July 28, 1883,) and affirms that of the Examiner of Interferences made June 3 last. The interference between the parties was originally decided in favor of Sawyer and Mann January 8, 1882, but the case was reopened for the admisson of new evidence. According to the view now taken Sawyer and Mann had the conductor in a rude form in March, 1878, and in a perfected form in September or October, 1878, while Edison did not have his conductor perfected until October, 1879. In commenting on "the effect of the decision" the *Herald* says: "A decision in his (Edison's) favor would have secured to him the entire control of the manufacture of carbonized conductors, as paper is the only substance of which such conductors are at present made that is not covered by his patents." This is a strange view to take of the subject. Mr. Edison's so-called "ground patent" on his list affecting incandescent electric lamps contains the broad claim of a carbon filament pure and simple. Carbon is carbon whether from paper, wood or other material, and it is generally understood in electric-lighting circles that the Edison and its rival companies will yet have a legal fight over this claim. For if it can be maintained by Mr. Edison all the other incandescent electric-lamp companies in this country will have to go out of business or pay tribute to the so-called "Wizard of Menlo Park."

THE SILK INDUSTRY.

A reporter of the New York *World* recently visited Paterson and interviewed representatives of several of the large silk mills. In reply to a question as to the practicability of raising silk-worms in America Mr. John Ryle, the president of the "Pioneer Silk Association," said that he thought it could be done. The difficulty, however, consists in our inability to reel the silk, owing to the great skill necessary, the cheapness of reeling abroad, and the higher rate of wages demanded here. The question was also asked why as good silk cannot be made in America as abroad with good material and better wages to attract the best skill? In reply, Mr. Ryle said it is due to the fact that machine work can never be made to equal hand work; that low wages abroad permit the use of the latter, while the higher rates paid here necessitate the use of machinery exclusively notwithstanding over 50 per cent. duty. Messrs. William Strange & Co., proprietors of the largest silk mills in Paterson, in reply to the same question declared that our manufacturers (they?) can turn out as fine goods as those which are imported. The reporter says he had the face to reply: "But you do not. On the finer grades of dress goods the imported article commands a higher price, and is said to be superior." The Messrs. Strange replied: "For the goods of which we make the most—ribbons and handkerchiefs—we fear no rivalry. They cannot be made better in any part of the world, and we could make the fine dress goods, but cannot at present make them at a profit. That is all that there is of it." The last sentence evidently stopped any further discussion of this most interesting subject, for the *World's* man abruptly changed the subject. This is to be regretted. If the Messrs. Strange had condescended to tell why as good or better silk fabrics manufactured here cannot be made at a profit the statement would have proved of exceptional interest. As it is the *World's* man only succeeded in stirring-up a very interesting subject without finding out anything new. BRADSTREET'S published a review of our silk manufacturing industries two years or more ago, in which the fact of our success in competing with foreign ribbon and handkerchief manufacturers was pointed out. Mr. William C. Wyckoff, secretary of the Silk Association of America, in New York, said to the *World* reporter: "Those who say that American manufacturers cannot make as good an article as the imported goods are mistaken. It is only a question of manufacturing the goods profitably. We must do one of two things, either cut down the wages of our operatives or substitute machinery for hand labor. We have as skilled workmen as any in the world, and of course the raw material is as good." Why did not the interviewer then ask the reason for our ability to excel in making ribbons and handkerchiefs at a profit? But these leading questions never avail much.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

The stock market during the past week has not exhibited violent fluctuations, but prices have been crumbling away slowly. There have been the usual rallies, due to local trading and its manipulations, but the main movement has been downward. The Villard stocks, which absorb so much attention, have been somewhat peculiarly situated. The directors of the Northern Pacific Company, having determined to issue $20,000,000 second-mortgage bonds, found themselves necessitated by the terms of the reorganization agreement to obtain the consent of three-fourths of the preferred stockholders to such issue. The transfer books of the company were ordered to be closed on the 20th inst., all stockholders of record on that day being entitled to vote. The issue of these bonds is practically a question of life or death to the company, and the directors and their financial backers in the banking world had to set themselves to getting enough stock which, added to their own holdings, would make the necessary three-fourths. They were able to do this, and their buying made a sharp recovery in the price of that stock. The bear leaders were apparently kept thoroughly informed how matters stood, and seeing that short sales of the preferred stock would only help the directors' party to put up the price, they bought in their short contracts for cash, and put them out again "seller 60"—that is, the seller having the option to deliver the stock sold any time within sixty days. These sales were generally made about 2 per cent. under the market quotation for the cash stock. In this way the price of the preferred stock has been held up, though it was not able to keep the level which it reached under the stimulus of the first buying. The common stock was not needed for voting purposes, and Oregon Transcontinental was outside the arrangement altogether. To these the bear operators turned their attention, with the result of depressing them lower than they had ever been before. After the books are closed it is supposed the directors and others will try to sell again the preferred stock they were compelled to buy. When the issue of the new bonds has been authorized the question comes of who will buy them, and on this subject there are a variety of contradictory reports. Lists have been published purporting to show the individuals and firms which have subscribed for them; but they seem to be only guesses. Messrs. Gould and Sage, for example, were set down for $2,000,000, but they have publicly denied it, declaring they have nothing to do with the matter at all, and find their own business matters enough to occupy all their attention now—which is probably quite true. Mr. Pullman was put down for $1,000,000, but he states that he only made a conditional subscription for $300,000. Altogether there appears to be much uncertainty about the purchasers, which will doubtless be cleared up only after the issue is made. Of course, the effect of these contradictory stories and the doubt involving the whole matter has been the reverse of stimulating on the stock market.

The position of the several Villard stocks being definitely fixed, the general market was hammered with the usual effect of bringing a dripping of long stock from holders whose margins had been exhausted, and from the uncovering of stop orders. The Vanderbilt stocks were assailed with diverse effect. Lake Shore yielded but little until late yesterday afternoon, when it suddenly lost all strength and dropped about 2 per cent. in fifteen minutes. New York Central stood up for a time, but finally declined some fractions; Michigan Central had a bad drop, and Canada Southern looked as if it would follow and go further. The coal stocks have been quite a feature. Some one was discovered to be selling his Lackawanna Friday of last week, and this started the bears after it, Mr. Cammack being credited with the heaviest work. The attack was extraordinarily determined, based apparently on information that there was trouble among the members of the coal combination; in short, that they, like the railroads, were cutting rates on each other. The support the stock received was nearly as stubborn as the attack; but the selling was too heavy, and at last the price broke about 2½ per cent. There it held, and the short interest in it seems still to remain, for the stock is bid up on every little rally the market is moved by. Reading and Jersey Central are so tied together that they move in concert, and there is no doing anything with them. They cannot go up except the 1 or 1½ per cent. due to purchases to cover shorts, and the stocks are so closely held by the pool that they cannot be borrowed except at a premium. This is so purely an artificial method of sustaining the price that its breakdown is merely a question of time. When a pool holds a stock which nobody will buy, however closely they may hold it for the time, the end is almost inevitable. One member gets frightened, or is badly crippled, and sells out, and thereupon the whole pool goes to pieces. The only other end is a "corner," but the memory of the disastrous termination of the Hannibal & St. Joseph corner—which bankrupted the man who ran it—is too fresh in Wall street to encourage another attempt. Of all disastrous forms of stock speculation "corners" are about the worst. The Jersey Central pool will liquidate probably and its members get out the best way they can. Delaware & Hudson, the one remaining coal stock, is quite out of the circle of speculation, being held by a comparatively small number of wealthy men, and the trading in it is nominal.

The Gould stocks have been hit, so far as they have been hit, by what may be called natural causes. In the first place, Mr. Gould is undoubtedly selling out his holdings of every kind as fast as he can while still maintaining the appearance of supporting his stocks; secondly, his southwestern stocks have been depressed by the bad condition of affairs in the cotton states, and the earnings of the roads traversing those regions show up so badly for last week that a change in the method of reporting them was adopted for the obvious purpose of concealing the decreases. The Wabash report for the year ending June 30 last, just made to the Illinois Railroad Commissioners, shows a deplorable condition of affairs in that property, but probably Mr. Gould does not care for that a great deal as he sold out his stock at high prices two years ago. He may, and probably has, picked up a good deal of it again at the low quotations now made for it, and at some more favorable time will doubtless attempt to run it up again and again sell out. At present he is trying to lighten himself of his heavy burden of Missouri Pacific, which is, in consequence, made to appear as exceptionally prosperous. Texas Pacific has had a sudden drop, though it might have been supposed it had touched bottom at 25; but it is said the road, which crosses the frightful desert of the Staked Plains, has proved unequal to earning its working expenses. Mr. Gould sold out of that about the same time as he sold out of Wabash, at prices ranging from 60 to 70. His Western Union seems to weaken under selling from some quarter, and the publication this week of the annual report for the year ending June 30 certainly did not strengthen it. In its way the document is unique, for while it purports to state the condition of the company and the operations of the year it is a perfect blank. In the opening sentences there is a bare statement that the gross revenues were so much, the expenses so much, and the net profits so much. The rest of the pamphlet, excluding some reference to the recent litigation, is filled up with a history of the company, and a list of so-called "marketable assets" in the company's treasury. Of any data by which the assertions made about the company's earnings could be tested, in short, of any of the information which such a report should contain, there is a conspicuous absence. The report will take its place beside the Northern Pacific and Oregon Transcontinental reports as the most remarkable contribution to commercial and financial literature which the year has produced.

The extraordinary abundance of loanable funds at this center continues to excite surprise in the street, money on call being offered in any amount at 2 to 2½ per cent. In former years the loan rate at this season has ranged from 6 to 40 per cent., and occasionally very much higher on spasmodic jumps. The causes of this state of things were referred to last week, and it can only be said that they continue. Exchange rates remain about the same. Demand sterling continues at $4.82½, sixty-day bills at $4.85½. The Thursday's statement of the Bank of England shows a drain of gold for the week, reducing the reserve to 42½ per cent. against liabilities from 43 15/16 last week. The discount rate continues at 3 per cent.

The report that another bond call was coming next week has stiffened the market for long-date governments. The following were the closing quotations yesterday:

	Oct. 5, bid.	Oct. 12, bid.	Oct. 12, asked
U. S. 4½s 1891, registered	114	114½	..
U. S. coupon	114	114⅜	..
U. S. 4s 1907, registered	120⅜	121	121¼
U. S. 4s 1907, coupon	120⅜	121	121¼

The bank statement of Saturday last was somewhat of a surprise, as the large disbursements of the Sub-Treasury for October interest, etc., had supplied the banks with coin to an extent which showed itself in a large increase in the surplus reserve, while the movement of money to the interior was expected to have depleted it. Loans were largely decreased, and the surplus was increased $1,214,325, leaving it at $2,089,150. The following are the comparative totals of the statements of September 29 and October 6:

	Sept. 29.	Oct. 6.	Differences.
Loans	$329,764,600	$326,059,900	Dec. $3,704,100
Specie	55,324,400	56,602,900	Inc. 1,278,500
Legal-tenders	24,077,300	23,508,800	Dec. 568,500
Deposits	314,107,500	312,090,200	Dec. 2,017,300
Circulation	15,198,500	15,082,800	Dec. 115,700

The proportion of total reserve to liabilities is now 25.67 per cent., as against 25.17 per cent. at the same time last year.

[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: Currency is in good demand at the banks for the country. Call loans are 7 to 8 on the street. Securities are steady with an improving tendency.

From Baltimore, Md.: Money is abundant and rates unchanged. On the Stock Exchange railroad stocks were more active. Virginia's were not so firm, although the new 3s have sold as high as 51.

From St. Louis, Mo.: Money is getting scarce. The discount demand continues heavy at 7 per cent. on call, and 8 on time loans. Prime commercial bills are 50c. discount, and New York exchange is par.

From Cleveland, Ohio: Bank funds are lower than usual, owing to the brisk demand for money from all quarters.

From Montreal, Que.: The condition of affairs of the Exchange Bank of Canada is not reassuring, complications of a varied nature having developed since its suspension which need to be explained in the statement shortly to be submitted. Certain it is that very injudicious credits were extended which would go far to cramp a bank of much larger resources. While some of those so favored were, perhaps, legitimate enterprises, still it only shows on what a slender basis large advances are made, sometimes upon the judgment of one individual, as in the case of this bank's president. Until a properly attested statement is submitted full facts are impossible to obtain. But large overdrafts by the president and certain of its customers must cause a considerable shrinkage of the bank's assets.

COMMERCIAL.

SUMMARY.

Special telegrams from nearly all important commercial and industrial cities to BRADSTREET'S this week mark the general continuance of a fair volume of trade. As is natural at this time, the heavy dry goods jobbing centers are experiencing a lull in operations as compared with the rush in September. The lull has been rendered more noticeable by reason of the late mild weather. A cold snap would be sure to be accompanied by a brisk dealing with retailers. These have now filled their shelves with winter goods. In other lines in staple goods the same is true to a greater or less extent. The country merchants have gone home to sell their wares, and seasonable weather now appears to be the sole requisite to that end. As a a whole, throughout the country, business may be characterized as fairly active. The industries are only moderately well employed. A number of iron furnaces have been blown out. Restriction of the production of anthracite to half time during the fortnight beginning October 20 is being favorably considered, the boot and shoe industry has completed its busy season, and the glass-makers have not settled satisfactorily the difficulties with their employés. The provisions trade is suffering from a continuance of the depressing influences which have been visiting it for some time past, and prices have gone down. The expected squeeze in the Chicago market did not amount to anything, and there is no visible reason for believing in a permanent advance prior to November 1. Wheat has generally continued to decline, in conformance with the excessive stocks at home and abroad, and in the absence of demand. Almost all traders in grain are bears with respect to the existing statistical position of stocks of wheat, while many of them are bulls when the world's crops or question of demand and supply throughout the year are discussed. On Friday more strength and a slight advance was made on decreased receipts at the west, and a revival in the demand. Corn sympathized with wheat, but has shown more strength. Petroleum is lower, apparently because the pipe-line companies did not ship as much oil in excess of their receipts in September as was supposed. Refined is firm and unchanged, but the demand abroad is less, owing to heavy stocks. Ocean freights are unchanged, owing to light request for room from grain and oil. The moderate quantity of tonnage in port would be held higher at the first signs of pressure from shippers. Iron is dull and unchanged, although word comes of some inquiries for good round lots. Wool has been less active in all markets, but values have been stiffly maintained, and the general outlook continues favorable. There were 166 failures in the United States reported to BRADSTREET'S during the past week, 6 more than in the preceding week, 41 more than in the corresponding week of 1882, and 49 more than in the same week of 1881.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: General trade is very good. Produce is coming in freely. There is very little improvement in the fish trade. Real estate is improving.

From Boston, Mass.: In some departments the volume of trade is larger than last week, while in others it is just about the same. Manufactures show a fair movement, but no particular activity. October's business so far is a little disappointing, but while the sales are small the demand is steady, and transactions will probably foot up respectably at the end of the month. As a rule, brokers in merchandise report trade dull because there is no speculation, and purchases are mainly for immediate wants. The start in cotton futures has helped matters a little, but few here get the benefit of it. Hides, leather and metals are without improvement. Wool is not as active as last week, but prices are maintained. Food staples are moving moderately. Money is more plentiful and rates are easier, but borrowers not in high standing find it as difficult as ever to get accommodations. Bank discounts range from 5 to 6 per cent., with a leaning toward the inside figure.

From Philadelphia, Pa.: The volume of general trade has kept up well, although there has been no particular activity to note in any line. In nearly all departments values have been well sustained. No trouble is reported with collections. The general situation is fairly satisfactory and merchants as a rule take a hopeful view of the future, but there is still room for considerable improvement in many lines.

From Cleveland, Ohio: October trade continues good in most lines, though the grocers complain some. The excitement attending election has affected trade somewhat, and the quite warm weather this week may cause a little falling off.

From Chicago, Ill.: Demand for money is increasing and rates are firmer at 6@7 per cent. Balances of country bankers are lower than for years. Currency is going to interior points in liberal quantities to move grain and live stock. Exchange, 25 premium bid. Collections are satisfactory. Dry goods, millinery, clothing, and boots and shoes are active. Stocks are reduced, but sales are not larger than in the preceding week. Groceries are in good demand. Stocks of sugars are better, and of coffees, syrups and rice liberal. The market is firm. Lake fish are plenty; mackerel are rather scarce, but held firm and in good trade. Drugs and chemicals are in better request and steady.

From Peoria, Ill.: General trade fair.

From Detroit, Mich.: General trade is up to average. Some houses report a gratifying increase in the past ten days. Collections very fair.

From Louisville, Ky.: The general merchandise distribution continues large and the trade situation appears to be healthy and satisfactory. Money is actively employed and readily supplied at 7 per cent. Exchange is firm at par.

From Indianapolis, Ind.: Trade is reported good, especially in groceries. While the fall trade is not heavy it is considered as satisfactory. Collections are still somewhat slow. Money is 8 per cent.

From Kansas City, Mo.: The general trade situation is practically unchanged. The volume has been somewhat diminished by unfavorable weather, but sales are up to expectations and collections generally good.

From Burlington, Iowa: Dealers report a steady trade in all lines. Jobbers are filling satisfactory orders, and trade is good generally.

From Milwaukee, Wis.: The wholesale trade is improving and satisfactory. Collections are fair, and maturing paper is promptly paid. Money is easy at 7 to 8 per cent.

From Topeka, Kan.: General trade is heavy and satisfactory. The volume continues to increase as the season advances. The money market is in better shape than it has been for the past four months. Collections are fair.

From San Francisco, Cal.: Exports are active. There is a good demand for money. General merchandise is active without special feature. There is a brisk demand for canned goods for eastern account. Columbia salmon are quoted at $1.20. The Sacramento fall pack is all held by one house.

From Baltimore, Md.: There has not been much activity in general trade, but orders continue to come in fairly well.

From Wilmington, N. C.: General business is less active than for several weeks. The weather is warm and dry.

From Savannah, Ga.: General trade is brightening. The grocery trade while as large in bulk is not producing as large cash receipts as last season, in consequence of falling off in light goods.

From Memphis, Tenn.: Business continues to increase in volume as the season advances.

From Nashville, Tenn.: The jobbing trade keeps up well.

THE LABOR SITUATION.

Labor agitations have mostly died out. The window-glass blowers refuse to either accept wages offered or to confer with reference to an adjustment. The bottle-blowers at Pittsburgh are on strike against a reduction, and are circulating petitions requesting signatures for a reduction of duties on bottleware to equal the proposed reduction. A convention of miners in western Pennsylvania will be held at Pittsburgh on Monday to decide for or against a strike. Two thousand miners are on strike in Jefferson county, Pa., for higher wages. The coal operators in the third and fourth pools, Fayette county, Pa., have requested their workmen to organize the miners of the Kanawha region, West Virginia, to ask for higher wages in order that their employers will not be able to undersell Pittsburgh coal on southern markets.

INDUSTRIAL FEATURES.

[By Telegraph to BRADSTREET'S.]

From Indianapolis, Ind.: Manufacturers report trade somewhat dull and in some cases are reducing their forces.

From Milwaukee, Wis.: Manufacturers are doing a fair business except in flour. The mills are running on short time.

BREADSTUFFS ABROAD.

There is little that is new to report concerning the situation in foreign breadstuffs. The price at present turns on the question of stocks rather than demand and supply, and from the quantity of grain which foreign countries have already secured and contracted for it is not exaggerating to record an opinion that a month will be required yet before much relief may be expected. The wheat-importing countries abroad, as a rule, are heavily stocked and are not in the market at present prices. The trade in London has been depressed from causes mentioned. Wheat off stands has, of course, been dull, and cargoes off coast inanimate. During the week prices in Mark Lane have weakened. Russia is now believed to have a moderate surplus of wheat for export this year, and trade there is dull, north and south. The season's shipments of wheat from Cronstadt have been nearly treble those expected, and now Saxonska wheat at 40s. 6d. for October shipment will make 1883 remembered as a cheap year. On the 24th of September the London *Miller* calculated that on the basis of 37s. 2d. for September wheat in New York, 37s. 5d. for October, 38s. 3d. for November and 37s. 7d. for spot, that in the autumn months this wheat should make 43c. to 45s. in Mark Lane. The imports into the United Kingdom during the preceding week have amounted to 360,000 quarters of wheat, 115,000 quarters of corn and 200,000 barrels of flour, against 300,000 quarters of wheat, 190,000 quarters of corn and 130,000 barrels of flour in the previous week.

The quantity of wheat and maize on passage, as per Beerbohm's London cable, October 11, was:

	Wheat. Qrs.	*Maize. Qrs.*
To the United Kingdom	2,000,000	290,000
To continent	550,000	70,000
Total quarters	2,550,000	360,000
Equal bushels	20,400,000	2,880,000
Compared with the previous week:		
To the United Kingdom	1,875,000	290,000
To continent	580,000	55,000
Total quarters	2,455,000	345,000
Equal bushels	19,640,000	3,760,000
Increase, bushels	760,000	120,000

AMERICAN WHEAT MARKETS.

On Saturday, Monday, Tuesday and Wednesday of the past week the price of wheat has, on the whole, sustained a noticeable decline. The causes for this are not new ones. The visible supplies are increasing. Exports are very light when they were expected to be heavy. Stocks abroad continue of such proportions as to preclude the probability of an early reëntry of foreign buyers into the market here, and, worse than all, farmers have continued to market their crops, which has piled up the grain at the west and conspired to weaken prices there even more noticeably than at the east. The question is being seriously asked how much lower is wheat to go; yet the constitutional longs on the market do not appear to be launching out with that confidence of an early revival in prices which all inferences from the past and present statistical position of wheat would warrant. The statistical position of the cereal in its widest sense is nowhere. Stocks are all that appear to count. They are in excess of present wants, and prices lag. Thursday brought some activity to the market and prices revived fractionally. On Friday wheat was somewhat stronger and prices were a little higher; this was due to restricted receipts and better trading at the west.

The St. Paul (Minn.), *Pioneer Press* presents in advance the report of the State Agent of the United States Agricultural Department concerning the crops of Minnesota for the season of 1883. The wheat crop being the most important the statistics are given in detail and make an interesting showing. The total wheat acreage was 2,571,637 acres, or 64,466 acres greater than the estimate in the preliminary statement. The total yield is 38,305,373 bushels, an average to the acre of 14.89. Compared with 1882, this shows an increase in acreage of 241,668 acres, an increased yield of 6,129,115 bushels, and an increased average per acre of 1.08 bushels. The amount destroyed by storms is put at 3 per cent., though the agent's individual estimate is 5 per cent., reducing the total crop to 37,156,211 bushels, and the average per acre to 14.45.

The receipts of wheat at tide-water for the week ending October 6 decreased to 1,847,769 bushels from September 29, when they were 2,030,456 bushels. The exports from the Atlantic ports for the week ended October 6 amounted to 976,314 bushels, against 1,135,444 bushels September 29

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended October 6 amounted to 2,460,528 bushels, against 1,947,587 bushels in the preceding week, and the shipments to 1,615,789 bushels, against 1,604,635 bushels in the week previous.

The visible supply of wheat in the United States and Canada (east of the Rocky mountains) October 6, as against the preceding week, showed an increase of 1,558,951 bushels.

The course of prices of wheat at New York and Chicago (1 P.M.) during the past week has been as follows:

	At New York				*At Chicago*	
	Oct.	*Nov.*	*Dec.*	*Jan.*	*Nov.*	*Dec.*
Fri. Oct. 5	$1.11¼	$1.13¼	$1.15¼	$1.17⅝	$0.96¾	$0.98¾
Sat. Oct. 6	1.10⅜	1.12⅛	1.14¼	1.16⅜	.95⅝	.97⅛
Mon. Oct. 8	1.08½	1.10⅜	1.12⅝	1.14⅞	.93⅛	.95⅛
Tues. Oct. 9	1.09⅜	1.10½	1.13	1.15⅛	.94	.95¾
Wed. Oct. 10	1.08½	1.10⅜	1.12⅝	1.14¾	.93⅜	.95⅛
Thur. Oct. 11	1.08¾	1.10⅛	1.12⅜	1.14⅜	.93¼	.94⅞

At 1 P.M. on Friday, October 12, November wheat at Chicago was quoted at 94c., against 96¾c. on the preceding Friday.

INDIAN CORN.

The position of this cereal in the New York market during the past week has been somewhat better than that of wheat. With the former, however, the bearish influences prevalent have exercised the dominant influence, but have not had so great an effect. It is not to be overlooked, however, that holders of corn here have been disappointed owing to the indifference of exporters, when it is remembered that concessions in prices on recent sales have not only been made but that quotations have slowly but steadily been declining. The loss has not been as great as that in wheat (see table of prices), but the increasing stocks, relatively light inquiry on all sides and absence of shippers have had their effect. Thursday trading was more active and there were some shipments so that prices were firmer. On Friday corn was practically unchanged. The options fluctuated some but left off at about Thursday's close.

The receipts of Indian corn at the Atlantic ports for the week ended October 6 were 2,023,416 bushels, against 2,550,500 in the preceding week, while the exports from the same points amounted to 1,608,595, against 1,389,073 bushels. The visible supply of Indian corn in the United States and Canada, east of the Pacific coast, October 6 had decreased 651,319 bushels as compared with September 29. The total receipts of corn at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis, for the week ending October 6, were 3,453,910 bushels, against 2,726,125 the week preceding, and the shipments were 3,233,407 bushels, against 2,712,193 in the preceding week.

The closing prices of Indian corn daily during the past week at New York and Chicago at 1 P. M. were as follows:

	At New York.				*Chicago.*	
	Oct.	*Nov.*	*Dec.*	*Jan.*	*Nov.*	*Dec.*
Friday, Oct. 5	.59½	.59	.58⅜	.57⅞	.47½	..
Saturday, Oct 6	.59⅛	.59	.58¾	.57¼	.46⅞	.45½
Monday, Oct. 8	.58⅞	.59¼	.58	.57½	.46⅛	..
Tuesday, Oct. 9	.58½	.58½	.58¼	.57½	.46⅞	.45⅞
Wednesday, Oct. 10	.59⅜	.59	.58¾	.58	.47½	.46½
Thursday, Oct. 11	.59⅜	.59⅛	.58⅞	.58	.48	.46⅞

Corn at Chicago at 1 P. M. yesterday was for November 48¾c., against 47½c. for the option named on the preceding Friday.

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Oct. 5.	*Oct. 12.*
No. 2 flour	$2.60 @3.25	$2.50 @3.25

Total bushels	50,704,126	49,677,079	26,493,528	57,025,546

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Flour has ruled very dull, with a declining tendency except on low grades and fancy fresh ground old wheats which are scarce. Wheat has dragged heavily at declining prices, owing to the accumulating stocks in sight and slow seaport demand. Speculation has been quite active, but shippers have had few orders, and bids in all

cases have been too low to admit of business. The scarcity and high cost of vessels has helped to retard export trade. Corn has been neglected both by shippers and speculators. Oats have been more active, and the closing market is stronger, with a better feeling prevalent as to the future of prices.

From Chicago, Ill.: Wheat is active. Receipts are fair. There is a better shipping inquiry. Prices are firmer and ½c. higher. Corn is stronger and arrivals are smaller. The shipping and speculative demands are good. Prices ⅞c. higher near; ¾c. on long futures. Oats are ¼c. better on near business. Rye is quiet.

From Indianapolis, Ind.: The price of wheat continues to decline and trade is slack. Stocks in store are accumulating.

From Louisville, Ky.: Grain is quiet and nominal. Flour quiet and steady.

From St. Louis, Mo.: There is good export demand for corn, but not for wheat. All grains are depressed and inactive. Flour is still dull and weak.

From Kansas City, Mo.: Wheat receipts are very large. The market is dull and lower. Corn receipts are liberal and the market is strong and steady.

From Milwaukee, Wis.: The wheat movement is moderate, the country tributary to Milwaukee being able and willing to hold for higher prices. Receipts of flour are large, chiefly from Minneapolis in transfer.

From San Francisco, Cal.: Wheat for export and milling is weaker.

From Baltimore, Md.: Speculation in grain has been lifeless, and the markets are entirely devoid of interest.

From Wilmington, N. C.: In breadstuffs and grain nothing is doing.

From New Orleans, La.: Grain exports are trifling and receipts small. The stock of corn is 333,000 bushels; of wheat is 47,000 bushels. Prices are nominal; corn 56c., wheat $1.10. Provisions and breadstuffs are quiet, and stocks are small.

From Memphis, Tenn.: Flour is dull, but prices are unchanged. Breadstuffs are dull. Cornmeal is quiet.

From Nashville, Tenn.: Corn is dull and wheat quiet.

PROVISIONS.

The price of hog products went off during the earlier portion of the week. This was due in part to lack of export demand as compared with what dealers expected, and as well to the steadily increasing supply of hogs at the west in the face of this condition of affairs. The general trade in hog products is, in fact, slowly but surely creeping up, and promises in another year to far exceed all previous records, notwithstanding the prohibitory action by France and Germany. Yet this fact, in the face of large stocks here, a declining grain market and a present moderate demand from the other side, aids in the depression of speculative prices. Thursday saw a better export demand. Speculative prices, however, declined under manipulation by traders. The market was dull and weak on Friday. The lard options were 3@5 points lower.

Exports of hog products from the following places for the week ending October 6, 1883, were:

	Pork, barrels.	*Bacon and hams, pounds.*	*Lard, pounds.*
New York	3,430	3,484,373	3,033,172
Boston	1,424	769,084	1,079,198
Portland	6	....	....
Montreal	183	534,500	228,030
Philadelphia	....	1,000,800	5,500
Baltimore	6	7,365	13,867
New Orleans	116	3,600	1,380
Totals	5,165	5,799,722	4,361,147
Previous week	4,543	7,207,307	3,888,680

The total export of hog product from the abovementioned places from November 1, 1882, to October 6, 1883, was as follows:

	1882-83, pounds.	*1881-82. pounds.*
Pork	43,999,000	45,655,200
Bacon and hams	394,485,198	353,183,276
Lard	268,331,117	232,392,663
Totals	706,815,315	631,231,139

Prices of lard and mess pork at New York during the week were as follows:

	Lard, per lb., October.		*Pork, per bbl., spot mess.*	
	This week.	*Last week.*	*This week.*	*Last week.*
Saturday, Oct. 6	8.20c.	8.14c.	$12.00	$12.00
Monday, Oct. 8	8.10	8.15	12.00	11.75
Tuesday, Oct. 9	8.10	8.10	11.75	11.75
Wednesday, Oct. 10	7.96	8.17	11.75	11.75
Thursday, Oct. 11	7.85	8.15	11.75	11.75
Friday, Oct. 12	7.75	8.45	11.50	11.75

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Provisions are firm. Speculative trading is light. The export and southern demand for meats and hams keep stocks reduced. Pork is 7½c.@10c. Lard and short ribs are 5c. higher. The heaviest receipts of cattle on record this week, and the market is lower.

From Louisville, Ky.: Provisions are easy and the demand is small. The stock of hams is exhausted.

From St. Louis, Mo.: Provisions have tended strongly upward, but are now steady, except pork, which is weak and downward. The movement is light.

From Kansas City, Mo.: Provisions are active. Smoked meats are firm, but lard and pork are weaker. Cattle receipts are 3,000 head greater than last week. Range cattle have declined 20c. to 25c. Natives are unchanged. The market has ruled fairly active. Hog receipts are about the same as last week. Values had increased 10c. during the week, but later fell off 5c. to 10c. The market is active.

From Topeka, Kan.: Provisions are in good demand; flour continues to be active, and prices are steady.

From Baltimore, Md.: A good jobbing trade is reported in provisions, and the market rules firm and steady. There is a good demand for high grades of fresh New York state butter, and the supply is reported light.

From Wilmington, N. C.: Meats have advanced. The demand is legitimate, but restrained.

From Savannah, Ga.: The provision trade is good, and firm at quotations.

From Memphis, Tenn.: Meats and lard are steady.

From Nashville, Tenn.: The cattle market is good.

THE NEW YORK DRY GOODS MARKET.

This has been a quiet week in dry goods and kindred trades, attributable mainly to the continued mildness of the weather, though the observance of the "Yom Kippur" by the Hebrews doubtless helped to lessen the week's sales. Up to the present break the season has been a satisfactory one, and on the recurrence of cold weather it is expected that business will again become brisk.

The week has been a miserable one for the retail trade, warm weather at the opening, the Hebrew holiday of Thursday, and winding up with rain. Sales have doubtless been heavily affected.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Dry goods are fairly active and the local markets are steady.

From Boston, Mass.: There is more activity in the dry goods market than last week. Jobbers have been selling more freely to New England buyers, and orders from other sections have increased. From agents' hands the movement holds up at a fair average. Plain cottons are in strong position, and if the demand continues at present rate higher prices will be asked, in keeping with the rise in cotton and the increased cost of manufacture owing to the scarcity of water. Prints are slow and values are unsettled. Dress goods continue in request, and several makes are sold ahead. Woolens for men's wear are quiet, but in a fairly satisfactory condition.

From Philadelphia, Pa.: The general market has been quieter. Interior orders have been fair, however, and there has been a steady reassorting demand from the local and nearby trade. The market is in good shape and as soon as retailers' stocks shall have been broken by consumptive requirements, agents and jobbers look for renewed activity in the wholesale trade.

From Pittsburgh, Pa.: Dry goods are in active demand and jobbers are pushed to keep up with orders.

From Cleveland, Ohio: Dry goods continue active and business is fully up to expectations.

From Peoria, Ill.: The dry goods movement is good, with fair collections. The weather is unfavorable.

From Detroit, Mich.: In dry goods a good average trade has been done for the week both by house and mail orders. Collections are reported fair to good.

From Louisville, Ky.: The dry goods demand for winter fabrics is restricted by warm weather, but the general stock is moving freely.

From St. Louis, Mo.: Dry goods are very firm at former rates, and continue in remarkably fine sale. General jobbing trade keeps in almost as heavy volume as during the fair week. The best of feeling prevails as a rule.

From Burlington, Iowa: Dry goods are moving steadily, with increasing sales. Collections are fair.

From Kansas City, Mo.: Dry goods sales continue quite heavy on mail and personal sorting orders. The size and character of the demand indicates an active retail trade. Jobbers sales continue largely ahead of last season.

From Topeka, Kan.: Dry goods are active and well up to other lines of business.

From San Francisco, Cal.: The dry goods trade is improving. Country buyers are more numerous than since the fall trade opened.

From Baltimore, Md.: Sales in the dry goods market have slackened some, as is to be expected now. No complaints of dullness are heard.

From Wilmington, N. C.: Dry goods are quiet, but satisfactory.

From Savannah, Ga.: Dry goods are steady, with a fair demand.

From New Orleans, La.: Dry goods move slowly.

From Memphis, Tenn.: Wholesale jobbers in dry goods say business is good and sales quite large. Money for loans is at 8 per cent., exchange is at par.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Manufacturers continue to report a good business in clothing, and the indications are that October sales will come up to a full average. New England dealers are operating to a fair extent, but colder weather is needed to start the demand for overcoats, which up to this time has been only moderate. We hear no complaints about collections, and the financial situation seems to be healthy.

From Savannah, Ga.: Clothing is in fair demand with wholesalers, but retailers are backward. The stock carried by jobbers is valued at $625,000, and retailers $203,000.

COTTON.

The market at New York for spot cotton during the week has been quiet and steady. The demand has been moderate, and sales mostly on spinners' account. Quotations advanced 1/16c. on Saturday and Monday each, and ⅛c. on Tuesday, closing last night at 10¾c., with old cotton 3/16@¼c. higher. The sales foot up as follows: For export 400 bales, for consumption 4,598, for speculation 1,400, and in transit 4,500, making a total for the week of 8,698 bales, against 6,973 last week. Deliveries on contract amounted to 2,300 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	*Last week.*	*Last year.*
Ordinary	8½c.	8¼c.	9c.
Strict ordinary	8 15-16	8 11-16	9 7-16
Good ordinary	9¾	9½	10¼
Strict good ordinary	10⅛	9⅞	10 11-16
Low middling	10⅜	10⅛	11⅛
Strict low middling	10 9-16	10 5-16	11 5-16
Middling	10¾	10½	11½
Good middling	11	10¾	11 13-16
Strict good middling	11⅛	10⅞	12
Middling fair	11⅜	11⅜	12½
Fair	12⅝	12⅛	13¼

STAINS.

	This week.	*Last week.*	*Last year.*
Good ordinary	8⅛	7⅞	8⅝
Strictly good ordinary	8 14-16	8 9-16	9 7-16
Low middling	9⅛	9¼	10⅛
Middling	10⅜	10⅜	11 1-16

The market for spot cotton closed quiet and easy.

The future market has been steady. Sales have been much greater than last week, reaching 896,500 bales, as against 475,800 last, and 411,200 for the same week last year. Prices have fluctuated, advancing one day only to decline the next. The closing quotations show an advance of 3 points for near months, while later ones remain practically unchanged from those of last Friday.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
October	10.59	10.51	11.13
November	10.64	10.60	10.90
December	10.74	10.73	10.89
January	10.89	10 88	10.95
February	11.04	11.03	11.06
March	11.17	11.17	11 17
April	11.28	11.29	11.29
May	11.39	11.40	11.40
June	11.50	11.51	11.50
July	11.60	11.61	11.62

The market for futures closed steady.

The southern markets have been firm and steady. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	*To-day.*	*Last year.*
Galveston	13,281	10½	10¾
New Orleans	38,100	10 11-16	11⅛
Mobile	4,700	10½	10⅞
Savannah	22,000	10 5-16	10½
Charleston	14,000	10½	10⅞
Norfolk	9,000	10½	....
Baltimore	2,941	10⅝	11¼

The total receipts of cotton at the ports since September 1 are 711,482 bales, against 633,063 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	130,363	134,676
New Orleans	162,353	101,653
Mobile	31,013	50,220
Savannah	155,856	158,332
Charleston	114,854	110,174
Wilmington	19,201	18,629
Norfolk	56,951	65,908
Baltimore	2,191	1,199
New York	771	1,877
Boston	1,149	9,268
Philadelphia	.....	3,642

Below will be found the receipts at each of the ports for the week ending October 12, 1883:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	4,698	10,607	1,351	6,128	7,586	5,641
New Orleans	6,473	14,669	10,995	4,673	8,465	18,498
Mobile	2,159	3,928	2,536	1,004	1,157	1,886
Savannah	6,172	7,913	7,661	7,904	6,572	7,857
Charleston	4,023	5,936	3,863	3,805	4,858	6,756
Wilmington	687	1,375	643	1,449	2,161	995
Norfolk	2,887	3,603	2,658	4,085	4,269	4,862
Baltimore	....	531	47	...	166	91
New York	25	...	....	124	....	...
Boston	....	20	78	99	123	70
Philadelphia	....	55	....	....	53	100
Totals	27,124	49,200	29,832	28,971	35,181	45,599
This day last week	22,009	33,588	23,863	23,430	25,019	28,660
This day last year	21,231	49,518	27,136	29,533	32,804	32,589

The total receipts for the week were 228,120 bales, against 164,330 last week, and 204,201 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 99,409 bales, against 87,284 bales last week and 91,674 bales for the corresponding week last year. The shipments for the week were 79,242 bales, against 61,419 bales last week and 77,360 bales for the corresponding week last year. The stocks for the week were 128,739 bales, against 114,172 last week and 76,460 for the same week last year.

The Liverpool market for prompt delivery uplands has been firmer, with higher prices. The closing quotations for middling uplands last night was 6½d. against 5⅞d. last week.

The future market has been strong and steady. The closing quotations last night show an advance of 6 points for near months and 5 for later ones over those of one week ago.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
October	6d.	5 56-64d.	6 33-64d.
October-November	5 62-64	5 54-64	6 26-64
November-December	5 60-64	5 53-64	6 15-64
December-January	5 61-64	5 54-64	6 15-64
January-February	5 63-64	5 56-64	6 15-64
February-March	6 1-64	5 60-64	6 16-64
March-April	6 4-64	5 63-64	6 17-64

The market for futures closed steady.

The sales for the week at Liverpool were 93,000 bales (of which 60,000 were American), against 64,000 (of which 46,000 were American) last year. The sales for export were 7,900 bales, against 4,900 bales last year. The sales for speculation were 8,500 bales, against 2,300 bales last year. The amount forwarded was 4,600 bales, against 5,300 bales last year. The stock in port is 555,000 bales (of which 311,000 are American), against 436,000 bales (of which 144,000 were American) last year. The total imports for the week were 27,500 bales (of which 18,000 were American), against 45,000 bales (of which 30,000 were American) last year, and the amount afloat 83,000 bales (of which 30,000 are American), against 217,000 bales (of which 114,000 were American) last year.

The Manchester market closed firm.

The Havre market closed quiet and steady.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Cotton has been very firm all the week with a steady consumptive demand.

From Louisville, Ky.: Cotton is in very good demand at full prices. Receipts show an excellent quality.

From St. Louis, Mo.: Cotton is brisk at an advance, with both a spinning and exporting demand. The crop is now coming in freely.

From Baltimore, Md.: Little has been done in cotton. Shippers have regarded the market high and spinners buy sparingly. Late sales are at 10@10⅜c.

From Wilmington, N. C.: Cotton active. A cargo of 5,000 bales cleared Thursday.

From Savannah, Ga.: The cotton market is firmer with better inquiry. The growing crop in some fields has more top cotton, which is due to the long dry season developing more small bolls, but this yield will be of an inferior quality in color and staple.

From New Orleans, La.: Current crop estimates are 5,750,000 bales, the extremes being 5,400,000 and 6,000,000. Picking is progressing, but the weight is very light. Since Thursday last week the movement of prices has shown fair advance—ordinary 9/16c.; good ordinary and middling fair, 7/16c.;

others ⅜c.; Octobers, 27 points; Novembers, 19, other months 7 to 10.

WOOL.

The seaboard wool markets have continued quiet as compared with the activity prevailing at the close of last month, but the volume of business has been very fair, and the situation is, if anything, stronger than at last report. The available supply of desirable wools in eastern markets is unusually light for the time of year, and the offerings at country points are very moderate. As there is every reason to believe that the last clip was fully as large as that of 1882, it is difficult to account for this condition of affairs, except upon the assumption that a great deal more wool has been bought by manufacturers direct from the growers than has been generally supposed to have been thus withdrawn from the market. There is no question but that stocks are under exceptionally good control in the eastern markets, and all reports at hand indicate that store lots throughout the west have been remarkably well cleared up. In view of the fact that eight months must yet elapse before the next clip will begin to come forward, holders as a general thing are taking a very confident and hopeful view of the future of the market, and are offering stocks with a good deal of indifference. The present lull in demand is the natural sequence of the recent activity and excites no concern, as consumptive requirements are increasing rather than falling off, and there is every indication of a strong market and steady trade during the coming winter months.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The demand for wool the past week has been moderate, but prices remain the same, and desirable lots of fine fleeces and fine combing continue to be held firm. The sales of he week have been 2,369,600 pounds, and include, Ohio and Pennsylvania fleeces at 36@38c. for X, 38½c. for choice X and above, 38@40c. for XX, a lot of 100,000 pounds selling at the latter rate, and 41@41½c. for XX and above. In Michigan fleeces the sales have been at 34½@35½c. per pound for X, but 35c. is a fair quotation for good average lots, although some holders ask 35½@36c. per pound, For combing and delaine fleeces there has been a fair business doing, with sales of fine Michigan and Ohio delaines at 40@43c., and fine and No. 1 combing at 43@45c. per pound. For unwashed wools the business has been light comparatively, but prices are steady and sales of territory, Texas and Montana at steady prices. California wool has been quiet and no sales of importance. Choice spring California is held at 28@30c. per pound, but buyers pay these prices reluctantly. For pulled wool there has been but a moderate business doing. Choice supers are scarce and command full prices. The sales of common and good supers have been at 23@25c., and choice eastern and Maine at 40@43c. per pound. In foreign wool very little has been done. Carpet wools continue to be held above the views of buyers. A lot of 127,000 pounds Montevideo sold on private terms.

From Philadelphia, Pa.: Upward of 600,000 pounds of territorial and similar wools have been taken by carpet manufacturers this week, but demand for other grades has been less active. Stocks are small and the market continues very firm.

From Chicago, Ill.: The call for wool has fallen off. All orders are filled for the present. Receipts are fair and stocks are better, but still moderate; mostly western unwashed. Hides are dull and easy.

From Louisville, Ky.: Wool is firm and sales are improving.

IRON.

The American pig iron market continues quiet, and prices are unchanged. Leading furnaces other than the Thomas Company have not cut prices. The latter's quotations continue at $21 for No. 1 X and $20 for No. 2 X. The general demand is slightly below that of a week ago, as consumers have been waiting to see if the recent decline in price means any more than has been already developed. Four or five pig iron furnaces have blown out within the past few days, which has led to inquiries and negotiations by a few of the larger consumers of foundry and forge irons, which will probably result in the placing of some orders for large blocks of iron for fall and winter consumption. Stocks on hand are known to be light, and requirements are heavy. In view of the fact that a heavy restriction in production will soon be made, and that, with the present exhausted condition of consumers' stocks it may lead to an improvement in prices, some buyers have been endeavoring to close for large lots. Scotch pig presents no new features. Prices are unchanged on the basis of $23.25 for Coltness from yard, and the market is quiet but firm. An advance in freights from Glasgow to this side is in part a cause of this. The strike of 5,000 miners in Scotland has also contributed to strength in the foreign market. Steel rails are unchanged, except that current bids are below rates at which mills are now executing orders. Bar iron has sustained no improvement.

IRON MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The pig iron market has not developed the hoped-for improvement. There are some inquiries for large blocks, but at low prices, and the market closes very quiet. Merchant bar continues weak and dull, and the outlook is not encouraging to sellers. Construction iron is fairly active in small lots, but there are no large transactions to note. Steel rails continue quiet.

From Pittsburgh, Pa.: The market for manufactured iron is unchanged. The present demand falls far short of expectations. Nails are in better request.

From Cleveland, Ohio: The pig iron market is if possible duller than last week, though no change in prices is announced. Dealers are rather discouraged as the fall is well advanced with no indications of a demand for iron.

From Chicago, Ill.: Sheet-iron and tin-plate are firm and in good manufacturing demand. Pig-iron is in moderate call in small lots. The stock of Lake Superior charcoal is light and held steady. Southern is in liberal supply and unchanged at $20@$21.50. Steel rails are dull and rates nominal; small sales at $40.

From Detroit, Mich.: In iron there is a reported tendency to weakening of prices, and the demand not so active as a month since, particularly in boiler plates.

From Louisville, Ky.: Pig iron at southern furnaces is not accumulating. The demand is ahead of production, and quotations are steady. Bar iron and hardware are active.

From St. Louis, Mo.: Pig iron is, if anything, duller. Transactions are for small lots only, but quotations are unchanged. Manufactured iron continues in good sale at firm values, and stocks are light.

AMERICAN HARDWARE.

[By Telegraph to BRADSTREET'S.]

From Cleveland, Ohio: Manufacturers of hardware, edge tools, bolts, nuts, etc., report business good.

From Chicago, Ill.: Hardware and nails are moved freely, but there is no marked increase over other weeks. Prices are about the same.

From Savannah, Ga.: The hardware trade is having a good demand for all building supplies, and more business has been done so far than last season.

From New Orleans, La.: The movement in hardware is quiet.

COAL.

There are no special developments in the anthracite coal market since the excitement caused last week by the unwarranted assertions concerning the sales made by the Delaware & Hudson Canal Company. The reason given by the vice-president of that company for sales 12@15c. off current rates have not been since contradicted or brought in question. It may be only necessary to add that jobbers have not realized within 20c. of the September circular since the promulgation of that document. One large dealer states that $4.50 is the best he has heard of or received on the size which the September circular places at $4.70 per ton. Mr. Gowen has been in the city, but the situation did not warrant a gathering of the coal company magnates respecting prices. The demoralization reported on Friday of last week does not now appear. The condition of the general trade is quoted as fair, and considerable coal is going into consumption, although the few days of mild weather of late has checked sales some. The latest record of the production of anthracite coal shows something like 2,034,000 tons in excess of the output during a corresponding period in 1882. It is reported that a decision will be reached during the coming week respecting the proposition to restrict production during three days of the succeeding week, and also during the first week in November. The bituminous trade continues quiet and relatively dull.

COAL MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Coal is firm and sales are larger. Stock are good.

PETROLEUM.

From the close on Saturday last to Thursday evening prices of pipe-line certificates showed a greater decline than, it is safe to say, even the most anxious bears had expected, the net loss in price being within ⅛c. of 4c. per barrel, to $1.09½. Saturday's and Monday's operations were moderate in extent and lifeless in character. There was considerable activity in the exchanges on Tuesday, owing to new statements respecting the coming in and weakening of various new wells, alleged stoppages in drilling, and the like. Wednesday the United Pipe-lines' September reports were made public and proved a surprise in that the excess shipments from the tanks in the regions did not greatly exceed the receipts of oil from the wells, as was confidently expected, the loss in stocks amounting to over 354,261 barrels. Inasmuch as the daily runs and deliveries reported are bulletined at all the exchanges, it appears strange that the result should have been materially short of what must have been indicated. Still, this view is advanced, and may be taken for what it is considered to be worth. The United Pipe-line Company reports for September: Outstanding acceptances, 27,736,393; decrease from August, 201,209. Credit balances, 5,680,283; decrease from August, 86,827. Net stocks, 33,416,676; decrease from August, 288,036. The Tide-Water Pipe Line Company reports: Outstanding acceptances, 1,662,000; decrease against August, 119,000. Credit balances, 592,470; decrease against August, 52,875. Net stocks, 2,254,470; decrease against August, 66,125. The stocks reported by both companies, both lines, aggregate 35,671,146 barrels; decrease against August, 354,261 barrels.

The stocks abroad show an increase as against like period in the preceding year. The following gives the statistical position of the product abroad at the seven leading ports of entry on the continent and at London:

SEVEN CONTINENTAL PORTS.	1883.	1882.
Stock September 21	1,625,931	1,501,191
Afloat September 21	268,315	259,985
Loading in United States September 21	258,400	214,150
Total supply September 21	2,152,646	1,975,326
LONDON.		
Stock September 21	433,460	318,801
Afloat September 21	24,323	22,121
Loading in United States September 21	14,500	57,000
Total supply September 21	472,283	397,922

The work of inspecting the contents of the Standard tanks was finished September 20, and the committee from the various exchanges are satisfied with the result. As the reports from the gaugers and inspectors were received they were intrusted to accountants, and the results, together with the committee's estimate based upon actual experience and the test, of the amount of merchantable petroleum obtainable from the B. S. by methods at the command of the pipe line.

	Barrels.
Total contents of tanks gauged Sept. 1, 1883	34,227,589.03
Sediment as per inspection	14,810.61
Free water per inspection	201,360.26
B. S. per inspection	3,012,473.82
Total	3,228,644.69
Amount of clear merchantable oil	34,998,944.34
Amount of merchantable obtainable from B. S. by means at the command of the pipe line	1,383,575.10

The total amount of merchantable oil to meet oil liabilities of the United Pipe lines September 1, 1883, is 34,382,519.44. To a sub-committee, consisting of Messrs. J. B. Smithman, Nic Mehler and Joseph H. Simmons, was intrusted the examination of the books and accounts of the lines, who report that by the general ledger of the company the liabilities appear to be as follows:

	Barrels.
For credit balances	5,767,110 21
For registered certificates	3,433,188.50
For outstanding acceptances	24,504,414.02
Total liabilities September 1, 1883	33,704,712.73
Surplus	677,806.71

This showing furnishes an apparent surplus of oil in the Standard tanks of 677,806 barrels.

The petroleum market opened yesterday at $1.09¼ and closed at noon at $1.09¾. At the close yesterday the quotation was $1.10⅜ as compared with $1.13⅛ on Friday of last week, a decline of 2¾c. on the week. The market was firm during the afternoon session. There was a large short interest, a part of which covered and helped prices up.

The following shows the fluctuations in prices of certificates of crude petroleum during the week ended last evening:

	Opening.	Highest.	Lowest.	Closing.
Saturday, October 6	1.13	1.13¾	1.13	1.13⅜
Monday, October 8	1.12½	1.12½	1.11⅜	1 11½
Tuesday, October 9	1.11	1.12⅜	1.10⅛	1.11⅞
Wednesday, October 10	1.12¼	1.13	1.09½	1.09¾
Thursday, October 11	1.08⅞	1.09¾	1.08	1.09½
Friday, October 12	1.09¼	1.10¼	1.08⅝	1.10⅜

Refined has continued dull for export at unchanged prices. The home trade has been fairly active. Naphtha has been in better request at ⅛c. advance. Crude, in barrels, has been moderately active. Prices, with comparisons, are:

	Sept. 14.	Sept. 21.	Sept. 28.	Oct. 5.	Oct. 12.
Certifi's, crude	1.11⅜	1.15½	1.15⅝	1.13⅛	1.10⅜
Refined, 110°	8⅛	8¼	8⅜	8⅜	8⅜
Refined, 70°	8¼	8⅜	8½	8½	8½
Crude, in bbls	7½@8	7¼@8	7¼@8	7⅛@8	7⅜@7⅞
Case, plain	9⅜	9⅜	9⅜	9⅞	10
Naphtha	5¼	5¼	5½	5½	5⅝

The export of petroleum from the United States, crude equivalent, for the week ending October 6, was 13,265,146 gallons, against 16,298,201 in the preceding week. The total export from the United States since January 1 was 496,430,369 gallons, against 492,628,570 gallons in the corresponding portion of 1882, a gain in the current year of 3,801,799 gallons. The total exported from New York city during the week ended October 6 was 9,546,189, against 13,820,640 in the preceding week, and during the year, to October 6, 407,276,166, against 388,126,910 gallons in a like portion of 1882. This shows an increase in shipments on the year from New York alone, as compared with 1882, of 19,149,256 gallons (crude equivalent) as against an increase from the country at large of only 3,801,799 gallons.

The total exports of petroleum and petroleum products from the United States for August, 1883, as reported by the National Bureau of Statistics, was 49,580,807 gallons (actual), against 44,011,074 gallons in August, 1882, the value of the same being respectively $4,229,292, and $3,599,440. For eight months of 1883 the quantity reported (actual) was 344,892,207 gallons, valued at $30,917,732, against 350,098,750 gallons, valued at $30,946,856 in eight months of 1882. These totals compare with reports of exports for the same period calculated on the basis of crude equivalent, as follows:

	1883.	1882.
Eight months exports, United States, crude equivalent (trade report)	408,074,929	423,311,210
Eight months exports, United States, (actual No. of galls.) Bu. Statistics	344,829,207	350,098,750
Difference (apparent)	63,245,722	73,212,460

OCEAN FREIGHTS.

Rates for charters are stiffly held owing to the limited supply of tonnage in port and disengaged. The only commodities calling for charters to any extent are petroleum and grain, but neither of these are going abroad extensively at present. Any special demand would at once advance rates. There are some vessels due here, but most of them are already engaged. The extensive stocks of grain and petroleum on the other side prevent shippers here from exporting, which leaves unchartered vessels here without pressing demands. Berth freights are, as for some weeks past, of nominal size only and at usual rates.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: While there has been only a moderate chartering demand the general market has ruled strong, owing to the meager supply of vessels in port. Grain to Cork for orders is quoted at 4s.6d.@4s.9d. for sailers and steamers, and petroleum for direct continental ports at 3s.6d@3s.9d. Liverpool grain room is still engaged ahead. Last business was at 4½d.

From San Francisco, Cal.: Freights for the United Kingdom are easy at lower rates.

From Baltimore, Md.: The freight market continues quiet.

From New Orleans, La.: Freights for Liverpool, cotton 5/16d.; Havre and Bremen ⅜d. Grain for Liverpool and Havre 5d. per bushel; oil-cake 20s. per ton.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The boot and shoe trade is now passing through its quiet season, and there are no features of importance to report. Salesmen on the road with spring samples have sent in a few orders, but none of any magnitude, and the factories are running out of work. Dealers in the interior are quite busy on fall goods, but are in no hurry to contract for spring supplies. Stocks in hand here are cleaning up well. Prices are steady. Shipments have decreased, but compare favorably with last year. The season has been fairly successful.

LEATHER.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Leather is quiet. Calfskins are held firm, and offerings are moderate.

From Louisville, Ky.: Leather is in fair demand, but prices are unsatisfactory.

THE COFFEE MARKETS.

[By Telegraph to BRADSTREET'S.]

From Baltimore, Md.: Sales of coffee have been good, and the market for both spot and futures is quoted strong.

From New Orleans, La.: Coffee is active and excited. Fair is 12¾c.

THE SUGAR MARKETS.
[By Telegraph to BRADSTREET'S.]

From Baltimore, Md.: The raw sugar market is fairly active, and prices of refined are steady.

From New Orleans, La.: New sugar and molasses are arriving freely with no market yet. The crop prospects are poor but the yield is good.

THE GEORGIA RICE CROP.
[By Telegraph to BRADSTREET'S.]

From Savannah, Ga.: There is good inquiry for rice, but offerings are light. The acreage of the growing crop on the Savannah river is 12,000 acres. Ten per cent. was not planted. The yield is reported at 25 per cent. less than last season, but the quality is better.

WHISKY MARKET REPORTS.
[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: In whiskies there is a moderate amount of trading and prices are steady.

TOBACCO REPORTS.
[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: Manufactured tobacco is strong and orders are coming in freely. Leaf tobacco is firm and active. The crop is about all cut and the yield placed at 75 per cent. of last year. The quality is very fair.

From St. Louis, Mo.: The tobacco market is firm, but buyers hold off and sales are slow.

LUMBER.
[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Lumber is unchanged and trade is good. Stocks are as large as last year. Manufacturers of shingles are limiting production.

From Wilmington, N.C.: Lumber receipts are meager. Mills are running on half time.

NAVAL STORES.
[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: Spirits of turpentine are active with indications of a further advance. Rosins are in more inquiry. Tar receipts are improving.

From Savannah, Ga.: In naval stores, spirits closed better; 37½c. is bid, and the stock on hand is 16,000 barrels, three-fourths of which is in the hands of exporters. Pale rosins are firm and advancing. Low grades are dull.

NEW ORLEANS SPECIAL TRADE REPORT.
[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: Cottonseed mills have stopped owing to light stocks, new being exhausted. Cake and meal are $24.50. Crude oil is 34c., refined 41c. Rice is dull as the market is heavily overstocked; fair to prime is 5c. to 5⅝c.

SPECIAL CHICAGO TRADE SITUATION.
[Special Correspondence to BRADSTREET'S.]

Chicago, October 10.—Business in nearly all legitimate channels of trade and industry shows most gratifying gains over the opening ten days in October during the two years immediately preceding. The demand for money at the banks is nearly as large as the volume of funds seeking investment, country bankers who want rediscounts being well represented among the applicants for favors, and many of them are securing advances on their government bonds held for investment. Advices from nearly all sections of the interior say the demand for loans is more than usually active, and in many localities the banks are unable to supply the wants of customers. This large employment of funds in the interior is not due, as is often the case, to the impoverishment of a majority of the customers of interior banks, but to increasing investments in new enterprises, many of which, although assuring large results in the not distant future, are at present absorbing large outlays of capital without immediate returns. This is especially the case with the cattle business. The newly developing portions of the west and northwest are also making heavy drafts on the monetary resources of the older sections, and the outlook for a large demand for money from this time forward until the close of next winter is promising. It is fortunate, however, that there is a large available surplus of grain and other property to be marketed within the period mentioned, and the proceeds thus realized will go far to reimburse the productive sections for the heavy drains being made on them by the newer portions of the country.

The general jobbing trade in dry goods, millinery and all other collateral lines of goods, although scarcely so active as during the week immediately preceding, is fully up to the most sanguine expectations, and the trade shows the same healthy features that have characterized it since the opening of the fall season. Many interior retailers who bought early are already duplicating a large percentage of their purchases. Remittances are also much above the average at this season in former years, and stocks closely trimmed. The clothing, hat, boot and shoe houses are having a liberal line of trade, and the volume of such goods distributed since the opening of the season is materially greater than for the corresponding time last year. Tanners report fair orders for calfskins, which were held firm on account of light stocks and a limited production, as the tanneries are only run at half capacity, and many small ones have been forced to shut down, as stock is sold so closely that they cannot afford to run at a loss. Full prices are asked and obtained, with no desire to advance, as that would curtail sales. Wool quieter; western mills the chief buyers, and they operate on the hand-to-mouth principle. Stocks of desirable fleece reduced, and held at old prices; but common and coarse western slow, with fair stocks in hands of dealers, but little is understood to be in the hands of growers and interior dealers. Fish in good request. Lake fish has arrived freely of late and stocks are in better shape; cod and herring plentiful, but mackerel held firm, with offerings light. Lumber steady, with a good trade and liberal receipts. Linseed oils in moderate supply and held firm; orders good, but crushers not inclined to sell freely at present figures. Drugs and chemicals exhibited more life, but orders limited to small amounts. Groceries active, with moderate supplies of sugars and coffees, and the tendency seems to be in favor of an advance in the near future. Syrups and rice steady; offerings large. Shelf hardware jobbers well supplied with orders, and express themselves as well satisfied with the aggregate amount of goods sold, which is as large, if not larger, than for the same time in former years. Nails and bar iron move freely; jobbers have ample stocks, but feeling rather easy. The western bar mills have fair orders, but are not running at full capacity, and some complaint is heard about the low prices of iron preventing mill owners from making any money. Pig iron was taken in moderate quantities. Stocks of Lake Superior charcoal reduced, but still ample for the present trade, and holders demand full rates. Tennessee and Alabama pig offered with a fair degree of freedom, and holders claim to be getting former prices, but any attempt to advance rates would check the present demand. The Menominee furnace will close the 20th for an indefinite period. Steel rails dull. The mills here are running on small orders, and $40 can be obtained, with round lots at 38@39. There is no call for next year's delivery as yet, and holders are anxiously awaiting the arrival of such orders. Coal active, and full rates obtained. Wheat unsettled, irregular, and 1c. lower to-day; receipts fallen off, but shipments moderate and mostly on owners' account. Trading chiefly between local brokers; shorts have covered on the decline. Corn exhibits more strength, shippers taking hold more freely. The southern demand is increasing, while receipts here not so large; May corn the weakest on the list on account of full sales by parties who have the cash property cribbed in the country; market to-day the reverse of wheat, and ½@1c. higher. Oats in fair demand for shipments, receipts ample, and stocks show an increase, but market steadier in sympathy with corn. Rye quiet, trading chiefly on local account. Hogs continue to come in freely, and prices lower, which has rather a depressing effect on the provisions market, and prices 5@10c. lower on pork and lard and 2½@5c. on short ribs. Trading in pork moderate, chiefly in January; orders for cash lots small, and principally from the south. Lard fairly active and unsettled. Stocks have increased and chiefly held by Fairbanks and Fowler. Shipping inquiry light; short ribs rather quiet, with trading mostly in long futures, operators being afraid that Armour, who holds most of the stock here, will give the shorts another squeeze. Other cuts of sides, hams and shoulders sell fairly on orders from the south and for export, and supplies kept well in hand.

The stock of grain here on the dates named was:

	Oct. 8, 1883, *bush.*	*Oct.* 1, 1883, *bush.*	*Oct.* 9, 1882, *bush.*	*Oct.* 10, 1881, *bush.*
Wheat	7,132,283	6,792,881	2,507,186	3,490,942
Corn	2,648,664	2,329,489	2,159,188	9,489,687
Oats	424,248	349,777	385,199	329,385
Rye	859,884	730,899	262,453	337,438
Barley	66,505	49,240	107,761	159,043

THE BOSTON FISH TRADE.
[Special Correspondence BRADSTREET'S.]

Boston, October 11.—The salt fish trade of Boston is not in a satisfactory condition. Until within a week or two mackerel were in very light supply, and prices througout the season have ruled from 25 to 50 per cent. higher than during last season. Up to October 1 the shore catch was only 140,000 barrels, not more than half the quantity caught during the same time last year. Since then the supply has increased, but the total catch will still be considerably under last year's. Owing to the high prices buyers from the interior held off as much as possible, and, although the demand has been better for a few weeks past than earlier in the season, the trade is not anywhere near what it ought to be at this time. Fishermen who have made good hauls have done well, but a large number of the vessels in the fleet will lose money. Packers consider the season a partial failure, and dealers are not getting the profits they would if prices were lower. Still, stocks are not large, and no material decline is expected. To-day's jobbing prices of shore mackerel are as follows: No. 1 extra, $27@$28; No. 1 ordinary, $22@$24; No. 2, $14.50@$15; No. 3 large, $10@$10.50; No. 3 medium, $9.50@$10, and No. 3 small, $7.50@$8 per barrel.

The different kinds of codfish have been in liberal supply during the season, and prices have ruled lower than last year. Trade has been fair, so far as the home demand is concerned, but there has been little or no export demand. Large pickle-cured bank are jobbing at $4.25@$4.50 per quintal, and large dry bank $5@$5.50. Owing to a scarcity last week George's bank codfish have been advanced to $6.75@$7 per quintal, but they were at $5.50@$6 most of the season. Hake, haddock and pollock are in liberal supply, and selling from $2.50 to $3.50 per quintal. Within the last week the market has been glutted with pickled herring from Nova Scotia and Newfoundland, and prices have declined, though at present it is difficult to give reliable quotations. The nominal rate is $5@$6 per barrel for the very best. The catch is much larger than last year, and low prices may be expected. The supply of smoked herring is very large, and prices have dropped from 30c. a few weeks ago to 20c. a box in jobbing lots, and cargoes are now selling as low as 16c. a box.

PENNSYLVANIA COAL AND NATURAL GAS.
[Special Correspondence BRADSTREET'S.]

Philadelphia, Pa., October 11.—There is considerable activity in coal and coke interests in western Pennsylvania, in natural gas and in railroad combinations. For some time past negotiations have been quietly progressing looking to the control, practically, by two citizens of the supply of natural gas. A Dr. Hostetter owns the majority of stock in the Pittsburgh Consolidated and the East End Gas companies. He and an associate are now closing for control of two additional companies, the Allegheny and the West End. Under the original charters these companies have the right to occupy the streets and roadways necessary to enable them to reach dwellings and manufactories. Competition was forestalled by a legislative proviso in 1874 which provided that those companies should have exclusive rights in the districts in which they operate. The supposed gas territory in four counties has been secured, and prospecting is progressing. Experimental wells are being put down in three places, and a number of others are projected. A corresponding activity is reported in the coke region. The H. C. Frick Company have secured control of 3,500 ovens, the latest acquisition being the Dillinger, Tarr Company, price $38,000. They have the option of seven other works, aggregating 2,000 ovens, and will probably close before the expiration of the present month. The erection of new ovens is progressing rapidly. Several large tracts of coal lands have just been purchased by eastern parties in Westmoreland, Fayette and Jefferson counties, Pa., along the line of a projected road from Mount Pleasant to Punxsutawney.

NORFOLK TRADE SITUATION.
[Special Correspondence BRADSTREET'S.]

Norfolk, Va., October 10.—All departments of trade and industry are progressing favorably. Dry goods jobbers seem to be doing a very fair business, and the general outlook is favorable. The receipts of flour from the western mills aggregate monthly many thousand barrels, and the superiority of the article commands satisfaction. Bulk meats and pork are largely handled from northern and western depots, and the demand and supply is constantly increasing. This market is now regarded as one of the best in this particular line, and merchants are fully alive to the importance of meeting the increasing demand and supplying the seaboard and southern trade. Sales of real estate indicate a healthy condition. A prospect for the establishment of one or more large cotton mills is now occupying the public attention. The effect of climate upon the cotton fiber is in favor of the project, and Norfolk is therefore regarded as a desirable point at which to manufacture cloth. Cotton is now coming in freely, but the crop will not come up to the usual standard; the result will, no doubt, be an increase in price. The peanut crop, in which we are so largely interested, it is thought will fall short. Virginia nuts stand at the head of the list, both in quality and quantity. The crop is only beginning to come in. Collections are fair, money is easy, and the weather is fine. The health of the city is excellent.

COUNTERFEITING IN INDIA.

The report of the Indian Currency Department for the year ending March 31, says the *Economist*, contains some interesting details as to the forgeries of notes and counterfeiting of coin. During the twelve months 4,515 one-rupee, 211 half-rupee, 88 quarter-rupee and 43 one-eighth-rupee coins were destroyed as being counterfeit, and there were also destroyed 67,772 one-rupee, 481 half-rupee, and 50 quarter and eighth-rupee coins, because they were believed to have been reduced in weight "otherwise than by reasonable wear." In the same period, only 13 forged notes were discovered, and it is believed that the forgers did not succeed in getting more than £20 to £30 of their spurious notes into circulation. The Indian experience would thus seem to be that the danger of counterfeiting is greater in the case of the metallic than in that of the paper currency. At the same time, however, the discovery of forged notes in circulation has proved much more destructive of confidence, for whereas the knowledge that spurious coins were circulating seems not to have disturbed people's minds, the detecting of the false notes had a very great effect.

TRADE EMBARRASSMENTS.

There were 166 failures in the United States reported to BRADSTREET'S during the past week, 6 more than the preceding week, 41 more than the corresponding week of 1882 and 49 more than the same week of 1881. Compared with the previous week the middle states had 33, a decrease of 10; New England states 38, an increase of 12; southern states 25, an increase of 11; western states 48, a decrease of 4; Pacific states and territories 21, a decrease of 3; Canada and the Provinces 26, a decrease of 6. Among the failures reported were Simon Mack & Co., wholesale clothing; William H. Jenkins & Son, wholesale sash, doors, etc.; Edward Bussell, lumber, and I. Harby Moses & Co., produce exporters, New York; The Springfield (Mass.) Soapstone Company, and T. C. Porteous, dry goods, New Orleans. In the principal trades they were as follows: Grocers 22; general traders 22; liquors 15; dry goods 10; hardware 9; grain, flour, etc., 9; lumber 7; manufacturers 7; hotels and restaurants 6; produce and provisions 5; tobacco and cigars 5; clothing 5; shoes 4; bakers and confectioners 4; leather 4; commission 3; drugs 3; jewelry 3; millinery 2; hats 2; coal 2; gents' furnishing goods 2; carriages 2.

ARIZONA.

TOMBSTONE.—Blackburn & Bourdett, saloon, have assigned.

CALIFORNIA.

INDEPENDENCE.—John C. Irwin, saloon, has compromised.

LOS ANGELES.—Joseph Murtagh & Co., dry goods, have assigned to Murphy, Grant & Co. Liabilities $17,000; assets $15,000.

MARYSVILLE.—J. Hayes, fruit, has sold out and failed.

OAKLAND.—J. Goldstein, general store, has assigned.

OAKLAND.—E. Polet, restaurant, has failed.

SAN FRANCISCO.—A. J. Coghill, stationer, has compromised at 25 cents cash.

SAN FRANCISCO.—A statement of Colman Brothers, clothing, shows stock in San Francisco $47,000; in New York $20,000; book accounts $50,000.

SAN FRANCISCO.—E. Cooke, saloon, has been attached and is reported to have left town.

SAN FRANCISCO.—Timothy Daly, grocer, is advertised to be sold out by the sheriff.

SAN FRANCISCO.—Robert A. Dowe, photographer, is in insolvency. Liabilities $4,976; no assets.

SAN FRANCISCO.—Application has been made to force Driscoll & Murphy, tanners, into insolvency.

SAN FRANCISCO.—J. C. Graham, dairy, has filed a petition in insolvency.

SAN FRANCISCO.—C. C. W. Poppe, grocer, has been sold out by the sheriff on claims for $983.

SAN FRANCISCO.—Robert S. Reardon, butcher, has filed a petition in insolvency.

SAN FRANCISCO.—Charles Steinfels, butcher, has been sold out by the sheriff.

SAN FRANCISCO.—N. D. Thayer, capitalist, has filed a petition in insolvency.

SAN FRANCISCO.—George A. Travis, broker, has filed a petition in insolvency.

SAN FRANCISCO.—Application has been made to force B. G. Winter & Co., commission, into insolvency.

SAN LUIS OBISPO.—James Kirkland, general store, has compromised at 75 cents.

SUSANVILLE.—F. M. Hostetter, grain, is in insolvency.

WHEATLAND.—Levy Pincus & Co., general store, have been attached on $28,000, and called a meeting of creditors.

WOODLAND.—E. Buchanan, cigars, has been attached and closed.

COLORADO.

DENVER.—C. P. Goss, grocer, has assigned to W. T. Graff.

CONNECTICUT.

BRISTOL.—Thomas Prior, grocer, has assigned.

DANBURY.—Fay, Walsh & Co., hat manufacturers, have assigned.

DANBURY.—James Murray, grocer, has been attached and is reported to have left town.

DANBURY.—Henry B. Osborne, carriage manufacturer, has assigned.

NEW HAVEN.—Samuel H. Kirby, jeweler, has assigned to Henry Elcox, of New York. Liabilities about $9,000.

NEW HAVEN.—Andrew Treitlein, groceries, etc., has been attached for $650.

GEORGIA.

DAWSON.—Robert Brothers, general store, have been closed by the sheriff on a chattel mortgage for $4,600.

ISABELLA.—William F. Tanner, general store, has failed.

MADISON.—J. T. Rogers, grocer, has failed. Liabilities about $4,000; assets $2,500.

SAVANNAH.—Chris. Murphy, painter, has been attached and the store closed.

IDAHO.

HAILEY.—Bateman & Co., confectioners, have been attached.

ILLINOIS.

CHICAGO.—A receiver has been appointed for Chapman, Grier & Co., wholesale glassware, and a meeting of creditors has been called for the 26th inst.

CHICAGO.—T. E. Henegan, tailor, has been closed by the sheriff.

CHICAGO.—Meyer Kaiser, wholesale gents' furnishing goods, has been closed by the sheriff on confessed judgment for $10,412.

IPAVA.—N. Hulit, general store, has failed. Liabilities about $4,000; assets $2,500.

IRVING PARK.—C. H. Race, general store and coal, has been closed by the sheriff.

KANKAKEE.—Edward Des Lauries, clothing, has been closed by the sheriff.

LOSTANT.—Rhodes & Henning, grain, have been attached for $5,558.

MARSHALL.—Blackie & Hippard, shoes, have been closed by the sheriff

MASCOUTAH.—Schlinger & Schubkegel, millers, assigned on the 11th inst. to F. H. Pieper. Liabilities $65,000.

OREGON.—Benjamin F. Sheets, hardware, has assigned to Frederick G. Petrie.

WARSAW.—C. Albers & Co., flour mill, have assigned.

INDIANA.

DARLINGTON.—E. R. Booher, baker and grocer, has failed.

EVANSVILLE.—Harry Joseph, clothing, has assigned to S. I. Lowenstein. He previously gave realty and chattel mortgages for $8,009 to secure home creditors. Assets about $8,000.

LA FAYETTE.—Warwick & Florer, dry goods, have assigned.

PAOLI.—D. W. Pepper, hotel and saloon, is reported to have left town.

ROCHESTER.—Wellens & Frains, saloon, have failed.

TERRE HAUTE.—Alfred G. Houriet, jeweler, has assigned to Patrick Henry.

VALPARAISO.—Rufus P. Wells, coal, has failed. Liabilities about $10,000. He previously gave a chattel mortgage for $1,000 and conveyed his store and yard to his son for $1,500, subject to mortgage.

IOWA.

MOUNT AYR.—T. H. Leasure, shoes, has assigned to F. F. Leathers. Liabilities about $3,000: assets $1,500.

ODEBOLT.—H. P. Rehberger, agricultural implements, has mortgaged all his property.

KENTUCKY.

LOUISVILLE.—The attachments against Isadore Bronner, millinery, were by his brothers, $3,073 in favor of Ben. Bronner, of New York, and $1,000 by Isaac H. Bronner.

LOUISVILLE.—T. J. Nowacki, shoemaker, has assigned to H. Stucky.

TAYLORSVILLE.—B. L. Northcutt, general store, has assigned to D. H. French. Liabilities $6,000; assets $4,000.

LOUISIANA.

NEW ORLEANS.—T. C. Porteous, dry goods, assigned on the 10th inst. Liabilities $70,000; assets $65,900. In August last he succeeded J. Lewis' Heirs, for whom he had been manager for several years, buying the bulk of the stock for $38,000. He owes largely in New York.

NEW ORLEANS.—Christian Sporl, cotton pickery, has assigned. Liabilities $92,539, of which $68,954 is secured by mortgage on real estate valued at $68,900. The other assets are estimated at $15,587; total assets $84,487.

MAINE.

AUBURN.—The Highland Mineral Spring Company has been attached.

BLUE HILL.—W. H. Darling, trader, has been attached for $500.

BLUE HILL.—Freeman K. McIntire, granite, has been attached for $500.

GOULDSBORO.—George W. Whitaker, hotel, has been attached for $600. He conveyed realty $1,500.

HOLLIS.—Charles W. McKenney, lumber, has been attached for $4,000.

NEWRY.—Jacob A. Thurston, general store, is in insolvency.

SOLON.—Augustus Maynard, confectioner, has been attached for $500.

TOPSHAM.—Humphrey P. Thompson, coal, is in insolvency.

UNION.—C. A. Robbins, general store, is in insolvency. Liabilities $2,000; actual assets about $500.

MARYLAND.

BALTIMORE.—Dodge & Co., commission lumber and hides, have assigned to Henry W. Fox. They indorsed $5,000 for Morse & Barrett, of Boston, who advanced them money.

BALTIMORE.—William T. Malster, of Malster & Reamy, machinists, has filed a petition in insolvency.

BALTIMORE.—Samuel S. Pattison, trading as S. S. Pattison & Co., wholesale liquors, has confessed judgment to two creditors, to whom he surrendered his stock, etc.

MASSACHUSETTS.

BOSTON.—F. S. Bailey & Co., desk and table manufacturers, give notice that they have transferred all property to T. H. Niles, trustee, for the benefit of creditors.

BOSTON.—Dr. Edmond P. Banning has gone into insolvency.

BOSTON.—E. F. Birmingham & Co., liquors, have failed.

BOSTON.—Frank M. Brigham & Co., boot and shoe machinery, have failed, and assigned to Charles S. Fifield.

BOSTON.—The liabilities of Canterbury & Haskell, manufacturers of boots and shoes, are $193,171; nominal assets $208,572. They withdrew their offer to pay in full on time. The committee expected to get a party to pay 75 cents for all claims.

BOSTON.—C. W. Copeland & Co., boots and shoes, have been petitioned into insolvency.

BOSTON.—Henry H. Dinsmore, butter and cheese, has failed and compromised at 25 cents.

BOSTON.—Daniel Gregory, provisions, is compromising at 25 cents.

BOSTON.—Benjamin B. Jenks, provisions, has failed. Liabilities $7,491, of which $6,191 is unsecured; assets—stock $1,300, mortgaged for full value; accounts $500.

BOSTON.—Kimball Brothers, carriages, offer 50 cents.

BOSTON.—Francis Maguire & Co., wholesale oils, have failed and compromised at 10 cents. Liabilities $4,000. The firm will discontinue business.

BOSTON.—At a meeting of the creditors of Rhodes & Co., boots and shoes, on the 9th inst., the statement showed liabilities $240,060; assets $203,078. A committee was appointed.

BOSTON.—O. A. Scoville & Co., wholesale butter and cheese, owe about $18,946; actual assets $4,500. A committee has been appointed. The firm offer 20 cents.

BOSTON.—George B. Willis & Co., wholesale produce, owe $12,400, of which $5,400 is for merchandise and the balance for borrowed money, $5,000 of the latter being to Mr. Willis' wife. They offered 25 cents, but the committee recommended 30 cents, which many of the creditors accepted.

CHICOPEE.—Creditors have filed a petition in insolvency against S. P. Kenyon, drugs.

EAST SOMERVILLE.—James Harris, grocer, is reported to have failed.

EAST WOBURN.—Parks & Dodge, curriers, have failed. Liabilities about $7,000. They offer 20 cents.

FALL RIVER.—The Importers' Tea Company is advertised to be sold out by the sheriff.

HYDE PARK.—John N. Bullard, grist mill, has called a meeting of creditors. Liabilities reported at $10,000; assets $3,000.

LAWRENCE.—Albert B. Davis. hotel, has filed a petition in insolvency. Liabilities secured $11,500; unsecured $6,199; assets merely nominal.

MARLBORO.—M. J. Early, stable, is advertised to be sold out by the sheriff.

MIDDLEBORO.—Charles F. Cushman, cider manufacturer, is in insolvency.

NEW BEDFORD.—T. W. Croacher, picture frames, has failed, and offers 30 cents.

PEABODY.—The liabilities of C. L. Pierce, morocco manufacturer, are reported at about $20,000; assets small.

SALEM.—J. E. Arnold, morocco manufacturer, has failed. Liabilities reported at $16,000; assets about $8,000.

SPRINGFIELD.—The Springfield Soapstone Company has filed a petition in insolvency, and a meeting of creditors has been called for October 20. It was organized in October, 1881, with a capital stock of $100,000. It purchased real estate near Palmer and erected a factory, leasing a quarry at Enfield, Vt.

STONEHAM.—John Wilson, currier, has failed and gone into insolvency. Liabilities $24,725, of which $21,000 is secured by mortgage, $8,000 on the factory and $13,000 on residence. There is nothing, it is said, for the unsecured creditors.

WEBSTER.—Jacobs & Shumway, dry goods, are reported to have been closed up.

WORCESTER.—Herbert K. Sparrell, saloon, has failed, and will settle in insolvency. Liabilities about $5,000; assets about $1,500.

MICHIGAN.

KALAMAZOO.—Strong, Sebring & Co., commission grain, have assigned to J. M. Tolchard.

SOUTH LYONS.—William Greig, builder and planing mill, has assigned to William Doty.

TWIN LAKE.—Mrs. S. I. Scott, grocer, has had a chattel mortgage foreclosed.

WILLIAMSBURG.—Potter & Crispe, grocers have assigned.

MINNESOTA.

DULUTH.—The Northwestern Iron Company has been closed by the marshal. It had been reported tight in money matters owing to the failure to collect accounts. It was incorporated in July, 1882, with a capital of $30,000.

HOKAH.—C. A. White & Co., flour mill, have assigned.

LANESBURGH.—E. V. White, flour mill, has assigned.

MOTLEY.—At a meeting of creditors of H. B. Morrison, saw mill, he showed liabilities $100,000, and net worth of $100,000 to $125,000, but not in convertible shape; of this $50,000 is lumber, $40,000 good accounts, and the balance in logs, brickyard and mill. Of the liabilities $30,000 is due to McMillan & Co., in which he is the capitalist. The creditors requested him to pay up the latter to enable them to meet engagements, which he is doing, and arrangements have been made to tide over matters.

MISSOURI.

BLUE SPRINGS.—John Gore, saloon, has been closed by attachment.

ST. LOUIS.—The Price & Austin Tobacco Company assigned on the 10th inst. to H. L. Edmunds. Liabilities about $13,000; assets $3,460.

ST. LOUIS.—E. M. Reynolds, saloon, has had a mortgage foreclosed.

ST. LOUIS.—Sargent & Brinkmann, manufacturers of mixed paints, have assigned to Hugo Muench. Assets $17,000.

ST. LOUIS.—The John Shields Grocery Company has assigned. Assets $8,000.

NEBRASKA.

ARLINGTON.—Charles Rheome has assigned.

GRAND ISLE.—Griswold & Bacon, lumber, have sold out. Liabilities about $15,000, and they claim to have accounts, etc., worth that amount

LINCOLN.—G. H. Lichty, confectioner, has given a bill of sale and claims he cannot pay at present.

MADISON.—H. E. Greenman, agricultural implements, has failed.

TABLE ROCK.—M. F. Reishline, restaurant, has failed.

TEKAMAH.—Tilyea & Early, organs and agricultural implements, have given a bill of sale.

NEW HAMPSHIRE.

CONCORD.—The Concord Carriage Company has been attached.

LACONIA (Weirs.)—True & Doolittle, grocers, have failed, and been sold out by the sheriff.

MANCHESTER.—Griffin Brothers, grocers, have settled the attachments and resumed.

NASHUA.—Charles Rogers, hotel, has resumed. His mother took off her claim and is paying the other small attachments.

NEW JERSEY.

BOUND BROOK.—Gilbert Mollison, grocer, has failed.

NEW MEXICO.

SILVER CITY.—John D. Ahler, restaurant, is reported to have failed. Liabilities $1,400; assets $800.

SILVER CITY.—The Carrollton Mill has been sold by the sheriff for $7,000 to J. W. Fleming.

NEW YORK.

BROOKLYN.—Isaac Eckstein, jeweler, assigned on the 10th inst. to Meyer Richards, giving preferences for $2,274.

BROOKLYN.—The liabilities of E. C. Pease, planing mill, are about $7,000; assets nominal. He is out of business.

BUFFALO.—The schedules of L. M. Knauber, planing mill, show liabilities $22,987; nominal assets $27,823; actual assets $26,810.

CANISTEO.—The liabilities of Mary M. Sumner, grocer, are $10,251; assets $6,393.

CONESUS CENTRE.—G. L. Lewis, miller and general store, has assigned.

MECHANICSVILLE.—Waterton & Robinson, drugs, have assigned to W. C. Talmadge, giving preferences for $900. Liabilities $2,400; actual assets $1,800.

NEW YORK CITY.—George William Ballou & Co., bankers and brokers, resumed on the 8th inst.

NEW YORK CITY.—Edward Bussell, trading as E. Bussell & Co., lumber, assigned on the 11th inst. to Edward Place, giving preferences for $38,719, among which are the following: Elizabeth D. Smith $1,422; Fifth National Bank $2,573; Bethesda Bussell $6,637: Elizabeth G. Bussell $1,654; Place & Co. $4,586; John P. Hawkins $3,250; Frank Pidgeon $3,224; J. W. Duryea $1,483; John Sniffen $3,494; Export Lumber Company $1,819; Saxe Brothers $1,141. He was involved in the failure of Sloat, Bussell & Co., to whom he gave accommodation paper and notes, it is said, for over $40,000, and against which firm he had a large claim.

NEW YORK CITY.—James Cairnes, carpenter, assigned on the 9th inst. to James Riley, giving a preference to Robert Cairnes for $2,675.

NEW YORK CITY.—The schedules of William Emberson, laces, show liabilities $5,591; nominal assets $801; actual assets $462.

NEW YORK CITY.—I. Harby, Moses & Co., produce exporters and commission, assigned on the 11th inst. to James J. Thompson, giving preferences to Joseph Braos & Co., Halsted & Co., Joachim W. Munzheim, Walter J. Harby, no amount being mentioned. They were principally engaged in the West India trade and had considerable money tied up in Jamaica, on account of the Kingston fire, to which their failure is attributed. Liabilities reported at about $40,000.

NEW YORK CITY.—William H. Jenkins & Son, wholesale sash, doors and blinds, assigned on the 8th inst. to Charles O. Le Count. The amount of preferences given in the deed was $15,082; besides this are checks drawn on the Bowery and Butchers' & Drovers' National Banks remaining unpaid, and salaries and commissions are also preferred; $14,082 of the preferences are promissory notes to the order of various parties. The assignment is attributed to the failure of A. B. Vorhis, manufacturer of sash and doors, of Canisteo, N. Y., to whom the firm gave accommodation paper and indorsements for upwards of $50,000, on which they have been sued for the amount past due. The direct liabilities are about $100,000 additional. The value of the assets will depend largely on realization of mortgages the firm hold, which they had to take from various builders. The business was started by W. H. Jenkins nearly twenty-five years ago, and his son has been a partner since 1875.

NEW YORK CITY.—The schedules of Orange Judd show liabilities $144,606; nominal assets $35,782; actual assets $1,908.

NEW YORK CITY.—Ketchum & Valentine, cotton brokers, suspended on the 10th inst.

NEW YORK CITY.—The schedules of John McIntosh, laces, show liabilities $8,873; nominal assets $8,521; actual assets $5,479.

NEW YORK CITY.—J. R. McNulty, coffee broker, suspended on the 9th inst. on account, he says, of customers failing to respond to margins on coffee he was carrying for them.

NEW YORK CITY.—Simon Mack & Co., wholesale clothing, assigned on the 8th inst. to Frederick Lewis, giving preferences for $311,630, of which there are accommodation notes $140,466; notes for money loaned $122,998; money loaned $30,046, and the balance for merchandise. The principal preferred creditors are, for money loaned, Joseph Frank $30,956; David Mack $22,642; Harmon Mack $15,495; Isaac Rau $15,156; Eleanora Mack $18,264; Paulina Bamberger $8,061; Emma S. and Laura S. Mack $5,227; Joseph Bohm $5,000; on accommodation paper Bamberger, Bloom & Co. $26,307; Henry Newman $12,250; Henry Mack $12,000; Mack, Stadler & Co., Cincinnati, $10,000; Mack & Co. $5,000; for merchandise and money loaned Fred. Butterfield & Co. $11,929. The firm was involved with F. Mayer & Co., to whom they loaned accomodation notes for over $135,000, to which the failure is attributed. The liabilities are reported at over $400,000 including this accommodation paper, but exclusive of mortgages on real estate. The assets consist of merchandise, accounts and equity in real estate. Mr. Simon Mack has been in business many years, and failed as Simon Mack & Son about ten years ago, compromising at 50 cents.

NEW YORK CITY.—Joseph Solomon, clothing, at No. 150 East 20th street, assigned on the 8th inst. to Ernest G. Schweig, giving three preferences for $3,165—to Yetta German $2,350; Leah Solomon $470; Anna Solomon $345.

NEW YORK CITY.—Ueckermann Brothers, cabinet makers, assigned on the 11th inst. to Edward R. Doup, giving thirty-eight preferences for $9,557, the largest being to Marie Ueckermann $4,000; Lizzie Ueckermann $2,000; E. R. Doup $1,529.

OSWEGO.—Robert Gordon, dry goods, has assigned to R. J. Oliphant, preferring $8,485, the largest to the First National Bank, $3,175; John Gordon, of Jersey City, $2,660; L. W. Cole $1,000. Liabilities about $50,000; nominal assets about the same. It is thought the creditors may receive about 25 cents. The failure is attributed to loss of business during the past two years.

REMSEN.—John M. Adams, general store, has assigned.

SCHENEVUS.—Hoagland Brothers, dry goods and groceries, have assigned to relatives to pay claims for $1,569 borrowed money, which about covers all the assets.

SYRACUSE.—T. J. Goodwin, manufacturer of shirts and overalls, assigned on the 12th inst. to Henry Hoyt. Liabilities $7,000; nominal assets $10,000; preferences $5,000.

WATERTOWN.—The liabilities of A. M. Kenyon, liquors, are about $10,000; assets about $4,000.

NORTH CAROLINA.

GREENVILLE.—Louis G. Heilbronner, dry goods, etc., has assigned to Samuel Reno. Liabilities about $8,000; preferences $1,300.

MATTHEWS.—M. E. Crowell, general store, has assigned to W. F. Phifer. Liabilities $10,000: assets $5,000.

TARBORO.—Isham Kea, general store, has failed.

TARBORO.—J. C. Younger, bar, has failed.

WILMINGTON.—Dryfoos & Sternberger, shoes, have assigned.

WINDSOR.—Cherry & Stokes, general store, have assigned.

WINDSOR.—B. F. King & Son, general store, have assigned. Liabilities about $2,000; actual assets $1,000.

OHIO.

AKRON.—Cahill & Kean, crockery, have assigned to James V. Walsh.

CHARDON.—The liabilities of Merrick Freeman, cheese manufacturer, are estimated at $20,000.

CLEVELAND.—A. I. Wolf, hats and caps, has been closed by the sheriff and assigned to Abraham Oppenheimer.

CUYAHOGA FALLS.—Harvey Snyder, lumber and planing mill, has assigned to E. L. Babcock.

KENTON.—R. D. Alter, grocer, has been closed by the sheriff.

LIMA.—Jacob D. Watt, formerly of Anderson, Sullivan & Co., grocers, is reported to have assigned.

LORAIN.—J. W. Palmer, drugs, is reported to have assigned.

LORAIN.—J. T. Tidman, grocer, has assigned to R. W. Braman. Liabilities $1,100; nominal assets $1,800.

PENNSYLVANIA.

ALLEGHENY CITY.—John Schmidt, liquors and cigars, has had execution for $2,300 issued against him in favor of Adler & Roedelheim.

ALTOONA.—H. P. Hooper, drugs, is in the hands of the sheriff. Liabilities about $2,600; assets $1,200.

ALTOONA.—Jacob B. Smith, publisher, is in the hands of the sheriff.

BRISTOL.—Amos Lippincott, cigars, has been sold out by the sheriff.

ERIE.—Execution for $637 has been issued against Patrick Doyle, grocer.

ERIE.—Adam H. Hart, cigar manufacturer, has been closed by the sheriff.

GETTYSBURG.—Newton M. Horner, agricultural implements, has assigned to J. F. Waybright.

HUNTINGDON.—At a meeting of creditors of Blain Brothers, car manufacturers, the statement showed liabilities $398,745; nominal assets $333,695. The Union Bank offered to assign its judgment of $52,500 for $36,000 if paid within ten days. If this is done it is expected that other execution creditors will also stay their claims and thus enable the firm to obtain an extension.

JOHNSTOWN.—S. B. Arthur, of Arthur & Noon, livery, is in the hands of the sheriff.

MEADVILLE.—A. J. Walp, tinware, has been closed by the sheriff on a claim for $5,000. Liabilities about $7,000

MILLERSTOWN.—F. L. Graybill, general store, has been closed by the sheriff.

PHILADELPHIA.—William C. Barker, wood and willow ware, offers 60c., notes at six, twelve and fifteen months. Liabilities $20,000; assets about $14,500.

PHILADELPHIA.—J. Block & Brother, shirt manufacturers, offer 25 cents. Liabilities $58,000; assets $16,000. The court has ordered the judgment of H. Rosenbaum for $20,549 to be set aside for the present, its validity to be decided hereafter, and directed the assignee to sell the stock for the benefit of creditors.

PHILADELPHIA.—Execution has been issued against Thomas Connelly, gents' furnishing goods, and he is advertised to be sold out by the sheriff on the 13th inst.

PHILADELPHIA.—Thomas J. Luckey, dyer, has compromised at 33 1-3 cents.

PHILADELPHIA.—The stock at the mill of John B. Nelson, cotton goods manufacturer, was sold out by the sheriff on the 9th inst., realizing about $8,000, most of which is thought to have been bought in for his benefit by friends. His mill will be sold under foreclosure of mortgage for $35,000, held by Nelson Brothers & Co., and the proceeds will probably be ordered into court to await a decision as to whether their or Mrs. John B. Nelson's mortgage of $28,000 should have preference. His liabilities, including abovementioned mortgages, were reported at $105,000 to $110,000. It is thought he intends resuming business.

PHILADELPHIA.—Joseph Teuscher, dyer and finisher, has been sold out by the sheriff.

PITTSBURGH.—It is said there is good prospect of the creditors of J. B. Hubley & Co., confectioners, accepting a compromise at 50 cents.

PITTSBURGH.—Execution for $426 has been issued against J. W. Scholefield, dry goods.

WILKES BARRE.—Execution has been issued against W. G. Stout, builder, on a judgment for $7,600.

WILLIAMSPORT.—Execution has been issued against John E. Jones, hardware, for $32,000.

SOUTH CAROLINA.

BARNWELL.—Burkhalter & Co., general store, have assigned.

CAMDEN.—Mrs. K. E. Meroney, millinery, offers 30 cents.

CHARLESTON.—At a meeting of creditors of D. McPherson & Co., cotton, the statement showed firm liabilities $89,617; assets $78,481. Mr. McPherson's individual liabilities on previous failure $57,601; assets $88,545. The available assets are mortgaged for full value, and it is said to be doubtful if the general creditors realize anything. J. B. Steele was elected creditors' agent.

SUMTER.—Murray & Murray (agents), general store, have been closed by the sheriff on a mortgage.

TENNESSEE.

NASHVILLE.—John Woodward, Jr., trunk manufacturer, is reported to have left town and has been attached for $9,000.

TEXAS.

BLACK JACK GROVE.—Mrs. S. A. Green, groceries and dry goods, has assigned.

DE LEON.—Cottrell & Newman, general store, have been closed by the sheriff.

FORT DAVIS.—Fairchilds & Dunn, saloon, have been attached for $1,908.

FORT WORTH.—Wetzel & Hall, saloon, have been attached.

GALVESTON.—J. Harvey Pierce, Beach Hotel, has assigned. He leased it in July. He was recently sued for $2,086 by Freiberg, Klein & Co.

WACO.—Charles Friedlander, dry goods, has assigned. Liabilities $30,000; assets $20,000.

VERMONT.

BENNINGTON.—H. T. McLeod, millinery, has been attached and closed up.

BRIGHTON (Island Pond).—J. M. Butters, lumber, is reported to have failed.

ST. ALBANS.—Lawrence Brainard, lumber, has been adjudged insolvent, but has taken an appeal to the county court.

WASHINGTON TERRITORY.

SNOHOMISH.—Thomas Clancy, general store, is in insolvency.

WISCONSIN.

CHIPPEWA FALLS.—Clough & Buzzell, general store, have assigned.

CHIPPEWA FALLS.—Frederick Hennemann, agricultural implements, has failed. Liabilities estimated at $6,000.

MEDFORD.—F. A. Healy & Co., general store, have assigned to Hubbell & Wheelock. Liabilities about $9,000: assets nominally the same.

MENASHA.—The Menasha Chair Company has assigned to Silas Bullard. Liabilities $80,000; nominal assets $100,000.

MENOMONIE.—Anderson & Williams, harness, have assigned.

MANITOBA.

EMERSON.—A. D. Jones, dry goods, has assigned.

MORRIS.—George B. Fraser, publisher, is in the hands of the sheriff.

NELSON.—Andrew M. Champion, grocer, has assigned.

WINNIPEG.—Hunter & Wilson, groceries and liquors, have assigned.

NOVA SCOTIA.

MUSQUODOBOIT.—C. F. Clinch & Sons, lumber, have assigned. Liabilities said to be $80,000. C. M. Bostwick is a preferred creditor, it is said, for $10,000. The assets are large, but consist of mill property and timber lands, and will shrink considerably. They claim to be able to pay in full.

PROVINCE OF ONTARIO.

AYR.—James Thompson, manufacturer of staves, is advertised to be sold out by the sheriff.

ELORA.—Fanny A. (Mrs. D. S.) Macorquodale, grocer, has assigned.

HAMILTON.—D. B. Chisholm, the principal partner in George Bible & Co., railroad-tie contractors, is reported to have left town.

INGERSOLL.—R. F. Hunter, dry goods, has assigned.

McGREGOR.—W. J. Twomey, late general store, has called a meeting of creditors.

MERRITON.—John Corcoran, hotel, has been sold out by the sheriff.

MOUNT FOREST.—C. W. Cheesman, furniture, offers 50 cents.

NEW HAMBURG.—Denison & Crease, bankers, have suspended.

RENFREW.—Albaugh, Bannerman & Co., contractors, have assigned. They had a contract on the Kingston & Pembrooke Railroad.

TORONTO.—A. J. Mills, jeweler, has failed.

TORONTO.—Smith & Brock, contractors, are reported to have left town.

TORONTO.—E. (Mrs. S.) Wicks, groceries and liquors, is in the hands of the sheriff.

PROVINCE OF QUEBEC.

JOLIETTE.—W. T. Granet dit Beausejours, tailor, has assigned.

MONTREAL.—C. T. Ryland & Co., commission oil, have assigned.

MONTREAL.—Mrs. J. B. Sarcault, hats, has assigned.

QUEBEC.—B. Balduc, jeweler, has assigned.

QUEBEC.—Ferdinand Giguere, dry goods, has failed.

QUEBEC.—Louis Paradis, dry goods, has failed.

ST. CECILE.—Ferdinand M. Mailhoit, general store, has assigned.

ST. HYACINTHE.—Bourgeois & Boivin, general store, are reported to have suspended.

VAUDREUIL.—Alfred Lalande, general store, has assigned.

A GENTLEMAN, age 33, of thorough business experience, who is desirous of residing in Australia, wishes an appointment as representative or prospector by a first-class firm. Excellent references. Address E. P., care of The Bradstreet Company, 84 Newgate Street, London, England, or 279 Broadway, New York.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 20, 1883.

NOTES OF THE WEEK.

Telegrams from 43 points throughout the cotton-growing region do not show any material change in the condition of the plant, as regards ultimate yield, from that reported in BRADSTREET'S of September 29. In a few instances only is a better condition shown. The weather at nearly all points has been good for the gathering and saving of the crop. But one report speaks of the quality being injured by stormy weather. Picking has progressed rapidly, and well toward the whole of the crop will be gathered by November 1. Cotton is rapidly marketing, and the present outlook is that by far the larger part will have left producers' hands by January 1. The dispatches which are given elsewhere point to a low average weight per bale. It is worth noting that of the correspondents telegraphing us 27 send estimates of the falling off from last year's yield as follows:

—20 per cent.	—35 per cent.	—35 per cent.	—10 per cent.
—50	—40	—30	—45
—40	—40	—50	—30
—35	—50	—25	—33
—35 to 40	—33 1-3	—25	—25
—33 1-3	—50	—33	—30
—15	—25	—22	

These dispatches come from representative men of business at leading points in the immediate cotton-growing regions. It should be borne in mind, in considering these and all other like reports, that the returns to BRADSTREET'S, since we began cotton reporting in 1881, have revealed a uniform underestimate as to ultimate yield. A calculation based on five consecutive returns revealed a uniform underestimate of of 8 per cent. The two crop returns proper were made at the close of November in 1881 and 1882. The other three returns related to the amount of cotton remaining unsold on plantations on particular dates. It might be argued that 1,100 men reporting on the prospects for ultimate yield at an earlier date in the autumn than the close of November are naturally inclined to be more gloomy in their views. The point we wish to make clear is that to attain to really serviceable crop-reporting the personal equation must be worked out.

The stock market has been through a period of excitement during the past week such as it experienced in August, when the first great fall took place in the Villard properties and startled the whole business community with its violence. The same stocks have again been leaders in the decline, Oregon Transcontinental at one time looking as if its price would sink quite out of sight; but the general demoralization of the market is the effect of conditions of business outside of Wall street. The general situation makes the public sellers instead of buyers of stocks, and to a market suffering under such depression the collapse of the Villard stocks has come with crushing weight. Losses are mainly confined to large capitalists; the public interest in the market was driven out by the steady decline of prices last year. Owing to this peculiar condition of things there have been few failures in the street. The market reached its lowest this week on Wednesday. There was a little rally at the close, and a "squeeze" of the shorts, engineered in Jersey Central on Thursday, helped along the recovery. The market is very uncertain, and more exciting times may be looked for.

In a late number of *L'Economiste Française* M. Leroy-Beaulieu points out to his countrymen the advantages to France of closer commercial relations than at present obtain between that country and the United States. In France, he says, there are constant complaints that the country's foreign commerce shows no sign of development—that it is even declining. These complaints are brought to the attention of the authorities, who appoint commissions to consider them, and meanwhile the ministers lightly make decrees which affect most injuriously the commercial relations of the country. This, he says, has been particularly the case with regard to the United States, whose commercial friendship should be especially valued by France both because of the remarkable growth and great value of its foreign trade, and because of the similarity of its political institutions to those of France—a circumstance which has gone far, the writer hints, to bring about France's present isolation in Europe. Every consideration impells France to cultivate a closer commercial union with the United States, and yet by the ordinance of February, 1881, interdicting the importation of American pork, friendly relations with this country have been imperiled.

It was natural, M. Leroy-Beaulieu says, that the Americans should retaliate, that the duty on wines should be raised, and that it should be discovered that, if American pork was diseased, French wines were frequently doctored. If France desires to become a commercial nation, the distinguished economist concludes, she must cease this dangerous childishness and return to good sense. She ought, he urges, to render entirely free the importation of American meat of every kind, and not allow her economic and even political relations with so great a nation as the United States to depend upon ministerial caprice. There are signs that before long the policy outlined by M. Leroy-Beaulieu will be adopted by the French government. It was reported by cable a few days ago that the Premier, M. Ferry, in a speech delivered at Havre, foreshadowed the withdrawal by France of the present embargo upon the importation of American bacon. Meanwhile an instructive commentary upon foreign prohibitory ordinances is found in the report that four hundred persons are dying of trichinosis in the villages of Saxony in "protected" Germany.

Mr. John Swinton, well known as an advocate of the cause of labor and an opponent of monopolies, has published a paper in which he will be free to champion his opinions without limitation. The paper, he says, is intended to represent the new political forces which are beginning to come to the front in the United States. In various movements which have taken place in the country within the past few years Mr. Swinton discerns the germ of Something—with a Carlylean capital—the exact scope and tendency of which he has not yet determined. But although Mr. Swinton does not yet feel able to indicate the proportions and direction of the coming general movement, he yet proposes a definite and comprehensive platform, which, however, is likely to provoke much criticism. He advocates the revival by Congress of the income tax as a means of relief from ordinary and oppressive taxation, the public ownership of railroads and telegraphs, the enactment of laws to prevent the holding of great tracts of land by corporations and individuals, the establishment of government industrial schools, of postal banks and of national boards of health, education, public works and industry! Mr. Swinton also favors the freedom of inventions with a royalty system, and the public ownership of coal, iron, gold and other mines, and of salt deposits and petroleum wells. Mr. Swinton's platform differs from the declarations usually put forth nowadays by the politicians in that it leaves room for very considerable differences of opinion regarding the expediency of the measures proposed.

The holding of the Liberal conference at Leeds marks a new departure in party methods in England. Heretofore the policies of parties have been determined for the most part by the leaders in the House of Commons, at nearly all times a small and exclusive body. These leaders have not, of course, been uninfluenced by the state of opinion within their respective parties; but that opinion has been unorganized, and such expression as it has received has been unauthoritative and far from unmistakable. The old methods are now apparently to be replaced by a new system, under which the various local centers of opinion throughout the country will be represented in general assemblies, the deliberations of which will, without doubt, largely shape the policy of the parties in the House. The movement is similar to that which has been witnessed in the United States, where the caucus of members of Congress for the purpose of nominating candidates and putting forth declarations of principle has given place to the national convention. The tendency in each instance has been in the direction of widening the basis of party action and of rendering party machinery more truly representative. The development of the new method in England is said to be mainly due to the energy of Mr. Joseph Chamberlain, who has long had the essentials of the system in successful operation in Birmingham.

It is said that fifteen hundred delegates, representing five hundred Liberal associations of the United Kingdom, were represented in the conference. The temper of the assembly was appropriately voiced by Mr. John Morley, who in opening the conference expressed the opinion that the government should bring in the County Franchise bill at the next session of Parliament, because the whole Liberal party of the House of Commons, excepting perhaps Mr. Goschen, was united in believing that the question could no longer be delayed. If the House of Lords raised any objection to the measure, he said, it would be dangerous for them. A motion embodying Mr. Morley's proposition was carried, as was one declaring that any measure for the extension of the suffrage should confer the elective franchise upon women fit to vote. A resolution was adopted in favor of the redistribution of the seats in Parliament, "in order to secure a true expression of the will of the nation," as were others recommending that the period required for the qualification of voters be shortened, that the hours of polling be extended and the constituencies be made to pay the expenses of elections.

THE TARIFF IN THE NEXT HOUSE.

Business men have before them no more serious problem than the probable course of the next House upon the tariff. A majority of the next Congress in both branches is probably in favor of still lower duties—the House certainly is. But no action can be taken unless the House originates it, and the action of the Democratic majority in the chamber will be powerfully influenced by the political situation and the apparent needs of the Democratic party. The Ohio election was won with a tariff plank in the Democratic platform which any protectionist could support; but it is certain to reopen the tariff issue next winter after a fashion no protectionist can accept. Success may force the Democratic hand upon the tariff at a time when the soberest leaders of the party have believed a waiting game the only safe one to maintain the integrity of their own organization and nurse the confidence of the country. The plan which events, aided by the ebbing tide of Democratic success down to the Ohio election, had shaped in the minds of Democrats like Speaker Randall and the men he leads was clear enough. The revised tariff offered a settlement which it would be unwise to touch until the way lay open for a general remodeling of the tariff when the demands of the government had decreased and all its branches were in Democratic hands. The internal revenue taxes offered meanwhile the true ground for retrenchment, and the organization of the next House should be modeled to prevent any reopening of the tariff in a bill which might alarm the country and could not become a law with the Senate and President Arthur in its path. Eight years ago Mr. Randall was the leading candidate opposed to Mr. Kerr in the Democratic caucus for the selection of a Speaker; but in the policy which he, more completely than any other man, represents, he is following closely the policy which led Speaker Kerr in 1875 to organize the House in the Forty-fourth Congress so as to prevent the action on the Resumption act, for which the west was clamoring, and direct the attention of the country and the efforts of the Democratic majority instead upon the retrenchment of expenditure, the exposure of abuses and the remodeling rather than reduction of the tariff as embraced in the so-called "Morrison tariff."

Under stress of defeat in Ohio and a decreasing Democratic vote elsewhere, this plan was successfully carried out; but no man aware of the drift and current of sentiment in the Democratic party, from the election of Mr. Kerr as Speaker to the nomination of Tilden and Hendricks, will feel that this would have been possible if William Allen had carried Ohio in 1875 instead of R. B. Hayes. All the platforms and policy wisdom in the country could not have prevented the passage by the Democratic majority of a measure upon resumption widely different from the tepid bill passed as a concession to western demands on the eve of the St. Louis Convention. Then, as now, nothing but the discipline of defeat could keep the Democratic party under the control of its longer-headed leaders; then, as now, the men favoring no action were in the minority; then, as now, the real doubt of the situation lay in the contingent of the Republican party out of sympathy with the avowed and admitted position of the party on the ruling economic question of the hour. The shrewder Democratic platforms of that day condemned the Resumption act, but stood by hard money in theory, and when the Ohio tariff plank was written shrewd hands in and out of the state united to shape it so as to express protection opinion in ambiguous phrase and yet leave the door open to condemn any specific Republican action.

The Ohio plank so drawn proved, like the New York hard-money plank of 1875, so successful in evading criticism and avoiding division that its form has been adopted in states whose economic opinions lie as far apart as Virginia and Pennsylvania. Nor, except in Massachusetts, has any Democratic platform cared this fall to take explicit ground in favor of "a tariff for revenue only." While the shadow of defeat still seemed to hang over the party in Ohio, every close observer of the political situation felt that the attempt to prevent action on the tariff in Congress would be reasonably successful in a party unwilling to urge radical action on this issue in its platforms. As a natural result, Speaker Randall's canvass for a reëlection grew steadily in strength. He had behind him, to begin with, that body of Democrats strong in motive, if weak in number, whose political support at home must end when it becomes clear that the Democratic party is opposed to protection—men among whom Mr. Randall is himself conspicuous. To the natural and inevitable support of these men Mr. Randall rapidly added that larger body whose first wish is to elect a Speaker whose choice will aid party success in 1884 by doing most to increase the confidence of the country. Large as is Mr. Carlisle's following and formidable the opinion he represents—narrow as the contest may yet prove—by September last the only uncompromising opposition to Mr. Randall lay in the able group of low-tariff men in New York city, headed by Mr. Hewitt, and in the Kentucky free traders with their allies in states like Mississippi. The Democratic party was unquestionably facing toward opportunism in dealing with the tariff, and in this country, on the brink of a presidential contest, the opportunity most sought by a great party is an opportunity to do nothing.

The Ohio election changes this by taking the pressure of possible defeat off the few men in every party who are always ready to risk something. The change in the attitude and sentiment of the party under the increasing probability of success next year may or may not defeat Mr. Randall and elect Mr. Carlisle. It takes time for party changes to register themselves in a floating canvass, extending through two hundred members of Congress spread over a continent. But the change in the feeling of these members is certain, with a rising Democratic tide bearing them forward instead of an ebb demanding daily care in party navigation. The way is clear before them. More than half the next Congress, 177 out of 325, are new, and nearly 100 of the new members are Democrats—more than half the Democratic caucus. But the leaders of the Democratic minority in the tariff debate last winter are all reëlected. Mr. Speer is the solitary Democratic member of the last Committee on Ways and Means not in the next House, while half its Republican members are left at home. The Democrats entered on economic legislation eight years ago, led by men trained only in the sentimental and partisan issues of the reconstruction period; the coming Democratic majority will be served and led by men schooled in the long debates of last winter, and abundantly equipped for the task of reopening the tariff question. The demand for action, to which no veto in the shape of party peril can be interposed, will come from men of the very first rank in the party, and it will be backed by the patent fact that the tariff has become the issue by which parties must stand or fall. At best and with all its members present the Republican party has in the next House barely the one-third on which the rules of the House confer the power to check legislation out of the iron course of the calendar; but the experience of last winter proved beyond a peradventure that at least twenty, and it may be forty, Republicans are ready to cast their votes for low duties. Mr. Randall and his friends had before them a difficult task in any event to prevent an active agitation of the tariff next spring—the odds are all against them now.

This change in the outer drift of events in and about the Democratic party is very far from pointing to the *passage* of a tariff bill by the next Congress. Too many risks hedge final action to make prediction possible. In any case it will be March or April before the issue can be joined. Under any organization of the House, it will be the middle of January before the new Committee on Ways and Means begins work on its calendar. A short bill reducing or abolishing the internal revenue taxes can be easily prepared; but a tariff, big or little, complete or dealing with certain duties, cannot be drafted by the most willing committee before the middle of March. If Mr. Randall appoints the committee it will be far from willing, and no one familiar with Washington will be surprised if April 1, 1884, is reached before any serious signs of a disposition to take up the tariff appear. Unfortunately for Mr. Randall's avowed purpose of confining reduction to the internal revenue taxation, few or no Republican voters can be rallied to relieve whisky and tobacco from their imposts. If such a measure is carried, it must be by Democratic votes alone, and by Democrats willing to close the door to any reduction of customs taxation until after the presidential election. Some reduction the surplus makes inevitable, and the difficulty of opening the floodgates without sweeping all before the demand for reduction in both branches of federal taxation promises to be too serious for solution.

Nor will it escape the attention of those mindful that tariffs register a larger vote and wider influences than those at the federal capitol, that the pressure for a reduction of duties is likely to be as vigorous next winter as in the period which began with the Tariff Commission and ended with the revised tariff. The close of the "boom" in building is not many months distant, and with it is predicted a further and serious fall in iron and possibly a serious season of liquidation in real estate. Wool, from the sheep's back to the finished cloth, is no more profitable than for a year past. The evidence is plain of a short cotton crop, but the price both of the raw material and of the manufactured halts. The western wheat farmer faces unfilled bins and unsatisfactory prices. A falling stock market has filled speculators with despair and investors with dread. At such a season men who have lost, are losing, or fear to lose, turn upon Congress in wrath for aid along the line of the current issue. From 1869 to 1879 this was the currency; to-day it is the tariff.

In view of all these facts, the strong and recent hope that their party could avoid the tariff must be considered small by Democrats. The prospect of a tariff agitation, beginning with the opening of the spring trade and continuing through the presidential struggle, must be seriously anticipated by business men; and while manufacturers can safely defer to the following winter any probable, not to say possible, passage of a tariff bill, a period of disquiet will probably open within a year from the passage of the revised tariff.

FACTS ABOUT BANKING.

Our correspondent at Washington writes as follows:

When the Bank Charter Extension bill became a law it was believed that the crisis of the national banking system had passed; that the system was established for twenty years, and that the banks were probably "out of the way of Congress" for that period. The speedy extinguishment of the national debt was not then anticipated, and the dangers which now threaten the security of bank circulation were not then considered so serious. Yet the Bank Charter Extension bill passed less than a year ago.

The new Congress, with a change in the dominant party in the lower House, will be called upon to consider the banking question. That is one of the most important subjects that will be submitted to it. The Bankers' Convention, which recently met at Louisville, realized the gravity of the situation, but it failed to give due weight to the very practical questions which lie at the basis of the matter. The fact is that the national banking system of the country is not to be considered with respect to the system which seems perfect, but with respect to the system which, under the existing political conditions, is alone practicable and possible. One very practical fact is that, aside from the first call of $15,000,000 of the 3 per cent. bonds, the banks now hold, in round numbers, about $200,000,000, or $197,500,000, of 3 per cent. bonds. These bonds will all be called for payment within the next three or four years. At the present rate they will be called in three years. During that period the national bank circulation will be reduced from $353,000,000 to $171,000,000 in the process of the extinguishment of the debt. This is a contraction of some $60,000,000 annually for three years, provided that the banks do not substitute any other bonds for the called 3 per cents. On the other hand, it is to be considered that a good many banks, when the 4 per cents reach 125 premium, will consider that there is more profit to them in realizing the premium than in continuing the circulation. The Controller of the Currency is of opinion that 125 is the maximum value of the 4 per cents for any purpose of circulation.

The following facts are to be considered by the friends of the national banking system in the inevitable discussion of bank matters in Congress the coming winter:

National banks will not be able to continue their circulation at profit after the premium on the 4 per cents reaches 125.

Unless some other security is provided national bank circulation will be extinguished with the public debt.

The majority of the next House will not be of the opinion that the chief function of the government is to provide a cheap in-

come-bearing investment as a security for bank circulation.

There will be vigorous opposition to any proposition to make the national debt permanent by providing a long low bond in order that the banks may continue their circulation at a profit.

The extinguishment of the national debt is popular; the national banking system is not so popular.

The national legislature will not be likely to authorize a new long bond for the benefit of the banks.

These are a few of the political realities which will have to be considered in connection with this question. Mr. Knox, Controller of the Currency, realized these facts more thoroughly than some who proposed various impracticable schemes at the Bankers' Convention. In studying the history of Louisville he discovered that King Louis, from whom the city is named, was very useful to the United States during the Revolutionary war in aiding in securing a foreign loan. From the fiscal operations of that period Mr. Knox suggested that the British consols and the French could be used as the basis for the national bank circulation of this country. The idea was a suggestion rather than a recommendation. The suggestion is a novel and ingenious one. These foreign securities are now a cheaper basis for circulation than our 4 per cents. During all the dynasties, the wars and political revolutions both of France and England, the integrity of these securities has always been preserved. There would be something reciprocal if such a proposition could be adopted. But Mr. Knox knows very well that such a suggestion can have no meaning, for no American Congress would ever adopt such a plan. The tradition which warns the country against entangling alliances with European powers is one of the strongest with a people which generally has scant respect for traditions.

The 4 per cents and the 4½ per cents at the continually increasing prices are as little likely to remain the basis of national bank circulation, and the 3 per cents, as already stated, at the present rate of progress, will be called in for payment in three years, causing an annual average contraction of the bank circulation during that period of $60,000,000. It is suggested that the repeal of the 1 per cent. tax on circulation is the only remedy which Congress can afford, and that that would be enough relief to the banks to permit them to continue their circulation. But a Congress, composed as the Forty-eighth Congress is, is not likely to enact a law repealing that tax except as a part of a general scheme. If the entire internal revenue system shall be repealed—and it is a part of the programme of the most prominent Democratic leaders that it shall be repealed—the 1 per cent. tax on bank circulation will of course go with it.

It is suggested that the present conditions are such that those who favor an exclusive government money will assail the banking system, and insist that if the government can properly issue a part of the paper money in the country, the greenbacks and the silver and gold certificates, it may with equal propriety issue all the paper money. This is the old struggle which has lasted for twenty years. The new element in Congress does not belong to the party whose traditions favor an exclusive government paper money. On the contrary, it belongs to the school which is disposed to resist any additional grant of power to the national government, and which would advocate restricting the issue of government money rather than increasing it. Rather than authorize an exclusive government paper money, the Democratic party in the next House doubtless would be more likely to favor the repeal of the ten per cent. tax on state banks. One of the most distinguished financiers of the country said the other day: "We are nearer a restoration of the old state-bank system than we are to a system of exclusive government money."

These are some of the considerations which are pertinent in connection with the discussion of the bank question in the coming Congress. These suggestions indicate the difficulties rather than point out any possible relief. Two things only seem certain in the situation: First—That the time is coming when the 4 per cents are not to be the basis for the bank circulation. Second—That no one has as yet suggested an adequate substitute.

Since the foregoing was written I have been furnished with the official figures of Controller Knox as to the amount of national bank circulation affected by the first and second call of the 3 per cent. bonds. The figures are larger than even Mr. Knox himself had supposed, and show that the Treasury policy of paying the 3 per cents is likely to result in a sharper contraction of the currency than had been imagined. For it is not to be supposed that the banks will find a sufficient profit in circulation to replace the called 3 per cents with the 4s or 4½s at the high prices which they command. The number of banks included in the first call was 130, and the amount of national banknotes affected by it was $4,078,000. The number of banks in the second call was 144, and the amount of circulation affected by it was $8,352,000. This is fully twice as large an amount as the original estimate of Mr. Knox. It is an amount which may give the Treasury authorities some concern. It would seem to mean that there is to be a contraction of the national bank circulation between now and December 15 of something more than $12,000,000. Whether the banks will replace the called 3s with high-priced 4s and continue their circulation remains to be seen.

THE TRANSPORTATION PROBLEM.

The railroad convention which recently met at San Francisco demonstrated the fact that the patrons of the Pacific railroads have no voice whatever in fixing passenger and freight schedules. Their interests were not considered in the matter at all. The sole apparent object of the convention was to prevent the lowering of the existing tariff, by making the Northern Pacific a party to the agreement between the Union, Central and Southern Pacific railroads and allied corporations. This was substantially accomplished, the concession on the through ticket from Omaha to San Francisco being so trifling as not to be worth mention. Three dollars were taken off a first-class ticket between San Francisco and Omaha, the full ticket now being $95, while $32.50 purchases a first-class ticket from New York to Omaha, which is only 400 miles shorter than from Omaha to the Golden Gate. The trains west of Omaha also run on miserably slow time and are noticeable generally for an absence of first-class comfort.

On general principles, perhaps, this was to have been expected. When a dealer has a monopoly of any commodity he may fix his own price for it, but the public need not buy. There is no compulsion in the case. It is different with the transcontinental railroads. They cannot be done without. They are essential to the transaction of the nation's business. Railroads are "a public use," and are not therefore to be regarded as in any sense a corporate monopoly; their management, at times, presupposes that they are. But in the case of the land-grant railroads, they are in truth and fact partly owned by the people themselves, and therefore their management should be directed toward providing the greatest measure of public convenience at the lowest possible charge. The opposite of this is too frequently true, although there can be little doubt that, when the land grants have been fully realized upon, it will be found that the country by its land endowments fairly built the transcontinental railroads, to say nothing of direct aid in bonds.

The point hence arises: What is to be done to protect the public, seeing that open competition is rendered impossible by corporate combination? The business of the country is greatly injured by the traffic exactions of the Pacific railroad combination. Extortion begins on the west-bound overland travel and traffic at Omaha; it ends at the same point east-bound. There is no disguising or denying this fact. But this is not all. The railroads so effectually control the trade between the Pacific and Atlantic coasts that shippers are practically denied any advantage from the natural highway, the ocean. This is an abuse which can be remedied by Congress alone, until such time as the interoceanic canal across Nicaragua helps to free the commerce of the United States from the embargoes placed upon it by the subsidized railroad combination.

It is the manifest interest of the manufacturing centers of the east that there should be cheap and rapid railroad transportation to the Pacific slope. Cheap railroad fares would tend to settle up vast regions of waste land, thereby increasing the area of production and consumption. National wealth would grow as a result, and the nation would become stronger at all points. But the fares adopted by the railroad pool does not sufficiently encourage an outflow of population to the Pacific slope. Emigration thither will be in driblets, while the corporations transfer to their own treasuries the bulk of all profits on production and interchange. This is the weak point of the pool arrangement. It does not take sufficient account of the public interest, amounting to a proprietary right, in all subsidized roads. These interests are too vast to be overlooked. The consequences of the railroad policy are too far-reaching to be accepted without protest.

CATTLE TRADE RESTRICTIONS.

Our San Francisco correspondent gives very interesting details regarding the breeding of pure-bred horses, cattle and sheep in New Zealand, and anticipates important results to flow from an interchange of blooded stock between the United States and the Australian colonies. This would probably be the case were the trade in question left free to develop itself; but reference to our advertising columns will show that an absolute embargo has been placed upon the shipment to New Zealand, from America, of "cattle, sheep, horses, swine and goats, and also of fresh meat, skins, hides, hair, horns, hoofs, offal, or other parts of any such animal, and of all hay, straw and fodder, and of all fittings which have been used in the transport of any such animal." This prohibition is to go into effect from and after December 1 next. The colonial government has taken this action under the Diseased Cattle Act, 1881, being doubtless alarmed at the recent outbreak of the disease in England, and being misled by prejudiced statements regarding the alleged prevalence of cattle disease in this country.

Although it is not stated, we have no doubt that similar action has been taken by the Australian governments. Indeed, we have been advised that pressure to this end has long been brought upon the New Zealand government by the pastoral interests of Victoria, New South Wales and Queensland, but without success until the recent alarming outbreak in England of the cattle disease. Of course, it is proper that precautions should be taken against the introduction of disease into the Australian colonies, but discrimination should be made in favor of the United States. There is no contagious disease among the sheep or cattle of this country, and hog cholera has practically disappeared. Texas fever is a local affection and is occasioned by overdriving in hot weather. Now that the bulk of the open-pasture lands in the south have been enclosed, compelling transportation of cattle to a much greater extent by railroad than formerly, the Texas fever is also disappearing. We are, therefore, free from danger on this score, and the Australian colonies should be notified of the fact. American commerce is extending in the South Pacific, and we should greatly regret if a policy of isolation were adopted by the prosperous Anglo-Saxon commonwealths in that part of the globe. Upon presentation of the actual facts to the Australian government, through the consular service, we apprehend that the rule would be relaxed in favor of American blooded stock, which is all we are ever likely to export to their territories.

THE ELECTRIC-LIGHTING COMPANIES.

The announcement that an international electrical exhibition is to be held under the auspices of the Franklin Institute for the Promotion of the Mechanic Arts, at Philadelphia, beginning September 2, 1884, warrants the statement that electricity and electrical inventions are destined to attract even greater attention in this country during the next year or two than has already been granted them, and naturally awakens inquiry as to the present aspects of electric illumination, from a business point of view. As a rule, these corporations are no more in the habit of frankly taking the public into their confidence regarding their intentions and real measure of success than do the officials of some railway companies on publishing an annual report for distribution in Wall street. A review of the development of electric lighting in the United States, however, together with the attitude of the companies to-day, conveys a distinct impression regarding their existing and probable future relations with the public which it is proper to state.

Briefly, it is a monopoly of patents on essentials to electric illumination and a warning to all newcomers. A glance at the operations of the past few years will render this clearer. It is not very long ago that the consumer looked for active competition between the then young companies in the field. The Brush, Weston, Fuller, Maxim and Jablochkoff arc-light companies were all prominent with globes of white light for street, store, and other public lighting. Edison and Maxim again had incandescent filaments within pear-shaped globes for domestic and other interior illumination. Each claimed an infringement on the part of the other. To recur to a later time, the Brush people united with Swan, of England, who has an incandescent lamp, furnishing the Brush arc light to Swan's customers (abroad), and using the Swan light here in opposition to the claims of Edison and Maxim.

As far back, however, as in April, 1882, the Amer-

ican Gramme Company was formed, and this circumstance meant more than was generally credited to it. The Gramme Company was an organization owning the American right to the patent on the Gramme dynamo machine, an electrical generator. Its special advantage was not apparent, inasmuch as the Siemens dynamo is not patented here and can be used by all. The Gramme Company, however, succeeded in forming a so-called consolidation—but more of an "offensive and defensive alliance"—of the Brush, Fuller, Jablochkoff, Weston, Maxim and the Edison companies with itself. The claim was made that the intention was to prevent litigation between the companies, to suppress infringements of patents, and to acquire valuable new inventions when made. The Gramme Company was to act as the attorney or agent for the members to the agreement, and it was generally understood that it had done well for itself, if nothing further. This combination, in the light of subsequent developments, foreshadows a policy looking to as full a cash realization on inventions already in hand as can be secured rather than to the complete development of the oft-times crude or imperfect apparatus for the public good. If this view is not correct, the outlying facts are strangely contradictory. Weston with his arc light has combined with Maxim in order that the company (the United States Electric Lighting) may supply both the arc and incandescent lamps. Jablochkoff does not compete, and cannot. His is one of the earlier forms, and is less efficient and more costly than any of its rivals here. The Fuller arc light is being pushed, but rather more in other cities than in New York.

The Brush and the United States companies (the latter with the Weston lamp) are the more conspicuous in supplying the request for arc lamps. Edison, the Brush-Swan Company (with Swan's amp), and the United States Company (with Maxim's filament light) claim the field for incandescent illumination. In relation to the latter there is reason to believe that the Swan and Maxim lamps are either infringements of Edison's ground patent, in which he claims the exclusive use of a carbon filament, or, if Mr. Edison does not feel able to contest that claim, there is room for other varieties of carbon filaments and more competition in the business of incandescent illumination. We recorded last week a decision against Mr. Edison wherein he claimed that the Sawyer and Mann paper carbon filament was an infringement. The case is not yet ended—unless the defeated party chooses to consider it so—but it is a striking circumstance that Sawyer and Mann are charged with infringing the Edison patents when Swan and Maxim are daily (nightly) sending currents unchallenged through carbon filaments in New York city.

Three solutions of the seemingly strange attitude of the companies concerned are suggested. The first is that the Gramme consolidation may have resulted in an understanding whereby an apparent opposition is to be kept up before the public, while in reality the companies at work proceed to take up as much of the field each as they find themselves in position to absorb, without legal warfare.

Or it may be that the Edison Company, with its "ground patent" claiming *all* carbon filaments, will wait until the alleged infringers have secured as much business as they can with opposition lamps before suing for infringement, thus enabling it to come in for larger damages on account of business done, and secure a permanent income in the shape of continued royalties on the possible infringement which shall have taken place. This view has received some favorable consideration. Various interviews with Mr. Edison and with other representatives of the Edison Electric Light Company, while in no way indicating the exact policy of that corporation, have been so filled with expressions of antagonism to the Swan and Maxim lamps as to warrant a belief that a fight must ultimately take place. The third view of the situation is that those now in the field are anxious to pool such issues as may not have been satisfactorily arranged, and are holding off for overtures in this direction. As bearing on this view, it may be added that a meeting of the Edison Electric Light Company was recently held in London to consider and agree to the terms of an amalgamation with the Swan United Electric Light Company (Limited). After explaining the reasons which had induced the directors to recommend the amalgamation to the shareholders, the resolution was carried unanimously. The chairman stated that the company had been doing a very successful ship-lighting business during the past half year, the turnover during that period equaling that for the whole of the previous year. There was also a special meeting of the Swan United Electric Lighting Company for the purpose of considering an agreement for amalgamating the Edison and Swan Electric Lighting Companies. In explaining the conditions under which it was proposed to amalgamate it was stated that the fusion had been assisted by the fact that the companies were drifting into the position of litigants. The British business of the Edison Company was to be fused with the British business of the Swan Company, but the Swan Company was to retain its foreign and colonial business, as the Edison Company had no such business to bring into the new company. It had been ascertained that Swan had spent in patents and on business done £183,487, and that the Edison Company had spent £100,000. The latter sum, however, would be swollen to £125,000, because the purchase of the Edison patents was a deferred interest to Mr. Edison, and not an out-and-out purchase, as was the purchase of Mr. Swan's patents. The Edison Company put everything it had got into the concern, including the half-share in the contingent profits under an agreement with Mr. Edison. The directors believed the bargain to be reasonable and just on both sides, and accordingly asked the shareholders to approve of it. A resolution was carried unanimously approving of the principle of the agreement. Now be it recalled that the Swan Company (of London) is amalgamated in the United States with the Brush Company, thus putting a competitor to Edison (an incandescent lamp) into the hands of the Brush people, who are not supposed to be at all interested with the Edison Company.

In short, the straws now floating about mean a "pooling of issues" and no competition from outsiders, whether said straws indicate truly or not. The telephone business has been managed on that basis. It is common talk that the telephone in use is a wofully imperfect instrument, and it is almost as well known that many improvements have been made to the telephone (and patented) which cannot be put into use unless purchased and used by the holders of the so-called original telephone patents. But the latter are not buying them, preferring to consolidate local companies and form a money-making monopoly to giving their customers (at considerable expense, of course) the benefit of all the later additions and improvements. It is needless to add that the high price of telephone stock is dependent in part on this, and that if the public are not satisfied the owners of the telephone patents are. Are the electric lighting companies to follow a like policy?

A corollary to it all may ultimately be phrased against our existing patent laws in that the owner of a patent for a crude but necessary appliance can now shut out of use for seventeen years a material and much-needed improvement on his work unless he chooses to buy the former. A suggestion from the consideration of a possible incandescent electric light monopoly will soon be found in a cry for a successful filament which shall not be of carbon. That would raise a dust in the camp of the combination.

THE NORTHERN PACIFIC AND TREE PLANTING.

So much has been heard of the Northern Pacific during the last few months that some comment upon one of its operations which is out of the usual class may be of interest. A handbill before us, which recipients are requested to "please post in a conspicuous place," gives details of the company's plans "to encourage the planting of forest trees in groves, shelter belts or live windbreaks." "To settlers and land-owners tributary to its lines and within the generally recognized treeless region" the company offer as inducements free transportation of forest trees not over two years old and tree seeds and cuttings to all prairie stations; also free carriage on improved varieties of small fruits, settlers being cautioned against ordering apple trees from east or south of Minnesota, as such trees generally fail. The next inducement is in the form of trip-passes for settlers accomplishing the best results. Although the single-trip passes offered are not intrinsically valuable enough to incite much effort, the competitors will be working for themselves; that is the most substantial reward, and the railroad takes the part of encouragement and education. Its other inducement is the gratuitous distribution of printed practical information about tree planting, and "the superintendent of tree plantations will, at such times as his active duties will permit, visit all localities on the lines of the Northern Pacific Railroad where the people manifest an interest in this work, and will aid them by his counsel and practical experience, imparting such information orally in a conversational way, or in lectures, as will enable them to avoid the mistakes so commonly made, and also endeavor to show the way to the best results with the least delay and the smallest and most judicious expenditure of time and money."

The vanguard of American civilization, moving westward, has always borne the axe, and "Chop! chop!" has been the American motto. The Sage of Chappaqua set up a wayside direction, not yet obliterated, sending the young man west, and one of the things he "knew about farming" was to go out and chop down a tree. Any man of fair health can do that in an hour or so; but it occupies the silent forces of nature a goodly number of years to set the tree up again. Tree and savage held the soil, and extermination has been levied against both; now it is time the axe rested and trees were allowed to stand until substantial reasons are found for cutting them. The forest primeval must have defenders or live only in Acadia and hexameters. The murmuring pines and the hemlocks of the Adirondack region are already largely destroyed by bark-cutters and charcoal-burners; the retention of the duty on wood (said to be "protective" of something), the increase of exports of "wood and manufactures of," and the penetration of the remotest wood wilds by the destroying railroad work all together.

The census forestry charts are most suggestive. It is not merely the exhaustion of wood that we have to contemplate, but, as man can never conquer nature, the penalty follows in drouth and tornado, alternated by flood. The last great outbreak of the Ohio was generally ascribed to denudation of its upper banks, although the conclusion was met by reference to a great flood long before that denudation; still, that there is a close connection between baring the soil and the excesses of too little and too much water is not doubtful. The tornado, which has become so persistent a visitor that special insurance against it has been discussed, adds its lesson, and the most valuable part of the lesson is that prevention is better than insurance. The St. Paul *Pioneer Press* regards windstorms as preventable. It argues that they are formed in the unbroken prairie stretches of the far west, and cites the familiar little eddies that are seen catching up dirt at a street corner. Contact with adjacent walls breaks up such eddies, which might develop resistless energy if unimpeded; the rotary movement which is only like this in its beginning on Nebraska or Dakota plains has force enough to devastate villages after it has traveled hundreds of miles. The ordinary course of settlement will do much toward reducing the dangerous level of the plains by interposing buildings, growing crops, and trees. But the slow course of settlement of the country should not be awaited—tree-planting should be systematically pursued. Lines of trees regularly disposed, at intervals of a quarter-mile to a half-mile, would be the most effective impediments to the development of the cyclone, and the prevalence of growing timber is also the best protection against the prolonged heating of one spot, which heating is itself the provocative of cyclonic currents.

This is the argument. It is certainly most reasonable, and the phrase "windbreaks" in the railroad company's poster is suggestive. Tornadoes, like fires, are governable in their time and place of origin by prevention; so are drouth and floods, in some degree, by conforming to natural laws. Tree felling must be exchanged for tree saving and tree planting. Forestry is beginning to be studied, and not too soon. In some parts of New England village improvement societies have been doing good work, as shown by an item, several years old now, that "the Williamstown Village Improvement Society finished its tree planting last week, and there is now a continuous row of over 450 elms for three miles from the village to the North Adams line." It is pleasant to find the newly completed Northern Pacific taking part in the reform with such prompt and wise forethought.

THE PRACTICAL VALUE OF ART WORK.

From a strictly commercial standpoint there is much cause for satisfaction in the development, strikingly rapid since the time of the Centennial Exhibition, of æsthetic tendencies in this country, for the educated love for the beautiful has created a number of highly profitable manufactures, has tended strongly to keep money in the country that previously went out of it, and has built up, in a variety of ways, new and desirable trades.

The picture trade, notably, has taken an entirely new departure. Twenty years ago there were very few people in America, even among professed picture-buyers, who knew a good picture from a bad one. Outside of the limits of certain well-known names in art buyers were shy of going, fearing to commit themselves by the purchase of a picture that the really knowing ones might declare was not good at all. Safety to a great extent was held to lie in buying the work of foreign artists. Very abominable things on canvas were rescued from condemnation by the saving grace of a foreign name. A few American names, chiefly of landscape painters, were in good repute—such pictures as Kensett's golden-brown autumn scenes made a way for themselves by sheer force of merit—but to go outside of the accepted limitations required a vast amount of temerity. Nor were these limitations on the whole unjust. The rank and file of American artists certainly did do prodigiously bad work twenty years ago. What was hard in the situation was that the few young artists whose work really did amount to something, but who had not done enough of it to conquer success, suffered cruelly for want of encouragement. Out of the liberal teaching of the Centennial Exhibition, where at last an opportunity was had to see a vast number of good pictures, representing all the modern schools, intermingled with a sufficient number of very bad ones to serve the useful purpose of horrible examples, not only the few American picture-buyers but the mass of the American people got hold of some substantial notions in regard to good and bad art. And what was better, regarding the matter from its commercial standpoint, the number of picture-buyers was infinitely enlarged. With that readiness to recognize and to adopt a good thing that is a distinguishing characteristic of Americans, and that is one of the main sources of American success, the visitors to Memorial Hall perceived that a good picture is a pleasant and, in certain ways, even a useful thing to have in the house, and this conviction was acted upon promptly and practically. And with each year that has passed since then the habit of picture-buying has strengthened and widened steadily. What is especially satisfactory in the change is that out of it, though along with a good deal of sham knowledge, a real knowledge of art has been begotten. Buyers no longer are afraid to buy a good picture by an unknown man; they have strength of mind, gained of strength of knowledge, to buy what they know to be intrinsically good, and to be glad to get it. The encouragement thus offered to art has led to excellent results. More good painting is done in America now than ever was done in it before. The number of American painters who now are making a living out of their work is out of all proportion to the number of successful painters in any previous decade.

Sculpture, in like manner, has taken a new departure, though less conspicuously than painting, for in America sculpture is almost an unknown art. Yet the easy, strong statue of "Farragut," by Saint-Gaudens, and the admirable "Fulton" of Howard Roberts—in many respects the best piece of work of its class that ever has been done in this country—are most comforting assurances of the movement forward from the ponderous, stiff "Lincolns" and "Washingtons" of the past. In this connection, however, any extended consideration of sculpture is out of place. Marble working, except in the tombstone line and in house decoration, is not, and is not likely to be, a money-making industry.

Engraving, on the other hand, has become a profitable business in just proportion to its approximation toward a higher art standard. The old, slick, smooth work in mezzotint, and the even more repulsive work in harsh line, have no standing now. In conjunction with good painting work of this nature cannot be tolerated. And out of the love for good painting has come a proper appreciation of that beautiful subdivision of engraving, etching—a medium that, better than any other, permits of multiplication of works in which the feeling of the artist directly is expressed. Etching, like painting, has come to be a money-making profession. A man or a woman who is strong enough to do good work is sure of a good market. A dozen years ago an etcher might have etched in vain in America. Save a few print collectors, nobody knew a good etching from a bad one or cared to own an etching of any sort. In those days—and they seem much older days than they really are—the trade in prints, so far as it existed, was confined to impressions of plates by European artists, and the buyers were the exclusive few. The trade still is largely in foreign work, but it has grown to be more popular and to include the work of native artists, and with popular encouragement each year sees better work by home artists and more of it.

Wood engraving, as everybody knows—for, thanks to the magazines in which it finds utterance, it is the best advertised of all high art work—has been absolutely created in America under the impulse of the art movement, and has been brought to what in certain directions probably may be accepted as absolute perfection. Of the high wages paid to the artists engaged in it the magazines are prompt in keeping the public well informed. These wages are well earned, for, aside from its intrinsic value, the value of this class of art work as a popular edu-

cator cannot easily be overestimated, while the stimulating effect that it has upon art work of all sorts is constant and powerful.

Porcelain painting has been lamentably overdone. Because of its "prettiness" every young miss in the land has taken to pot decoration, usually with blood-curdling results. But with the chaff there is a good deal of sound grain. The demand for really beautiful chinaware has been created and has led to important economic results, chief of which is the manufacture in this country of artistic pottery of a sort that a dozen years ago could be procured only from foreign manufacturers. At Trenton, the homestead of chinaware in America, very beautiful work now is done. The old designs, harsh and conventional, have been abandoned in the higher-class wares, and new designs have been adopted, of which the characteristic is artistic feeling expressed in graceful color and form. In Ohio, under the influence of the art movement in Cincinnati, admirable results have been reached, notably in the manufactories at East Liverpool. Still better results would have been reached but for the untimely death, two years or more ago, of Mr. Shakespeare M. Laughlin. It is not too much to say that this man was the most progressive potter in America. Had he lived to carry into execution his intentions his potteries at Philadelphia unquestionably would have turned out work the like of which—at least in large quantities—never has been seen on this side of the Atlantic. The Philadelphia works, for which the capital was subscribed and the site selected, would have been—and this is said deliberately—the most perfect potteries in the world. The plans provided for generous space, for absolute economy in handling materials, for all known requirements and conveniences of manufacture. Mr. Laughlin's death was a severe blow to American potting; but it is to be hoped that his plans eventually may be utilized. Chelsea, the Boston suburb, is acquiring a reputation now for pottery and tile-work, especially the latter, that recalls the historic associations with its name. A substantial and highly profitable business has been built up here within the past five years, a business that twelve years ago could have resulted only in disastrous failure.

The change that has come over architecture since the art-birth in America is much overvalued as an indication of art progress. At present, the majority of architects are feeling around for something new—they scarcely know for what—and in the course of their experiments they are creating some most astonishing monstrosities. Still, while some of its results are very bad, the change in itself is good; it is a practical remonstrance against the monotonous ugliness of the American houses of the past. Ugly some of the new houses most certainly are, but monotonous—never! Out of the present stage of mere eccentricity in the end will come, let us hope, individuality in which is beauty, which in a house is perfection. But meantime the new style of house has stimulated most astonishingly the trades and industries which may be grouped in the three broad classes of carpentry, cabinet making and upholstery, but which subdivide into legion. Indeed, a fourth class must be added, for in the modern stone or brick house of the first order sculpture plays an important part. In certain directions the modern house has not merely stimulated to greater perfection existing industries, but has created industries. What little ornamental brass-work of a really good sort was used a dozen years ago in our houses was made in Europe; now a good deal of it is made here. Much of the embroidery used in upholstery, but a little while ago unobtainable save in Europe, similarly now is produced in America; and in like fashion we have come to be, in part or wholly, our own manufacturers of carpets and of wall-paper—most important art industries—and of a whole host of minor articles which go to make a house beautiful and which, while insignificant in themselves, collectively constitute the basis of an art industry that furnishes a large number of people with means of support. Frescoing is a pure art work that the modern house—though, of course, only in exceptional cases—has demanded. Artists of the highest repute have been employed of late, at "picture prices," as wall decorators. A side issue of house adornment, keeping step with the increased demand for pictures, has been the prodigious development of the trade of picture-frame making. And in this connection the fact is to be noted that with the increased demand for pictures there has been a steady falling off in demand for French mirrors for decorative purposes, a condition of affairs that still further tends to keep American money at home.

Art, therefore, has done something for America that practical people are bound to respect. In the wake of high art has come a whole procession of minor arts and art industries which collectively draw enormous sums of money into circulation, and which, directly or indirectly, provide the means upon which a large number of people, dealers and producers, live. Leaving out of consideration, as foreign to the present line of inquiry, the moral benefit that has come of this development of a love for the beautiful, it is obvious that directly from love of the beautiful, and from nothing else, there has resulted the creation of industries of substantial benefit to the country at large.

OCCASIONAL NOTES.

We have received from Mr. John Stetson, of Boston, a copy of the United States Senate edition of the Lowell Bankruptcy bill—that is, the bill as amended and reported by the Judiciary Committee of the Senate in January last. It is unnecessary for us to repeat here what we have said by way of general argument regarding the need of a national bankrupt law, or to enter afresh upon a consideration of the provisions of the particular measure referred to. Upon both points our sentiments are already sufficiently familiar to our readers, and recent events have tended only to confirm us in our opinion. We are glad to notice that, as many indications show, the need of a uniform bankrupt law is being now generally recognized throughout the country. The New York Board of Trade and Transportation has received upward of one hundred friendly responses from commercial organizations throughout the country to the proposition to hold a national convention in furtherance of the enactment of a uniform bankrupt law, and it has been decided to hold a convention for that purpose in Washington on January 16 next. It is a gratifying sign that the commercial organizations of the country are awakening to a sense of their duty in this matter, and it is to be hoped that their efforts and the efforts of those acting in sympathy with them will meet with the success they deserve. Especial credit is due to the business men of Boston for the zeal and the persistent energy with which they have labored for the furtherance of this very desirable end. By their action in leading and constantly stimulating the movement for a uniform regulation of insolvencies they have laid the whole commercial community under weighty obligations.

The proposition to abolish convict labor in the state prisons will be voted upon by the citizens of the state of New York at the coming election. We have heretofore expressed the opinion that the convict-labor system should be abolished, and have given reasons for that opinion. These we need not here repeat further than to remark that under a system which in effect farms out the labor of the convict the idea of discipline is lost sight of, and the discipline looking to the reformation of the criminal is or should be one of the chief objects of every system of punishment. Some of those who oppose the abolition of the convict-labor system do so on the ground that the opposition to the contract system comes not from those who desire to see a better system of convict labor substituted but from those who wish to drive all products of convict labor out of the market, and who, when this is done, do not care how the convicts pass their time. This is an argument against the abolition of the system based upon the motives of those who oppose its retention. An argument of this nature is entitled to very little consideration, since, as will be seen, it does not bear upon the question of the wisdom or unwisdom of retaining convict labor in the prisons, which is the question to be decided.

The protectionists are apparently determined not to let the coming struggle over the revenue policy of the country go by default. Since November 1, 1882, according to the *Bulletin*, the American Iron and Steel Association has printed and distributed 108,700 tariff tracts and 31,500 tariff broadsides, in addition to occasional large editions of the *Bulletin* containing tariff articles of special interest. The work of printing and distributing this large amount of tariff literature has, according to the same authority, been very quietly, but none the less effectively, done. The association is evidently pleased with the work it has already done, for it announces that its system of distribution is nearly perfect, and that it intends to continue its efforts steadily and with broader scope than heretofore. Indeed, it declares that it can engage in no more important work than the distribution of documents presenting the protectionist side of the tariff controversy, and it hopes by this means to supply largely the lack of newspapers and professors from which the protectionist cause suffers in many parts of the country. The editor of the *Bulletin* avows, in italics, his intention to make the distribution of tariff literature the chief work of his office during the coming six months, if not for a longer period. This would seem to indicate that a very energetic protectionist propaganda will be made during the coming session of Congress.

A searching review of the attitude of the (as yet) dominant national party in regard to the questions of the day is presented in a striking article in the Philadelphia *American*, in which the writer asks, "Has the Republican party dry rot?" The *American* says that prohibition could not have overridden all other issues in Ohio unless the other issues were feebly raised, and, consequently, little cared for. Such a condition of things, it says, is the natural outcome of a party afflicted with "dry rot." The Republican party, the article continues, has had within the past few years certain political forces which were very strong, but these do not now survive and the party has stopped its advance. The financial questions pressing for solution, those, namely, in regard to the tariff, the debt payment, the foundations of the bank circulation, the coinage of silver, etc., all these, the *American* declares, are scarcely attempted to be dealt with by the Republican party. The same is true with regard to the question of administrative reform, about which the party should be in earnest, but is not. The point with which the article concludes is one which has been before elaborated in BRADSTREET'S, and which deserves the careful attention of the leaders of both political parties. It is rendered striking by finding expression in a journal whose sympathies have in the main coincided with the policy of the party it now criticises. The *American* says: "In politics as in life the paralytic and incapable perish. It is only those parties that serve a purpose and prove their capacity for use, good or bad, that can maintain an existence. If the Republican organization is to live, and to carry another presidential election, it must demonstrate its ability to deal with the great national questions that are demanding attention. If it has no such ability—if it is decrepit, and foolish, and incapable, its further history can be speedily written."

We have received from Treasurer Butler, of the State of Michigan, a statement of the financial condition of the state, condensed from his forthcoming annual report for the fiscal year ending September 30. This statement shows a balance on hand on that date of $1,074,267.20 as against a balance of $1,757,933.21 on September 30, 1882. Of this fund $585,186.61 is held in a general fund applicable to current disbursements. The appropriations for the calendar year still undrawn amount to $477,197.27. During the year the bonded indebtedness of the state has been reduced by the payment of all the Two-Million Loan Bonds, so-called, amounting to $591,000, and of $1,000 of the War Bounty Loan Bonds due in 1890. The outstanding unmatured bonded indebtedness of the state is now confined to the War Bounty Loan Bonds amounting to $297,000, for the payment of which United States 4½ per cent. bonds, amounting to $297,000, are provided. It is gratifying to have to record the steps in the process of debt reduction which is going on so rapidly, and under which oppressive mortgages on labor are being constantly retired. The financial condition of Michigan in this respect is one with which its citizens have abundant reason to be satisfied.

California is beginning to wake up to the importance of manufactures for building up a prosperous commonwealth, a new and healthful departure having taken place since the stoppage of Chinese immigration. The California Cotton Mills Company has been incorporated, capital $600,000. A suitable site has been procured at East Oakland, with a frontage to the bay of San Francisco, giving the advantage of water and railroad facilities. The machinery will be imported from Europe, the difference in cost being against the highly-protected home production with duty added. Building will soon begin. About 250 white hands will be employed in the mill. Some cotton is grown in the state, but not nearly enough. Texas will be looked upon to supply the bulk of the cotton, and the islands and Mexican cotton will also probably be bought. A strong company has also been incorporated to manufacture steam agricultural machinery. Why this has been so long delayed is unaccountable, the great alluvial valleys of California being the natural field for the application of steam cultivation. An English syndicate is likewise at work to acquire a site for graving docks in the bay of San Francisco, on the city side. The dock charges are so oppressive at present, and the accommodation is so bad, that shipping frequenting the port of San Francisco is placed at a great disadvantage. The bulk of the tonnage being British naturally causes English shipowners to take special interest in this matter, and the probability is that they will succeed in their purpose. The erection of suitable graving docks at San Francisco will be hailed with satisfaction also by New York and Boston shipowners.

The Houston *Post*, in introducing an interesting comparative table of the temperature and rainfall in Texas, in a recent issue, says that the extraordinary drouth of this year recalls the drouth period between 1855 and 1860, during which a large portion of southern and western Texas was affected. The present drouth period commenced in 1877, and though varied by years of good rainfall has clearly asserted itself in 1883. In 1881 the central and northwestern portions of Texas were most seriously affected. It appears that during the present year the drouth has covered a larger portion of the state than is shown by any previous record. The drouth period of a quarter of a century since has been followed by so many good seasons that many have been led to believe that the country has undergone a climatic change. The *Post* is of the opinion, on the other hand, that the statistics of drouth in recent years and the present condition of the country rather justify the surmise that such changes as have occurred have been merely periodic in their character.

Latham, Alexander & Co., of New York, have just issued the tenth annual edition of their "Cotton Movements and Fluctuations." The book is very neatly gotten up, the typographical work being very well done. The information given in this edition is more complete and comprehensive than that contained in any of its predecessors. The volume contains an interesting review of the cotton year just passed, with the usual statistical data as to the movement and prices both at home and abroad for a term of years; also a very interesting article from the pen of Mr. Thomas Ellison, of Liverpool, the recognized authority on cotton matters abroad. This latter is a brief history of the world's cotton supply from 1781 to 1882. Some interesting statements regarding the culture of cotton in Egypt and the East Indies are included. The book is valuable for the careful manner in which the work has been performed, and will be found interesting and instructive to cotton merchants and all who take an interest in the cultivation and consumption of our great southern staple.

M. Emile de Laveleye has an article in the *Pall Mall Gazette* on the question of state regulation of vice which has recently undergone discussion at the Hague before the Association for the Abolition of State Regulation of Vice, of which M. de Laveleye was president. M. de Laveleye declares that the system of state regulation, so far from diminishing clandestine vice continually develops it in a most frightful degree, and instead of reducing augments the physical evil. These are facts which are gradually being recognized. The Municipal Council of Paris (where the system was originally adopted in the early part of this century) and the General Council of the Seine have declared absolutely against the official recognition of debauchery. The governments of Italy and Belgium have appointed committees of inquiry upon the question. In other places the odious legislation has been abolished with the best results. Statistics and distinguished medical opinion are cited against the efficacy of the system. These considerations, of course, enforce the arguments against the system from a moral standpoint, the chief of which is that by legalizing vice the distinction between good and evil is gradually effaced and the moral sentiment enervated. To these there is to be added the argument upon political and economic grounds. Upon this latter point M. de Laveleye asks, with much force and pertinence: "How is it possible to admit that the state, whose aim must always be right and justice, can take upon itself the task of organizing debauchery, of patenting the agents of vice and of providing an assurance of security (misleading, however) to men of vicious life? While we hesitate to confide to the state the care of the education of the people and the amelioration of their condition, how can we allow it to undertake the task of facilitating the indulgence of the grossest passions of men?"

SPECIAL CORRESPONDENCE.

LIVE STOCK FROM AUSTRALIA AND NEW ZEALAND.

San Francisco, October 9.—Some months ago BRADSTREET'S reported the export to Australia of registered merino sheep from western New York, Vermont and Ohio flocks. Since then fifty

pure Australian merinos were imported by Mr. Haggin, of San Francisco, for his Sacramento farm. The sheep were on exhibition at the late state agricultural fair, and were greatly admired. This is in the line of crossing suggested by BRADSTREET'S in an article commenting upon the export of American sheep to Australia. Mr. Haggin satisfied himself by experiment several years ago that a cross with Australian sheep improved the fleece and increased the size of the American type of merinos. This fact is likely to lead to an interchange of stock which will be materially beneficial to both countries. At all events, it is in the interest of agricultural development that the fact in question should be extensively known in this country.

But this is only a very small part of the contemplated interchange of blooded stock between Australasia and the United States. Several years ago prominent colonists of New Zealand resident in Auckland established a Stud and Pedigree Stock Company, with a capital of $1,250,000, of which $900,000 is paid up, and they are now in a position to supply not only the Australian mainland with blooded stock, but this country also. Sires and dams of the purest blood were imported from England regardless of cost, and the same remark applies to the company's cattle and sheep. The pedigree of each is perfect. The shorthorn bull, Duke of Newcastle, belonging to the New Zealand Stud and Pedigree Company, was awarded first and champion prizes at the Intercolonial Exhibition, Sydney, for the best bull of any breed, and for which the whole of the Australian colonies competed with imported and colonial bred bulls. Many of the Duke's progeny are among the shorthorn herd. This company also owns the largest herd of pure Herefords in the world, numbering 600, and their progeny meets a ready sale in Australia. Sixty-four bulls and heifers of this herd will arrive from Auckland next steamer, having been ordered by California and Nevada breeders who want to improve their stock. The price here is $400 a head. Arrangements are also being made to establish a branch farm in the neighborhood of San Francisco, where the live stock from this great stud farm can be kept pending disposal, but the chances are that only those shipped to order will arrive, the colonial demand being active and increasing.

The thoroughbred horses and Clydesdales are well known throughout Great Britain and Australia, and are unequalled south of the equator. The sheep are also the best of their class. The meaning of this will be understood when it is stated that at a recent sheep sale in Melbourne a merino ram sold for over $16,000 (3,150 guineas). This ram did not belong to the New Zealand Stud Company, but their stock contains quite as fine animals. Indeed, some thirty years ago the original pure Saxony merino flock of the colonies was founded at Auckland, and soon netted a fortune for its owner.

It is evident, therefore, that we are entering upon new and important relations with New Zealand, and through it and its financial institutions, with Australia generally. New Zealand is the gate through which Australia is entered. It is decidedly the most progressive, as it is destined to be the greatest, of all the Anglo-Saxon commonwealths in the south Pacific.

AFFAIRS AT BERLIN.

Berlin, September 26.—In order to give a more extended, though not complete, idea of the amount of capital invested in the Berlin Exchange I will give some statistics of shareholders' banks which are quoted in the Exchange list, and therefore brought into the market. The number of such banks amounts to 108 and their shares represent a capital of 1,387,000,000 marks ($346,750,000). A considerable percentage of these houses, however, were not started in Germany, nor have they an establishment here even in the form of a branch. There are five banking institutions in Austria-Hungary, five Russian, two more in Belgium and two in Holland, one in Denmark and one in Switzerland, in all sixteen, with a capital amounting to the sum of 336,000,000 marks ($84,000,000). The capital of the 92 companies started and established in Germany amounts to 1,051,000,000 marks ($262,750,000).

Though it is indifferent for the estimate of material and amount of capital current in the operations of the Berlin Exchange whether the stocks emanate from foreign or native companies, it is still important to make this difference. In the first place, one may suppose that not the whole capital of the foreign companies, nor even the greater part of it, is the object of speculation here, so that from the 336,000,000 marks at least 200,000,000 marks must be subtracted. The total amount of bank shares current in the transactions of the Berlin Exchange is therefore reduced to 1,187,000,000 marks ($296,750,000), still a very ample capital, and surpassing that of the 221 industrial companies by the round sum of 171,966,000 marks. These figures, as well as the statistics mentioned in my previous letters, are intended to give an approximate idea of the general movement of business throughout Germany and not only of the Berlin Exchange. The foreign banking institutions, though partly dealt in here, do not in a proper sense reflect the commerce and industry of Germany. I therefore feel justified in making this difference between German and foreign bank associations.

The financial results of the 108 banking companies in 1882 are expressed by the following table:

GERMAN BANKING COMPANIES.

Banks.	Dividends paid, p. ct.	Banks.	Dividends paid, p. ct.
5	None.	7	7
1	2½	7	7⅛@ 7¾
1	3	6	8 @ 8¾
5	4	2	9 @92-3
4	4⅛@ 4¾	6	10 @10½
10	5	1	11
14	5¼@ 5¾	1	12
9	6	2	14
10	6¼@ 6¾	1	15

FOREIGN BANKING COMPANIES.

Banks.	Dividends paid, p. ct.	Banks.	Dividends paid, p. ct.
1	5	2	9⅝@93-5
1	6	1	10
3	7	1	10½
2	7½	1	12¾
1	8	1	15
2	8½		

This shows that the foreign banks whose shares are in the market here had very good results in 1882, for none of them paid less than 5 per cent. dividends, whereas the greater number distributed a considerably higher percentage, even to the threefold amount of the lowest above named. The German banks, too, have paid satisfactory dividends. Of ninety-two companies only five paid no dividends at all, two yielding only small profits up to 3 per cent., nine paid the accustomed interest of 4 to 4¾ per cent., and the remaining seventy-six paid mostly very good dividends. The semester balances of this year, as far as they are published, are not inferior to the corresponding results of last year, and the initiated pretend the second semester will be equally favorable. Not noticing these predictions for the present, and only taking the semi-annual accounts into consideration from January 1 to June 30, the favorable result is the more astonishing, as during that period no great transactions like government or private European loans took place, and speculation in minor branches of the Exchange was not particularly animated, but confined within moderate limits. These satisfactory results must have been earned, therefore, by the common daily transactions, or, in other words, the industrial and commercial traffic in Germany must have been so considerable during the first six months of this year that the banking houses could realize their profits simply by mediating money matters for industry and commerce. Should this conclusion be correct, that we may measure by the extensive transactions or profits of the banking establishments, the increased extent of industrial and commercial business, then we might anticipate a favorable outcome to the commerce of Germany for the calendar year 1883, for the banking institutions have also, according to what we hear, satisfactory results for the other three months now drawing to a close. It is, however, very much the question whether the fluctuations in industrial and commercial pursuits may be unerringly measured by the publication of the banking houses. Besides these banking companies there are, as elsewhere, no small number of private banks which frequently have a considerable capital at their disposal, but the majority of them cannot rival with the capital of companies, so that their importance and business transactions daily decrease. Nowadays, especially, the manufacturers and merchants frequently prefer banking companies—firstly, because they deal on easier and more convenient terms with some of them, and, secondly, because they think the connection with a great house makes their business and character appear in a better light. If, therefore, a part of the business formerly in the hands of private banks has passed to the banking companies, the increase of the latter's transactions cannot be regarded as conclusive evidence of the rise of trade and industry. The augmentation of business and the profits of banking companies are known by the publication of their balance-sheet required by law, but the decrease of the business of private banks usually remains a secret—not to mention that the increased facility and easier terms offered by some great banking companies to their customers frequently induce them to exceed justifiable limits in their transactions—the growth of business is not therefore always a sign of solid activity. But there are other safer and surer signs of the sound foundation of a rise in commerce and industry. At any rate, no great complaints of over-production have yet made themselves heard. Most wares find an easy market, and in some branches the manufacturers can scarcely meet all demands. Of course, there is a reverse side to the picture, and some trades suffer from competition, but in general good prospects are prevailing.

To return to the Exchange, inactivity continues, and money is unusually abundant for the time of year; only during last and this week the discount for first-class letters of exchange rose to 3⅜ per cent., up to that date it was only 3 and 2¾ per cent. There is no animation whatever, from Vienna or Paris, or elsewhere. Altogether Vienna has long lost its decisive influence on the capital of the German empire, and is far more apt to be influenced by Berlin than the contrary, and Paris is still suffering too severely from the crash of 1881—to say nothing of the depression produced by the course matters have been taking in Tonking, and the decrease of public revenue whilst expenditure is on the increase, so that in the immediate future no impulse can be expected from that direction. It is even doubted here whether the subscriptions for 600,000 shares of Panama obligations, which is going to take place in Paris on October 3d, will be successful. The only impetus observable sometimes on the Berlin Exchange is owing to reports more or less trustworthy of the plans of the Prussian Minister for Public Works for buying one or other of the German private railways for the Prussian government. Such reports are easily accepted, as everyone is convinced that sooner or later the government will buy up the lines in question, because private railways cannot profitably hold their own since the Prussian government has bought some of the railways. Just in proportion to the reported offers of government the shares of such companies are speculated in more or less animatedly. When speculation in consequence of such news reported for two or three days has exhausted itself, stagnation again sets in.

I should here like to mention a striking peculiarity in this market. Prussian 4 per cent. consols are quoted now at 101.80 and the 4½ per cents. at 102.60. It is quite evident that the trifling difference of 4/5 mark is not in proportion to the difference of ½ per cent. interest; but this anomaly is easily explained, the Prussian government being entitled to transform January 1, 1885, 4½ per cent. consols to the amount of 525,000,000 marks ($131,250,000), and a still larger sum of 4½ preference shares of the railways bought by the government, into 4 per cent. consols. The fear that the government will carry out this transaction at the stated time has lately depressed the price of the 4½ per cent. consols.

However scanty the corn harvest may have been here, our yield of fruit has been remarkably plentiful. The trees literally bend beneath the weight of their burden. Apples, pears, plums and the finer sorts of fruit are unusually abundant. Peaches are luxuries in Germany that only very well-to-do people can indulge in. This year, however, every one can enjoy them; a measure containing sixty peaches can be purchased for about 1 mark (25 cents), and still lower. The common sorts of fruit are more than one-half, nearly two-thirds, cheaper than usual.

Besides the German, the Danish sugar industry is most flourishing. According to the balance of the manufactories for 1882-83, just published, the shareholders receive a dividend of 10 per cent., and a considerable amount of the profits have been put by for next year.

In Austria-Hungary, in 1882-83, 230 sugar manufactories were at work, 17 of which consumed more than 600,000 cwt. of beet root. On an average each manufactory uses 88,000 tons of coal, and the average number of persons employed in each is 200 men and 90 women, besides 9 engines of 94 horsepower. The Russian naphtha (petroleum) industry is on the increase, notwithstanding unfavorable conditions and crises in the market. L.

LETTERS TO THE EDITOR.

A PACIFIC-COAST VIEW OF THE TARIFF ISSUE.

To the Editor of BRADSTREET'S.

SIR—However inexpedient it may be, there is now little doubt that the tariff will become an issue in the next presidential campaign. This is to be regretted from a variety of reasons, but most of all because of the uncertainty which it creates. It is clearly impossible to conduct any large business enterprise successfully if there is not a reasonable certainty that it will not be interfered with by legislation. For this reason, as has been frequently stated in BRADSTREET'S, a high protective tariff is preferable to an unsettled and shifting one, because business adapts itself to the former and cannot to the latter. But politicians do not regard it in that light. They simply consider the tariff as a subject for popular agitation, and dread above all things else fiscal finality. To them, and for their interests, the tariff should be an open question; but the country at large has everything to gain by stability.

In saying this I by no means admit that the tariff is just what it should be. On the contrary, I think it might be very easily amended to the great and substantial gain of the community at large; but people prefer to put up with its defects, many and glaring though they be, to risking another congressional wrangle over the schedule, with the absolute certainty of unsettling much and settling nothing. It were better for the country to rest content for a few years until the present tariff has been thoroughly tested than to blindly rush into changes without knowledge or experience. When the campaign of 1888 opens the tariff issue may be taken up with knowledge and propriety, for the reason that its workings will be understood and that the financial condition of the country will then be such as to admit of a large reduction of income without impairing any branch of the public service.

As I have already said, however, this will hardly be the course which politicians will pursue. The tariff will be the main issue in the campaign of 1884, and the material interests of the country will suffer thereby. And this suggests the inquiry, why it happens that the interests of party politics should so diametrically conflict with the best interests of the country. It seems paradoxical to say so, but this is undoubtedly the case. The reason would appear to be that under our system of government, with its frequent elections, a continuous policy is impossible, and therefore party leaders are compelled to lay hold on some salient point upon which to get up a cry of extravagance or retrenchment in lieu of a national policy. The tariff is the only point in our entire system which meets the requirements of the case, and it is seized upon with avidity by the two great national parties, while the greenbackers squat themselves at the door of the mint with a wisp of paper in their hands clamoring to have it stamped "Money."

If we had a land or law reform question to solve, a state church to disendow, or privileges and primogeniture to abolish, the exigencies of party management would not compel a perpetual tariff war. Having none of these social questions to grapple with, being without even a decent industrial grievance, and being too prosperous as a whole to pay much attention to corporate aggression, politicians are without a pretext for disputation outside the tariff. Thus it happens that our very advantages are turned against us by those whose sole purpose it is to acquire office and conduct the administration of public affairs. C.

San Francisco, October 9.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

A warranty in a policy of marine insurance "free from capture and seizure" includes the seizure by revenue authorities for smuggling, according to the decision of the English House of Lords in the recent case of Cory et al. vs. Burr.

Shares of stock in a mining corporation, whose principal office is in California and whose entire property is in another state, are, when held by citizens of California, taxable in that state, although the corporation is obliged to pay taxes on its property in the other state, according to the decision of the California Supreme Court in the recent case of San Francisco vs. Fry.

When a note is perfect on its face and contains no indications that it is delivered in violation of any agreement, and is taken in good faith and for a valuable consideration, the taker will not be affected by any agreement made between the principal and surety, of which he has no notice, according to the decision of the Supreme Court of Indiana in the case of Whitcomb et al. vs. Wheeler, decided on the 10th inst.

When no place of delivery is designated by a contract for the sale of articles of merchandise the articles are to be delivered where they are at the time of sale, according to the decision of the Supreme Court of Minnesota in the recent case of Janney vs. Sleeper. If the goods are not on hand but are to be procured elsewhere, then the store or shop of the seller, or other place of business, is presumptively the place of delivery.

In the case of Pearson vs. The Concord Railroad Company (decided August 30), where certain directors of railroad companies bought for their roads, at

prices far above the market value, a controlling interest in a connecting road for the purpose of controlling that road for the advantage of the other companies, and where the said directors subsequently made contracts and arrangements between the railroads to the detriment of the stockholders of the connecting road, the Supreme Court of New Hampshire held that a court of equity should interfere and restrain the execution of such contracts.

The Kentucky Court of Appeals held, in the case of Norsworthy et al. vs. Sparks, decided October 4, that a conveyance from husband to wife based upon an ante-nuptial agreement, by which the husband agreed to secure to the wife the amount received by him from her, was based upon a sufficient consideration, and was not fraudulent as to creditors, although not made until after the husband became embarrassed, there being no allegation that the property conveyed was worth more than the husband had received from the wife.

In the case of Jackson vs. The State, decided by the Supreme Court of Georgia on the 9th inst., the prisoner was indicted for forgery under the following circumstances: An order requested the drawee to pay for fifty-four pounds of lint cotton at 8½c. per pound. On the margin of the order were written the figures "54 lbs." The only charge in the indictment was that the figure 3 had been inserted before the marginal number, so that it read 354 lbs. The Supreme Court, reversing the opinion of the court below, held that the alteration did not change the value of the order, and could not injure any one, and that the indictment was demurrable.

The Boston Rubber Shoe Company recently brought a bill in equity in the United States Circuit Court, at Boston, against William Lambkin and others, for the infringement of a patent granted to one Bickford in 1877 for improvements in rubber boots. It appeared in evidence that a prior patent had been granted to one Moore in 1864, and had been reissued in the same year. Judge Lowell dismissed the bill, holding that there was no room for invention in adapting a strap or loop of India rubber to a boot of the same material in one of the forms shown by Moore in his reissued patents.

Where it is said of a judgment of a court having jurisdiction that it is void because of fraud in its procurement, this must be understood in a qualified sense, according to the opinion of the Indiana Supreme Court in the case of Hogg vs. Link, decided on the 10th inst. The statement referred to means that the judgment will be treated as a nullity when the fraud has been shown in a proper proceeding between proper parties and by competent evidence. Until this has been done the judgment, valid on its face, is only voidable, and must be be treated and enforced as a valid judgment.

The moral obligation to pay a debt survives a discharge in bankruptcy as it does a release wrought by the statute of limitations, and constitutes a valuable consideration for a subsequent promise to pay, according to the decision of the Kentucky Superior Court in the case of Ford vs. Sidebottom, decided October 3. The court held further that the fact that in this case the note which the bankrupt promised to pay was made payable to the payee individually, when it should have been made payable to her as administratrix, did not invalidate the promise which was made to the payee as administratrix, to whom the bankrupt owed the moral obligation to pay, nor did the fact that the promise was without consideration as to another payee in the note affect the right of the administratrix to recover.

A lease stipulated "that the party of the first part hereby rents and leases for the period of five years, from January 1, 1874, with the privilege of five years more, and with the right to a revaluation as to rent at the end of five years, to said party of the second part." Under this lease the party of the second part remained in possession of the premises after the expiration of five years, and paid the rent according to the lease, and nothing was said by either party on the subject of five years' holding. Under these circumstances the Supreme Court of Indiana held, in the case of Terstegge vs. The First German Benevolent Society, decided October 12, that the holding over was an election to hold for the additional five years, and bound the party of the second part for the rent for that period.

Where one railroad company contracts to transport live stock over its own roads and a part of the road of another company which is under its control and management, and damage is done to the stock while in the custody of the latter company through its negligence and inattention, the owner is not confined to suit on the contract against the company making it, but may maintain an action against the company inflicting the injury. So held by the Supreme Court of Georgia, in the case of The Southwestern Railroad vs. Thornton, decided October 9. The court holds that the violation of any specific duty, whether it arises from the law or flows from relations created by contracts expressed or implied, accompanied with damage, gives a right of action, and that when the transaction partakes both of the nature of a tort and of a contract, the party complainant may waive the one and rely upon the other.

Some months ago, in a review of a case in which the question of the constitutionality of the Civil Rights Act of 1875 was involved, we ventured to express the opinion that since the inhibitions of the Fourteenth Amendment, having regard to the abridgement of the privileges and immunities of citizens, were directed only against the states, it was difficult to see how discriminations made by persons or corporations as such, and affecting the privileges and immunities of citizens, could properly become the subjects of congressional legislation. This view of the question is sustained by the decision just rendered by the Supreme Court of the United States in the five cases known as the Civil Rights cases. These cases arose out of prosecutions under the first and second sections of the Civil Rights Act of 1875, for the refusal to admit certain colored persons to equal accommodations in inns or hotels, in railroad cars and in theaters. The defense set up in each case was the alleged unconstitutionality of the law. The act referred to, as will be remembered, declared "that all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities and privileges of inns, public conveyances on land and water, theaters and other places of public amusement, subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude," and further provided a penalty for the violation of its provisions, and gave exclusive jurisdiction to the District and Circuit Courts of the United States in cases arising under the law. The Supreme Court, in a long and carefully-prepared opinion by Judge Bradley, decides that Congress had no constitutional authority to pass the sections in question under either the Thirteenth or the Fourteenth Amendment, and that those sections are unconstitutional and void. The court holds that the Thirteenth Amendment gave no power to Congress to pass the sections in question, because that amendment related only to slavery and involuntary servitude, and had nothing to do with different races or colors, and that it is no infringement of the Thirteenth Amendment to refuse to any person the equal accommodations and privileges of an inn or a place of public entertainment, however violative it may be of his legal rights. The legislation under consideration cannot be supported under the Fourteenth Amendment for the reason, says the court, that that amendment is prohibitory on the states only, and that the legislation authorized to be adopted by Congress for enforcing that amendment is not direct legislation on the matters respecting which the states are prohibited from making or enforcing certain laws or doing certain acts, but is corrective legislation necessary or proper for counteracting and redressing the effect of such laws or acts. The Civil Rights Act falls within the former category, and therefore cannot be upheld. The court adds that its decision affects only the validity of the law in the states and not in the territories or the District of Columbia, where the legislative power of Congress is unlimited, and that it does not undertake to decide what Congress might or might not do under the power to regulate commerce with foreign nations and among the several states, the law not being drawn with any such view.

BUSINESS NOTES.

The Kidderminster *Shuttle* of October 6 reports that the carpet trade has perhaps never been heavier than during the past season. Preparations are now making for the coming season. Materials are low, wool is firm and spinners are busy.

The St. Louis papers estimate that the recent carnival of the "Veiled Prophets" resulted in a net gain to the city of $250,000, not counting the sum spent for refreshments other than that needed to sustain life. The total number of visitors is put down at 200,000. The theaters received $50,000 for the week, and the horse-car companies averaged $30 per day per car. The leading hotels accommodated 10,000 guests.

The municipal council of Paris has passed a resolution to lower the price of gas and the company has resisted. A scientific commission has, therefore, been appointed to decide whether the price can be lowered and a profit realized. It is surmised that the result will be in favor of the city. The report must prove of exceptional interest as it will bear upon the whole of the illuminating-gas industry, its history and condition and progress.

The total number of failures reported in *Kemp's Mercantile Gazette* (London), as having occurred in the United Kingdom and Ireland during the fourth week in September was 164, against 195 in the like week in 1882, and 197 the preceding year. England and Wales had 147, against 177 last year and 181 the preceding year. Scotland had 15 against 16 last year and 10 the preceding year, and Ireland had 2 against 2 last year and 6 the preceding year. The number of disasters in the grocery and provision trade was almost double the highest number reported in any other.

A Paris cable states that Mr. John W. Mackay, of the Postal Telegraph Company, and James Gordon Bennett have contracted with Messrs. Siemens Brothers for two transatlantic cables now constructing at the works of the firm near London. The first cable is expected to be ready for use June 1, 1884, and the second a few weeks later. Mr. Bennett's own paper in announcing the above says: "The policy of the company to be organized will be to maintain the absolute secrecy of messages intrusted to it, to forward and deliver them with the utmost rapidity, and to charge only a fair tariff, thus meeting the present demand for economy."

To those who reside in the larger cities where the telegraphic business transacted daily is so large, it will appear strange that the total number of messages transmitted by the Western Union Telegraph Company in the year ended June 30 last did not equal one message each per head of population throughout the entire country. In the year noted there were 40,581,177 messages sent and delivered, against 38,842,247 in the year preceding. In Australia, Switzerland, the United Kingdom and Holland the rate is higher than in the United States. In the first named the number sent is about 1.7 messages per capita per annum, in Switzerland about 1, in the United Kingdom 9/10, and in Holland .8.

The Wall Street National Bank has changed to a state bank under the name of the Wall Street Bank. The First National Bank of Holton, Kan., has been organized; capital $50,000; Thomas P. Moore president; James P. Moore cashier. The Bank of Salem, Mo., has increased its capital stock $13,000. The following changes have been made with presidents: First National Bank of Hebron, Neb., A. G. Collins in place of B. S. Ferris. National Bank of Lebanon, Ky., F. Wilson in place of R. M. Spaulding. First National Bank of Leslie, Mich., M. E. Rumsey in place of A. Walker. Lewiston (Idaho) National Bank, N. W. Beasley in place of J. Beasley. Sterling (Ill.) National Bank, James R. Bell in place of B. C. Church.

It is stated that the sugar refining interests of Canada are urging the Dominion government to adopt "the bounty system of the United States." The duty now paid on imported sugar for refining purposes is $1.75 per 100 pounds. It is represented that the duty paid on imports into the United States is $2.75 per 100 pounds, but a bounty of $3.15 on all granulated sugar exported is paid, which is thought to be equal to the duty paid on the quantity of raw sugar required to produce 100 pounds of granulated. The Canadian refiners think if this system is adopted that on every 100 pounds exported they will receive $2.05 bounty if the duty on raw sugar remains the same, and they thus hope to be able to compete with the refiners of the United Staes in foreign markets.

The British labor market, as reported by the London *Labour News* of October 3, was still unsettled in regard to the coal and iron trades. About 20,000 men had stopped work in South Wales because of the 10 per cent. reduction. They offered as a compromise, however, to accept 5 per cent. reduction for the present. About 300 engineers had struck at Leeds on being refused higher wages. Disputes were still frequent in the colliery districts. Building, ship-building and marine engineering are generally doing well. Navvies were wanted all over the kingdom for railway and tramway construction. Work was progressing satisfactorily in the iron-manufacturing districts. The textile trades were improving, and workmen were wanted in the boot and shoe trades. Emigration continues very active.

According to the San Francisco *Chronicle*, the independent refiners of petroleum have been encouraged at the successful competition of the Tidewater Pipe Line with the Standard Oil Company. The *Chronicle* believes the Pacific coast may escape the clutches of the Standard. It has an oil territory covering more than 600 square miles, and thirty wells daily producing 1,500 barrels of crude petroleum. With five or six pumping stations, twenty-five miles of pipe line, with refineries capable of handling 2,000 barrels of oil daily, and with low prices, eastern importations might be excluded. A guarantee of 5,000 barrels daily production for the summer of 1884, with easy transportation, and the plan might work. But can this be done? The outlook is certainly bright, but resistance to wealthy and well-organized business competition cannot rest on a bright outlook alone.

The gradual absorption of the smaller by the larger telephone companies goes steadily on. A press dispatch of the 17th inst., dated Boston, states that the stockholders of the Suburban, Bay State, Boston and Northern Telephone Companies voted to-day in favor of consolidating with the American Bell Telephone Company. West, northwest and southwest similar results are being quietly effected. It is not impossible that a national telephone company may yet control the use of the instrument throughout the country, and it is a significant fact that telephone improvements, many of them, hang heavy on the hands of the inventors. They are generally of little use except in connection with the instrument already patented, and if those owning the original patents do not buy up the needed improvements the dear public will, of course, make no complaint until after the original investors have gotten all their money back.

From the immigration returns for September it is seen that New York had 32,777 arrivals, against 34,753 in September, 1882. Baltimore had 2,346, against 2,891, and San Francisco but 89, against 133. The number of arrivals at Detroit increased, showing 2,014, against 1,048. New Orleans and Philadelphia also increased, the former reporting 267 and the latter 1,705, against, respectively, 93 and 1,678. Boston had declined, the number being 3,595, against 4,733. Minnesota had only 65 arrivals, against 267 in September, 1882. Huron had 2,361, against 3,753, and Passamaquoddy 500, against 586. The following shows the total number of immigrants, and the different nationalities, during September and three months ended September 30:

	—*September*,—		—*Three months ended Sept. 30*,—	
Countries.	1883.	1882.	1883.	1882.
England and Wales	8,803	8,363	22,687	22,239
Ireland	4,396	4,016	13,279	13,297
Scotland	967	1,300	3,753	3,023
Austria	789	639	2,684	2,577
Germany	15,988	18,080	43,659	50,811
Italy	560	1,094	2,044	2,888
Norway	1,267	1,931	5,003	7,249
Sweden	2,342	3,040	7,266	11,529
Dominion of Canada	5,398	6,482	14,264	18,205
All other countries	5,209	4,990	16,128	25,603
Totals	45,719	49,935	130,327	158,021

The Minneapolis millers have been furnished food for reflection in an interview between Henry Richmond, president of the Buffalo Board of Trade (and a member of "the Villard party"), and the St. Paul *Pioneer Press*. Mr. Richmond confidently states that the Northern Pacific is to put a line of steamers on the great lakes between Duluth and Buffalo, with the avowed purpose of transporting the hard wheat of the northwest to Buffalo at less rate than it is being laid down at Minneapolis. Mr. Richmond's inference is that Buffalo and Rochester —already considerable milling centers—will be thus enabled to compete so thoroughly at seaboard with the Minneapolis millers as to seriously injure the business of the latter, and "to make Buffalo one of the greatest milling centers in the United States." To the casual observer there is no immediate prospect of the Minneapolis mill owners losing heart, or of their stampeding to the stone walls about Black Rock Harbor. And for several reasons: First it may be stated that the Northern Pacific people just at present have something to occupy their attention to the entire exclusion of going in debt for or purchasing a line of lake propellers. Minneapolis is to-day the market for the surplus wheat of the northwest. The Northern Pacific Railway extends to that city, and it is not easy to perceive why or how any business man will find reason to develop a new market of equal capacity 1,000 miles distant. Baltimore used to aspire to do all the grain export trade, and there was talk of New York's losing its prominence in exporting grain. But it didn't and it hasn't. The cotton mills some of them have gone to the cotton fields, and the result does not justify the belief that any line of steamers with low freights on cotton from the south to the New England cotton mills will result in disturbing the heavy-dividend-paying cotton mills in the so-called "New South." The flour mills will likewise crowd after the wheat fields.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

The week has been a very exciting one in Wall street. The fluctuations in prices have been extreme, and the condition of affairs has been described as a semi-panic. After such affairs there usually succeeds a period of calm. Great surprise has been often expressed that with all the severe declines in prices no failures have occurred in the street. This is owing to the very peculiar state of affairs there at this time. Failures occur when a panic comes as it did in 1873, catching the market with prices high and every banker's and broker's office loaded to the guards with securities of all sorts and kinds held by a wide circle of customers who had bought to sell again when they should show a profit. It must be a "public" market which is hit disastrously for many failures to occur. A sudden and severe decline in prices then catches the people who are carrying the securities quite unprepared, and before they can sell out prices are down to a point where they cannot meet their engagements. Wall street is not that way now. It has been working down to a hard-pan basis for nearly or quite two years, and, as is always the case under such circumstances, stocks have become concentrated in the hands of large capitalists, and it is these who have been suffering the losses of the past three or four months. The "outside public" left the street last year completely denuded of its cash, and, as the circle of customers contracted under the exodus, the brokers found their business fall off, and their offices become bare of stocks and securities of all kinds. It has been almost starvation times for the ordinary run of them until quite recently, such business as was done being almost wholly through the houses connected with the baker's dozen of big operators. The very large transactions in the market beginning with the first great fall of the Villard stocks in August necessitated a wide distribution of orders, and in this way the brokers have, as a class, been kept well employed. The prospect, however, is rather blue for them, since a period of prolonged stagnation of business is likely to follow such events as are now occurring. Great losses in speculation always tend to kill speculation.

The crash of prices has again been mainly in the Villard stocks, and it reached its worst on Wednesday, when the market was in that state of "semi-panic" referred to. Monday was a bad day, Tuesday was worse, and Wednesday worse than all. This came from a very peculiar circumstance. It will be remembered at the close of last week rumors were in circulation that Mr. William K. Vanderbilt, second son of William H., had lost so heavily in the street as to be practically bankrupt. As a matter of fact this had been known in Wall street ten days before. When the rumors spread outside of it, they seemed to be so startling that a swarm of reporters rushed to the young man's father to inquire about the matter; and on Saturday came out the now famous interview with that gentleman, in which he denied with considerable energy the whole story, paid many back-handed compliments to Wall street bears, said prices had gone down far enough, and that he was himself buying stocks at this time. It was this last which gave the great crowd of small bears in the market a bad fright. They rushed to buy in their shorts, and by this operation the sustaining force of a large short interest was eliminated from the market in one day. Of course prices rallied considerably under the buying, but on Monday morning, after some more buying (probably on out-of-town orders) had been done, the market was found to be without support. If Mr. Vanderbilt was buying, his purchases were so small as to be inappreciable; and most people think he was only "talking bull," and not acting it. It was only a little while before a flood of long stock came flowing on the market as if some big box had been opened to its widest extent. It is true the Vanderbilt stocks held comparatively steady, but they were about the only things that did; and the better-informed operators suspect that a leading member of the Northern Pacific party having persuaded Mr. Vanderbilt to give supporting orders for his own stocks and thereby steady the market, improved the opportunity to unload himself. Anyhow, Oregon Transcontinental, after holding nervously about 47, suddenly broke, and before the close of the day it had fallen to 41, Tuesday it declined to 38½, and on Wednesday it dropped to 35. From this figure the stock rallied under free buying by the great bears, and touched 40 on Thursday. At the same time the Northern Pacific stocks were thrown on the market in loads, but as all the preferred is wanted for voting purposes to-day, most of it came out on sellers options, covering the period of the close of the transfer books, and between the "regular" sales and the option sales there was sometimes the extraordinary difference of 5 per cent. This was unmistakable evidence that the Northern Pacific pool were unloading their holdings in that way; and the experienced operators on the bear side, instantly discovering what was being done, renewed their assault on the stock in the same fashion, and so far forced down the price of both regular and option stock that the members of the pool were speedily forced to stop selling or the whole market would have gone to pieces. At the same time a dash was made at the Gould stocks, which were handled for a time with great rudeness; but Mr. Gould's brokers were on hand with supporting orders, and held them as well as they could against the storm. To add to the general demoralization, the Vanderbilt stocks gave way under the pressure brought against them. Northwest dropped badly, so did Lake Shore, and even New York Central, which had stood like a rock, suddenly broke 1½ per cent. The pool in St. Paul weakened like the others, and the stock fell from 99 to 94. The coal stocks, next to the Villard securities, were objects of attention, and Lackawanna, under a continuous pour of stock, dropped to 111; but Reading gave way only slightly, and Jersey Central gave unmistakable signs as the day wore on that there was something going on there rather ominous for the shorts in it. A few minutes before 3 o'clock, as the market was coming to a quiet and tired close, that stock was suddenly bid up from 80 to 82, causing extreme confusion and alarm in the triumphant cohorts of the bears.

On Thursday all attention concentrated on this stock, for it was found to be virtually "cornered." When the market opened there was a rush of all the weaker shorts in it to cover, and the price rose by a series of jumps from 83 to 90. The bears were furious. They went about threatening that if the stock was put up to "corner" prices, they would "bust the market wide open." The pool in the stock protested that there was no corner, but that the stock was held heavily in Philadelphia, and that the Philadelphia parties had taken all they owned out of the market and thus made the scarcity. The big bears refused to cover; and the loaning rate for the day was put up to the killing rate of 3 per cent. on them, that is, for the use of 100 shares of stock over night they were charged by the pool (who, of course, had it to lend) $300. Later in the day, by the large decrease in the short interest, the loaning rate sank to ¾ per cent., and the price of the stock closed at 85⅝ per cent. The general market would have rallied anyway, but this set-back to the bears, and a more moderate "squeeze" of the same kind in Northern Pacific preferred, caused it to stiffen considerably more than it would have done without such extraneous aid. The bear forces certainly received a considerable set-back. Yesterday, however, Jersey was quiet, weakened considerably, and the market exhibited all sorts of feverish fluctuations, quite bewildering to small traders.

It was while this Jersey Central "squeeze" was in progress that the loaning rate for money showed the first symptoms of a rising tendency, the rate going up for a time to 4 per cent., though it dropped back again to 3 per cent. It would be the proper tactics of the bear operators to make money "tight" at this time, to force the pool in Jersey Central to let go; but it is doubtful, with loanable funds so abundant as they are, whether they could create enough of an artificial scarcity to send the borrowing rate to a point where the pool would be hurt. Exchange rates have weakened nearly to the gold-importing point, the posted rates being now $4.82 and $4.85, and some French gold has already come in. The London market is quite flat, and there is nothing being called for from this side except on "scalping" orders by cable, which is now quite a feature of the foreign business. The government bond market is strong. The closing quotations yesterday were as follows:

	Oct. 12, bid.	*Oct. 19, bid.*	*Oct. 19, asked.*
U. S. 4½s 1891, registered	114½	114½	114⅝

The bank statement of Saturday showed an expansion in the loans of $1,867,800—not a favorable feature at this time—and a nominal increase in the surplus reserve of $75,925, leaving it at $2,165,075. The following are the comparative totals of the statements of October 6 and October 13:

	Oct. 6.	*Oct. 13.*	*Differences.*	
Loans	$326,059,900	$327,927,700	Inc.	$1,867,800
Specie	56,602,900	56,448,500	Dec.	154,400
Legal-tenders	23,308,800	24,836,900	Inc.	1,527,100
Deposits	312,090,200	316,477,300	Inc.	4,387,100
Circulation	15,082,800	15,177,900	Inc.	95,100

The proportion of total reserve to liabilities is now 25.68 per cent., as against 25.61 per cent. at the corresponding week last year.

From New Orleans, La.: Money is in good demand. Call loans are 8 per cent. Louisiana 7s are stronger and premiums are easier.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

SUMMARY.

Special telegrams to BRADSTREET'S indicate that the general commercial movement has been about equal to that of the preceding week. At various leading distributing centers in the east active preparations are making for the opening of sales of spring goods. The recent lower range of temperature has assisted the movement of merchandise among wholesale clothiers and dealers in heavy-weight dry goods. In the iron trade there has been a nominal cut of 50c. per ton, which will benefit only the regular customers of the company announcing the lower rate. From this it can hardly be regarded as an actual or general reduction in the price of iron, for none of the competitors of the furnace making the lower rate have announced any change. Some eight or ten pig-iron furnaces have been blown out during the past ten days, and a quiet winter season is looked for, with possible additional nominal reductions in price, if slack demand calls for it—to the extent of perhaps $1 per ton. Anthracite coal has improved in demand during the week, and the excess production thus far in the year amounts to about 2,100,000 tons as compared with 1882. The call for bituminous coal and for coke for industrial purposes during the year has greatly exceeded that demanded in 1882, and promises to still further increase. The price of wheat has declined about 1½c. per bushel in the week and Indian corn about twice as much. The causes are the old ones, of stocks so large, both at home and abroad, as to shut out of sight the question of demand and supply based on the size of the past season's crops and surpluses. Exports continue restricted, and the demand from abroad is nominal. Provisions are lower, owing to the same causes which have operated in favor of their depression for some weeks past. Arrivals of hogs at the west continue heavy; exports are moderate, and the home demand is not excessive. Wool has been moderately dealt in by manufacturers at generally unchanged prices. Petroleum is dull, and for speculation not materially changed. Refined is firm, and crude for export is from ⅛c. to ¼c. per gallon higher, and exports are increasing rapidly. There were 180 failures in the United States reported to BRADSTREET'S during the past week, 14 more than the preceding week, 39 more than the corresponding week of 1882, and 71 more than the same week of 1881.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: General trade is rather dull, being confined to immediate wants only. Collections are fair. Money is in good demand.

From Boston, Mass.: There has been a fair jobbing movement in manufactured wares and leading food staples, and the week's business is up to the average, though not specially active in any particular line. Raw staples have been rather quiet, with no material change in values, though the tendency is more or less in favor of buyers. The most prominent features of the situation are an improvement in the jobbing and retail dry goods departments and the appearance of the first installment of buyers in the boot and shoe market. Sales of wool are a little larger than last week. The money market is steady, with a light demand from regular mercantile sources. Bank discounts range from 5 to 6 per cent. and outside transactions run up to 6½. The two fairs are attracting a large number of strangers to the city.

From Philadelphia, Pa.: The trade movement in most lines has continued on a moderate scale, and while there is no depression or uneasiness in general business circles, there is a feeling of disappointment in some quarters that the volume of trade does not show a greater increase for the time of year. The demoralization of the long interest on the stock exchange, frequent losses and suspensions in the commercial world, and the continued evidence of overproduction in some lines contribute to retard the growth of confidence, but in spite of the prevalent caution the general view of the business situation is hopeful.

From Cincinnati, Ohio: General trade has been unsettled, and closes with a better feeling, although, as a rule, prices are weaker than last week. The borrowing demand for money is not equal to expectation, and the result is a large supply of loanable funds in the banks awaiting disposition.

From Cleveland, Ohio: The general trade continues to meet expectations. There is no material change noticeable since last week. Colder weather is needed to brighten up the retail trade and improve collections, which are still reported rather backward.

From Toledo, Ohio: The dry goods trade improves as the season advances. Dealers in shoes, groceries, hardware, clothing, hats, caps and notions report satisfactory sales. Collections are not as good as could be desired. Interest is at 7 to 8 per cent. New York exchange 1/10 of 1 per cent.

From Evansville, Ind.: Merchants report a very satisfactory trade both in wholesale and retail lines. Collections are fair, with good demands on the banks for money. The weather is warm and raining, favorable for fall seeding, which is progressing.

From Chicago, Ill.: The demand for loans is on the increase. The banks have plenty of funds and accommodate all offering good collaterals at 6@7 per cent. Deposits show a small reduction, but are still ample. Currency is going to the interior in larger quantities. Collections are generally satisfactory. Exchange is 25c. discount to par. The jobbing trade all that could be expected at this season. Dry goods, millinery and clothing are ordered fairly. Boots and shoes are moved well, and stocks are ample. Groceries are active. The supply of sugars, coffees and rice are moderate and held firmly. Syrups are easy. Drugs and chemicals are in moderate sale.

From Peoria, Ill.: Merchants are having a fair trade in all staple lines, with average collections.

From Louisville, Ky.: The general trade movement continues active. Money is steady and the demand good at 7 per cent. The weather is mild and rainy, and farming operations are getting in seasonable shape.

From Indianapolis, Ind.: Business is not active. The rainy weather of the past week has interfered much. Trade lacks vigor and snap. Collections are slow.

From Detroit, Mich.: In general lines of trade business continues very fair, but there are some complaints regarding collections, extra time being asked in numerous instances.

From St. Louis, Mo.: Though still in good volume general trade is quieter than last week. The switchmen's strike is badly interfering with merchandise movements. Money demand is unabated at firm 8 per cent. rate. New York exchange 25c. and 50c. premium. Prime commercial bills 50c. discount. All grains higher, with only moderate transactions.

From Kansas City, Mo.: The general trade situation is unchanged, the volume being satisfactory. Collections are fair.

From Burlington, Iowa: There have been no new features in trade during the week. Jobbers report a steady demand from the country for a general line of goods. The city trade is improving steadily. Collections are fair.

From St. Paul, Minn.: General trade is regular, with active sales. Values have moderately increased within two weeks, but the volume is only even with last year's, disappointing expectations. The farmers are busy, owing to the pleasant weather. They are plowing, but are slow in threshing because of unsatisfactory wheat prices. Country retailing is kept down to supply actual wants. Personal buyers are seen here only occasionally; sales are mostly on mail and traveling men's orders in small amounts and for assortments. Money is close. Currency moving to the country freely. Receipts are light. Collections are fair to good and slightly improved. Bank discounts are heavy and only to regular customers. The city demand is easier on account of better collections.

From Minneapolis, Minn.: A large increase in business is reported. The opening of new territory by the competition of the Northern Pacific Railroad marks a new era in the wholesale trade of the city. Collections are improving as the crop movement increases. A close money market is reported at the banks. An average of over $100,000 daily is sent to the country in payment for produce, requiring constant shipments of currency from the east. Rates are firm at 8 to 10 per cent., and outside paper cannot be negotiated at the banks at these figures. Eastern exchange dull at 100 per 1,000 discount.

From Milwaukee, Wis.: The flurry in stocks had no effect on business here. Money is easy at 7@8 per cent. for prime paper. The fall trade is brisk, stimulated by the fine weather and the fair movement of grain.

From Topeka, Kan.: General trade is active and collections are good.

From San Francisco, Cal.: The general tone of business is improving. Dry goods and other lines of fall trade promise to aggregate as large as last season.

From Baltimore, Md.: General trade continues fair, though in some branches there is considerable activity. The retail business is quiet, but dealers are making active preparations for the holidays. There has been urgent demand for money.

From Richmond, Va.: Trade in all branches continues good. Country merchants are here in large numbers. The prospects are for a continuance of steady business for some weeks.

From Wilmington, N. C.: The weather is variable but is now cool and pleasant. General business shows but little animation. Collections are only fair.

From Savannah, Ga.: There is but little change in the trade situation. The movement of goods is fair. Merchants now seem more cautious and are pushing collections. The grocery trade is more quiet than last week.

From Nashville, Tenn.: Trade is generally fair this week.

From Galveston, Tex.: The general jobbing trade is only moderate. Collections are rather slow. New York exchange is ⅜ discount.

From New Orleans, La.: General trade is improving.

INDUSTRIAL.

The Punxsutawney, Dubois and Beechtree, Pa., mines are working under police supervision. No outbreak is probable. The window glass workers' strike has not changed. The places of the two hundred union cutters who came out in response to the union's decree have been filled with glaziers. Eighty thousand cases of glass were imported last week and large orders were sent out this week. The carrying-in and carrying-out boys at the Bellaire, Ohio, glass works struck, and five hundred men are likely to be thrown out. The Monongahela river miners have refused to arbitrate, and a strike is probable. The Socialistic convention at Pittsburgh was composed of twenty-eight delegates. No trouble is probable in the rolling mills.

INDUSTRIAL FEATURES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Recent rains have added to the flow of water, and most of the mills are now running on full time, with all hands employed. The boot and shoe shops will soon put their cutters to work again. Most of the clothing houses keep their operators fully employed. Nail mills, which were idle for want of water, are starting up.

From Cleveland, Ohio: The manufacturing industries are active, with few exceptions.

BREADSTUFFS ABROAD.

Foreign markets for wheat have shown no improvement during the week. In fact Paris and Marseilles have been materially weaker, and the causes are those well known—excessive supplies backed by the quantity in sight in the face of a moderate demand. The prospect abroad now appears to depend on the ability of the consumer to eat his way well into the grain piled up in front of him. Exports from the United States, as well as from other countries, have been large, and are now paying the penalty. The record of British imports during eight months of 1883, as compared with a like portion of 1882 and 1881, are sufficiently conclusive on this point. Russia shipped 8,397,385 cwt. of wheat to the United Kingdom from January 1 to August 31 last, against 6,274,122 cwt. and 1,713,720 cwt. in like periods in 1882 and in 1881 respectively. Germany also has increased its exports to Great Britain enormously, they being from 475,369 cwt. in eight months of 1881 to 2,371,920 in 1882, and 2,442,299 in eight months of this year. France, not an exporting country, sent 1,907 cwt., 606 and 4,854 cwt. respectively in the same periods. Turkey, Wallachia and Moldavia increased from 6,433 to 292,687 and to 864,597 cwt., and Roumania from 214,855 cwt. in 1881 to 358,609 cwt. in eight months this year. Egypt has had a varying export, owing to complications there. It sent 839,358 cwt. to the United Kingdom in eight months of 1881, none in 1882, and 801,419 cwt. this year. Chili has more than doubled its exports to Great Britain, sending 755,591 cwt. in 1881 to 975,769 cwt. last year, and 1,733,549 cwt. in eight months of this year. British India has exported to the mother country twice as much as in eight months of 1881, but a trifle less than last year, the figures being, beginning with 1881, 3,850,175 cwt., 6,281,643 and 6,256,480 cwt. Australia's shipments to the United Kingdom have steadily declined from 2,164,587 cwt. in 1881 to 1,868,301 cwt. in 1882, and to 1,421,226 cwt. in eight months of 1883. British North America's record shows only a slight gain, the figures being from 1,170,547 cwt. to 1,131,029 cwt., and to 1,190,532 cwt. Other countries sent 23,747 cwt. in 1881, 102,483 in 1882, and 782,468 cwt. in eight months this year. The United States, while showing a gross decrease in the exports, suffers a decrease in its total from the Atlantic ports of nearly 50 per cent., and shows a gain of almost a like proportion from the Pacific coast. The figures are, in cwts., for eight months:

EXPORTS TO THE UNITED KINGDOM FROM THE UNITED STATES.

	1881.	1882.	1883.
Atlantic ports	16,942,574	10,241,668	9,205,396
Pacific ports	7,687,446	10,954,593	10,137,269
Totals, cwts	24,630,020	21,196,261	19,342,665

The total exports from all countries to the United Kingdom in eight months in 1881 were 35,846,309 cwt., in 1882, 40,650,651 cwt., and in 1883, 43,596,083 cwt. The exports of wheat-meal and flour from Germany to the United Kingdom, in the same periods named above, increased from 779,706 cwt. in 1881 to 1,158,685 cwt in 1882 and to 1,312,465 this year. France from 115,141 to 159,966 and to 112,677 cwt. in 1882. British North America sent 96,762 cwt. in 1881, 152,154 cwt. last year and 199,788 cwt. this year, and other countries, 1,303,608 cwt. in 1881, 1,818,291 cwt. in 1882 and 1,776,815 cwt. in 1883. The United States exports of the same in like periods decreased in eight months of 1882 from 5,624,170 cwt. (eight months of 1881), to 4,454,401; but in eight months of 1883 increased again to 7,790,420 cwt. This gives a total of 7,919,386 cwt. of wheat-meal and flour in eight months of 1881, 7,743,497 cwt. in 1882 and 11,192,165 cwt. this year. The gain in total British imports of wheat in eight months in 1883, as against like receipts in 1881, is about 22 per cent., and as against 1882, about 14 per cent. The gain in eight months British receipts of flour in 1883, as against 1881, is about 50 per cent., and somewhat more as compared with 1882.

The London *Miller* of October 1 furnishes the following revised estimate of the surpluses of and requirements for wheat during the crop year:

Cereal year 1883-84.	*Required importation, quarters.*	*Probable exportation, quarters.*
The United Kingdom	16,060,225	.....
France	7,000,000	.....
Belgium and Holland	2,000,000	.....
Spain and Portugal	500,000	.....
Italy and Sicily	1,500,000	.....
Ottoman Empire	.....	2,250,000
Switzerland	1,000,000	.....
Austria-Hungary	.....	1,500,000
Roumania	.....	750,000
Russia	.....	8,000,000
Persia	.....	250,000
India	.....	5,343,500
Australia	.....	750,000
New Zealand	.....	600,000
United States	.....	16,797,932
Mexico	250,000	.....
West Indies	950,000	.....
Central America	990,000	.....
Canada	.....	1,000,000
Chili	.....	500,000
La Plata	.....	250,000
Brazil	250,000	.....
South Africa	400,000	.....
Totals	33,400,225	38,191,432

This indicates a probable surplus production of 4,691,207 quarters only, or about 37,000,000 bushels. The opinion has been expressed, however, by an equally good authority that the surpluses credited to Russia, to New Zealand and to India in the above are excessive. The *Miller's* estimate of the quantity of old wheat carried over this year is:

United Kingdom	6,000,000	Austria-Hungary	1,000,000
United States	4,000,000	Russia	500,000
France	4,000,000	India	500,000
Belgium and Holland	500,000	Other countries	1,301,560

Or a total of 17,801,000 quarters—about 142,400,000 bushels.

From these exhibits it is inferred that in the not far distant future the demand for wheat must sensibly increase, and the inference concerning the effect on the price of wheat is that it will, of course, advance. As bearing on this it is noted that the north Russian ports will be unable to send out wheat much longer, owing to the approach of the winter season. India also will not afford much wheat for export until next spring. At present, however, stocks and not harvests are the influencing factors in prices abroad.

The quantity of wheat and maize on passage, as per Beerbohm's London cablegram of the 18th inst., was:

	Wheat. Qrs.	*Maize. Qrs.*
To the United Kingdom	1,775,000	250,000
To continent	510,000	130,000
Total quarters	2,285,000	380,000
Equal bushels	18,280,000	3,040,000
Compared with the previous week:		
To the United Kingdom	2,000,000	290,000
To continent	550,000	70,000
Total quarters	2,550,000	360,000
Equal bushels	20,400,000	2,880,000
Increase, bushels	.....	160,000
Decrease, bushels	2,120,000	.....

AMERICAN WHEAT MARKETS.

The domestic wheat markets have continued their downward course as to prices. Saturday wheat at New York lost ¼c., and on Monday it regained it. Tuesday's closing price was not different from that on Monday. Lack of export on the two days first named, with succeeding reports of engagement of several cargoes, caused the fluctuations noted. Tuesday brought just firmness enough to hold prices where they were owing to causes last named. Wednesday wheat lost 1c. mainly through the drop in prices in Wall street, the sympathetic movement being quite in the usual order of things. Thursday the market was weaker, cash stuff going off about ½c. Friday brought with it a

lower range of from ½ to 1½c. per bushel. Speculation was active.

The October report of the Washington Agricultural Bureau does not vary materially from that issued in September, and points to a probable crop of from 417,000,000 to 420,000,000 bushels of wheat, or about 26,000,000 more than the total as figured out by the statistician of the New York Produce Exchange, or that of the Association of Millers, which met in Milwaukee three months ago and reported an inquiry indicating a yield of about 391,000,000 bushels of (winter and spring) wheat only. Statements have been published in St. Paul, Minn., that three-eighths of the wheat crop in that state north of the line of the Northern Pacific Railway has suffered seriously from being frost-bitten. It is added that elevators in the district affected have stopped receiving the damaged grain, and Minneapolis millers are reported to be disturbed by the news. Special advices yesterday state that this report is grossly exaggerated. The National Bureau of Statistics reports the total value of the exports of domestic breadstuffs for the month of September, 1883, to be $16,192,960; for the corresponding month in 1882 $24,662,001; for the three months ended September, 1883, $45,281,501; for the corresponding period in 1882 $70,081,590; for nine months ended September 30, 1883, $150,430,436; for the corresponding period last year $134,937,899.

The effects of the declining shipments of wheat during the past two months are thus making themselves felt.

The receipts of wheat at tide-water for the week ending October 13 decreased to 1,339,695 bushels from October 6, when they were 1,847,769 bushels. The exports from the Atlantic ports for the week ended October 13 amounted to but 683,570 bushels, against 976,314 bushels October 6.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended October 13 amounted to 1,992,423 bushels, against 1,999,492 bushels in the preceding week, and the shipments to 1,345,491 bushels, against 1,155,173 bushels in the week previous.

The visible supply of wheat in the United States and Canada (east of the Rocky mountains) October 13, as against the preceding week, showed an increase of 1,346,411 bushels.

The course of prices of wheat at New York and Chicago (1 P.M.) during the past week has been as follows:

	At New York.				At Chicago.	
	Oct.	Nov.	Dec.	Jan.	Nov.	Dec.
Fri. Oct. 12	$1 09	$1.10⅜	$1.12⅞	$1.15	$0.94	$0.95⅝
Sat. Oct. 13	1.08¾	1.10¼	1.12⅝	1.14¾	.93⅛	.94⅜
Mon. Oct. 15	1.09	1.10⅛	1.12⅜	1.14½	.92½	.94¼
Tues. Oct. 16	1.09	1.10⅜	1.12¾	1.15	.93¼	.95⅛
Wed. Oct. 17	1.08	1.09½	1.11⅞	1.13⅞	.92⅜	.94½
Thur. Oct. 18	1.07½	1.10⅞	....	1.13¼	.92⅜	.94⅞

At 1 P.M. on Friday, October 19, December wheat at Chicago was quoted at 92¾c., against 95⅝c. on the preceding Friday.

INDIAN CORN.

The decline in price has been even more pronounced in the corn market than in that of wheat. At New York it went off ⅜c. per bushel on Saturday, a like amount on Monday, ¼c. per bushel on Tuesday, and ⅛c. on Wednesday. Sales of corn made on Saturday were bought back again on Monday, and while exporters had been in the market for a little grain at the close of the last week, on seeing the downward movement of prices again Monday, they drew off. Another depressing influence was the receipt here of 500,000 bushels of corn on Monday when the stocks at seaboard were already excessive. Thursday saw prices ½@1c. lower, owing principally to active selling in the face of light demand. Pressure to sell on Friday brought prices down still further, options going off ¾@1¾c. Export demand gained and speculation was more active.

Kansas this year has raised an enormous crop of corn, some 36,000,000 in excess of that of 1882, and word that the farmers there are shipping their grain to market again favored a downward turn. The average corn yield estimate for Kansas has been reduced by the State Board of Agriculture to 40.9 bushels per acre, or a total of 190,363,000 bushels. The October report of the Washington Agricultural Bureau respecting the yield of Indian corn at large: "The product of the year will be close to 1,600,000,000 bushels, with more soft corn than last year, mostly in regions that consume their entire crop."

The receipts of Indian corn at the Atlantic ports for the week ended October 13 were 1,565,350 bushels, against 2,023,416 in the preceding week, while the exports from the same points amounted to 972,051, against 1,608,595 bushels. The visible supply of Indian corn in the United States and Canada, east of the Pacific coast, October 13 had decreased 982,976 bushels as compared with October 6. The total receipts of corn at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis, for the week ending October 13, were 2,189,296 bushels, against 2,509,833 the week preceding, and the shipments were 2,345,361 bushels, against 2,250,500 in the preceding week.

The closing prices of Indian corn daily during the past week at New York and Chicago (1 P. M.) were as follows:

	At New York.				Chicago.	
	Oct.	Nov.	Dec.	Jan.	Nov.	Dec.
Friday, Oct. 12	.59¾	.59⅞	.59¾	.58¾	.48¾	.46⅞
Saturday, Oct. 13	.59¾	.59⅝	.59¾	.58½	.47⅞	.46⅜
Monday, Oct. 15	.58⅞	.59¼	.59¼	.57¾	.47⅜	.46⅛
Tuesday, Oct. 16	.58⅝	.59¼	.59¼	.58	.47⅞	.46¼
Wednesday, Oct 17	.57¾	.58⅜	.58⅜	.57¼	.47½	.46¼
Thursday, Oct. 18	.57	.57¼	.57¾	.57½	.47¼	.46⅛

Corn at Chicago at 1 P. M. yesterday was for November 46⅛c., against 48¾c. for the option named on the preceding Friday.

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Oct. 12	Oct. 19.
No. 2 flour	$2.50 @3.25	$2.40 @3.15
Superfine flour	3.10 @3.40	3.05 @3.30

Totals	51,048,260	50,704,126	26,129,658	57,628,702

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Flour has continued dull and buyers have had the advantage on prices all the week, but have shown little disposition to operate even at concessions. Wheat has fluctuated considerably in a small way, and the net result of the week's trading is a gain of 1c. to buyers, the market having reached within a day or two the lowest point yet touched for this crop. Exporters bought a little early in the week, but demand has again fallen off. Corn has declined 1½c. on lack of speculative support or foreign orders, and closes dull. Oats are a trifle lower, but fairly active.

From Cincinnati, Ohio: Flour is weaker in most of the lower grades, but the better grades apparently hold their own, although there is a diminution in the volume of business, and wheat and corn under light demand are a trifle easier in prices.

From Chicago, Ill.: Grain is unsettled and trading fair, wheat is weak, with a moderate shipping and speculative demand, and the market is weak and ⅝c. lower. Corn is quiet and easy, ½c. lower. There are liberal shipments and a falling off in receipts. Oats are ⅜c. lower.

From Indianapolis, Ind.: Wheat is dull, and prices are declining.

From Louisville, Ky.: Flour is in fair request for southern shipments.

From St. Louis, Mo.: Flour is weak and very quiet.

From Minneapolis, Minn.: The wheat market is quiet but steady at about $1.02 for No. 1 hard. More wheat is being stored by farmers than usual. The newspapers have got up quite a sensation on the subject of frosted wheat in the Red River valley. Some late wheat was injured by the frost, but the quantity is not 10 per cent. of the newspaper estimates. The corn was nearly ruined by the frost. The flour market shows more activity and the mills are running nearer their capacity than for some months, and the business is more satisfactory. The daily production is about 19,000 barrels.

From Milwaukee, Wis.: The decline in breadstuffs here has resulted in liberal purchases of wheat for shipment east, and stocks are being reduced steadily. Receipts are fair, and of flour large, the latter being en route for eastern markets. Winter wheat looks well.

From Topeka, Kan.: Wheat, corn and oats are offering more liberally than last week, but prices are unchanged. Flour and feed are in heavy demand.

From Baltimore, Md. Choice qualities of wheat are in demand from home millers, and prices have had a tendency to improve; western grades lower. The inquiry for southern corn continues good, and desirable lots find ready purchasers at good prices. Western corn is quoted dull.

From Savannah, Ga.: The grain market is more firm, and the demand is good. Stocks on hand are fair.

From New Orleans, La.: Receipts of corn 200,000 bushels; exports, 170,000 bushels; stock, 300,000 bushels. The wheat movement is small, and the market nominal. The stock of flour light, and the demand moderate.

From Nashville, Tenn.: Flour is steady, and wheat is dull but firm. Corn is steady but scarce.

THE WHEAT CROP.

[By Telegraph to BRADSTREET'S.]

From Minneapolis, Minn.: Thus far weather has been favorable for fall work until within the last three days, during which considerable rain has fallen, but the weather is again fine, and farmers have their fall plowing well under way, and a larger acreage of land will be prepared for wheat than last year. Threshing is progressing, and wheat is moving freely. The receipts at Minneapolis have averaged over 100,000 bushels per day.

PROVISIONS.

The week has shown no new features in the market for hog products. In the main prices have continued to decline. There was a slight reaction on Wednesday—the day on which the stock and grain markets suffered a decline—but the gain is believed to be mainly due to covering by shorts who were desirous either of realizing their profits or anxious to escape a squeeze. The packers are believed to be consistent bears, and they may hardly be looked for on the other side until after November 1. The claim is daily made that hog products are relatively cheaper than hogs, which keep pouring in at the west in excessive numbers as compared with like days in preceding years. While there is a party which talks of still lower prices, there is another which believes pork is cheap enough. The trouble appears to be, however, that the latter do not exhibit the courage of their convictions and jump in and buy. Exports continue moderate.

Exports of hog products from the following places for the week ending October 13, 1883, were:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds.
New York	2,664	3,778,950	2,754,110
Boston	86	607,740	185,134
Portland	....	....	....
Montreal	883	809,600	102,600
Philadelphia	....	650,000	115,500
Baltimore	442	11,795	25,976
New Orleans	73	4,200	1,480
Totals	4,148	5,862,285	3,184,800
Previous week	5,165	5,799,722	4,301,147

The total export of hog product from the abovementioned places from November 1, 1882, to October 13, 1883, was as follows:

	1882-83, pounds.	1881-82, pounds.
Pork	44,828,600	46,316,400
Bacon and hams	400,347,483	355,364,242
Lard	271,515,917	235,180,731
Totals	716,692,000	636,861,373

Prices of lard and mess pork at New York during the week were as follows:

	Lard, per lb., October.		Pork, per bbl., spot mess.	
	This week.	Last week.	This week.	Last week.
Saturday, Oct. 13	7.73c.	8.25c.	$11.50	$12.00
Monday, Oct. 15	7.60	8.10	11.50	12.00
Tuesday, Oct. 16	7.60	8 10	11.50	11.75
Wednesday, Oct. 17	7.65	7.96	11.50	11.75
Thursday, Oct. 18	7.80	7.85	11.50	11.75
Friday, Oct. 19	7.80	7.75	11.50	11.50

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The stocks of cured meats are about exhausted, but continued warm weather has prevented any activity in the demand for green meats.

From Chicago, Ill.: The speculative business in provisions is small. Pork is 7½ points lower. Lard is weaker on good receipts of hogs and cattle. The shipping call for meats fair.

From Peoria, Ill.: Cattle are being shipped here freely for feeding.

From St. Louis, Mo.: Provisions are weakening and buyers are very cautious, making the movement light. Hogs are in fine offering, but railroad troubles have frightened shippers and sales are difficult. The tendency is downward. Poor quality cattle are in large supply, but there is only a butcher and feeding demand, eastern shippers holding off.

From Kansas City, Mo.: Provisions are steady. The jobbing demand is good. Cattle receipts during the week fell off considerably. The market is remarkably steady. There are no quotable fluctuations. Hog receipts show another large increase, and values are 15c. to 20c. lower than last week. The tendency is still downward.

From Topeka, Kan.: Cattle are in light supply on the market. Hogs are coming in freely, but prices are off and the market is weak. Salt meats and lard are in strong demand.

From Baltimore, Md.: A fair jobbing trade is reported in provisions, but the market is quiet, without any further changes in prices.

From New Orleans, La.: The stock of provisions is light and the demand moderate.

From Nashville, Tenn.: Cattle are active and prices good.

THE NEW YORK DRY GOODS MARKET.

The quantity of business transacted by the large distributors has been of a moderate nature. Many buyers are in the market representing jobbers from the interior and west, but their purchases, for reassortment purposes, are mostly confined to the auction houses. The large city jobbing houses also report a quiet week, with the exception of those who mainly do a near-by trade, and this class seem quite active. Retail trade has somewhat improved, though sales are not as active or brisk as they ought to be at this time of the year. Colder weather is required to sharpen all branches of the dry goods trade.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Dry goods are well sustained but stocks are reduced.

From Boston, Mass.: There has been a satisfactory jobbing demand in dry goods, and dealers say that, with a continuance of cool weather, their sales for October will foot up quite liberally. New England dealers are operating cautiously, but their stocks are low and they are forced to buy often. No complaints about collections. The demand from agents' hands has been light for both cotton and woolen fabrics, but prices are steady and the lull is no more than what might be expected in the absence of all kinds of speculation. The leading retail houses have been crowded with customers most of the week, and this branch is quite promising.

From Philadelphia, Pa.: Dry goods have been selling better in retail lines and jobbing, with more freedom in most departments, but the market has lacked decided activity.

From Pittsburgh, Pa.: The dry goods trade continues good, though not so active as for some weeks past. Collections are reported good.

From Peoria, Ill.: In dry goods a good average trade, with a fair number of country merchants here to buy.

From Detroit, Mich.: In dry goods the trade for the week has been of fair proportions and volume about same as in corresponding week last year.

From Louisville, Ky.: There are a large number of country dry goods buyers in the city and trade is well supported.

From St. Louis, Mo.: The colder weather is increasing the demand for heavy dry goods, but otherwise business in this line is lighter from last week.

From Kansas City, Mo.: Dry goods sales are still active. Sorting orders come in freely and the outlook is very good.

From Burlington, Iowa: Dry goods trade is steady and improving.

From St. Paul, Minn.: Dry goods are less active than a week ago, but sales are better than last October. Winter goods moving, purchases being in small bills for assorting up.

From Minneapolis, Minn.: Jobbers of dry goods report a large and satisfactory fall trade in all lines of jobbing.

From Topeka, Kan.: Dry goods are active, and trade in clothing is very heavy.

From Baltimore, Md.: The dry goods market rules steady, and jobbers say they are doing a satisfactory business. Sales are nearly up to the average of last year at the same period and prices are firm.

From Savannah, Ga.: Dry goods have ruled steady for the week and many shipments have been made to the interior. The retail trade is looking up and sales have increased.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Last week's warm weather checked the demand for clothing, and business has been light since. Up to this time the fall business has been very satisfactory. Manufacturers say that the New York failures do not affect the clothing houses here.

From St. Paul, Minn.: Clothing sales are even with last year's. Liberal mail orders, independent of drummers' demands, are heavy, and goods are moving.

COTTON.

The market at New York for spot cotton during the week has been firm and quiet. The demand has been very light, and sales have been mostly for consumption. Prices fell off a point each on Saturday, Monday and Tuesday, and have since remained unchanged at 10 9/16c. for middling upland, with old cotton 3/16c. to ¼c. higher. The closing price last Friday was 10¾c. The week's sales foot up as follows: For export 152 bales, for consumption 3,605, for speculation 750, and in transit no bales, making an aggregate of 4,707 bales, against 8,698 last week. Included in the above were 800 bales to arrive. Deliveries on contract amount to 1,300 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	*Last week.*	*Last year.*
Ordinary	8 5-16c.	8½c.	8½c.
Strict ordinary	8¾	8 15 16	8 15-16
Good ordinary	9 9-16	9¾	9¾
Strict good ordinary	9 15-16	10⅜	10 3-16
Low middling	10 3-16	10⅜	10⅜
Strict low middling	10⅜	10 9-16	10⅜
Middling	10 9-16	10¾	11 1-16
Good middling	10 13-16	11	11 5-16
Strict good middling	10 15-16	11⅛	11½
Middling fair	11 7-16	11⅜	12
Fair	12 3-16	12⅜	12¾

STAINS.

	This week.	*Last week.*	*Last year.*
Good ordinary	7 15-16	8⅛	8⅛
Strictly good ordinary	8⅜	8 13-16	8 15-16
Low middling	9 5-16	9½	9⅝
Middling	10 3-16	10⅜	10 9-16

The market for spot cotton closed quiet and easy.

The future market has been steady, with a moderate inquiry. Prices steadily declined the first half of the week, owing to the unexpectedly large port receipts and the heavy movement south; they, however, recovered on Thursday from better cable news and possibly a fear of frost reaching some sections of the cotton belt, but dropped again on Friday, the closing quotations showing a decline of 16 points for near months and 13 for later ones from one week ago. The aggregate sales for the week reached 654,200 bales, against 896,500 last week.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
October	10.49	10.59	10.74
November	10.49	10.04	10.62
December	10.59	10.74	10.62
January	10.74	10 89	10.72
February	10.90	11.04	10.83
March	11.04	11.17	10 93
April	11.15	11.28	11.04
May	11.27	11.39	11.15
June	11.38	11.50	11.26
July	11.48	11.60	11.37

The market for futures closed quiet and steady.

The southern markets have been quiet and easy. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	*To-day.*	*Last year.*
Galveston	10,101	10 3-16	10½
New Orleans	45,050	10 5-16	10⅜
Mobile	6,750	10⅜	10½
Savannah	24,370	10	10 3-16
Charleston	3,727	10⅛	10⅜
Norfolk	9,884	10⅛	10⅜
Baltimore	1,572	10⅜	10⅜

The total receipts of cotton at the ports since September 1 are 966,942 bales, against 869,085 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	168,402	167,254
New Orleans	223,642	151,953
Mobile	46,929	60,003
Savannah	204,051	202,590
Charleston	147,626	140,251
Wilmington	28,367	25,365
Norfolk	89,492	98,320
Baltimore	3,861	1,878
New York	1,000	3,581
Boston	2,579	12,015
Philadelphia	4,584	6,042

Below will be found the receipts at each of the ports for the week ending October 19, 1883, with comparisons for last week and the same week one year ago:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	6,611	12,303	2,097	7,661	6,048	3,409
New Orleans	3,482	18,975	9,218	6,124	10,334	13,156
Mobile	2,592	2,947	1,930	3,963	1,599	2,285
Savannah	8,171	9,996	7,372	8,153	6,865	8,238
Charleston	6,139	7,468	4,076	4,623	6,732	3,733
Wilmington	1,855	1,910	1,193	1,496	1,346	1,300
Norfolk	4,011	4,903	5,326	6,315	6,808	5,178
Baltimore	625	297	96	51	125	476
New York	35	35	23	27	....	109
Boston	33	161	256	101	309	570
Philadelphia	....	21	38	....	8	94
Totals	33,554	59,016	31,627	38,514	40,174	38,554
This day last week	27,124	49,200	29,832	28,971	35,181	45,590
This day last year	33,452	55,644	31,721	31,156	39,531	30,970

The total receipts for the week were 255,460 bales, against 228,120 last week, and 241,205 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 119,749 bales, against 104,164 bales last week and 106,739 bales for the corresponding week last year. The shipments for the week were 83,467 bales, against 84,116 bales last week and 87,502 bales for the corresponding week last year. The stocks for the week were 175,915 bales, against 138,438 last week and 101,654 for the same week last year.

The market at Liverpool for prompt delivery uplands has been dull and easier with lower prices. The closing quotations for middling uplands were 5 15/16d. against 6⅛d. last week.

Futures have been dull but steady. The closing quotations show a decline of 6 points for both early and later months.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
October	5 56-64d.	6d.	6 25-64d.
October-November	5 55-64	5 62-64	6 13-64
November-December	5 54-64	5 60-64	6 8-64
December-January	5 54-64	5 61-64	6 7-64
January-February	5 56-64	5 63-64	6 9-64
February-March	5 59-64	6 1-64	6 9-64
March-April	5 62-64	6 4-64	6 11-64

The market for futures closed easy.

The sales for the week at Liverpool were 59,000 bales (of which 41,000 were American), against 48,000 (of which 31,500 were American) last year. The sales for export were 2,600 bales, against 6,500 bales last year. The sales for speculation were 2,100 bales, against 700 bales last year. The amount forwarded was 6,400 bales, against 5,500 bales last year. The stock in port is 506,000 bales (of which 277,000 are American), against 449,000 bales (of which 150,000 were American) last year. The total imports for the week were 21,000 bales (of which 11,500 were American), against 64,000 bales (of which 38,500 were American) last year, and the amount afloat 130,000 bales (of which 76,000 are American), against 228,000 bales (of which 140,000 were American) last year.

The Manchester market closed dull.

The Havre market closed quiet and steady.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The market has ruled quiet, and within a day or two there has been a disposition to shade prices to good buyers, but there is no quotable decline from last week's prices.

From Cincinnati, Ohio: The cotton market is strong. Receipts here are liberal. The amount received is almost double that of last year.

From Louisville, Ky.: Cotton movements are active and the market easy.

From St. Louis, Mo.: Cotton is lower and rather quiet, though there have been heavy sales on foreign account.

From Baltimore, Md.: The cotton market is dull, and a few recent sales were on the basis of 10¼c.

From Wilmington, N. C.: Cotton receipts continue to increase, and the market closes active.

From Savannah, Ga.: The cotton market is improving, and the demand is very good. Stocks have changed hands frequently. The railroads are bringing in good receipts.

From New Orleans, La.: It is believed that rains may raise water sufficiently in tributaries to make November and December receipts greater than expected. Since Thursday the cotton movement has been fair, the demand being principally for the continent. The decline on ordinary to low middling is ⅛c.; middling, ¼c.; good middling and middling fair, 5/16c.

COTTON CROP REPORTS.

[By Telegraph to BRADSTREET'S.]

From Charlotte, N. C.: The weather has been good, and picking is progressing finely. The ultimate yield will be 80 to 90 per cent. of last year's crop.

From Lumberton, N. C.: The weather has been good, and picking is progressing finely. The yield will be one-half of a crop.

From Mount Olive, N. C.: The weather has been clear and cool, and picking is one half done. The ultimate yield will be only three-fifths of last year.

From Raleigh, N. C.: The weather is everything that could be desired; picking is progressing rapidly. The crop in this county will be one-fifth short.

From Tarboro, N. C.: Since our last report the weather has been rather unfavorable, but picking has progressed fairly. The prospect for final yield not exceeding 65 per cent. of an average crop.

From Wilmington, N. C.: The weather has been variable, but is now cool and pleasant. Cotton receipts continue to increase.

From Aiken, S. C.: The weather has been good, and fully 90 per cent. of the crop is picked, and 65 per cent. of same sold. The crop is 60 to 65 per cent. of last year's yield.

From Charleston, S. C.: The weather has been favorable this month, and picking is progressing rapidly. The ultimate yield in the state will be one-third less than last year.

From Columbia, S. C.: The weather has been fine for picking. Cotton is coming in and selling freely. Our estimate of yield unchanged.

From Greenwood, S. C.: Picking is about over. There is no improvement in prospects for yield since last report. The crop will be 35 per cent. less than last year.

From Spartanburg, S. C.: The weather has been good and picking goes on well. The ultimate yield will be from one-half to five-eighths of a crop.

From Albany, Ga.: The weather has been very favorable for picking. Three-fourths of the crop is already picked. No improvement in prospects for ultimate yield.

From Atlanta, Ga.: The weather has been fine, and picking is nearly finished. The ultimate yield will be very short.

From Columbus, Ga.: The weather is threatening rain, which is much needed. Three-fourths of the crop is gathered. The utimate yield will not be more than 60 per cent. of last year's crop.

From Greensboro, Ga.: The weather has been dry and cotton is two-thirds picked. There will be barely one-half of a crop.

From Macon, Ga.: The weather has been much cooler, and excellent progress has been made in picking. Prospects for ultimate yield are unchanged.

From Montezuma, Ga.: The weather has been dry and hot and cotton about picked out. The yield will be about one-half as much as last year.

From Sandersville, Ga.: The weather is still favorable for picking; a full two-thirds crop in this county will be made.

From Waynesboro, Ga.: The weather has been fine and rapid progress has been made in picking. The ultimate yield will be one-half of a crop.

From Madison, Fla.: The weather has been good, and picking nearly finished. The yield is estimated at 25 per cent. less than last year.

From Monticello, Fla.: The weather has been good, and cotton is about all picked, The yield is about five-eighths of an average; perhaps a little better.

From Birmingham, Ala.: Up to to-day the weather has been very fine for development of late bolls, and favorable for picking. The crop is fully matured, and frost will do no harm. Picking is over one-half finished. Considerably over one-half of a crop will be made. Farmers are selling out as they bale.

From Demopolis, Ala.: Have had our first rain to-day; 95 per cent. of the crop is gathered. There is a continual falling off; bales averaging 420 pounds. Outside estimate is for only one-half of average crop.

From Eufala, Ala.: The weather has been good, and picking is nearly finished. The crop is 25 per cent. short of that of last year.

From Seale, Ala.: The weather is dry and four-fifths of the crop has been picked; two-thirds of a crop will be made.

From Selma, Ala.: The weather is warm, cloudy and windy, and picking is about over. The ultimate yield points to about 25 per cent. less than last year.

From Tuskegee, Ala.: The weather has been good, and picking nearly finished. The yield will be one-third off from last year.

From Durant, Miss.: We have had general rains; over one-half of the crop gathered. The yield will be three-fourths of last year's crop.

From Grenada, Miss.: Good rain to-day, and still cloudy. The crop is 22 per cent. short; picking is very well advanced.

From Jackson, Miss.: We had heavy rain to-day, the first in three months. The weather has been fine for picking, and over one-half of the crop is gathered. The yield will not be over 10 per cent. short of last year.

From Meridian, Miss.: Have had a good rain to-day, first for two months. Cotton is about all gathered. The ultimate yield will be 40 to 50 per cent. short. At the present rate cotton will all be marketed by January 1.

From Natchez, Miss.: The weather has been good; at least two-thirds of the crop is picked; prospects are as previously stated; no improvement in yield.

From West Point, Miss.: The weather has been very favorable for gathering up to date; picking will be finished by November 15. Prospects are better for ultimate yield.

From Bayou Sara, La.: The weather has been warm, and picking is about over. Prospects are poor, and staple short and yield likewise.

From Clinton, La.: The weather has been damp and cloudy. Two-thirds of the crop is gathered. The yield is as reported last.

From New Orleans, La.: Improved crop reports from some sections has reduced extreme inside crop estimates, causing more leaning toward 5,750,000 to 6,000,000 bales.

From Shreveport, La.: The weather has been favorable, and picking is progressing finely and will close by November 1 on hills and November 15 in bottoms. The yield will be 30 per cent. less than last year.

From Galveston, Tex.: The weather for the past two weeks has been hot with but very little rain.

From Marshall, Tex.: The weather has been good and crop is two-thirds picked, and yield will be about two-thirds of an average crop.

From Arkadelphia, Ark.: The weather has been good and cotton is being picked rapidly.

From Helena, Ark.: The weather has been favorable for picking, which has been checked to-day by heavy rain, without much wind. Warm weather has stimulated the growth and maturity of late cotton on small tracts of land that were overflowed, otherwise situation is unchanged. Ultimate yield will be more than 25 per cent. below last year's.

From Little Rock, Ark.: Have had heavy rains; picking is progressing finely. The yield is not over 15 per cent. short of last year.

From Pine Bluff, Ark.: The weather continues favorable. Sixty per cent. of the crop is picked, and picking is progressing well. No improvement since last report as to final yield.

From Collierville, Tenn.: The weather has been unfavorable and cotton is badly stained with rain and dirt; two-thirds of the crop is gathered and prospects for yield slightly improved.

From Memphis, Tenn.: The weather during this month, with the exception of two days, has been fine, and picking is progressing rapidly. It is estimated that fully one-half of the cotton crop in this district has already been gathered. The estimated yield, as compared with last year, according to the official monthly report for Memphis district, issued on the 4th inst., was 30 per cent. decrease.

From Murfreesboro, Tenn.: It is raining here to-day. Picking has been progressing well to date; with favorable weather to November 1 will make an average crop.

WOOL.

This has been an uneventful week in the seaboard wool markets. Manufacturers have been buying to some extent, but there has been less urgency in the demand than recently noted, and the volume of business has been comparatively small. The range of values shows little change.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The market for wool remains unchanged. The sales for the week have been 2,435,200 pounds of all kinds. The demand has been moderate from manufacturers, as they are now very generally well supplied, having been free buyers for some months. Prices remain the same, and we do not look for any material change. The business in foreign wool has been light and no sales of any importance.

From Philadelphia, Pa.: Demand has been slow and transactions smaller in the aggregate than for some weeks past. Stocks are light, however, and holders resist all attempts to depress values.

From Cincinnati, Ohio: Wool is in weaker demand, and is confined almost exclusively to local mills.

From Chicago, Ill.: Wool is in better supply and orders are small.

IRON.

The past week has brought with it several surprises in the iron trade, and among them a further cut of 50 cents per ton in the price of pig iron by the Thomas Iron Company. According to the schedule now presented we find that No. 1 X is quoted at $20.50 per ton, and No. 2 X at $19.50. With the exception of the Sterling Company, of New York state, we hear of no following to the reduction made by the Thomas people. The Sterling furnace offers No. 2 iron at $17.75 per ton, and it is believed that the same can be had at $17.50, which places No. 2 iron at $17.50@$18.50 for certain brands. But this cut is of less significance than the above statement warrants. None but regular customers can take advantage of the Thomas Iron Company's reduced rates, so it may not be improper to state that while the price of raw iron is nominally lower, with respect to the general public it is unchanged.

The Thomas Iron Company has blown out three furnaces. About eight furnaces have been blown out altogether within the past week or two. Scotch pig iron continues about as previously reported, with about 1,400 tons arrivals, nominal sales, practically none stored, and prices unchanged. Coltness is quoted at $22.75@$23, with only fair demand. Of Gartsherrie there is only a small quantity in stock, and that is held at $23, with little demand. There is no Glengarnock now offering. There is some Eglinton here, but no inquiry there-

for, its place having been taken by cheaper brands. Stocks of Scotch iron on hand in New York will aggregate between 4,000 and 5,000 tons only, of mixed brands, none predominating sufficiently to specify.

IRON MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Foundry irons continue very dull and weak to sell, and business in manufactured iron is generally very quiet. The local market, as a whole, presents no new features of interest.

From Pittsburgh, Pa.: There is a fair demand for pig iron, and no difficulty is experienced in selling where holders are willing to meet the low prices. Best brands of mill iron are $17 cash; foundry $18@$19. Buyers who formerly made thousand-ton purchases now order by the hundred tons, thereby indicating that they do not fear an advance. The situation is, however, about the same as for the past month, except prices are weaker. There is no radical change in the market for manufactured iron, prices if anything being weaker, though there is a moderately good demand.

From Cincinnati, Ohio: The iron market both for pig and manufactured is without noteworthy change.

From Cleveland, Ohio: The iron market is weak, with prices unchanged and a fair trade in some quarters.

From Chicago, Ill.: Iron is freely called for, and the supply is ample. Nails are unsettled, and stocks of jobbers are moderate. There is a good trade and prices are lower. Sheetiron and tinplate are firm. Pig iron is ordered moderately. Lake Superior charcoal is in small supply and steady. Southern pig is offered more freely and is weak, 25c@50c. lower. The failure of a dealer here has little effect on the market as he carried light stocks.

From Detroit, Mich.: In iron there is no change to note in prices or demand. Purchases are only made for actual needs.

From Louisville, Ky.: Iron is steady and in fair demand and average consumption.

From St. Louis, Mo.: Pig iron is weaker than before, but the demand is improving. Manufactured iron is unchanged, with fairly good request.

From St. Paul, Minn.: Heavy iron is fair.

HARDWARE.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: General hardware sales are good; up to former years.

From St. Paul, Minn.: Hardware is very active.

COAL.

There has been more animation in the anthracite coal market, caused in part, no doubt, by the lower temperature. No developments are reported concerning the cut in prices by the Delaware & Hudson Canal Company. All dealers have experienced a better inquiry, and this fact has served to override the discussion about holding up to schedule prices. Rates have been better, owing to the improved demand, which has aided the general gain noted. No decision has yet been reached regarding the expected restriction of production, but it is practically ascertained that no change will be made to affect work at the mines next week. The Pennsylvania people, as well as other leading dealers and producers, look for no announcement of any decision respecting reduced working time until next week, and none to take effect prior to November 1. It is reasonably sure that some such action will be taken prior to the close of the year. The statement of production of anthracite in Pennsylvania to the close of September, 1883, compared with 1882, is as follows:

	For year '83.	*For year '82.*	*Differences.*
Phila. & Read. R. R.	7,160,876.09	4,899,124.19	Inc. 2,261,751.10
Cent. R. R. of N. J..	1,745,393.19	3,068,629.11	Dec. 1,323,230.12
Lehigh Valley R. R.	4,568,221.10	4,237,307.06	Inc. 330,914.04
Del., L. & W. R. R.	3,675,134.17	3,343,632.17	Inc. 331,502.00
Del. & H. Canal Co.	2,530,864.17	2,240,983.00	Inc. 289,881.17
Pennsylvania R. R..	1,989,886.12	1,747,105.03	Inc. 242,781.09
Penna. Coal Co.....	1,096,594.11	1,045,970.01	Inc. 50,624.10
N.Y.,L.E.&W.R.R.	268,542.03	195,493.17	Inc. 73,048.06
Totals.....	23,035,519.18	20,778,246.14	Inc. 2,257,273.04

The stock of coal on hand at tide-water shipping points, September 29, 1883, was 538,490 tons; on August 31, 1883, 576,132 tons; decrease, 37,642 tons. On October 12, the total production in 1883 had aggregated 23,439,083 tons, against 21,351,034 tons in a like portion of 1882, an excess this year of 2,088,049 tons. The bituminous trade at present is moderately active with no especial request in excess of last season.

COAL MARKET REPORTS.

From Chicago, Ill.: Coal is firm and in good consumption.

From Cincinnati, Ohio: The coal market has been active, with a tendency to higher prices. There is apparently an effort being made to secure coöperation or consolidation of interests for the purpose of obtaining better prices. Stocks on hand are fair.

From Savannah, Ga.: The coal market is opening well, and sales have increased. Stocks on hand are large enough for present wants.

OCEAN FREIGHTS.

The dearth of tonnage reported for several weeks past still continues, which causes a firmness in rates for charters which would not otherwise be noted. The amount of berth room demanded is quite equal to the requirements, and rates for the same are moderate. There is less stiffness in holdings of vessels for long voyages than a few weeks since.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The supply of unchartered tonnage in port is very small, and rates are consequently well maintained, but there is very little demand either for grain or oil vessels.

From Baltimore, Md.: Ocean freights are dull.

From Wilmington, N. C.: Coastwise steamers take full cargoes. Another steamship cleared with a large cotton cargo for Liverpool. Mechanics are fully employed.

From Savannah, Ga.: Coastwise charters are in good demand, while the off-shore business is nominal.

PETROLEUM.

During the greater portion of the week the speculative petroleum market exhibited no evidences of a decided turn in either direction. Prices varied but little, but kept an even keel in the neighborhood of $1.10. Two wells which were expected to come in heavily and reduce quotations appeared, but with no oil. The daily average of shipments of petroleum out of the regions during October has been about 10,000 barrels in excess of the total average daily runs of oil from the wells to the tanks. This sounds bullish, but the market is in a waiting attitude for some reason or other.

The speculative market opened on Friday at $1.11, and continued dull during the forenoon, closing at $1.10⅞. It opened again at $1.11, and closed for the day at $1.09⅞, as compared with $1.10⅜ on Friday of last week, a decrease of ½c. on the week. Porcupine well No. 13, in the Balltown district, was looked for through the day to exert some influence, and its delay in coming in contributed to the dullness prevalent. The market closed weak without any news to influence the decline. Sales of oil apparently had the effect of slightly depressing prices.

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, October 13.....	1.10⅞	1.11⅞	1.10	1.10
Monday, October 15.....	1.10¾	1.11⅜	1.10½	1.10⅞
Tuesday, October 16	1.11⅜	1.11⅞	1.10	1.10¼
Wednesday, October 17... .	1.10¼	1.10¾	1.09⅝	1.09⅞
Thursday, October 18.....	1.10	1.11	1.09⅞	1.10⅜
Friday, October 19.....	1.11	1.11¼	1.09⅞	1.09⅞

Refined oil has been generally firm throughout the week, and in somewhat better request for export as well as for home consumption. Prices are as last noted. Crude in barrels has been dull, and buyers are not in the market. The result was a cut of ⅛c. per gallon. Naphtha, on the other hand, experienced a better demand, and advanced ⅛c. on Saturday last, and another ⅛c. again on Tuesday. On Thursday there was more firmness for crude in barrels. For naphtha the price was raised another ⅛c., to 6c. Prices with comparisons last evening were:

	Sept. 21.	*Sept. 28.*	*Oct. 5.*	*Oct. 12.*	*Oct. 19.*
Certifi's, crude..	1.15¾	1.15⅞	1.13⅛	1.10⅜	1.09⅞
Refined, 110°....	8¼	8⅜	8⅜	8⅜	8⅜
Refined, 70°.....	8⅜	8½	8½	8½	8½
Crude, in bbls...	7½@8	7½@8	7½@8	7⅜@7⅞	7⅜@7⅞
Case, plain.....	9⅝	9¾	9⅞	10	10⅛
Naphtha.....	5¼	5½	5½	5⅝	6

The export of petroleum from the United States, crude equivalent, for the week ending October 13, was 15,122,972 gallons, against 13,265,146 in the preceding week. The total export from the United States since January 1 was 511,553,341 gallons, against 502,167,126 gallons in the corresponding portion of 1882, a gain in the current year of 9,386,215 as compared with the gain of but 3,801,799 gallons reported last week. The total exported from New York city during the week ended October 13 was 12,682,854 against 9,546,189 in the preceding week, and during the year, to October 13, 419,959,020 against 395,915,114 gallons in a like portion of 1882. This shows an increase in shipments on the year from New York alone, as compared with 1882, of 24,043,906 gallons (crude equivalent) against but 19,149,256 gallons to October 6, and as against an increase from the country at large of only 9,386,215 gallons.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Nothing of consequence has been done in the way of trade in the boot and shoe market, but a few large buyers have made their appearance, and in another week or two the spring trade will show some life. Salesmen who were out with samples have returned home with some orders, and report a satisfactory condition of trade in the interior. Prices of boots and shoes are about the same as last season.

From St. Paul, Minn.: The boot and shoe trade is fair; no greater than last season, but has increased within a few days

TOBACCO REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Tobacco is without change in prices; offerings are liberal and buyers plenty.

From Louisville, Ky.: Leaf tobacco burleys are firm and active. Dark grades are easier.

From Evansville, Ind.: The tobacco crop is about all safe.

From St. Louis, Mo.: Burley tobacco tends upward on a strong speculative and manufacturing demand, but lugs are weak and dull.

WHISKY MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Kentucky whiskies are in better demand, but wants are promptly met without any advance in prices.

From Louisville, Ky.: Whiskies are steady and distributive movement good.

LUMBER.

[By Telegraph to BRADSTREET'S.]

From Minneapolis, Minn.: The late rains have increased the volume of water in the river, but from 150,000,000 to 160,000,000 feet of logs are hung up in the upper river. The lumber market is steady with moderate business.

From Chicago, Ill.: Lumber is unchanged and orders are decreased.

From Detroit, Mich.: There is an active demand for money from the interior, mainly from the lumber regions.

NAVAL STORES.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: Spirits of turpentine are declining without demand. Rosin is in better inquiry and shows more firmness. Tar and crude meet ready sales.

NEW ORLEANS SPECIAL TRADE REPORT.

[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: Sugar, choice, is 7⅞c.; clarifieds, yellow and white, 8¼c. Molasses, choice, 57c.; good prime 55c.; receipts are increasing. Rice, clean, is steady; rough is dull; fair to prime is 5¼c. to 5¾c.; receipts have diminished. Coffee is firm and supply light; the demand is good; fair is 12½c. Cottonseed is arriving slowly; the mills are nearly all stopped. Prices of new cotton products are unchanged. Old are nominal.

TRADE EMBARRASSMENTS.

There were 180 failures in the United States reported to BRADSTREET'S during the past week, 14 more than the preceding week, 39 more than the corresponding week of 1882 and 71 more than the same week of 1881. Compared with the previous week the middle states had 44, an increase of 11; New England states 25, a decrease of 13; southern states 24, a decrease of 2; western states 71, an increase of 23; Pacific states and territories 16, a decrease of 5; Canada and the Provinces 31, an increase of 5. Among the failures reported were Adler Brothers & Newbouer, wholesale dry goods; Holzinger & Bruckheimer, importers of notions, and John Zitlosen, shipping, New York; Hyams Brothers, clothing, New York and San Francisco; Herman Exstein & Co, wholesale clothing and gents' furnishing goods, Buffalo; The Bangor (Mich.) Furnace Company; Charles D. Rhodes, pig iron, Chicago, and The Norton & Wieller Glass, Paint & Color Manufacturing Company. In the principal trades they were as follows: General traders 21; grocers 16; liquors 13; manufacturers 12; hardware, etc., 10; clothing 10; shoes 9; dry goods 8; grain, flour and millers, 7; tobacco and cigars 6; lumber 5; furniture 5; drugs 5; fancy goods 3; bakers and confectioners 3; commission 3; harness 3; carriages 3; iron 2; hotels and restaurants 2; gents' furnishing goods 2; jewelry 2; millinery 2.

ALABAMA.

MOBILE.—John Maguire, clothing, has assigned. Liabilities reported at $70,000. He has been in the clothing business for over fifteen years, and also had government contracts for dredging.

ROCK MILLS.—The Wohadkee Manufacturing Company, cotton yarn, has suspended. The company was incorporated and commenced business in December, 1881, with an authorized capital of $50,000, of which $35,000 was paid in, F. P. Randolph being the president.

ARKANSAS.

HOT SPRINGS.—Frank Gross, dry goods, has assigned to C. N. Rix.

PERRYVILLE.—E. H. Feltus, drugs, is reported closed out.

CALIFORNIA.

CHICO.—Bonham & Cecil, lumber, have assigned.

MODESTO.—H. L. Bradford, publisher, has filed a petition in insolvency.

PETALUMA.—V. Schmidt, general store, has assigned.

SACRAMENTO.—M. T. Brewer & Co., commission and fruits, have voluntarily closed up. Liabilities from $40,000 to $50,000; assets said to be small.

SACRAMENTO.—A. McIntosh, saloon, has failed.

SAN FRANCISCO.—A judgment for $78,000 was entered on the 13th inst. against Edward Hyams, of Hyams Brothers, clothing, and the firm assigned in New York.

SAN FRANCISCO.—S. Robitscher, shoes, has assigned.

COLORADO.

GRAND LAKE.—W. S. Chamberlain, saloon, has been attached for $837.

PUEBLO.—Stokes & Ebbert, millinery, have turned stock worth $6,000 over to secure bankers.

ROCKWOOD.—W. E. Sears, drugs, has assigned to John Taylor, Jr., and given a bill of sale to Mrs. Sears.

SALIDA.—W. F. Miller, saloon, is reported to have left town.

CONNECTICUT.

DANBURY.—Peter Moran, groceries and liquors, has been attached.

DANBURY.—Henry B. Osborne, carriage maker, did not assign, as previously reported. It was a party of the same name in the saloon business.

DAKOTA.

CASTLEWOOD.—Bard & Schurz, general store, have assigned.

GRAND FORKS.—A. J. Stacy, agricultural implements, has been attached for $17,000.

LACOTA.—John Weeks, general store, has sold out, and it is said cannot pay at present.

PIERRE.—Irving R. Bixby, grocer, has assigned. Liabilities $2,000; assets nominal.

GEORGIA.

AUGUSTA.—Cooper & Meadowcraft, foundry, have assigned to J. H. Oppenheimer.

AUGUSTA.—A. E. Sholes & Co., house furnishing goods, have assigned.

AUGUSTA.—Mrs. C. Silver, clothing, is reported to have failed and sold out to her uncle.

MADISON.—J. T. Rogers, grocer, offers 25 cents.

TALBOTTON.—W. E. Ragland, general store, is reported to have failed. Liabilities $20,000; assets nominal.

ILLINOIS.

BLOOMINGTON.—Smith & Barnes, manufacturers of road carts, have failed. Liabilities $15,000; assets $17,000.

CHICAGO.—The assignees schedules of Alexander & Taussig, wholesale syrups, show the liabilities $75,000, exclusive of the secured claim of the First National Bank for $30,000; assets $13,000. Mr. Taussig thinks they could pay about 20 cents, but are waiting the settlement of the affairs of Taussig & Hammerschlag of New York.

CHICAGO.—Ellen Henderson, furniture, has confessed judgment for $614, and was closed by the sheriff.

CHICAGO.—Charles D. Rhodes, pig iron, assigned on the 18th inst. to Henry D. Oakley. He had a large business, was also president of the Bangor (Mich.) Furnace Company, and interested in other enterprises. He succeeded Rhodes & Bradley May 15, 1882.

CHICAGO.—S. Townsend & Co., grocers, have been closed by the sheriff.

ELGIN.—Walter Griffin, baker, has failed.

ELGIN.—C. S. Kilbourne, trading as C. S. Kilbourne & Co., butter and cheese manufacturers, has failed.

JOLIET.—William J. Adams, manufacturer of hardware, has assigned. Liabilities about $35,000; assets about the same. It is regarded as only temporary.

MOUNT VERNON.—W. B. Casey, books, has failed.

PEORIA.—John J. Clauson, tinware, has been closed by the sheriff on a judgment for $370, which will about take all the stock. Other liabilities $700 on building secured by mortgage.

INDIANA.

FRANKFORT.—B. F. Kuhn, grocer, has failed and sold out.

HAGERSTOWN.—Teeter & Replogle, millers, have assigned.

INDIANAPOLIS.—Jacob Streicher, saloon, has assigned. He is also of Jacob Streicher & Co., groceries and cigars.

OAKFORD.—Haskett & Co., millers, have dissolved. Joseph Haskett succeeds, and has assigned.

SYCAMORE.—E. S. Zahn, general store, has assigned to James Nateor.

IOWA.

CEDAR RAPIDS.—J. W. Emerson, agricultural implements, has assigned.

GREENE.—F. Harlinsky, tailor, has assigned.

OSSIAN.—C. H. Langbein & Bro., harness, have been closed on mortgages for $3,794. The real estate is said to be worth $2,500 and stock $5,000.

OTTUMWA.—J. H. Bruckman, tailor, has been closed by the sheriff.

SANBORN.—J. Z. Pumphrey, general store, has assigned.

KANSAS.

HUNNEWELL.—George W. Avery, grocer, has assigned.

KENTUCKY.

SKILESVILLE.—Greenwood & Poole, leaf tobacco, hav been attached for $1,000.

LOUISIANA.

NATCHITOCHES.—Edward Aaron, general store, has failed and sold out. Liabilities $1,200; assets $500.

NEW ORLEANS.—E. De Lanzac, drugs, has assigned. Liabilities $10,900; assets $12,300.

NEW ORLEANS.—The offer of M. Schwartz, hardware, to pay 50 cents, one half cash and the balance in six and twelve months, has been accepted by all but two creditors.

NEW ORLEANS.—H. De Verges & Co., hardware, have assigned. Liabilities $48,600; assets $61,200. They began September 1, 1877.

MAINE.

NEWRY.—The liabilities of J. A. Thurston, general store, are $6,000; assets $3,000.

PORTLAND.—F. W. Clark, brick manufacturer, has been attached.

PORTLAND.—Storer Brothers, dry goods, offer 42 cents on their liabilities; Storer, Bolster & Co. 58 cents; H. P. Storer 55 cents, and Fred. Storer 11 cents.

PORTLAND.—J. B. Wheelock, grocer, has been attached.

SACCARAPPA. — Crocker & Dunn, cotton batting, have failed. Liabilities about $28,000.

TOPSHAM.—The liabilities of H. P. Thompson, coal, are about $40,000; actual assets not over $6,000.

MASSACHUSETTS.

BOSTON.—F. S. Bailey & Co., desk and table manufacturers, have assigned. Liabilities $1,850, of which $400 is secured. It is thought the creditors will be paid nearly in full.

BOSTON.—At a meeting of the creditors of F. M. Brigham & Son, shoe machinery, the statement showed liabilities $6,207; nominal assets $3,022. It was voted to accept 25 cents.

BOSTON.—F. A. Coombs, furniture, owes about $3,000; assets merely nominal.

BOSTON.—The liabilities of W. L. Frost & Co, furniture, are about $1,700.

BOSTON.—Hill & Rowe, shoe manufacturers, offer 75 cents. Liabilities $61,876; assets $57,455.

BOSTON.—Solon B. Hodgkins, flour and feed, has failed.

BOSTON.—At a meeting of creditors of Kimball Brothers wholesale carriages, etc., it was voted to accept 50 cents.

BOSTON.—Robert A. Murray, broker, has been petitioned into insolvency.

BOSTON.—The insolvency proceedings in the case of Charles O. P. Ross, shoes, have been dismissed.

BOSTON.—Seavey & Co., stamped goods, were attached on the 13th inst. for $56,000 on actions of contract by several parties out of the state. The firm claims the attachments are the result of difficulty with a creditor; that they have not failed, nor do they intend to, and claim to be solvent.

BOSTON—The committee of creditors of F. Shaw & Brothers, tanners, reported at a meeting of creditors on the 18th inst. that the assets were worth $3,856,000 and liabilities $5,344,000, and that the firm could pay 72 cents.

BOSTON.—J. B. Snow, agent, dry goods, has failed and is settling at 10 cents. Liabilities about $1,800; nominal assets $300.

BOSTON.—Henry K. Wing, liquors, is in insolvency.

CHELSEA.—Frederick W. Lincoln, marble, is in insolvency. Liabilities $1,167; no assets.

DANVERS.—M. Sillars & Co., shoe manufacturers, have failed. Liabilities reported at $10,000; assets about $2,000.

HOLYOKE.—J. H. Lamay, paints and paper hangings, is in insolvency.

LOWELL —Lewis B. Farwell, shoes, has failed. Liabilities estimated at $1,800. It is thought the assets will nearly pay in full.

MALDEN.—J. W. Farnsworth & Co., grocers, have failed.

MATTAPOISETT.—Jabez Shurtleff, market, has failed. Liabilities $2,500; assets merely nominal.

PALMER (Thorndike).—Ella J. Edwards, millinery, has been closed by the sheriff.

TAUNTON.—Thomas Perkins, of Perkins & Son, bottlers, s in insolvency.

WEBSTER.—Jacobs & Shumway, dry goods, are advertised to be sold out by the mortgagee.

WESTFIELD.—The National Whalebone Company has been attached.

WORCESTER.—Henry Houghton, grocer, offers 20 cents.

WORCESTER.—A warrant in insolvency has been issued against George W. Miller, cigars. Liabilities about $2,000; nominal assets $700.

MICHIGAN.

BANGOR.—The Bangor Furnace Company assigned on the 18th inst. to W. H. Nelson, in Chicago. Charles D. Rhodes, the president and owner of the company, also assigned. The company commenced in November, 1872, with a capital stock of $100,000.

DETROIT.—Henry Lentz, crockery and wall paper, has assigned to L. D. Harris.

DETROIT.—Mrs. B. Lorne, jewelry, has assigned to Frank D. Andrus. Liabilities $4,000; assets about $2,000.

FIFE LAKE.—Boos Brothers, shoes, have been closed up under a chattel mortgage. Liabilities $800; assets $500.

FREMONT CENTRE.—S. P. Barnhard, general store, has assigned.

HOLLAND.—W. C. Melis, hardware, has assigned. Liabilities $5,000; assets $3,500.

HOWARD CITY.—C. W. Pratt's shingle mill has been taken under a chattel mortgage.

MINNESOTA.

FARMINGTON.—The Bank of Farmington assigned on the 17th inst. It was started August 1, 1876, with a capital of $25,000.

LE SUEUR.—D. Baker, harness, has failed and sold out.

LE SUEUR.—Daniel Bannatyne, dry goods, has assigned.

LEWISTON.—Gensner, Newman & Co., agricultural implements, are reported to have assigned.

LITTLE FALLS.—Hogle & Arnold, harness, have been closed by creditors. Liabilities $600; assets $250.

MINNEAPOLIS.—C. W. Davidson, confectioner, has assigned to H. P. Hurly. Assets $700.

MINNEAPOLIS.—M. L. Merrifield, grocer, has assigned.

ST. PAUL.—H. T. Judd, commission, has been attached and left town.

MISSISSIPPI.

MAYERSVILLE.—S. Kaufman, general store, is reported to have failed and sold out.

MISSOURI.

NEWTOWN.—The insurance of J. P. Hart, Jr., & Co., general store, who were recently burnt out, is said to be the only resource to meet their liabilities, and probably cannot pay more than 70 cents.

SEDALIA.—D. C. Paulin, lumber, has failed.

ST. JOSEPH.—Meyer Brothers, cigar manufacturers, gave a chattel mortgage of $30,000 to secure creditors, and it was foreclosed. They did a large business for their capital, and collections were dull.

ST. LOUIS.—Benzek & Berg, shoes, are advertised to be sold out by constable.

ST. LOUIS.—Most of the creditors of William C. Campbell, furniture manufacturer, have accepted a compromise of 50 cents.

ST. LOUIS.—L. E. French, groceries and liquors, has been attached.

ST. LOUIS.—F. F. Hilder & Co., show cases, have assigned to H. L. Christie. Assets—stock $3,200; real estate $15,000, subject to a mortgage for $6,000.

ST. LOUIS.—George F. Schories, saloon and restaurant, has moved stock and fixtures to parts unknown.

ST. LOUIS.—The Norton & Wieder Glass, Paint and Color Manufacturing Company assigned on the 16th inst. to Stephen Moriarty. Assets $150,665. The business was started in 1875 by Mr. Norton, and Mr. Wilder became a partner in June, 1876. It was incorporated January 11, 1882, with a capital stock of $100,000. A branch was established in Chicago in March last. The failure of another party in the same line caused creditors to collect more promptly and refuse indulgence. It is said it will probably pay in full.

NEBRASKA.

TECUMSEH.—William Klatfeldt, grocer, has failed.

NEVADA.

EUREKA.—The Eureka Tunnel & Mining Company is advertised to be sold out by the sheriff. It was recently attached for $36,000 by O. N. Hansers.

NEW HAMPSHIRE.

CONCORD.—The Concord Carriage Company have assigned. Liabilities reported at $30,000; assets nearly equal.

LACONIA (Weirs).—The assets of True & Doolittle, grocers, were sufficient to pay in full.

MANCHESTER.—E. Desroche & Co., grocers, are advertised to be sold out by the sheriff.

NEWTON.—W. A. Bartlett, shoe manufacturer, has assigned.

NEW JERSEY.

JERSEY CITY.—Hector Mackenzie, dry goods, assigned on the 13th inst. to Kenneth Dingwall, and it is reported that the former has left town.

NEW MEXICO.

ALBUQUERQUE.—Arthur Hamlin, news, has been closed by creditors and sold out under a chattel mortgage.

NEW YORK.

BROOKLYN.—William Joy, granite, has assigned.

BUFFALO.—Hiram Exteins & Co., wholesale gents' furnishing goods and clothing, assigned on the 17th inst. to Philip Becker and Louis M. Brock. Preferences were given aggregating about $150,000. The liabilities are reported at over $300,000. Their statement for January 1 showed assets $215,000; liabilities $125,000. The business has been largely increased recently and friends aided them with loans and accommodations. The failure is attributed by some of the creditors partly to losses in oil speculations. Mr. Extein was also the capitalist of the Excelsior Manufacturing Company, overalls.

BUFFALO.—The Phœnix Refining Company, petroleum, is reported to have failed and is virtually out of business. Judgments for $3,000 have been entered.

BUFFALO.—The liabilities of Jacob Weilbacher, market, are $11,850; actual assets $2,579.

CHAMPLAIN.—J. L. Le Prohan & Co., drugs, have been closed by the sheriff.

JAMESTOWN.—M. F. Truby, cigars and notions, has assigned.

JOHNSTOWN.—John C. Holmes, shoes, has assigned to George A. Streeter. Liabilities $4,000; assets about $1,800; preferences $1,600 for accommodation indorsements.

KENDALL.—William N. Spicer, general store, has assigned to William S. Jewett.

NEW YORK CITY.—Adler Brothers & Newbouer, wholesale dry goods, assigned on the 16th inst. to Louis Adler, giving preferences for $105,761, of which $43,450 was for accommodation notes, $57,109 borrowed money and $5,000 merchandise. The preferences were as follows: Wechsler & Brother, Brooklyn, $4,700; Jacob Adler & Co. $18,750; Louis Meyers $9,000; Isaac Heidenheimer, of Galveston, $5,000, all on accommodation paper, discounted by the Chemical, Importers' & Traders' and Park banks; Weider, Haas & Krause $8,807, notes and money loaned; Caroline Adler, wife of Samuel, $16,595 loan; Caroline Adler, wife of Seligman, $8,510, loan; Emma Newbouer, $8,515, loan; Joel Adler $3,086, loan; Henry Meyers $2,650, loan; Sarah Liebholz $899, loan; David Wertheimer $3,000, loan; A. D. Juillard & Co. $5,000, merchandise. The liabilities are stated to be $300,000, of which about $200,000 is for merchandise, and the balance confidential debts—money loaned and trust funds. No estimate is given as to the assets, but the firm say they expect to make a good showing. They have been in business thirty-five years; they suspended in 1860, but paid up in full. The failure is ascribed to competition, heavy expenses, small profits and impaired credit.

NEW YORK CITY.—Wm. H. Bennett, liquors, assigned on the 15th inst. to Joseph B. Reilly.

NEW YORK CITY.—Siegel Bernhard, cloak manufacturer, assigned on the 19th inst. to Charles V. Wagner, giving a preference to the National Citizens' Bank for $2,410.

NEW YORK CITY.—Samuel Bertschy, manufacturer of ribbons, assigned on the 19th inst. to Samuel Goodman, giving preferences for $5,838, the largest being for wages $1,500; Alfred Bertschy $2,708.

NEW YORK CITY.—Patrick Casey, trunks, assigned on the 15th inst. to Thomas Bain.

NEW YORK CITY.—Holzinger & Bruckheimer, importers of notions, assigned on the 15th inst. giving preferences to Pacific Bank, notes $6,600; Meyer Whitehead, notes $5,365; Rothbarth & Co., notes $4,000; Budge & Goldschmidt, loan $2,400; L. Friedman & Co., loan $800; six notes, the holders unknown, $17,665; total $36,665. They have been in business about twenty years and have gradually rusted out. They bought principally in Europe.

NEW YORK CITY.—Hyams Brothers, wholesale clothing, through William Hyams, assigned on the 15th inst. to Elias Joseph, giving preferences for $23,336, as follows: Emma Hyams $1,000; Selig Hyams $2,500; Arnold Harris $4,363; Joseph Lilienthal $4,338; Simon Enoch $2,880; Philip Levy $1,635; Henry Cooper $1,500; J. L. Lindheim $3,000; Tradesmens' National Bank $4,119. The firm manufactured in New York city and sold in San Francisco, and have been established since 1867, Edward residing in San Francisco. Judgment for $78,000 was rendered against Edward Hyams in San Francisco on the 13th inst. in favor of Herman Schainwald in a suit growing out of the insolvency of Schoenfeld, Cohen & Co., and an attachment was levied for $5,000. As soon as this information was received in New York William Hyams assigned, and it is said the San Francisco business was transferred to him. The liabilities in New York are $53,000, of which $28,000 is for merchandise and $23,000 borrowed money; assets $18,000. At a meeting of creditors the request of William Hyams to go to San Francisco to see how matters stand there was granted. William Hyams owns the Tahoe House at Virginia City, Nev., which cost $60,000, mortgaged for $15,000.

NEW YORK CITY. —Abraham Kaufman, novelties, assigned on the 13th inst. to Simon E. Isaacson, giving a preference to G. Rice & Co. $8,640.

NEW YORK CITY.—The schedules of Joseph Kearney, laces, show liabilities $12,807; nominal assets $14,071; actual assets $4,146.

NEW YORK CITY.—The New Jersey Cloth Converting Company has been placed in the hands of a receiver, Garret J. Ackerman, of Hackensack. F. Mayer, the cloth merchant, who recently failed, was the president and principal stockholder, and he preferred the company for $18,000. Since his failure several judgments and attachments have been obtained against the company. Its liabilities are reported at over $100,000. It was incorporated in May, 1882, with a capital stock of $25,000, and its factory at Lodi, N. J., cost about $12,000.

NEW YORK CITY.—A. Schwarz & Bro., manufacturers of cloth caps, assigned on the 13th inst. to Isaiah Friesin, giving preferences for $39,594—to Joseph Schwarz $6,625; Louis Meyer $3,000; Leo Sinsheimer $395, and the balance on notes the holders being unknown. They started in a small way about ten years ago.

NEW YORK CITY. — The schedules of Ueckermann Brothers, cabinet makers, show liabilities $13,007; nominal assets $14,947; actual assets, $4,102.

NEW YORK CITY.—The schedules of Max Wallstein, knitting wools, show liabilities $111,589; nominal assets $91,962; actual assets $70,833.

NEW YORK CITY.—John Zitlosen, shipping and stevedore, assigned on the 15th inst., giving preferences for $20,440. The primary cause of his failure is said to have been the depreciation in shipping property in which he was largely interested. He had been compelled to sell off most of his vessels and also his residence in Bank street. He is said to have also made an injudicious investment of over $30,000 in a sawmill near the Delaware Water Gap. In the spring he claimed to be worth over $200,000, and to have only small liabilities. His liabilities now are reported at about $80,000.

ONEIDA.—W. P. Hill, merchant tailor, has assigned.

POUGHKEEPSIE. — Brooks, McKean & Pierce, manufacturers of sash and blinds, assigned on the 13th inst. to Frank B. Snow, giving preferences to James Brooks, $1,000; City National Bank, on notes indorsed for W. H. Jenkins & Son, New York, $4,600; James Moir, Albany, $2,886. They manufactured largely for W. H. Jenkins & Son.

SHORTSVILLE.—W. H. Derr, builder, has assigned.

SYRACUSE.—Austin O. Ames, sash and doors, has assigned. He previously gave a chattel mortgage for $2,823 and realty mortgage for $17,823. He commenced about June, 1882, at which time it was stated that T. P. Jenkins, of W. H. Jenkins & Son, of New York, was a regular partner. Mr. Ames states that T. P. Jenkins, previous to the failure of the New York firm, was paid back all the capital he furnished and the partnership was dissolved.

SYRACUSE.—W. H. Bradley, carpets, has assigned to Stillwell W. Mason, on account of the depression in business. Preferences were given for about $26,000, the largest being to David Collins, of Boston, $12,064; estate of O. S. McDowell $4,101; Wm. Judge & Brothers, Philadelphia, $3,300; Artman & Weischler, Philadelphia, $1,719; Stephen Beckwith $1,500; Van Deventer & Horn, New York, $1,317; Schwartz & Graff, Philadelphia, $1,571.

TONAWANDA.—J. R. Edwards & Co., wholesale lumber, have assigned. The failure is attributed to the purchase of lumber last spring from a western firm, with the understanding that their paper was to be renewed from time to time until they were in shape to take it up. The failure of the western firm necessitated Edwards & Co. taking care of this paper, now falling due, which they were unable to do.

NORTH CAROLINA.

HICKORY.—D. W. Rome, general store, etc., has failed.

TARBORO.—The liabilities of J. C. Younger, bar, are about $3,000; preferences $1,300; actual assets $500.

OHIO.

BERLIN.—J. H. Bushman has assigned.

CINCINNATI.—Daniel Bloch, cigar manufacturer, has assigned to James S. Meyers.

CLEVELAND.—The Cleveland Chair Company has turned over its assets to the Commercial National Bank, to whom it was indebted, it is said, for $10,000.

CLEVELAND.—J. W. Hughes, brewer, gave chattel and real estate mortgages for $21,877, and one of the preferred creditors advertises to sell him out under the mortgage on the 25th inst. The unsecured indebtedness is placed at $18,000. It is thought the embarrassment is only temporary.

CLEVELAND.—S. Wolf, grocer, has sold out for $1,500 and been attached for $440.

FREMONT.—D. Wagner, general store, has been attached. He claims to have sold out to his brother.

GALION.—George C. Richmond, cigars, has assigned to J. U. Bloomer.

HAMILTON.—John Sortman, miller, has assigned.

LIMA.—W. S Neuenswander, stoves, etc., has assigned to John Hoffman.

MIDDLETOWN.—J. Sutphin & Sons, millers, have given a deed of trust for benefit of creditors to D. McCollum and E. F. Gunckel.

MILLERSBURG.—Maxwell, Stevens & Co., millers, have had judgment for $5,000 entered against them. It is said the firm will have to go into liquidation on account of the arrest of J. S. Maxwell, in New York, and it is a question whether the assets will pay in full.

NELSONVILLE.—M. J. Hamilton, grocer, has assigned.

NEW BURLINGTON.—M. C. Hadley, general store, has assigned.

NEWPORT.—T. C. Durkee, general store, has assigned.

PIQUA.—Upton & George, coal and wood, have assigned to John L. McKenny.

PENNSYLVANIA.

ALLEGHENY CITY.—The liabilities of John Schmidt, cigars and liquors, are about $11,000; assets $7,000.

ALTOONA.—The sheriff 's sale of H. B. Hooper, drugs, realized only $250. He will continue as Hooper & Co., the latter being his mother and sister.

BLOSSBURG.—Andrews & Morgan, wholesale liquor dealers, have failed and are in the hands of the sheriff on executions for $7,000.

FRANKSTOWN.—Execution for $7,000 has been issued against Albert Wilson, flour mill.

FREDERICKTOWN.—J. H. Vandegrift & Brother, distillers, are reported to have failed.

HULTON.—Execution for $625 has been issued against Godfrey Brenner, general store.

HUNTINGDON.—Alexander N. Campbell, grocer. has been sold out by the sheriff.

MOUNT OLIVE.—G. H. Espy, drugs, is advertised to be sold out by the sheriff.

PHILADELPHIA.—Edward D. Bair, manufacturer of sash and doors, has been sold out by the sheriff, realizing about $600.

PHILADELPHIA. — Cobb & Watson, manufacturers of packing boxes, are advertised to be sold out by the sheriff on the 22d inst. for arrears of rent $769.

PHILADELPHIA.—E. Wilmer Craven, laundry, has been sold out by the sheriff.

PHILADELPHIA.—Ludwig Fox, jobber in hosiery. has been attached on a judgment for $2,628. Liabilities about $8,000.

PHILADELPHIA.—John Hager, manufacturer of boots and shoes, was advertised to be sold out by the sheriff. Liabilities about $12,000.

PHILADELPHIA.—Execution has been issued against The Hampshire Manufacturing Company (Limited), cotton and woolen goods, for $51,160. Liabilities reported at $75,000. It is thought the assets will nearly satisfy the preferred claims. It has assigned to Josiah R. Adams.

PHILADELPHIA.—Hughes & Kay, manufacturers of cotton and hosiery yarns, have obtained an extension of eight, ten and twelve months. Liabilities about $27,000. They are said to have $2,800 by recent failures in New York.

PHILADELPHIA.—At a meeting of the creditors of Daniel M. Karcher's Sons, manufacturers of furniture and upholstery, they offered to compromise at 30 cents. The offer was declined, and finally 33 1-3 cents was accepted. A friend, it is said, will loan them $15,000 cash with which to pay the compromise.

PHILADELPHIA.—John J. McDermott, grocer, is in the hands of the sheriff. Liabilities $500; assets not over $400.

PHILADELPHIA.—B. P. McDonough, restaurant, was advertised to be sold out by the sheriff, but it is said he sold out sometime ago.

PHILADELPHIA.—Mace & Weeks, manufacturers of shoes, have confessed judgment to Baum, Little & Co., morocco manufacturers, for $15,514, of which, it is said, $13,000 was for money loaned and the balance for merchandise. It is thought the liabilities will reach $50,000 to $60,000. They claim to have lost money.

PHILADELPHIA.—Mintzer Brothers, book mounters and gilders, were sold out by the sheriff. Their brother, E. L. Mintzer, who was a judgment creditor for $7,000, bought in everything.

PHILADELPHIA.—John Server, coach maker, has assigned to Carroll R. Williams.

PHILADELPHIA.—Brower S. Wells, merchant tailor, is advertised to be sold out by the sheriff on a judgment for $1,030, in favor of Mary P. Brady.

PITTSBURGH.—George H. Anderson has been appointed assignee of The Mount Braddock Coke Company and A. O. Tistman & Co., in place of A. A. Hutchinson, resigned.

PITTSBURGH.—Execution has been issued against K. Witkowski, gents' furnishing goods, for $2,100.

READING.—William Green, baker, has been closed by the sheriff.

SAYRE.—J. F. Weaver, billiards, has been closed by the sheriff.

SHARON.—William L. Prindle, general store, has been closed by the sheriff on judgment confessed to his father for $2,200. He has stock about $2,500 and real estate $5,000.

WELLS TANNERY.—Jacob Fillman, general store and lumber, has been closed by the sheriff.

RHODE ISLAND.

PROVIDENCE.—The paper of the St. Croix Cotton Mill has been protested. D. Morrice of Montreal was its agent. The mills of the company are at Milltown, N. B., in which there is over $500,000 invested.

PROVIDENCE.—S. C. Vose & Co., grocers, are advertised to be sold out by the assignee.

SOUTH CAROLINA.

WILLISTON.—Buckhalter & Co., general store, have assigned.

TEXAS.

CUERO.—A. W. Evans, dry goods, has failed.

GALVESTON.—The suit against J. Harvey Pierce, hotel, by Freiberg, Klein & Co., for $2,086, has been withdrawn.

HOUSTON.—The McManus Manufacturing Company, carriages, has been attached for $3,200.

JEFFERSON.—H. Mathesias, jeweler, has been attached and assigned.

PALESTINE.—G. R. & B. W. Howard, general store, have assigned. Liabilities $35,000; assets $40,000.

SENTERFITT.—Hooton and Townsend, general store, have been closed up by attachment.

UTAH.

OGDEN.—Wilson & Co., shoes, have assigned. Liabilities $12,000; assets about the same.

SILVER REEF.—Clark Brothers, saloon, have failed. Liabilities $1,000.

VERMONT.

ISLAND POND.—The liabilities of J. M. Butters, lumber are $18,000; assets $9,000. He is settling at 27½ cents.

WELLS RIVER.—Union Durant, paper, has failed. Liabilities reported at about $30,000; actual assets estimated at about $20,000.

VIRGINIA.

BRIDGEWATER.—T. P. Humphrey, furniture, has failed.

CHURCHLAND.—O. B. Baker, grocer, has been attached in New York for $1,128, goods sold.

WINCHESTER.—William H. Calvert, liquors, has assigned.

WASHINGTON TERRITORY.

SEATTLE.—J. G. Wright, dollar store, has assigned to Jacobs & Jenner. Liabilities about $12,000; assets $8,000.

WISCONSIN.

ASHLAND.—M. E. Monsell & Brother, general store, have assigned.

LA CROSSE.—A. Cohen, dry goods, has been attached.

MILWAUKEE.—M. Phillips, tailors' trimmings, has been attached for $2,000.

MANITOBA.

MOOSE (Northwest Territory).—S. A. Copland, hardware and groceries, is asking an extension.

MORRIS.—W. A. Russell, general store, is about to be sold out by the sheriff.

WINNIPEG.—William Muir, contractor, has been sold out by the sheriff.

NOVA SCOTIA.

HALIFAX.—Thomas Walsh & Co., painters, have failed.

SHUBENACADIE.—John B. Fraser, tanner, has been attached.

PROVINCE OF ONTARIO.

BRANTFORD.—John Folger, grocer, is reported to have left town, and the store has been closed by creditors.

CHATSWORTH.—Robert Green, tinsmith, is reported to have left town.

COPLESTON.—A. A. Smith, gen'l store, has assigned.

CORNWALL.—Mrs. D. T. Ross, milling, is in the hands of the sheriff.

DUNDAS.—David C. Haystead, grocer, is unable to meet engagements, and creditors have taken back goods.

FERGUS.—Phillip Bowley, blacksmith, is reported to have left town.

FLESHERTON.—The stock of R. G. Trimble, jeweler, is advertised to be sold out under a chattel mortgage.

GAMBRIDGE.—The stock of N. C. Gilchrist, general store, has been taken under a chattel mortgage.

HAMILTON.—Henry Osgood, shoes, has assigned.

HAMILTON.—Alfred Ram, builder, has assigned.

HARWOOD.—Henry Allan, general store, has assigned.

LONDON.—P. E. Shamblean, blacksmith, is reported to have left town.

NEW HAMBURG.—F. D. Woodcock, produce and commission, is in the hands of the sheriff.

NEW HAMBURG.—T. Woodcock, trading as T. Woodcock & Co., manufacturers of shoddy, has assigned.

OSHAWA.—George McDonald, dry goods, has assigned.

OSHAWA.—J. F. Willox, books, is advertised to be sold out by the sheriff.

PALMERSTON.—J. D. Hayhurst, grocer, has been closed by creditors.

PICTON.—Walter Ross, Sr., general store, is in the hands of the sheriff.

PORT LAMBTON.—C. J. Wagstaff, groceries and dry goods, has been sold out by the sheriff.

TORONTO.—John W. Treen & Co., wholesale woolens, have assigned.

TORONTO.—Frederick Tunmore, cabinet maker, has assigned.

WHITBY.—John Leslie, hotel, has been sold out by the sheriff.

PROVINCE OF QUEBEC.

MANSONVILLE.—S. Peabody, general store, offers 25 cents.

MONTREAL.—Robert Cyprien, hats and furs, has failed.

MONTREAL.—The creditors of D. Morrice, trading as D. Morrice & Co., wholesale woolens and manufacturers' agents, at a meeting held on the 17th inst. agreed to an extension for maturing obligations of three, six, nine and twelve months. The liabilities are about $1,600,000, and there appeared to be a surplus in the business of $265,000 and outside investments of $125,000. Messrs. W. H. Plummer of the Merchants' Bank, C. S. Clouston of the Bank of Montreal, W. J. Ingram of the Federal Bank, and A. F. Gault were appointed trustees for the mills interested, and were empowered to divide receipts pro rata among the creditors. It was understood that the twelve months would not be required to liquidate the various obligations.

MONTREAL.—St. Jean & Co., tailors, have assigned.

QUEBEC.—L. A. Lapointe, grocer, has failed.

ST. HYACINTHE.—Henri Lamoreaux, dry goods, has assigned.

A GENTLEMAN, age 33, of thorough business experience, who is desirous of residing in Australia, wishes an appointment as representative or prospector by a first-class firm. Excellent references. Address E. P., care of The Bradstreet Company, 81 Newgate Street, London, England, or 279 Broadway, New York.

Extract from *New Zealand Gazette*, Aug. 23, 1883.

IMPORTATION OF CATTLE PROHIBITED.

WM. F. DRUMMOND JERVOIS,
GOVERNOR.

ORDER IN COUNCIL.

AT THE GOVERNMENT HOUSE, AT WELLINGTON, THIS TWENTIETH DAY OF AUGUST, 1883.

Present:

His Excellency the Governor in Council.

IN pursuance of the powers and authorities vested in him by the sixtieth section of "The Diseased Cattle Act, 1881," His Excellency the Governor of the Colony of New Zealand, by and with the advice and consent of the Executive Council of the said colony, doth hereby absolutely prohibit the introduction into the Colony of New Zealand from the countries following, that is to say, Europe, Asia, Africa, America, and the islands in the Atlantic, Pacific and Indian Oceans, save and except the Australasian Colonies, of all cattle, sheep, horses, swine, and goats, and also of fresh meat, skins, hides, hair, horns, hoofs, offal, or other parts of any such animal, and of all hay, straw, and fodder, and of all fittings which have been used in the transport of any such animal:

And with the like advice and consent doth declare that this Order in Council shall come into force from and after the date hereof: Provided that this Order in Council shall not apply to animals which shall have been shipped from any of the abovementioned countries before the first day of December, one thousand eight hundred and eighty-three.

FORSTER GORING,
Clerk of the Executive Council.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 27, 1883.

NOTES OF THE WEEK.

Important municipal elections will be held on Tuesday week in New York, Brooklyn and Philadelphia. The contest in the metropolis is important as marking the formal withdrawal of the Citizens' Committee of Fifty. It is well that this has been done, for nothing is better calculated to retard the progress of true reform in the direction of local affairs than unwise and ineffectual trading of the moral forces of a community. The master spirits of the New York Committee of Fifty should learn, if they do not already know, that under the present system it is of comparatively little importance who is elected to this or that city office, provided always that really bad men are not chosen. Thus the mayoralty is so shorn of power that no mayor, however desirous of reform and however aggressive, can accomplish much of lasting good. The need of the hour is to point the way to a reform of the present absurd system. We have more than once pointed out that the seat of government for the metropolis is now nearer Albany than New York, say at Poughkeepsie, where the politicians get their coffee; that the present city legislature is no more than a committee of executive officers known as the board of apportionment; that the confusion of responsibility is so great that practically none exists, and that to adequately remedy this state of affairs the first thing to do is to bring back the representative principle to the end that New York city may learn anew to govern itself. But as such a result can come about only at the end of patient propagandizing and far-reaching effort it is easier to beat the air about this or that office. The voters of New York city have more than once shown that they are not wanting in public spirit when the way is clear for abiding results, but they have wisely learned that mere differences as to individuals will avail nothing. It is well, therefore, that the Committee of Fifty have gone out of business. At another time, when the principles relating to municipal reform shall be made clear, another citizens committee will have useful work to do.

In Brooklyn Mayor Seth Low is striving for reëlection. He has made a good mayor, but is doubtless opposed by numerous unthinking voters now because more was expected of him than could be done in a brief time. It will be recalled that Mr. Low's election was brought about largely by the aid of Democratic votes. Now the Democrats are apparently united in favor of electing Mr. Joseph C. Hendrix to the mayoralty. The Brooklyn contest is especially interesting to BRADSTREET'S, for the reason that its pay-as-you-go overture for the conduct of city business is put prominently forward by the supporters of Mr. Hendrix. At the Democratic nominating convention the following resolution was adopted:

> We are opposed to postponing the time of payment of the current expenses of the city government to a period in the future; the expenditures of the city government for each year should be met by the taxation for that year, so that the people may not be misled as to the amount of public moneys annually expended.

This principle is fundamental. The voters of Brooklyn are fortunate in that it has found definite expression.

Philadelphia is about to elect a controller who, under the present system, is the most important officer in the city. The mayor of Philadelphia, be it remembered, is little more than a chief of police. Executive duties are largely centered in the committees of councils. The Democrats are supporting the present controller, S. Davis Page, who succeeded Controller Pattison by appointment when the latter was made governor. The Committee of One Hundred are united in the support of Mr. Page and are in favor of his election. Philadelphia continues to work out important practical lessons for those who would solve the so-called municipal problem.

Wall street has been treated to another of its sensations during the week, the tumultuous crowd of bears, rendered careless by long success, having caught themselves in a tight place by the "corner" virtually made in Northern Pacific preferred stock. A brilliant dash on the bull side led by Mr. Keene, and backed to a certain extent, it is understood, by Mr. Vanderbilt, completed the rout. There was an awful slaughter of the "shorts." All the room traders and the crowd of small operators rushed frantically from the bear to the bull side of the market, and from Saturday last to Thursday noon there was a craze to buy stocks. The craze was at its height when the bull combination opened their tin boxes and sold out their stocks by the ream, sending the market down in confusion, and yesterday there was a further unloading.

A vigorous crusade has been in progress in Chicago of late against diseased cattle. None of the maladies that the public have been made so familiar with elsewhere, such as pleuro-pneumonia, foot and mouth disease, etc., have prevailed there, but there have been many cases of cancer and "lump-jaws." The law seems inadequate to prevent the shipment of these animals to the stockyards, and the danger is greater at this time of the year than at any other season, since the dealers want to get them off their hands before winter. During the summer reputable dealers in live stock called the attention of the health authorities to the fact that there were cancerous cattle among the herds. It was not necessary that they should do this for their own protection, because it is the practice of their buyers to reject cattle that look diseased. They did it for the good name of the business and to allay the suspicions of a public who have heard so much about the danger of being poisoned by bad meat.

A careful examination was made, the result being that every day some cattle were condemned and shot as cancerous. Previously only meat at the slaughter-houses had been examined unless notice was received of the arrival of diseased animals. But cancer is difficult to detect in dead meat. Of late the disease attracting most attention is "lump-jaws," which is not very well understood, but seems to be allied to cancer. A tumor on one of the jaws swells to immense size, becomes putrid, discharges, and thus communicates the infection to other cattle. A number of these animals are known to have been sent to Michigan, and no doubt consumed as food. Nearly all the diseased meat that escapes detection is, however, eaten by Chicago people. There is a class of dealers who make it a business to buy and sell such goods. They have made some opposition to the movement against the traffic, but there is a strong public sentiment on the subject, and the authorities are working with much vigor for the suppression of these diseases.

Charges have recently been made in the press that there has been trouble on the Erie canal in consequence of boats running aground because of low water at places along the canal. The charges have been inquired into by canal officials, who declare that the statements made were unfounded. The results of this official inspection, however, are not entirely satisfactory to the complainants, who make the point that an inspection advertised beforehand, as it is claimed the one referred to was, can be of no real value. The critics of the canal management insist upon the necessity of a continuous and secret inspection in order to secure the keeping of the canals in good working order in every part. The charges brought against the management of the canal are serious, and they should be thoroughly investigated, and such remedies as may be needed, if any, should be applied without delay. It is a matter of high importance to the commercial interests of the state of New York that traffic along its inland waterways should be expeditious and convenient.

According to the annual report of First Assistant Postmaster-General Hatton, the whole number of post offices on June 30, 1883, was 47,863, an increase of 1,632 during the year. The report devotes some attention to the private enterprises which have been conducted in competition with the government service, and says that the patronage bestowed upon them evinces a public demand for the more speedy delivery of a certain class of correspondence. To meet this want it is suggested that a special stamp be provided, which, when applied to a letter, whether mail or local, in addition to the ordinary postage stamp, shall be regarded as entitling the letter to immediate delivery up to a certain hour of the night. The report further suggests that, in view of the excess of receipts of postage on local matter alone over the cost of its delivery, the time is near at hand when the postage on local letters where the carrier system is in operation can be reduced from two cents to one cent.

An official account of the operations of the French army in Tonquin has just been issued by the home government and gives a very favorable view of the situation of affairs in the East. The position of the French, it is said, has materially improved. They now hold all the strategic points in the Red River delta, and only await reinforcements to complete the pacification of the country. There can be very little doubt that the actual condition of affairs in the East is much graver than the official report would lead one to believe. Very little light is thrown on the matter by the dispatches which are received from the scene of trouble from time to time, but the opinion gains ground that the delay in which the negotiations between the French and the Chinese governments has resulted has gone far to weaken the French position.

THE PROPOSED MEXICAN RECIPROCITY TREATY.

In a few weeks the United States Senate will again be called upon to take action with regard to the pending proposed reciprocity treaty with Mexico. The friends of the treaty have improved the time between the sessions of Congress to collect facts in favor of it which seem unanswerable. The opponents of the treaty have suggested nothing new. When Congress adjourned there were doubts as to the effect of the proposed treaty, and its supporters were not able to give satisfactory answers. They are now relieved from that embarrassment. The State Department instructed its consuls in Mexico to furnish all information possible. Consul-General Sutton at Matamoras has just sent a report which, in as accurate a manner as is possible under the circumstances, shows the effect of the adoption of the treaty, his calculations being based upon our new tariff of 1883.

A closer examination of the terms of the proposed treaty shows that, omitting unimportant articles, the United States concedes the duties on five articles, viz.: sugar, henequen, istle fiber, tobacco in leaf, and fruits; and that Mexico concedes the duties on twelve articles, viz.: petroleum, carriages, tools, sewing machines, machines, stoves, naphtha, clocks, vegetables, crude petroleum, steam engines, and fruits. The comparative concessions under the treaty may be thus stated:

DUTIES CONCEDED BY

United States.		*Mexico.*	
Sugar	$75,000	Petroleum	$472,045
Henequen, etc	48,207	Carriages, etc	175,000
Istle	32,500	Tools, etc	25,000
Tobacco leaf	18,487	Sewing machines	15,000
Fruits	4,000	Machines, etc	12,000
All others	881	Stoves	9,000
		Naphtha	6,500
		Clocks	5,000
		Vegetables	4,000
		Crude petroleum	3,935
		Steam-engines	2,500
		Fruits	2,500
		All others	9,731
Total	$179,075	Total	$742,351
Difference in favor of the United States, (United States coin)	$489,041	Reduced to United States coin at 90 cents	$668,116

The only considerable opposition in this country to the treaty—outside of the general objection to tariff treaties and the arguments founded upon absolute protection—have been respecting the provisions as to sugar and tobacco. The imports of brown sugar into the United States for the fiscal year 1882 were:

	Quantities, pounds.	*Values.*
Brazil	228,683,398	$8,446,779
French West Indies	59,952,340	2,385,578
British West Indies	70,044,291	2,902,845
British Guiana	64,157,685	3,192,669
Cuba	1,107,578,529	53,297,787
Mexico	2,031,049	102,147
Porto Rico	78,768,975	3,392,855
Other countries	261,132,189	9,426,485
Hawaiian Islands (free by treaty)	106,181,858	6,918,083
Total dutiable	1,873,546,056	$83,147,135
Grand total	1,979,727,914	$90,065,218

This shows an importation of 39$\frac{3}{5}$ pounds to each inhabitant. Taking into account, at the same time the amount of refined sugar exported during that period, which was 13,761,069 pounds, the actual net imports into the United States were 39$\frac{1}{2}$ pounds per capita. But a fraction more than $\frac{1}{10}$ of 1 per cent. of all the imports come from Mexico, or about an ounce per capita. The proposed treaty, therefore, would reduce our revenues from sugar about $\frac{1}{10}$ of 1 per cent.

The representatives of the Louisiana sugar interests, however, have argued that if the treaty should be ratified the effect would be a very greatly increased production of sugar in Mexico, and that, consequently, the concession would be more valuable than it even now appears to be. The argument, doubtless, has a substantial foundation, but the conditions of sugar production in Mexico are very different from those which affect it in this country. A mere statement of them will show that there is less reason for fear than is apprehended. The total sugar exports of the United States for five years, in American coin—years ending June 30—were:

1878	$251,622	1881	286,143
1879	217,173	1882	239,468
1880	445,803		

In addition to the labor question, successful sugar culture in Mexico is dependent upon irrigation, malaria and other fevers, and on the very important element of placing large sums of capital at a great distance from home, upon export duties, and upon local taxation. Mexican labor is a very uncertain dependence, irrigation is always expensive, and the water supply is uncertain. The health problem is a very grave one. Foreign capital requires very large inducements for investment in Mexico. The states of the Mexican republic have by no means surrendered their independent right to enforce export taxes, and in Vera Cruz, the chief sugar-producing state, this duty is at present so great as to seriously embarrass planters, and to prevent capitalists from starting new plantations. This export duty is such a burden that it would prove a serious check to excessive exportations from Mexico. The local expenses of these states are large, their finances are poorly managed, and they are always in want of funds; so that there is very little probability that they will relinquish the right to impose these export taxes. There are, besides much race prejudice, the embarrassments connected with a foreign language, the uncertainty of justice, and the standing menace of civil disorder. Moreover, should sugar growing be materially increased in Mexico, it is probable that refineries would be established there and that a large portion of the native sugar product would find a market in Mexico, and, to a corresponding extent, both the exports of crude sugar from Mexico and the imports into that country of refined sugar from the Uuited States would be reduced. Considering all these points, the estimate made by our consular officers of the possible increase in the Mexican sugar production is that it may double within six years.

The commercial arguments are, therefore, in favor of the treaty. There is another point which should prompt the American government to agree upon any fair terms of reciprocity. The testimony of our consuls is that European merchants, and the agents of European governments, are unanimously opposed to reciprocity between the United States and Mexico. There should be no reason why countries occupying the same continent, separated from each other only by a river which in parts can be forded, should not have reciprocal trade relations. But countries now separated from Mexico by the broad ocean almost monopolize the trade of that country. As the railroads which are to connect the United States with Mexico approach completion, this condition of affairs seems even more abnormal. The objections to the treaty seem to be mainly suggested by selfish interests, and even if they had a substantial basis they would not offset the advantages of reciprocity.

VIRGINIA POLITICS AND THE DEBT QUESTION.

Some weeks ago we presented an exposition of the present state of the Virginia debt question in so far as it was affected by judicial decisions, together with a resumé of the legislation affecting the debt. The story of the part played by the debt question in the politics of Virginia is one upon which we touched only incidentally in the previous consideration of the matter, yet it is an episode fraught with grave interest. It reveals one phase of our political activity which cannot be contemplated by conservative men without a sense of disgust and of shame. It shows on the one hand the excesses to which unchastened party spirit may lead, and it warns us on the other that there are depths of corruption beyond those sounded even by the most reckless of partisans, as such. This is a point to which it is worth while to call attention at a time when everybody's eyes are being opened to the dangers of party spirit. The story, besides, is one of present interest, since, unfortunately, the struggle between the Readjusters and the debt-payers has not yet passed finally into history.

It is not very long since the Readjuster party was in a minority in Virginia. In 1876 Senator Mahone, the leader of the party, was defeated in an effort to obtain the nomination of the Democratic party on a Readjuster platform. The Legislature elected at the same time, however, was largely in favor of his policy. The efforts of that body to embody Mahone's policy in the legislation of the state were in the main nugatory, because of the hostility of the governor to his schemes. Mahone's views did not diverge so widely from those held by his opponents at that time as they have since come to do. Both he and the debt payers agreed as to the amount of principal due, the only disagreement was as to the rate of interest to be paid. The debt payers were in favor of paying 6 per cent. interest, while Mahone insisted that only 3 per cent. interest should be paid. A change came over the senator's views with the success of his party in the elections of 1879. In that year a legislature was elected in which the Mahoneites were in a majority. They declared in favor of scaling down the debt over one-third and paying only 3 per cent. interest. Mahone quickly fell into line with his party and adopted their platform.

In order to obtain the legislation necessary to the accomplishment of their ends it was of importance for the Readjusters to secure control of the chief executive office in the commonwealth. In 1881 the Readjusters exerted all their resources to bring about this end. Mahone appealed to the negro vote and to the lower element among the whites. There are always to be found a considerable number of persons willing to evade obligations and to throw off responsibilities, and to those of this class in Virginia Mahone's appeals were not made in vain. Another weighty factor was imported into the question at this point. It had long been recognized by the leaders of the Republican party that Virginia was a Democratic state. At the time of which we are speaking, however, the divisions between the Democrats upon the debt question seemed to present an opening for the effective introduction of Republican influence in the state. At an early stage in the struggle the leading conservative men among the Republicans were opposed to a coalition with Mahone, and preparations were made to run a Republican candidate for governor and Republican candidates for the legislature in each county. This policy was suddenly changed shortly after the accession of Gen. Arthur to the presidency. He threw the whole weight of the federal influence in the state in favor of Mahone; obstinate Republican officeholders were removed and Readjusters put in their places; assessments were levied on the federal officeholders, and the money thus extorted from them went to swell the campaign fund of the Readjusters. The result was that all organized Republican opposition to the Readjusters disappeared. Against all the influences thus brought to bear against them the debt-paying Democrats were powerless to contend, and the Readjuster party came into full control of the state. The baneful activity of the party since that time has been devoted to the passing of laws impairing the contracts heretofore made by the state; to evading and nullifying as far as possible the decisions of the United States Supreme Court, and to securing the control of the state courts by packing them with men in their interest and pledged to sustain their views upon the bench.

Senator Mahone is struggling desperately to maintain his ascendancy in Virginia in the approaching election, and it is not unlikely that many of the forces which secured the triumph of his party in 1881 will be again found enlisted on his side this year. The federal influence will, without doubt, be thrown in his favor, and it is even said that the laws against political assessments are being ignored in his favor. On the other hand, there are signs that his position has been very sensibly weakened since the election of 1881. It is now no longer certain that he will be able to retain the control of the negro vote, many of the colored men who supported him in 1881 declaring their intention to support straight-out Republican candidates in the coming contest. In the north, too, where some sympathy was looked for in favor of Mahone, in consequence of the belief that he was able to break "the solid south," his cause has fallen off in popularity. The most influential Republican journal in the north recently declared that the Republicans of that section at least cannot afford to have their position compromised by sympathy with men who openly violate a principle upon which they must largely depend in the future for political support.

It is to be hoped that the members of this corrupt combination will fail of their purpose to retain the control of affairs in Virginia. The principles upon which they have acted are subversive of that political morality which is after all the true life of the state. The danger involved in the success of these men is by no means confined to Virginia alone. There can be little doubt that in the event of their success an attempt would be made to apply their doctrines on a wider theater. Some of the leaders make no secret of their intentions in this respect. The present governor of the state and the attorney-general elected in 1880 have declared themselves in favor of a vigorous application of Readjuster principles to the national debt. As past experience unfortunately shows, there are to be found in this country, as in every other, classes upon whose support men proposing a "readjustment" of debt can always depend. The sense of justice of the people of the country at large may be relied upon to defeat any such desperate design as that contemplated by the more thorough-going leaders of the Readjusters, but it is none the less the part of wisdom to withstand evil in its beginnings.

THE VITAL STATISTICS OF FRANCE.

A little more than a year ago a volume of a somewhat startling nature, entitled "Le Peril National," was published by M. Raoul Frary in Paris. The aim of the author was to bring into clear light the fact that, while the population of nearly or quite all the other nations of Europe is increasing with considerable rapidity, the increase in France is so slow as to point directly to the day when the relative position of the country now held in the family of nations will have to be abandoned. Since the appearance of Frary's volume numerous articles on the same general subject have appeared in the *Revue des Deux Mondes* and other French journals. There are various theories to account for the facts, and differing measures of importance are attributed to them, but the facts themselves seem not to be seriously disputed. In whatever way the figures are turned they lead substantially to the same result; and it is but reasonable to say that unless some influence at present undiscovered shall yet thwart what seems to be the operation of a natural law, France at no very remote day will have to take a third or fourth place among the European powers.

The grounds for apprehension are taken quite out of the domain of doubt by the care with which the vital statistics of France have been compiled. The sources of information are open to all. The "Annales Démographique Internationale," by Cheroin, and the article on mortality in France in the "Encyclopædic Dictionary of Medical Sciences," by Bertillon, are perhaps the most trustworthy authorities, and they give all needed information.

In the study of these statistics the first impression likely to be made upon the reader is the uniformity of progression that everywhere prevails. This regularity is so striking that one is hardly permitted to infer that anything whatever escapes the vigorous control of law. Some years ago Buckle, in a well-known passage, and a little later Quetelet, called attention to the fact that one day with another the number of misdirected letters lodged in the post office is subject to no more than a very trifling variation. A similar uniformity is observable in the vital statistics to which we refer. The average number of deaths per week in Paris is 958. If we take ten weeks in succession we find the variation in any one week not more than about 9 per cent. A similar uniformity is observable in the number of births. The average number per week is 1,158, and, curiously enough, here, too, the variation in any one week is only about 9 per cent. from the average number. Even the table of criminal statistics shows a very suggestive and somewhat depressing stability. For example, the number of murders, including infanticide, in France in 1872 was 360; in 1873, 341; in 1874, 352; in 1875, 352; in 1876, 327. These figures are remarkable, as showing not only the infrequency with which homicide is committed, but also as proving that it is committed with what seems to be a kind of irresistible regularity.

The several territorial changes that have taken place in France during the past half century have very nearly counterbalanced each other. The annexation of Savoy and Nice in 1861 brought an addition of 1,346,949 to the population, while the annexation to Germany of Alsace and Lorraine entailed a loss of 1,964,143. Making proper allowance for the slight difference in these figures we find that the average annual increase of population during the present century in France has been 95,039. The rate, moreover, is not increasing, but, on the contrary, is diminishing. But when we compare these figures with the statistics of the other large nationalities we discover that there is a startling difference. For example, during the last five years the annual increase of Great Britain and Ireland has been 340,118, that of the German empire 493,360, and that of the United States 1,155,446. These figures reveal the absolute increment to the nations. But when we analyze them the result is not less striking. We find that for every 10,000 inhabitants in the United States an addition is annually made of 260; in Germany of 115; in Great Britain and Ireland of 101, while in France the increase is only 26. A similar result is reached by an inspection of the excess of births over deaths. In 1879 this excess in Great Britain and Ireland was 436,780, in Germany 592,098, but in France only 96,647. These figures are somewhat modified by making the proper deductions for excess of emigration over immigration, inasmuch as the losses to England and Germany are much greater from this source than to France; but the modification is less than at first thought would be supposed. In 1879 the loss to Great Britain and Ireland from this source was 160,157, and to Germany only 28,004, while that of France was 2,793. Even after making all necessary deductions we find that the net increase in Germany was 564,094, in Great Britain and Ireland 276,603, while in France it was only 93,854.

In view of these suggestive facts it is a matter of interest to inquire whether this slowness of increase is owing to a low birth rate or to a high rate of mortality. On this subject the statistics give conclusive evidence. For example, in Austria the average annual death rate is one in 310 of the inhabitants; in Italy one in 340; in Germany one in 400; in France one in 450, and in England one in 500. Thus we see that the death rate in France is more favorable than in any of the other large European nations, with the single exception of England. The cause of the diminishing rate, therefore, must be sought in the decreasing number of births. If we inquire whether the number of marriages has diminished to any very considerable extent the answer, perhaps contrary to the general impression, must be in the negative. The statistics show that from 1801 to 1865 the number of marriages per year in every 1,000 of the inhabitants slightly increased; and, although since 1865 there has been a slight diminution, the difference is not enough to be taken into serious account. We are, therefore, driven to the conclusion that the chief, if not the only, cause of the diminishing increase of the population is to be found in the decreasing average number of births in the French family.

This conclusion is strikingly confirmed by the statistics. Bertillon gives a table showing the annual number of births per annum since 1801 for each 1,000 of the inhabitants. The diminution, though not rapid, is very considerable, and, what is most remarkable, is so regular that there is no one year in which the rate is not a trifle less than it was in the year that preceded. The diminution, moreover, seems to be characteristic of the rural districts as well as of the cities. In the department of the Pyrénées, for example, the birth rate in the course of the century has fallen from 44 to 32 per 1,000, in Rhône from 36 to 26, in Tarn from 34 to 25, and in Indre from 37 to 27.

But while such are the facts in regard to France, what do we find to be the proportional increase in other European states? The answer is at hand. While the average number of births per 1,000 inhabitants in France is only 26, in Switzerland it is 30; in Denmark, 31; in Norway, 31; in Belgium, 32; in England, 35; in Austria, 38; in Prussia, 38.5; in Saxony, 40, and in Russia, 50. While in Germany the average number of children per marriage is 5.25, and in England 4.79, in France it is only 3.31.

What the ultimate result of this very striking tendency is to be, it is interesting, but perhaps idle, to speculate. But if the present rate of increase should go on for the next fifty years, it is obvious that the relative importance of the several European powers will be strikingly changed. France will have grown to 44,000,000 in place of 29,000,000, Great Britain to 63,000,000 in place of 36,000,000, Austria to 51,000,000 in place of 38,000,000, the German empire to 83,000,000 in place of 46,000,000, Russia to 158,000,000 in place of 90,000,000, and the United States to 190,000,000 in place of 52,000,000. It is certainly not safe to predict such results as these, but in view of the permanent forces that seem to be at work it is not easy to discover what influences are to prevent their coming.

GREAT BRITAIN'S PART IN THE WORLD'S COTTON TRADE.

At the recent meeting of the British Association Mr. Edwin Guthrie read a paper on the position and prospects of the cotton trade, of which the London *Economist* prints a synopsis with remarks. In the course of his paper Mr. Guthrie dwelt upon the increase in the production and consumption of this important staple during recent years, and indicated the chief factors which have influenced international competition in the trade in the past, and which are likely to influence it in the future. He also presented some interesting comparative tables, the meaning of which we give below. Dealing first with the growth of the industry, Mr. Guthrie shows that during the last forty years or so it has undergone an enormous development. In the five years ended 1840 the average annual consumption of cotton was 1,014,000 bales of 400 pounds each, while for a like period ending in 1880 the average consumption was 3,137,000 bales, and in the two years 1881–2 it reached an average of 3,626,000 bales. The increase in production has also been very rapid in other countries. Thus the continent of Europe in 1836–40 took an average of 521,000 bales, and during the last two years an average of 3,139,000 bales, and the consumption of the United States during the same period increased from an average of 242,000 bales to an average of 2,137,000 bales. It will be seen that the proportional increase has been much greater on the continent and in the United States than in Great Britain, which has increased its consumption some 250 per cent., against an increase of 500 per cent. on the continent and 700 per cent. in the United States. Mr. Guthrie, however, shows that in such a case as this a comparison of percentages of growth is necessarily fallacious, the greater ratios shown by the continent and the United States being mainly due to the fact that they started from a lower basis. Calculating by number of bales, the United Kingdom shows an increase of 2,600,000, against about the same amount in continental countries and 1,900,000 bales in the United States.

The above figures, it is admitted, show that the former enormous supremacy in this branch of industry is not being maintained by Great Britain. It was inevitable that the infant industries of the continent and America would grow and develop, and that their growth would be greatly enhanced by the continued improvement and increased means of communication between cotton-growing countries and the rest of the world. The *Economist* says that, in spite of all the advantages which, in consequence of this improvement, have inured to the competitors of Great Britain, that country, with a comparatively small population, has increased its consumption—taking the increase in the number of bales as the measure—to about the same extent as the whole continent of Europe, and to a considerable larger extent than the United States, notwithstanding all our facilities for production, our nearness to the raw material and our rapidly-increasing population. Moreover, it is pointed out that in comparing the respective amounts of cotton consumed weight of bales is not the only criterion of trade progress and prosperity; the quantity and value of the product must be taken into consideration. Mr. Guthrie shows that the average weight spun per spindle in Great Britain last year was 35¾ pounds, while on the continent it was 57 pounds, and in the United States it reached 74 pounds per spindle, indicating that while other countries are doing more of the coarse trade, requiring a greater supply of raw material, Great Britain is doing a finer trade, requiring less weight of raw material. He also shows that reducing these respective weights per spindle to an even number of hours worked, say 56 hours per week, and taking the average weekly running time on the continent and in the United States, the weight per spindle would be 35¾, 45½ and 59¾ respectively. Speaking of the question of foreign competition, the *Economist* says that, all things considered, the United Kingdom has little reason to be dissatisfied with the way in which it has thus far held its own against foreign competition. When, however, the further questions as to the probability of continuing to keep pace with foreign competitors, and the measures which should be taken to enlarge Great Britain's trade and make it more profitable, come to be considered very divergent views are found to be entertained. The *Economist* says that doubtless the main factor which will determine the future course of trade will be the cost of production. Mr. Guthrie thinks that in respect to hours of labor rival British producers have an advantage, and he is evidently of the opinion that the factory acts have been a mistake. He admits that "for every farthing a pound we are handicapped in the cost of labor we are handicapped perhaps from 5 to 10 farthings by foreign tariffs;" "but," he very plausibly argues, that "the latter are not in British control, while the former is, and to a large extent the difference of a farthing a pound on yarn makes all the difference between free sales and no trade at all." The *Economist* maintains at some length that shorter hours of labor in the British cotton factories have not afforded foreign competitors any advantage in neutral waters, and does not agree with Mr. Guthrie that the present depressed state of the cotton trade is attributable to the factory acts. It, nevertheless, coincides with his view that the policy of restricting the output would be suicidal to the interests of the trade. Mr. Guthrie's argument on this point is an elaboration of the proposition that curtailing production increases cost, and that such an act would hand over to competitors a portion of Great Britain's business, while the relief afforded would be only momentary.

THE GROWTH OF THE SOUTH.

The New Orleans *Times-Democrat* of recent issue publishes interviews with the governors of twelve southern states. From the figures contained therein the following tables are prepared showing the increase in assessed valuation during four years last past:

	1883.		1879.	
	Assessment.	*Tax rate.*	*Assessment.*	*Tax rate.*
Alabama	$155,000,000	6½	$117,486,581	7
Arkansas	128,000,000	7	66,892,541	6½
Florida	50,000,000	5	29,471,018	7
Georgia	326,000,000	2½	235,050,530	5
Kentucky	374,554,979	4¾	318,037,875	4½
Louisiana	201,790,723	6	158,587,195	6
Mississippi	132,000,000	2½	106,594,708	3½
N. Carolina	200,000,000	2 4-5	156,000,000	2 2-5
S. Carolina	130,000,000	5	132,237,980	6¾
Tennessee	252,589,873	2	223,211,345	1
Texas	538,000,000	3	304,470,736	5
Virginia	332,000,000	5	315,576,822	6
Totals	$2,824,934,575	4½	$2,184,227,547	5 1-12

This is an increase of 640,707,028 in four years, an average of $160,176,757 a year.

During the past four years Arkansas, Florida, Louisiana and Texas have doubled their railway mileage, the total for twelve states being in 1883 (October) 26,049, against 17,260 miles in January 1879, an increase of 7,789 miles, or one-quarter of that for the whole country.

Here is the picture of four years of cotton manufacturing in the south:

1880.	*Mills.*	*Spindles.*	*Looms.*
Alabama	15	55,072	1,060
Georgia	44	200,974	4,713
North Carolina	50	102,707	1,960
South Carolina	19	92,788	1,776
Totals	128	451,601	9,509
1883.	*Mills.*	*Spindles.*	*Looms.*
Alabama	20	90,000	2,000
Georgia	50	300,000	6,000
North Carolina	64	156,030	2,856
South Carolina	26	180,701	4,120
Totals	150	726,731	14,978

An increase of over 60 per cent. in three years

It is believed that the facts elicited about the cheapness of manufacturing cotton goods in the south and the dividends paid, ranging from 15 to 20 per cent., must bring about an even greater growth of this industry.

Alabama seems to be turning her attention to the great mineral wealth, coal and iron.

Arkansas is sharing with Texas the tide of immigration pouring southward from the west, attracted by the extensive forests.

Florida hopes to become the garden and orchard of the United States, and looks to the redemption of the swamp which has made so large a portion of southern Florida uninhabitable.

Georgia is still "the Empire State," leading in manufactures.

Kentucky's cereal crops are large, and it still maintains its position in the matter of blooded stock and horses.

In Louisiana new railroads are being built, new factories erected, and everything promises well.

In Mississippi, as in Louisiana, the levee question has been a matter of the most importance, great railroad activity prevails, and new cotton mills are going up.

North Carolina contains not only all minerals known to commerce and science, but many peculiar to its mountains.

South Carolina has doubled the number and output of its cotton mills within two years.

Tennessee has at least four sources of wealth; its fertile fields, that produce every crop known in this country; its manufactures, its minerals, and its immense wealth of valuable timber.

Texas is sixth in railroad mileage and sixth in agricultural productions in this country, and is adding to its assessed wealth at the rate of $120,000,000 a year.

In Virginia trade and commerce have more than doubled.

OCCASIONAL NOTES.

While it is the agreeable duty of the daily press, as well as that of the sporting journals of the country, to treat of the great Horse Show Exhibition in a *dilettante* or a professional manner, it becomes us to regard it from a commercial point of view, not only as regards the probable benefit to the horses of our country as a result of the instruction breeders can there obtain, but also as regards the information as to what the foreign market offers, both in animals useful for us to import and the sort of horse which will best suit the tastes of British and general European horsemen. As American trade in horses now stands, the balance is entirely against her. Of the comparatively few American horses sent or taken abroad the greater number are usually destined to return. Notable instances of this occur among the great racehorses of to-day, of which only a few are purchased in England. Great Britain is the world's mart for horses; annually she requires many thousands more than she can produce to perform the omnibus and tram service of her great cities; yet, while she buys thus largely from foreign breeders, she is able to supply stallions and brood mares to nations enterprising enough to need them.

The vast extent of country which we possess, and in which are many districts admirably suited for horse-breeding, places us foremost in the rank of producers; that is, if our breeders took full advantage of what nature has prepared. Hungary exports annually troops of saddle horses—low-priced animals suited as remounts for cavalry. France and Canada furnish Great Britain with a yearly quota of ordinary quality harness horses, and Ireland still breeds the best hunters and steeplechase horses of the world. This she can do so long as the traditions of her hunting men are preserved—that is, only by using thoroughbred sires. America has in horse-breeding departed from the ways of wisdom; her farmers and general horse-breeders have diligently sought after speed. So a horse was vulgarly fast no heed was taken as to how he performed or how he looked during or after his work. The National Horse Show is destined to teach the lessons so widely needed throughout our land, that symmetry and power are always united; that docility and brain development go together, and that these qualifications command the home and foreign markets to the widest extent. Already Australia and New Zealand are among our buyers, and no effort should be spared to increase the volume and keep up the already extended compass of our foreign horse trade.

Among the boldest ideas of this scientific age was that of providing means for ocean electric communication. When first attempted the scientific problems to be solved and the mechanical difficulties encountered were of the most formidable character, complicated by the erroneous conception of leading electricians that in telegraphing through a cable the current had to be forced from one end to the other in the working, necessitating powerful batteries, batteries which were found not only to constantly overcharge the cable, rendering it inoperative (a phenomena then attributed to interfering earth currents), but rupturing the cables. Comparatively weak batteries are now found sufficient, signalling being effected by the mere disturbance of the static charge in the cable. Hence the performance and good working of sea cables, any injury to them being attributable to breakage from mechanical causes, abrasion or corrosion.

The principal difficulties being surmounted (room being yet left for improvement in details), the great requirement, particularly as regards transatlantic telegraphy, is the cheapening of cost of messages, only apparently to be obtained by increased facilities, afforded by the laying of new cables, the proprietary of which, free from affiliation with companies controlling present cable management, shall lay themselves out for the large additional business to be obtained by more moderate rates in commercial trading and social communications. For the latter, transatlantic cables have heretofore played an indifferent part. With companies establishing an exclusive combination there is an irresistible temptation to charge "what the traffic will bear." The laying of the two Mackey-Bennett cables as independent routes will necessarily bring down the rates of the present companies, with great benefit to the public, and, as we believe, owing to the augmentation of business that will ensue, with no material reduction, if any, of current profits. Financially regarded there is no more lucrative ocean cable route than that between this country and England, not only because of our enormous trade with that country and the extent of social correspondence to be maintained, but because it brings us into connection with the whole telegraphic system of the world.

That the recent bank and commercial troubles in Canada have caused much uneasiness in that province is evident from the tone of its newspapers and the utterances of representatives of its banks in this country. On all sides is the cry of overproduction, with no great body of consumers at hand on whom to force the surplus. Some industries have curtailed their output, and others are considering the advisability of the same step. The cotton manufacture is perhaps the most conspicuous among those interests that have been overstimulated by the protective tariff. The bank statements are the most available index of the expansion of trade. Nine banks in the Province of Ontario have discounts amounting to $55,034,218, against $34,970,272 in 1879, while the deposit item has increased from $22,790,383 to $42,704,649, the circulation from $5,366,799 to $10,906,912. Meanwhile the capital has increased but $2,200,000. In the Province of Quebec the discounts of fifteen banks have grown from $60,610,026 to $70,620,201; deposits, $42,699,627 to $54,948,951; circulation, $9,140,127 to $17,269,185. There has been no increase in the capital. A scarcity of gold has been complained of in Canada for some time, and shipments were recently made thither from England, when, if it had been a mere matter of paying a debt, exchange would have been cheaper.

The lumber trade direct between Puget sound and adjacent territory and Australia has become important. The point, however, occurs whether it is not desirable to adopt measures for the preservation of our forest timber. The Pacific coast is being rapidly denuded of timber, and nothing is done to compensate for the loss by planting new forests. Climatic changes of very serious character may be anticipated from the wholesale destruction of growing timber. A correspondent writes to us from California stating that he had driven recently for days through the Sierra Nevada range, and that the usually bright atmosphere of that elevated region was so charged with smoke from burning pine trees that it was impossible to see for any considerable distance. Millions of dollars worth of valuable timber are thus annually destroyed on the Pacific coast. Sheep-herders and hunters are the greatest offenders, but as they are never prosecuted they continue their devastations year in and year out. It should be somebody's business to prevent this waste of national property. Because men are permitted to depasture sheep and hunt over the national domain without charge or license is no reason why, for their own gain or personal convenience, they should destroy the public forests. Congress would do well to consider this matter at its next session. Furthermore, steps should be taken to disallow all entries for speculative purposes on timber lands. It is charged that this has been done on a very large scale in the redwood-lumber region of California. The supply of this timber is limited, and as it is exceedingly valuable for building purposes it should be carefully conserved. The public rights in the premises, however, should be protected.

Our San Francisco correspondent writes: The California wine crop will be short, owing to the scorching hot days early in June. It will be safe, however, to estimate the crop at 10,000,000 gallons. The reduced yield is generally estimated at about 3,000,000 gallons. The season has not been a good one for fruit on the Pacific coast, and complaints are made by fruit-raisers of the cost of transportation east. Unless the eastern states are open as a market for California fruit products it is quite evident that the limit of production has been reached here for years to come. There is an unlimited market for California products east of the Rocky mountains, but railroad transportation is far too costly at present to enable free shipments from the Pacific coast to those points. The consequence undoubtedly will be the arrest of this promising industry and a check to the upward value of fruit-land, unless the freight schedule be changed in favor of production; $850 a carload for grapes from here to Chicago and $1,050 from here to New York is rather a steep figure. On the principle of "charging what the commodity will bear," the transportation companies capture the profits of the vignerons. The time has surely come when the transportation question should be considered upon its merits, and not solely with a view to squeezing the productive industries, travel and commerce of the country in the interest of corporations.

Statistics of manufacture show that the number of cigars made at San Francisco, Cal., during September, 1883, was over a million less than in the corresponding month of 1882. The numbers were: September, 1882, 15,158,075; September, 1883, 14,134,900. There was a slight increase in the manufacture of cigarettes last September, as compared with the corresponding month of 1882, but nothing to affect general results. It appears probable that the manufacture of cigars has reached its utmost limit in the Pacific-coast metropolis for some time to come. Competition at other points on the coast is now keen.

The Chamber of Commerce of San Francisco, in concurrence with the local Board of Trade, has reported in favor of the Lowell bill, should any national bankruptcy law be considered by Congress; and Senator John F. Miller, of California, has been requested to represent the chamber at the National Bankruptcy Convention to be holden shortly in Washington. This is satisfactory, so far, although the chamber expressed the opinion that national legislation on bankruptcy was unnecessary on the Pacific coast. The language of the report is "that while no exigency exists in this portion of the country for a national bankruptcy system * * * the Chamber of Commerce and Board of Trade of San Francisco are, nevertheless, in sympathy with other mercantile communities whose earnest declarations are in favor of such legislation. On these grounds these boards do not oppose the general demand for a uniform bankruptcy law; and if it be the pleasure of Congress to adopt such a measure, then these two bodies declare their preference for the Lowell bill, and earnestly protest against the so-called equity bill of Senator Ingalls." At the same meeting the San Francisco Chamber of Commerce adopted a report in favor of free ships.

A correspondent writes: Maquoketa, Iowa, the county seat of Jackson county, is pleasantly situated on a level plain, and surrounded by a badly broken though rich agricultural country. Its retail trade, which is the largest of any town in the county, is very fair, and prices are well maintained. Most of the business houses are of brick, well built and substantial. In the resident portion of the town are some of the most tasteful dwellings and best-kept grounds to be seen in that part of the state. Maquoketa has three banks, also one or two small jobbing houses, but the territory covered is limited. Some of the neighboring bluffs are quite noteworthy, having abrupt descents for over 150 feet. They are of limestone formation, and there are four Maquoketa firms engaged in burning and shipping lime. They supply considerable territory north and west, traveling men being employed in placing the product. One of these enterprising limeburners is reported to have already accumulated $40,000 to $50,000 in the business. Farming lands in this county that were a few years ago held at $5 and $10 per acre now bring $30 to $50. This year's corn crop was badly damaged by the early frost; a few fields on high ground (uninjured) will yield 45 to 55 bushels to the acre.

Two noteworthy items of news in reference to the Suez canal have come to hand, one being that the French engineers of that undertaking have reported in favor of a parallel and contiguous route for a duplicate canal; the other that a vessel, termed a hydromotor, and designed for towing vessels of all grades of tonnage through canals, has been tried on the Elbe, before admirals of the German navy and eminent engineers, and been approved by a representative of M. de Lesseps who was in attendance, as calculated to facilitate transit. At present the time taken up by steamers and other craft, ordinarily three days, the distance being some ninety miles, is excessive. There exists a crowding which needs relief and a delay which is opposed to the exigencies of commerce. It is probable that M. de Lesseps will be as good as his word, and that another canal, with or without British assistance, will be carried through.

It will be remembered that the English government was prepared to make an advance to the Suez Canal Company of several million pounds toward this new enterprise, the amount to be repaid by installments in a series of years, and that an undertaking to that effect, contingent on the approval of Parliament, was entered into; but the hostility of English public opinion, and especially the attitude of the mercantile community, who desired a British canal under British control, rendered hopeless any parliamentary indorsement, and the agreement was accordingly not brought forward for ratification. English capitalists, however, always go in for assured profitable investments, and, despite the feeling on the subject against government assistance, which has lately found such emphatic expression, they will doubtless prove liberal purchasers of shares in the new stock. Meanwhile, M. de Lesseps' enterprise tends to discourage any immediate endeavor at making a canal strictly British, even were the right of way fully conceded. One cannot but be struck with the change in the "situation" since the existing canal was projected. Political jealousy, fanned by Lord Palmerston, led to every possible impediment, diplomatic and otherwise, being placed in the way of the enterprise, even capitalists being warned off by representations of the impracticability of the scheme. If the sands of the desert did not fill up the ditch as quickly as it was dredged, the difference of level between the two seas was to prove fatal. Now it is all plain (though slow) sailing. No reasonable doubt can be entertained that the second canal will be financially successful.

SPECIAL CORRESPONDENCE.

BRAZILIAN FINANCIAL AFFAIRS.

Rio de Janeiro, September 25.—On the 19th inst., and after a session of 139 days, the General Assembly of Brazil was formally adjourned. Although the financial state of the country is most critical, the imperial budget laws for the ensuing year were not passed, and no measures were adopted to aid or relieve the public treasury. Supplementary or deficiency credits to an aggregate of about 18,000,000$ ($9,000,000) were passed, one of which was for a deficit of 12,000,000$ in the public relief expenditures of the Ceará *sécca* of 1878–80. As the public departments are now running under the budget laws of last year, which were prorogued to this year because the General Assembly failed to pass the regular annual appropriations, it is evident that this failure of the last session cannot be otherwise than inimical to a proper fiscalization of public expenditures. In view of these conditions and of the present serious embarrassments of the imperial treasury, the following resumé of the finances of Brazil for the last twenty-five years, together with an abstract of her present financial condition, will have unusual interest to capitalists and business men abroad.

Some ten weeks since an important epitome of all the imperial budget laws since 1823 was published here in the official journal by Senator Castro Carreira. A comparison with the annual reports of the Minister of Finance shows that its figures are correct, or as nearly so as careless typographical work will admit. This epitome includes quinquennial summaries and abstracts of public indebtedness, which are of great value in comparisons. In order to make this abstract cover the period of the present system of "public improvements," beginning with the construction of the Dom Pedro II. Railway, and also to comprise these quinquennial debt abstracts,

it is necessary to take the fiscal year 1855–56 as a starting point. During the preceding five years the aggregate revenue of the government had been rs. 176,376,689$988, and the aggregate expenditure 182,607,683$897, leaving a deficit of 6,230,993$909. The total indebtedness of the empire at the end of this period (1854–55), including the 1852 foreign loan of £1,040,600, was as follows, the Brazilian *milreis* (rs. 1$000) at par being equivalent to 54½ cents United States gold:

Foreign debt, 4½* and 5 per cent	Rs. 51,760,213$800
Internal debt, 4, 5 and 6 per cent	57,944,117$349
Total	Rs. 109,704,331$149
Overdue amortization	552,674$504

* The loan of 1852, amounting to rs. 9,201,003$900, was the only one issued at 4½ per cent.

During the five years from 1855–56 to 1859–60, inclusive, the reign of reckless expenditure on public works began, and since then there has been but one single year (1856–57) in which the revenue has exceeded the expenditures. Some of these works were necessary, and either have been or will be reproductive; but in great part they have been unnecessary and enormously expensive. The best of these investments has been the Dom Pedro II. Railway, upon which the government has expended, not including interest on investment, over £10,000,000. In this period three foreign loans, aggregating £3,407,500, were made, while the internal debt was slightly decreased. The aggregate deficit for the five years was 14,766,501$430, the average annual revenue being 45,653,023$988, and the expenditure 48,606,324$274.

With the year 1860–61 a new portfolio was added to the imperial cabinet, that of "Agriculture, Commerce and Public Works"—a department which was designed to preside over and develop the wealth-producing industries of the nation, but which has succeeded only to the extent of mischievous interference and burdensome expense. In 1860–61 its operations were covered by the modest expenditure of 3,871,543$615; in 1880–81 this annual expenditure was 36,798,932$429, an increase of nearly ten-fold, against an increase in the imperial revenue, in the same period, of only a little over two-and-a-half-fold. In the last year of this quinquennium (1864–65) a war broke out between Brazil and Paraguay, which lasted through the succeeding five years. There was but one foreign loan contracted, amounting to £3,855,300, but the internal debt was increased to 84,265,751$023, by the issue of 6 per cent. apolices. A large amount of paper money was also put into circulation. The aggregate deficit of the five years amounted to 39,291,246$732, the average annual receipts being 52,591,517$851, and the expenditures 60,449,967$196.

In the next five years (1865–66 to 1869–70) the expenditures of the government were enormously increased by the war with Paraguay, the total cost of which is calculated to have been rs. 613,183,262$695. The extraordinary credits of the government during this period amounted to 297,901,467$920, taxation was largely increased and new issues of paper money were made. The aggregate deficit amounted to 324,308,486$584, the average annual revenue was 75,378,203$782, and the expenditure 140,239,901$019. One foreign loan, amounting to £6,963,600 was raised in London, and the internal debt was largely increased by the issue of 6 per cent. apolices. The total public debt (1870) was as follows:

Foreign debt, 4, 4½ and 5 per cent	Rs.	113,136,525$300
Internal debt, 4, 5 and 6 per cent	"	238,590,553$106
Total	Rs.	351,727,078$406
Overdue amortization	"	2,054,162$257

In the five years following there was a large falling off in the expenses of the war and navy departments, but the steady increase in those of agriculture and finance kept the total up to an unwarranted high figure. Although this was a period of peace the expenditures were largely disproportionate to the revenue, the aggregate deficit for the five years being 56,612,024$302. Extraordinary credits were authorized to a total of 70,426,709$145, more paper money was issued and taxation was again increased. One loan of £3,423,200* was placed in London, and the internal debt was increased to 289,562,250$388. The average annual revenue was 102,850,542$492 and the expenditures 114,173,147$352.

In the last quinquennium of the period under review there was a steady increase in the expenditures of the Department of Agriculture, and the aggregate expenditures of all the departments largely exceeded those of the five years of war. This period included the great *sêcca* of Ceará, in which there was so great a loss of life and property, and upon which the government expended 60,503,848$320 for public relief. A large part of this expenditure, however, was swallowed up by speculators and dishonest public officials, of whom the government has the names of 1,539, with evidence of guilt, not one of whom has ever been prosecuted. The aggregate deficit of these five years was 208,226,626$668, the average annual revenue 101,489,513$880, and the expenditure 149,134,839$214. The extraordinary credits footed up to 194,252,406$919, a large issue of paper money was made, and the internal debt was increased. One loan was made in London (1875) amounting to £5,301,200, and a national loan was made in 1879 amounting to 51,885,000$000. At the close of this period (1880) the state of the public debt was as follows:

Foreign debt,* 4, 4½ and 5 per cent	Rs. 144,059,478$500
Internal debt, 4, 5 and 6 per cent	416,306,722$424
Total	Rs. 560,366,200$924
Overdue amortization	3,364,971$702
Paper currency (April 1, 1880)	189,199,591$000
Public deposits (finance report, 1880)	52,950,884$564
Treasury bills (April 30, 1880)	11,632,700$000
Total	Rs. 817,520,348$190

* The foreign debt is estimated at the par exchange of 27d., or 5¾d. above current rates.

Tabulating the aggregate quinquennial revenue receipts, expenditures and deficits for this period of twenty-five years gives the following result:

Quinquennium.	*Receipts.*	*Expenditures.*	*Deficits.*
1855-56 to 1859 60	228,265,119$941	243,031,621$371	14,766,501$430
1860-61 to 1864-65	262,957,580$252	302,248,835$984	39,291,246$732
1865-66 to 1869 70	376,891,018$011	701,199,505$495	324,308,486$584
1870-71 to 1874-75	514,253,712$462	570,865,736$764	56,612,024$302
1875-76 to 1879-80	537,447,560$402	745,674,196$070	208,226,626$668
Totals	Rs. 1,919,815,009$968	2,563,019,895$684	643,204,885$716

Average annual deficit, Rs. 25,728,195$428.

Since 1879–80 only the accounts of the year following have been definitely settled, from which it appears that the receipts were 127,076,363$334, the expenditures 138,583,090$590, and the deficit 11,506,727$256. For 1881–82 the government admits a deficit of 5,054,000$228; but on removing some 7,000,000$ of treasury bills, deposits, etc., from the revenue and nearly 1,000,000$ from the expenditures, which had no place there, the actual deficit mounts up to 10,315,846$517. For 1882–83 the government's estimate places the deficit at 6,104,000$; but as the revenue receipts include 17,666,800$ of treasury bills emitted, 141,200$ in nickel coins issued, and 3,500,000$ of deposits for special purposes, the deficit really amounts to 27,412,000$, as shown on the minister's report. The *Jornal de Commercio*, however, has recently called attention to some important omissions in the expenditure account, which increases this deficit to 33,883,775$674. For the current year the *Jornal* calculates that the deficit on actual appropriations will be 28,366,065$942, making a total of 62,249,841$616 for the two years covered by the budget law now in force. According to an admission made by the Minister of Finance in the Senate on the 10th inst., the floating debt of the imperial treasury now amounts to 48,000,000$, notwithstanding the new loan of £4,599,600 which was placed in London in January last. Under such circumstances the adjournment of the General Assembly, without one single effort to improve the financial condition of the country, can be considered as nothing else than recklessness or incapacity of a very high order.

BUSINESS MEN AND POLITICS IN ST. LOUIS.

St. Louis, October 22.—This city is suffering a disgraceful notoriety through what is called its "police muddle." An outgrowth of that muddle is a virtuous spasm of rebellion in commercial circles against a high-handed dominion of political rascality. The scandalous rumors which have been published all over the land as connected with the police department of our municipal government have been and still are the subjects of grand-jury investigation. That one general statement obviates any call for rehearsing specific facts arrived at in the odious untangling of official and political intrigue now and lately going on. Enough meanness has been uncovered in one department to make the most stable of our business men doubt the integrity of other departments.

At the first indication that the business element of the city was about to assert itself regarding the administration of municipal offices one of our partisan newspapers protested against interference in political matters by the merchants on 'change. A few days later some three thousand of our merchants and manufacturers held a meeting on 'change to organize their influence with a view to taking the control of municipal offices out of the hands of political rings. The unsurpassed rottenness of local politics is now keenly felt by our merchants, and an unpartisan activity and interest in politics among them is a result. This is probably about as spasmodic as the quarrels between political ringsters, through which alone corruption is often discovered.

But it is believed and asserted by not a few of our business men that beneath this spasm of self-assertion in political matters by commercial circles there is a stable tendency that is rapidly gaining force and character. That tendency is to bar professional politicians from office with an exacting discrimination not heretofore exercised. The strictly commercial character of the leading questions in national politics is referred to as the justification of this feeling, together with the delay and trifling over such questions in Congress which has repeatedly jeopardized business in the last few years.

Moreover, the feeling is expressed that in the discussion of questions of business economy the partisan press is, by its very nature, untrustworthy. The opinions on those issues of such a business journal as BRADSTREET'S have more weight with our best commercial element than the dicta of any partisan newspaper in this section of the country.

Committees of merchants on 'change are now arranging an organization by which it is hoped that politics here will in future be, at least in a fair measure, relieved of the evil control of professional ringsters. The experiment is considered one of no slight importance to commercial interests, though its value will hardly be proved until tested in the next general campaign.

THE GROWTH OF KANSAS CITY.

Kansas City, Mo., October 8.—In no previous year has there been more pronounced improvement in the development of trade and building up of the city. The papers have said less about it than heretofore, taking it for granted that it is generally known that Kansas City is growing and prosperous. Trade has become more settled in character. It is more as a commercial than manufacturing center that Kansas City is known. For the nine months ending September 30 the bank clearings aggregated $188,799,900, against $132,564,000 the corresponding time last year, an increase of $56,235,900, or 42 per cent. As a grocery market Kansas City is one of the most conspicuous in the west, the sales last year in that line reaching $9,500,000; for the nine months to October 1 they were $8,193,750, showing an increase of 15 per cent. In the dry goods trade there has been even a more conspicuous growth. For the first nine months of this year the sales are put at $4,218,750, as compared with $4,500,000 during the whole of 1882, a gain of 25 per cent. The clothing and notions trade is said to have been 15 per cent. better than last year, so far this year the sales up to October 1 being placed at $2,587,500, against $3,000,000 during 1882. So far $3,400,000 worth of boots and shoes have been sold by jobbers; last year there were $4,000,000 worth, the gain being 10 per cent. In furniture the aggregate sales were $1,250,000 for 1882; this year it is claimed that sales will be fully 20 per cent. higher. As an agricultural implement market Kansas city is a very prominent distributing center. Up to October 1 the sales were estimated at $5,175,000. For all of 1882 they were $6,750,000, an increase so far during 1883 of 20 per cent. In the six leading departments of trade named there has been an aggregate business of $24,700,000 done this year. There was $1,600,000 worth of drugs sold here last year and over $1,500,000 worth of hardware. There was a trade of $4,000,000 in liquors, a large crockery and queensware business, and sales of $1,000,000 in woodenware. In all these lines business has been growing, and an increase is claimed of from 10 to 25 per cent. The grain interest is large and valuable. Large quantities of both corn and wheat are handled on eastern account, and a good trade in oats is done for the west and southwest. The completion of the Kansas City, Springfield & Memphis Railroad to Memphis, which is announced for next week, will open up a new and valuable market for grain, and in the future large quantities of western cereals will doubtless find a market in southern cities, or seek European shipment via New Orleans. There are six elevators here, representing a value of $510,000, employing 97 hands and paying out $65,475 per annum in wages. Their working capacity is about 400 cars per day. For nine months of the present year there was handled here:

	Bushels.		*Bushels.*
Wheat	6,113,054	Oats	306,810
Corn	8,535,054	Rye	132,605

Allied to the grain trade is the milling interest. Several mills have been built in the past few years, and some of the old ones have been improved, yet such has been the march of business that they have all been kept busy. There are now seven flouring mills here, fitted with the most approved machinery, valued at $290,000, employing 99 hands, paying in wages $74,250 per annum, and manufacturing 425,000 barrels of flour, besides meal and feed stuffs.

The most important manufacturing industry is pork packing. Its development the past few years has been rapid and so great as to place the city second on the list of packing centers. Chicago leads in the number of hogs slaughtered. There are but three firms engaged in the business, but they all represent large capital and do a very extensive trade; two of the plants are among the largest in the country, employing over 700 hands each. The three houses represent an investment of $6,700,000 in buildings and capital. An average of 1,800 hands are employed the year round, and earning each an average of $2.50 per day, making the amount paid out in wages $1,350,000 per annum. Most of these employés are men of family, and to say the packing interest here furnishes support to 5,000 people is thought to be rather an under than over estimate. There were slaughtered here from the first of the year to October 1, 735,068 hogs, at a cost of $9,500,000, and 52,000 cattle, for which $1,820,000 were paid, making $11,320,000 paid out for the raw material. Add to this $1,350,000 for wages and the increase in the value of the manufactured product, and the trade in meats here so far this year may be safely placed at $15,000,000.

The live stock trade at Kansas City is the largest and wealthiest single commercial interest. Kansas City being the gateway to the great plains of the west, large numbers of grass cattle are received every year. In the spring the adjacent feeding districts in Kansas, Missouri and Nebraska, furnish large receipts of corn-fed cattle, hogs, sheep, horses and mules. The stockyards are among the most complete in the country, employing 150 hands and paying $90,000 per annum in wages. For the past nine months the live stock receipts at Kansas City have been:

	Cattle.	*Hogs.*	*Sheep.*	*Horses & Mules.*
January	21,259	153,894	8,527	1,045
February	21,973	111,518	10,190	1,015
March	28,180	76,978	6,941	1,607
April	31,516	95,077	10,088	1,655
May	32,259	158,608	7,110	1,800
June	30,358	109,089	11,666	2,502
July	53,902	98,356	6,163	2,339
August	59,519	96,660	8,006	1,844
September	40,134	94,876	15,556	1,803
Totals	319,100	995,050	84,580	5,700

The total money value of this stock may be placed at $28,000,000.

There are eight iron foundries, boiler and machine works here, and all at work. The plants represent an investment of upward of $300,000, and 300 hands are employed, earning $236,000 per annum. All kinds of foundry work is done, architectural irons being manufactured quite extensively. There are two linseed oil works, one an old and quite an extensive mill, the other new. The plants are valued at $160,000, and the capital engaged in the business put at $210,000. There are an average of 45 hands employed and upward of $27,000 paid in wages each year. Of the minor industries, probably the manufacture of crackers and candies lead. One firm alone last year employed 275 hands, used 37,500 barrels of flour, 20,000 pounds of sugar, 2,000 pounds of lard, and paid out in wages $185,000. Within the past year two new houses have been opened, and both are doing a good business. The sales in 1883 will show a large increase over last year.

The permanent improvements have been no less conspicuous than the growth in trade. Up to October 1 the number of building permits issued was 951, against 950 for the entire year of 1882. There were twelve buildings put up costing $20,000 to $42,000 each, twelve costing $10,000 to $18,000, fifty-seven costing $5,000 to $9,000, and seventy to cost $4,500 down. In all, an investment of $2,200,000, against $2,057,500 in 1882.

LOUISIANA LUMBER PROSPECTS.

New Orleans, October 23.—No state of adequate area can boast of more extensive virgin forests than Louisiana. Many of her trees are commensurate in height and breadth with their California rivals. The water facilities for transportation are unequaled. Deduct 17,584,600 acres of untouched forest lands from a total area of 28,105,600 acres, and it will readily be perceived what vast possibilities for the export of lumber await the capitalists whose penetration may foresee the success of their venture. The average price asked for these lands is from $1.25 to $2 per acre. The many advantageous sales made during the past year or two, at rates never before equaled in this section, have renewed interest in southern timber lands. The majority of the purchasers were northern and western lumbermen, who expect to double their investment within a few years. Of oak alone 18 varieties are found within the state. There are 3 varieties of pine, 3 of locust, 2 of mulberry, 4 of ash, 3 of elm, 2 of gum, 4 of hickory, 3 of maple, 2 of sassafras, 2 of magnolia, 3 of china, 6 of pecan and 4 of willow. The preferred varieties seem to be cypress and yellow pine, especially yellow pine, which is considered stronger and more durable than white pine. The parishes bordering on Lake Pontchartrain abound in pine forests, and give lucrative employment to hundreds. Calcasieu,

* The last report of the Minister of Finance gives the total of this loan as £3,459,600.

Vernon and Sabine, contiguous to Sabine river, with portions of Natchitoches, Rapides, Grant, Caldwell, Catahoula, Lincoln, Jackson and Bienville parishes form another wide belt of valuable timber lands. It is remarkable that the growth of this industry has not been earlier and more vigorous when one considers the many uses the different varieties of Louisiana timber may be put to, viz., ash for furniture and wagons; elm, wagon and ship-building; hickory, wagons, buggies, handles, etc.; locust for trenails and pins in ship-building, etc.; maple, fancy work and machine frames; pine for timber; oak for ships; yellow pine, ships, building, furniture and ornamental work; willow for charcoal, gunpowder and woodenware; in fact, there is not one of our native trees that is not useful either for commerce or industry, and yet it is only within the last half-dozen years that our exports of lumber have been noticeable. To be sure we had to compete against the great western forests, the large amount asked for transportation, the expense of tonnage at our wharves, and the almost annual early quarantine established against the Mexican, South American and West India island ports, to which our largest consignments are made, leaving but a few months for trade. Another opposition to the progress and enlargement of this commerce, notwithstanding the immense advantage of the local bayous and lakes, has been the want of sufficient money among lumbermen generally to enable them to purchase machinery and materials for steam railroads for the carrying of saw logs from the forests too distant from water courses to be conveniently handled otherwise. The need of capital is great, in view of the increased cost of a mill with all modern appliances. At least $60,000 would be necessary now, while half that amount would have covered all expenses hitherto; but the expense is justified by the results attained in the better quality of the finished work, besides the saving in time.

The formation of the Lumbermen's Exchange has been of great help in dispelling the dark clouds upon our otherwise hopeful future in the lumber line by the zest it has given for accurate statistics of home manufactures, the cheerful information always given to inquiries, and the pointing out by competent judges of the necessity of unity of purpose for progress among experienced members for the general good. A glance at the total receipts for several years past shows the impetus given to our foreign shipments from this concentration of force in one body. Stock of lumber on hand September 1, 1881, 19,500,000 feet. Manufactured in city saw mills 21,000,000 feet. New and old canals, river and railroads 103,488,000 feet. Total 144,188,000 feet. For 1883: Lumber on hand September 1, 1882, 26,651,663 feet. Shipments from July, 1882, to July, 1883, of lumber and timber, 8,418,000 feet (valued at $150,000), not including box, staves, shooks, etc. The improvement in the manifests of foreign shipments on Mississippi sound, particularly at Pass Christian, is most remarkable. Seventy vessels expressly for lumber have been chartered for this year alone at this port. A pleasant sail along the sound waters often shows twenty or more vessels awaiting cargoes of lumber. The coast shipments via Ship Island and Pascagoula anchorage also amount to many thousand feet in a season, of which it is difficult to obtain exact accounts from reliable sources; consequently these exports are, as a rule, not included in the Exchange totals. Perhaps there is already a remedy for this discrepancy in the appointment of a competent agent for the Exchange at both these points. The augmentation in the importation of tropical woods at this port is noteworthy, particularly as regards cedar and mahogany. The mahogany trade, so long subservient to that of the more fashionable walnut, has again become of great importance in consequence of the craze for the antique styles. A large amount of capital has been invested in the importation of these woods, and in every instance the ventures have proved remunerative to the speculators, our contiguity to the producing countries and the unusual facilities New Orleans possesses for general distribution by rail and water being favorable to our monopoly of this lucrative trade. Added to the aforementioned local advantages for the future prosperity of the lumber industry is the fact that we have little to fear from forest fires, as we have no undergrowth, and because of our immense water surface and our comparative freedom from the northwest winds so destructive to western and northern timber tracts. These forest and prairie fires are always spread by winds from the northwest, never by southeast winds, which bring rain. Whenever these fires reach a wide body of water the flames are powerless, so an extensive prairie fire is impossible in our state, intersected as it is by numerous lakes, bayous and rivers. It is the general opinion of reliable, well-informed men who are interested in the lumber commerce here, and whose conclusions are therefore worth repeating, that the base of the lumber and timber supplies within the next few years must be at the south, and must, of necessity, center in New Orleans. Although your correspondent is neither a prophet nor the son of one, he coincides in the opinion of the New Orleans lumbermen upon this subject.

SOME DAKOTA TOWNS.

Fargo, D. T., October 20.—Fargo, which is the largest city in the territory, claims 10,000 inhabitants; there are probably about 6,000; Bismarck claims 6,000, and really numbers about 3,800, and the remaining cities estimate in the same proportion. Bismarck has enjoyed a first-class "boom" this summer consequent on the location of the capitol buildings there, and the money made by property holders out of those who thought the advance would continue is astonishing; but now property in the city has declined 100 per cent., which tends to make some feel blue. Fargo property is down, or nearly so, to a legitimate basis at the expense of those who bought and held on with the expectation of a constant increase which would yield them a big interest. It has a large foundry, put up at a cost of $150,000, thoroughly equipped with the finest machinery, that now stands idle, at a yearly loss to the stockholders who have sacrificed every dollar invested in the establishment. In the vicinity of the foundry stands a paper mill which has already cost $100,000, waiting for the disposal of $25,000 more stock before it can be completed and put in condition to run. The city is lighted at an expense of between $200 and $300 a month; has an imperfect system of sewerage that cost thousands of dollars, and has lately been bonded for $40,000 to enable it to take up the municipal warrants at par, which for the past year have been disposed of at a discount of 15 per cent.

The cities of southern Dakota have enjoyed prosperity the past year, and, although their development has not been of the wildfire order, it has been profitable and safe. Sioux Falls, Pierre, Huron and Yankton, all old towns, have built manufactories that are profitable. Their prosperity is due in a great measure to the cutting of rates on the southern roads, which drew the tide of immigration to that portion of the territory.

The Dakota merchant in many cases is the beneficiary of eastern friends, who, expecting to reap a big income, invest capital in the mercantile business and place it in the hands of some friend or relative, who too often knows but little of business, and who starts out with the idea that he cannot help making money. He often finds himself on the shoals of insolvency before he has fairly started.

The supposition that fortunes are easily and quickly made in trade in the territory is too commonly drawn. Of all the places in the world where business tact is necessary to make both ends meet this is the chiefest. Every branch of trade in every town is crowded, and the newcomer meets competition which, unless he has an ample capital and energy, it is impossible for him to overcome. General merchandise stocks of $200,000 valuation are found in towns that boast of no more than 1500 inhabitants, and dry goods establishments and clothing houses carry stocks that would surprise the heavist dealer in an eastern city of 25,000 people; expenses are enormous, freights likewise, and rents very high. Store room in a desirable location costs not less than $200 or $300 per month, and during the winter the expense of heating is no inconsiderable material item. Goods are put in by eastern wholesale dealers on long time, and the inexperienced manager fills his store in the anticipation of a heavy spring or fall trade; the wheat crop, which is the basis of the merchants' calculation, is, perhaps, a failure. The former is unable to make cash bargains, and the merchant fails to meet his obligations. In coming to the northwest the best investment the immigrant can make is in farm land which, as the country develops, must necessarily increase in value.

LETTERS TO THE EDITOR.

THE SUPPLY AND PRICES OF WHEAT.

To the Editor of BRADSTREET'S.

SIR—All authorities agree that the wheat crop is short compared with that of last year, the deficiency being variously estimated at from 80,000,000 to 120,000,000 bushels. Yet, week after week, for months past, we have seen the price of wheat decline; one, and perhaps the principal reason for the decline in prices is the large and so far continually increasing visible supply of wheat at lake and seaboard ports, and in transit by rail and water. Let us examine carefully whether it is principally to an increase of the supply or to a decrease in the demand for wheat that the visible supply has been increased.

1882.	*Bushels.*
Visible supply of wheat September 1	12,045,595
Visible supply of wheat October 13	14,488,914
Increase of visible supply from Sept. 1 to Oct. 13.	2,443,319
Export from September 1 to October 13	21,236,383
Total of increase of visible supply and export from September 1 to October 13	23,679,702
1883.	
Visible supply of wheat September 1	21,404,798
Visible supply of wheat October 13	29,869,699
Increase of visible supply from Sept. 1 to Oct. 13.	8,464,901
Export from September 1 to October 13	8,145,616
Total of increase of visible supply and export from September 1 to October 13	16,610,517
1882.	
Total of increase of visible supply and export from September 1 to October 13	23,679,702
1883.	
Total of increase of visible supply and export from September 1 to October 13	16,610,517
Decrease in export and in increase of visible supply of the year 1883 compared with that of 1882 from September 1 to October 13	7,069,185

From the above statement it is perfectly clear that, as the combined amount of the increase of the visible supply and the export from September 1 to October 13 this year is 7,069,185 bushels of wheat less than during the same period last year, that if the supplies from our farmers of wheat had been as great this year from September 1 to October 13 as they were last season, that instead of the visible supply increasing 8,464,901 bushels from September 1 to October 13 this year it would have increased 7,069,185 bushels more; so that, with the same supplies as last year, the visible supply would have been on October 13, 36,938,884 bushels, instead of what it is, 29,869,699 bushels.

People should consider that it is not the visible supply that will determine prices until we reach harvest, but it is the quantity of the invisible supply in the hands of our farmers. It is a mistaken idea that a large stock of wheat in the hands of merchants insures future low prices. The position of Indian corn, after the bad crop of 1881 was ascertained, is a case in point. The visible supply of Indian corn in October, 1881, was immense and the largest ever reached, being over 28,000,000 bushels. Did that stock prevent Indian corn advancing in the west from 41c. to 80c. per bushel within one year, and selling in New York at the end of the harvest year for corn at 100c. per bushel? and did it prevent the visible supply dwindling from 28,684,661 bushels of Indian corn on October 15, 1881, to 4,481,938 bushels on October 14, 1882? It will, perhaps, be well for parties who think that wheat should be lower in price to keep this in mind, and also that, sooner or later, our farmers from necessity must lessen their supplies of wheat, and that consequently our immense visible supply of wheat will diminish, especially as European stocks of wheat must lessen, for our light exports of wheat from the Atlantic coast must soon tell. They have been since September 1, and for eight weeks before that period, 60 per cent. less than last year. Believing that the wants of Europe are greater than in any year except 1879, I have no hesitation in believing that our visible supply of wheat before the crop of 1884 is reached will shrink to a very moderate quantity.

In order to define more clearly the position of our supply and demand for wheat since September 1 for two years I give the following figures:

1882.	*Bushels.*
September 1, stock of wheat in sight at lake and seaboard ports and in transit	12,045,595
October 13, receipts of wheat at eight western points since September 1	17,554,247
Total	29,599,842
October 13, exports from Atlantic seaboard since September 1, 1882	21,236,387
October 13, stock in sight	14,488,914
	35,725,301
Deficiency	6,125,459

This deficiency of supply was furnished by that portion of the states south and east of the eight western lake and river ports, in addition to what they used for home consumption.

1883.	*Bushels.*
September 1, stock of wheat in sight	21,401,798
October 13, receipts of wheat at eight western points since September 1	16,929,281
Total	38,331,079
October 13, export from Atlantic seaboard since September 1	8,145,616
October 13, stock of wheat in sight	29,869,699
	38,015,315
Excess	315,764

This small excess went to make up what the states east of eight western points were short of in their supply of wheat for their own wants. I shall say more about this further on. According to the above statements the receipts for two years from September 1 to October 13 would stand thus:

1882.	*Wheat, bushels.*
Receipts at eight western points from September 1 to October 13, 1882	17,554,247
Receipts from the states east of the eight western points from Sepfember 1 to October 13, 1882	6,125,459
Total	23,679,706
1883	
Receipts at eight western points from September 1 to October 13, 1883	16,929,281
Deficiency of receipts as compared with 1882	6,750,425

No supply from east of the eight western points over their own consumption.

Here I should state the reason why there are no receipts this year from states east of the eight western points except for their own consumption. The crop of wheat of 1882 in the states of New York, Ohio and Indiana was fully 100,000,000 of bushels; deducting 60,000,000 for seed and their home consumption, they had 40,000,000 bushels surplus for sale. The crop of wheat in these three states this year is only 63,000,000 bushels, and they will require the whole of the crop of this year to seed their land and feed their people.

The outlook for the export of wheat, in my opinion, is from the crop of 1882:

	Wheat and wheat flour, bushels.
The export from the Atlantic coast was about	118,000,000
The export from the Pacific coast was about	30,000,000
Total export	148,000,000

As the export of wheat and wheat flour from the Atlantic coast from this crop from September 1 to October 13, 1883, is only about 13,000,000 bushels, against 27,000,000 bushels for same period of last year, being only 48 per cent. of the quantity shipped last season at same period, I feel quite certain that I shall be within the mark if I calculate that the shipment from the Atlantic coast from this year's crop will not be over 60 per cent. of what it was last year. I therefore estimate our export as follows:

	Wheat and wheat flour, bushels.
Estimated wheat exports from the Atlantic coast from crop of 1883	70,000,000
Estimated export from the Pacific coast from crop of 1883	30,000,000
Estimated total export from crop of 1883	100,000,000

I feel certain that the above estimated exports from the Pacific coast, although no more than that of last season, is liberal, for although the crop there may be larger than last year, which I doubt, the reserves were lower at the end of the crop year 1882 than for five years previous.

I do not believe the reserves of wheat left over from the crop of 1882 are over 65,000,000 bushels, and as there must be a normal small reserve carried over every year, I do not think that over 35,000,000 of bushels can be taken from the reserves of the last crop to help this year's shipment; therefore, if we consider the crop of wheat is short this year, as compared with that of 1882, by 100,000,000 bushels, from which if we deduct 35,000,000 bushels from last season's reserves it would make the exports short from this crop about 65,000,000 bushels, I am therefore keeping on the safe side when I estimate the export from the crop of 1883 as only 48,000,000 bushels short of the export from the crop of 1882.

It may be objected that giving the receipts from September 1 is for too short a period, especially as new wheat begins to be delivered in the southwest freely from about July 1. Compared with last year the receipts are as follows:

	Wheat, bushels.
Receipts at the eight western points for sixteen weeks ending October 13, 1882	40,898,715
Receipts at the eight western points for sixteen weeks ending October 13, 1883	31,628,325
Deficiency this season	9,270,390

I have examined with care the estimate of this year's wheat crop given by the able and experienced statistician of the New York Produce Exchange on October 5, estimating the wheat crop of this year at 393,429,568 bushels, and with the probability when the deficiency from wheat being plowed up in some southern states is deducted he thinks the crop will be 380,000,000 bushels. This estimate exactly agrees with the one I made in my letter to you September 29 last.

Agreeing also with Mr. Walker's estimate of the deficiency of Europe's wheat crop, I have come to the conclusion that No. 2 red wheat at $1.07¼ per bushel for October delivery in New York is too low, and that long before the supplies from the crop of 1884 are reached much higher prices will be realized.

OBSERVER.

New York Produce Exchange, Oct. 24.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

The grantee of mortgaged premises under a conveyance stating that he assumes the payment o the mortgage, is liable for the payment of the mortgage, although the grantor himself was not personally liable to the mortgagee, according to the

decision of the Illinois Supreme Court in the case of Dean vs. Walker, decided on the 29th ult.

Where an agent gives a creditor notice of the extent of his authority by telling him (the creditor) what the principal directed him (the agent) to say to the creditor, outside agreements beyond the scope of his authority made by the agent with the creditor will not bind the principal unless ratified by him. Greer, administrator, vs. Burman, decided by the Supreme Court of Georgia on the 17th inst.

A note payable on or before a certain day is payable on that day, so far as the maker is concerned, according to the opinion of the Supreme Court of Georgia, in the case of James vs. Benjamin, decided on the 16th inst. The maker may pay the note before the day mentioned, but he may also put off payment until that day, if he so desires. The court holds that there is no ambiguity about the legal effect of such a note, and that parol testimony is inadmissible to vary its import, or to show that it is to be paid before the day named.

In order to justify the setting aside of a conveyance as fraudulent there must be not only an intent on the part of the vendor to defraud, but a knowledge of that intention on the part of the vendee, according to the decision of the Kentucky Court of Appeals in the case of Allen vs. Gilliland, decided on the 16th inst. The court said that while, from the necessity of the case, both of the facts referred to must ordinarily be established by circumstantial evidence, that evidence should be sufficient to overcome the presumption of fair dealing.

Mere irregularities in an attachment proceeding do not invalidate a sale under the attachment, the court having jurisdiction of the subject matter and of the parities for the purpose of ordering the sale, Burchett vs. Burchett, decided by the same court on the same day.

A principal refusing to pay a debt and buying the surety's land at a sale under an execution against both cannot hold the land as against the surety and thus compel the surety to pay the debt he himself should have paid, according to the decision of the Supreme Court of Indiana in the case of Madgett vs. Fleener, decided on the 12th inst. In such a case as between the principal and surety the principal merely pays his debt to the amount of his bid, and equity requires that the surety shall hold the land unclouded by such a purchase.

In a contract whereby one party agrees to sell and deliver an article to another on the demand of such other at a certain place and upon the payment by him of a certain price, the undertakings are mutual and dependent, and before either party to such a contract can maintain an action against another for non-performance thereof, he must aver and show an offer of performance on his part or a readiness and willingness to perform, according to the circumstances of the case. Meis vs. Yokum, decided recently in the United States Circuit Court, Oregon.

An insurance policy, and the money to become due under it, belong the moment the policy is issued to the person named in it as the beneficiary, and there is no power in the person procuring the insurance, by any act of his, by deed or will, to transfer to any other person the interest of the person named. So held in Weisert vs. Muehl, decided by the Kentucky Court of Appeals on the 16th inst. This rule, in the opinion of the court, applies as well to policies in mutual benefit associations as to policies in ordinary life insurance companies, unless there is something in the charter which makes a distinction, and a certificate of membership in such an association is in substance a policy of insurance.

The assignee of a note made some inquiries of the maker regarding the note, and the latter told him that "the note was all right; that he had no defenses to the same, and that he would pay it off in a few days thereafter." The Supreme Court of Indiana held, in the case of Plummer vs. The Farmers' Bank of Mooresville, decided on the 12th inst., that the statement made by the maker was a promise to pay the note, and that the maker was thereby stopped from asserting any defenses to the note against the assignee who purchased the same on the faith of such promise, and that this was so whether the maker was or was not ignorant of his defenses at the time the promise was made.

A third person can maintain an action at law in his own name upon a contract made between others in his favor, although no consideration may have passed from him to the promisor, and the party with whom the contract was made is not a necessary party to the action, according to the opinion of the Kentucky Superior Court in the case of Whallen vs. Judah, decided on the 17th inst. If, before the plaintiff in such an action notifies the defendant of his intention to accept the benefits of the contract, the defendant has debts against the party with whom the contract was made, he may set them off, and it is not necessary for him to allege that they arose before he had such notice. It is for the plaintiff to show that they arose after such notice.

Where a mutual account between warehousemen and their customer ran on from year to year, entries both of debits and credits being made by the warehousemen, but no settlement was made between the parties, the Supreme Court of Georgia held, in the case of Flournoy et. al vs. Wooten, executor, et. al, decided October 17, that the statute of limitations began to run from the date of the last charge or item of the account. The court held, further, that, although the account was charged on the books of the warehouseman in the name of another than the person sought to be held liable, the court having left it to the jury to find from the evidence to which of the two credit was in fact given, and whether or not the account was so charged for the convenience of the person claimed to be liable, and the jury having found that such was the fact, the court did not err in refusing a new trial on the ground that the case was within the statute of frauds.

A promissory note made in Nebraska provided for the payment of $100, with interest at 10 per cent. from the date of the note until maturity, and if not paid at maturity the principal was to "draw interest at the rate of 24 per cent. per annum from maturity until paid, as compensation and damages for non-payment thereof." In a suit upon the note the makers set up the defense of usury. The general statutes of Nebraska provided that any rate of interest not exceeding 12 per cent. would be valid upon any loan or forbearance of money, and in a case where a greater rate of interest was agreed upon, the plaintiff in a suit upon an instrument reserving such illegal interest should only recover the principal, and the defendant should recover costs. The Supreme Court of Nebraska held, in the case of Weyrich vs. Hobelman, decided recently, that the note in suit was not usurious on its face, the provision therein contained being in the nature of a penalty, and that the holder was therefore entitled to recover the principal, with interest at the legal rate only.

In the case of Eaton vs. McKahan et al., decided by the Indiana Supreme Court on the 17th inst., it appeared that the appellant (plaintiff below) sold a steam engine to one Tyner, one of the defendants, and took a mortgage thereon to secure the price. The mortgage was dated and acknowledged on the 25th of April, 1882, but was not recorded until the 15th of May following. Executions of later date than the mortgage were levied on the engine. The appellant filed a complaint against the plaintiff and the officers levying the executions, alleging that, although the mortgage was signed by Tyner and placed in appellant's hands on April 25, 1882, yet the appellant, by reason of certain defects and omissions therein, did not accept it until May 6, 1882; that he then accepted it, and afterwards, on May 15, 1882, had it duly recorded. The court below gave judgment sustaining a demurrer to the complaint. This judgment, however, was reversed by the Supreme Court, which held that the mortgage, under the allegations of the complaint, was good as against the executions. The court said that merely signing an instrument was not a delivery of it; that there could be no delivery without an acceptance.

The case of the United States vs. Ott, which was before the United States District Court at Leavenworth, Kan., on the 18th inst., involved an interesting point. The defendant was a wholesale liquor dealer in Kansas City, Mo., and was charged with being a dealer in Chanute, Kan., without paying a revenue license. It appeared that he shipped by express a number of jugs of whisky, packed in boxes marked "To bearer, C. O. D.," each package being numbered. Orders were then sent corresponding with the numbers on the packages to several citizens of Chanute, who presented the orders at the express office, paid the C. O. D., and received their whisky. The government claimed that this constituted the defendant a dealer in Chanute, while in behalf of the latter it was asserted that the whisky was ordered through the traveling agent for Ott's Kansas City house; that the transaction was a usual one in any legitimate business, and that the express agent could not be called Ott's agent, since he merely delivered the goods in the same manner as he would deliver goods for any other business for his company. Judge Foster held that Ott had a right to ship goods to Chanute if the orders were taken in advance, but that he could not ship spirits there to be sold after their arrival. The jury, under this ruling, found the defendant guilty, taking the view that the actual business transaction was in Chanute. This prosecution was a test case, a large number of dealers being interested, and it is expected that an appeal will be taken from Judge Foster's ruling.

BUSINESS NOTES.

The Farmers' National Bank of Franklin, Tenn., has been organized; capital $50,000; N. N. Cox president, George W. Smithson cashier. The Stockton (Cal.) National Bank has gone into voluntary liquidation. Richard Berry, president of the Tradesmen's National Bank, is dead.

The supply of ivory for the coming quarterly sales at Liverpool will be about an average one, some 24 or 25 tons being now on hand. There are only about 62 tons in London, which is less than usual, the greater part is of East Indian teeth, not more than 3½ tons are Egyptian. Only about 30 tons have been reported for the next Cairo sales. Stocks are very low.

The total number of failures in the United Kingdom, reported in *Kemp's Mercantile Gazette* for the week ending October 10, was 168, against 212 in the corresponding week in 1882, and 212 in 1881. England and Wales had 140, against 193 and 193 respectively in like weeks of 1882 and 1881; Scotland 25, against 15 and 13; and Ireland 3, against 4 and 6 respectively. The grocery and provision trades still keep the lead in having the highest number of failures reported.

The Marquette, Mich., *Mining Journal* prints the following table, giving in gross tons the total lake shipments of iron from upper peninsula ports the present season, up to and including October 17, together with the amounts shipped from the same ports during the corresponding period of last year:

	1882.	1883.
Escanaba	1,520,574	1,227,722
Marquette	825,013	604,920
L'Anse	57,984	57,410
St. Ignace	53,383	42,839
Total	2,457,554	1,932,891

—showing a decrease of 524,663 gross tons.

Joseph D. Weeks, secretary of the Western Iron and Steel Association at Pittsburgh, on his return from Europe, states that wages are lower in England, France, Belgium and Scotland in the iron industries than those paid here, while food is higher; but the trades' unions are strong and flourishing, and have a standing which they do not attain in America. In the north of England about one-third of the puddling furnaces have stopped work. Arbitration is being largely resorted to in England in settling difficulties between employers and employés.

The London *Labour News*, of October 10, says the labor disturbances were still prevalent in the coal and iron districts. The colliers strike continued in North Staffordshire. The Yorkshire miners' troubles were still unsettled, as were also those of the miners in the Scotch coal-fields. Some of the Lancashire weavers had refused to work except for higher wages. Building and ship-building were very brisk, and labor was in demand in the railway and tramway works. Most of the iron manufacturing works were kept busy. Nearly all the marine engineers were employed. The difficulty with the Sunderland engineers had not yet been settled. Increased activity was seen in the boot and shoe trade. The textile trades were mostly good. Ready-made clothing manufacturers were kept so busy that tailors were in great demand, and although dock labor was very brisk the number unemployed was far in excess. Emigration continued good.

One of the great obstacles to the export of wheat from British India hitherto has been imperfect railroad facilities, and yet the remarkable thing about the railroad system of that country is the rapidity with which it has been developed. In 1854 there were only 21 miles of road in British India, and now there are 9,879. That is, the mileage is more than forty-seven times as great as it was twenty-nine years ago. The mileage of the United States is less than seven times as great as it was in 1854. British India has, however, only about 10 miles of road to every 1,000 square miles of area, while we have about 32 miles. The Indian roads have not yet any of the modern facilities for receiving and discharging freight, but the former exorbitant tariffs having been reduced this disadvantage will now doubtless be attended to. The system of irrigation was materially developed last year. The Sirhind canal, in the Punjab, for the irrigation of 780,000 acres, is already over 500 miles long and has 2,500 secondary streams.

The use of the modern wooden pavement in London is extending. Asphalt holds its place, but that is all. Wood pavements have been laid where stone pavements have been removed. The municipal authorities of New York have abandoned wooden pavements on account of the danger of their harboring filth and disease. London is better adapted to wooden pavements than New York, because the latter is built on rock, and all the moisture is trapped, as it were, in a few feet of soil, and thus the evil spoken of is produced. But if the streets of London are kept clean they ought to be able to avoid this. There are several varieties of wood pavement. One variety is that which is placed (creosoted blocks) in a bed of cement concrete, which is rendered water-tight by a filling of asphalt and gravel. In another the blocks are laid on a flooring of boards interposed between them and the cement. In still another way the blocks are of yellow pine, not creosoted. These are laid on concrete, a carpet of tarred felt being interposed between the two, and strips of felt are placed between the blocks; the whole is then covered with hot asphalt, which runs into every crevice, and this, on being crushed, makes a hard substance, which is of considerable durability. Wooden pavements are by some authorities believed to be healthy and practicable in London, even if not in New York.

The official returns of exports and imports to the British Board of Trade for the month of September were somewhat unfavorable. The total value of imports was £32,307,465, against £33,135,908 during September, 1882, and £33,191,225 during September, 1881. The value of exports was £20,495,494, as against £20,922,418 and £20,900,653 in the corresponding portions of 1882 and 1881 respectively. The total value of exports up to the end of September was £179,665,085, against £182,134,944 in the corresponding time in 1882, and £171,819,712 in 1881. The value of iron and steel exported last month was £2,465,843, against £2,575,453 in September, 1882, and £2,562,268 in September, 1881. The value of iron and steel exported for the nine months ending September 30 was £21,725,945, against £23,831,138 and £20,162,509 for the other two years. The following table from the *Ironmonger* shows the exports to the United States during September, 1883, as compared with September, 1882, and August, 1883:

	Sept., 1883.	*Sept.*, 1882.	*Aug.*, 1883.
Alkali, cwt	285,040	358,707	295,576
Hardware and cutlery	£30,479	£50,109	£33,606
IRON:			
Pig, tons	20,819	42,935	29,374
Bar, angle, rod, etc., tons	1,101	1,390	305
Railroad, all, tons	6,821	7,096	9,683
Hoops, sheets, plates, etc., tons	1,859	4,670	3,307
Tinplates, tons	21,200	15,578	21,114
Cast or wrought, tons	362	416	352
Old, tons	2,016	6,864	1,181
Steel, unwrought, tons	280	333	951
Lead, all sorts, tons	56	61	3
Steam-engines	£4,159	£3,853	£119
Other machinery, etc	£23,216	£34,632	£19,608

SPECIAL RETURN:			
Iron rails, tons	50	103	120
Steel rails, tons	6,508	6,662	9,391

CRIME IN ENGLAND.

Mr. Howard Vincent read a paper at the recent British Social Science Congress on the repression of crime. In England, Wales and Scotland the direct cost of crime, he said, amounts to nearly £6,000,000 annually, thus distributed: Police £3,500,000; prisons £602,000; reformatories and industrial schools £482,000; legal proceedings £322,000; value of property stolen at least £1,000,000. More than 64,100 persons are maintained for the prevention, detection and punishment of crime, viz.: Magistrates 22,256; police 35,780; prison, reformatory and industrial school officials 6,105, to which numbers may be added fully 10,000 clerks, jailers, ushers, etc. In 1881, 825,657 persons were either apprehended, proceeded against or cited. Of this number 94,868 were arrested for offences against the person, and 122,761 for offences against property, the remaining being for minor offences. He considered that there is an undoubted diminution in serious crime in recent years in amount if not in character. This is best illustrated by the fact that the number of convicts or persons undergoing penal servitude in 1882 was only 101 in excess of the number of 1871, although the population had increased by more than three and a half millions. Speaking of detective work, he said it had been urged that better and more reliable detectives might be found among the retired officers of the army and younger sons of gentlemen than in the ranks of the police. Six such recruits had been enrolled in the Criminal Investigation Department, with a result, he was sorry to say, eminently unsatisfactory.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

The stock market during the week has exhibited one of those violent reactions which come naturally after a long period of depression, when nearly everybody who trades in it has been selling short, until at last the market gets into a much "oversold" condition. A sharp dash on the other side by some one or more daring operators is then likely to start every one who is on the short side into a wild rush to cover, under which prices go bounding up more rapidly than they fell, and the market exhibits the phenomena incident to what is called a bear panic. On this occasion the reaction was extreme, just as violent as anything seen this year in the worst periods of the fall of prices. Its primary cause was due to the trap into which a great crowd of small and a few large traders walked last Saturday, the trap being represented by the transfer books of the Northern Pacific Company. It was mentioned last week that the leading bear operators, who had been conducting the campaign against the Villard party, had guarded themselves against the danger of a "squeeze" on the day in question by covering up their short sales for cash delivery and putting them out again "seller 60." The tumultuous crowd of their followers, rendered blind and careless by long success, took no such precautions, but went on selling short right up to the day when out of $40,000,000 of stock $30,000,000 was all to be called in, while the remaining $10,000,000, which alone remained available for borrowing purposes, was scattered all over the United States and Europe. When the day came the crowd of belated ones proved to be amazingly numerous, and thereupon ensued such a scramble to cover, which was also continued on Monday, as Wall street has not seen for many a long day. Something like a panic took place among the bear army. This was the moment seized by the leaders on the other side to make a concerted dash, and for three days the street went wild. The main movement seemed to be engineered by Mr. Keene, and it showed all his usual dash and daring; but the heavy artillery was furnished by Mr. Vanderbilt. When his hand, weighted with many millions of hard cash, was felt in the market, the leading bears covered as rapidly as possible and retired sullenly. Mr. Cammack, "the old man," as he is familiarly known in the street, growled out to some one who inquired why he gave up the fight, "I am not going to pit my brains against Vanderbilt's money."

Mr. Vanderbilt's reëntry on the arena, which he has so often declared of late he had abandoned forever, was in a measure accidental. When he made his roar of rage at the bears through the papers a week or so ago, he had, as he explained, been looking over the books of his son, William K. Vanderbilt. The sight was not a pleasant one, as may be surmised. There was nothing for it but to take up the stocks whose price had fallen so ruinously against all the efforts of William K. to bull them. He caused them all to be called in, and undoubtedly lent money or otherwise assisted some other big capitalists whose resources had been rather impaired by recent events to call in all their stocks. This created a sudden and extreme scarcity in the loan market in several of the most active stocks; Mr. Keene's buying, and the locking up of practically all the Northern Pacific preferred stock, changed the whole aspect of the market; and the "bear panic" followed almost as a matter of course. The Stock Exchange presented a scene of the wildest excitement on these days. The great body of room traders, who fly from one side to the other with every wind of change, were transformed from bawling bears into rampant bulls. They bought stocks right and left; about every other stock on the list was declared to be cornered, and would go up out of sight; nothing was heard but of the enormous short interest in this or that stock; this great bear operator was cleaned out, that one was bankrupt, some other was nearly in the same state. The excitement was worked up day by day to increasing heat, and seemed to reach its culmination Thursday morning, by which time there had been a rise of 10 points in a number of stocks, and of 5 to 7 points in nearly all. This was too tempting a profit to resist taking, and those who had bought stocks at the lower prices poured them on the market by the ream. The first shower came very soon after the opening, prices being opened high and a further rush upward being instantly effected. Such a pouring out of stock from the tin boxes was done as quite staggered the market; prices receded all through the list, and a pause followed preparatory to another rush. In about an hour or so the market was steamed up again, and, having been got under full headway, the bull cliques went to selling out in such dead earnest that prices fell back 2, 3, and even 4 per cent., the market at the close being in a state of complete confusion—stunned, as it were, by the torrent of stocks poured upon it. The room-traders and others were caught badly, and went away that afternoon with feelings considerably mixed, and there was a further unloading of stock yesterday which mixed them some more.

The suits against the Northern Pacific Company begun this week to restrain the issue of the second mortgage bonds may or may not be mere stock jobbing affairs, and the street was inclined to consider them in the light of the latter. In fact, the announcement that they had been begun was considered a sign of desperation on the part of the bears in the Villard stocks, and an immediate and powerful stimulus was given to prices—a result which the more sagacious among them predicted on receiving the news. The point made by the complainants, however, proves to be better than any one seemed inclined to think at the start; and the fact that the Northern Pacific directors have retained ex-Senator Conkling and Mr. Evarts to defend them indicates that they consider the matter serious enough for argument. The pith of the thing is this: In the act of incorporation granted the Northern Pacific Company by Congress in 1865, and which gave the company its land grant, it was specified that the company might issue a mortgage for the purpose of building and equipping the road. The company did issue such a mortgage. In 1873 the company became insolvent; the mortgage was foreclosed. In the reorganization, which was made in 1875, the old mortgage bonds were converted into the present preferred stock, and a new mortgage was placed upon the property, the now outstanding first mortgage bonds representing it. The company now propose to put a third mortgage on it, to secure the new second mortgage bonds. This, says the plaintiff's bill of complaint, is illegal without the consent of Congress. The power to mortgage the property under the act of incorporation was exhausted when the first mortgage was placed on it, and no second or third mortgage could be imposed upon it without power so to do being granted by Congress. Of course, if this view be correct, the outstanding first-mortgage bonds are illegal, and this is inferred in the bill of complaint, though the point is not insisted on. The plaintiffs are supposed to be willing that the outstanding bonds shall not be disturbed, they object merely to the proposed issue of other mortgage bonds. There seems to be the material for a long litigation here. Whatever be the outcome the suits are another complication of a troublesome situation. They may delay the issue of the new bonds which is, in itself, a serious matter to the people who are now carrying the load of nearly $30,000,000 of the stock they have had to acquire. If the bonds could be marketed now the company or its creditors could get their money back, and so be in a better position to market their stock again. As it is there is promise of trouble which may yet seriously influence the stock market.

As a consequence of the bull movement a livelier demand for money in loans sprang up, and the rate has advanced on call to 4 per cent.; but this is low for the time of the year, and we may yet go through into the winter with a continuance of the unusual ease which has so far marked the money market. The low prices of grain, comparative inactivity of speculation everywhere, and the slow movement of the crops accounts for this easy condition. Exchange rates are now down to the edge of the gold importing point, being $4.82 and $4.83 for posted, actual rates being as usual lower than these. Any rise in the rates for money here would tend to bring gold this way, and some small amounts have already arrived. The Bank of England discount rate remains at 3 per cent. The government bond market is strong under continued demand for bonds, and it is said a syndicate of bankers has been formed to buy up the 4s as they come on the market and then petition Congress to repeal the tax on bank circulation. If this were removed the national banks could afford to buy these bonds up to $128 to secure their circulation, and the syndicate could sell at a round profit. The following were the closing quotations yesterday:

	Oct. 12, bid.	*Oct. 19, bid.*	*Oct. 19, asked.*
U. S. 4½s 1891, registered	114½	114¾	115
U. S. coupon	114⅜	114¾	115
U. S. 4s 1907, registered	121	122⅛	122¼
U. S. 4s 1907, coupon	121	122	122¼

The bank statement of Saturday showed a loss in the surplus reserve of $2,182,300, which brought the total reserve below the 25 per cent. line to the extent of $17,225. The following are the comparative totals of the statements of October 13 and October 20:

	Oct. 13.	*Oct. 20.*	*Differences.*
Loans	$327,927,700	$327,718,300	Dec. $209,400
Specie	56,448,500	53,544,100	Dec. 2,904,400
Legal-tenders	24,835,900	24,037,900	Dec. 198,000
Deposits	316,477,300	312,796,900	Dec. 3,680,400
Circulation	15,177,900	15,266,600	Inc. 88,700

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

SUMMARY.

The general merchandise movement during the week, as reported in special telegrams from leading cities to BRADSTREET'S, has been less active. Unfavorable weather in the central western and western states has interfered with the inquiry from the retail dealer, and this in turn has affected the interior jobber. The country roads are also reported in bad condition in many localities, which serves to increase the difficulty in making collections and hardens the money market with country bankers. The distribution of dry goods has been of more restricted proportions from agents' hands, and millinery, notions and collateral lines have experienced a slackening in demand. The iron trade has suffered no change. Stocks, especially of lower grades of pig iron, have been in fair demand. No sales of No. 1 X are known under $20.50 per ton, and that quotation is called firm. There is no improvement in the demand for manufactured iron. Bar remains dull, margins of profit are small and some mills are running on part time. The excess production of coal this year as compared with 1882 now exceeds 2,500,000 tons, at which rate the total product for the year will approximate 31,600,000 tons, against 29,120,000 tons in 1882. The curtailing work at the mines early in November has been decided adversely, as the Pennsylvania and the Reading companies are full of orders at present capacity. Petroleum has fluctuated considerably at a slightly higher range, with no desire to go far from $1.10. Provisions have declined, owing to the prospect of increased stocks, and in the face of heavy receipts of hogs. Wheat by Thursday night, after having lost and gained 1c., found itself at $1.07 for October, just where it was last week Friday at the close. Last evening it had declined ⅛@¼c., which represents about the change on the week. Corn has been dull, as has wheat. It was 55¾c., ½c. higher (for October) on Thursday than on the preceding Friday. Yesterday prices were firmer and fractionally higher on the late options. Ocean freights were again firm at the close of the week. Trade in wool has continued quiet, but the market has ruled steady. There were 209 failures in the United States reported to BRADSTREET'S during the past week, 29 more than the preceding week, 72 more than the corresponding week of 1882, and 92 more than the same week of 1881.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: General trade moderate and featureless. The markets are steady.

From Boston, Mass.: There is not much change to report in the general business situation. The volume of trade in manufactured goods is not fully up to expectations, but there is a steady legitimate movement which must show favorable results in the end. The exciting political state canvass is interfering with small dealers in the interior, and their purchases here are consequently restricted. More boot and shoe buyers have made their appearance and the spring trade will soon take a start. The sales of wool are larger than last week and prices are steady. Money is in rather high demand and easy for legitimate borrowers.

From Providence, R. I.: The rate of discount on prime commercial paper is 6 per cent. The rate of exchange on New York is at par.

From Philadelphia, Pa.: The volume of general trade has continued moderate. There is not the least tendency to anticipate requirements in any department, and the cautiousness of buyers occasions considerable complaint; but, as a rule, merchants regard the situation hopefully. Values show very little change from last week, but the few price revisions reported are chiefly in buyers' favor. Collections are represented as satisfactory in most cases.

From Cincinnati, Ohio: There is less activity in general trade. Collections are poorer. The borrowing demand for money is better and promptly met.

From Cleveland, Ohio: Trade has improved in some lines. The money market is easier.

From Dayton, Ohio: General trade is dull, with poor prospects of any improvement. Money is in good demand and scarce; interest is 7 and 8 per cent. Collections are hard to make.

From Evansville, Ind.: Trade continues fair, and merchants are preparing for the holiday trade. The weather is cool and windy with rain.

From Indianapolis, Ind.: The wet weather affects trade, which is quiet in most lines. A very conservative spirit prevails among country merchants, who are only buying from hand to mouth. Money is 7@8 per cent.

From Detroit, Mich.: General trade, while of fair proportions, lacks snap just now. Lumber men who buy supplies largely at this season have not fairly commenced yet. Collections are very fair. The grain and produce markets are very quiet.

From Chicago, Ill.: Money active and strong at 6@7 per cent. Deposits are decreasing. Collections are reduced by bad roads in the country. Exchanges 40c. minimum. Dry goods, millinery, notions and collateral lines are affected by bad roads and the unfavorable weather. Orders for nearly all lines are restricted to replenishing stocks. Clothing, boots and shoes are slow. Rubber goods are more called for. Hardware, metal and tinners' goods are meeting a moderate order sale.

From Peoria, Ill.: As a rule business is reported satisfactory, though collections are still backward.

From Louisville, Ky.: Trade is still active and satisfactory, but is quieting down after the rush. Money is in good regular demand and supply.

From Kansas City, Mo.: Owing to the inclement weather general trade has not been specially active, but the week's business is up to the average at this season. Collections continue good. There is a good steady demand for money, which rules firm at 12@15 per cent. for cattle paper and 10@12 per cent. for prime commercial paper. Exchange is $1 premium.

From Milwaukee, Wis.: General business is brisk, and money wanted at 7 to 8 per cent. Currency shipments westward are moderate.

From Minneapolis, Minn.: Jobbers of merchandise report trade holding out fully equal to expectations. A fair representation of country dealers are in the city, and traveling men send in a large amount in orders. The money market continues close at unchanged rates. Eastern exchange is dull and weak.

From Lawrence, Kan.: General trade is dull temporarily, but the outlook for the winter is excellent. Money is easy and collections are good.

From Topeka, Kan.: General trade has fallen off during the past week owing to continuous rainy weather and bad roads. Money is in good demand at 10 per cent. Collections are good.

From Omaha, Neb.: Sales in all lines continue fair, orders being mainly for present demands.

From San Francisco, Cal.: General business is active without speculation. The export trade is good and there have been heavy imports from China. The Northern Pacific freight competition is beginning to tell, eastern goods for San Francisco coming by that route with no charge for sea transportation. Exchange in New York is 20c. premium.

From Baltimore, Md.: The general volume of business has reached fair proportions and all branches appear in a healthy condition. Money has been easy and ruled lower, rates being 5@5½ per cent.

From Norfolk, Va.: In general lines trade is fair. Collections are only moderate. Money is a little tight. In some lines trade has not been as active as usual for the past week, caused by the prevalence of an easterly storm.

From Richmond, Va.: Business is good, but a shade lighter than last week, owing to many country merchants holding over to visit the state fair, which opens next week.

From Savannah, Ga.: Trade is more even and steady. Many buyers are in town filling in stocks. Collections are reported better.

From New Orleans, La.: Money is in fair request and firm. Call loans are light. The recent and present firmness is due to meeting drafts on cotton, principally from Texas, which is arriving slowly. General trade is fair.

From Galveston, Tex.: The weather is cooler, with several good rains during the past week. The dry goods and general jobbing trade are reported rather dull, with only moderate collections. New York exchange ⅜c. discount; interest 8 per cent.

From Memphis, Tenn.: Dry goods, boots and shoes remain unchanged, and collections are some better despite the fact that nearly $2,250,000 worth of cotton have been sold during the past week. The money market is very close, all available capital being fully employed in the various branches of traffic. Rates of discount are quoted at 8 per cent. Exchange is the same as last given, the offerings being liberal while the demand is fully equal to the usual volume required at this season, and bankers are buying commercial bills on the east at ¼c. to ⅜c. discount, and on New Orleans ¼c. off.

From Nashville, Tenn.: Trade is generally good.

INDUSTRIAL.

The managers of the Vulcan Iron & Steel Works at St. Louis, Mo., have reduced wages 10 per cent., to take effect November 1. It is probable that the same reduction will be made at the Homestead and Edgar Thompson rail mills, near Pittsburgh, next January. All labor troubles in the Chicago mills have quieted down. The window glass blowers are out, and foreign window glass is coming in. Two coöperative glass works are threatened by the workmen. Nine-tenths of the wage workers in and about Pittsburgh are organized in trades unions and Knights of Labor lodges. Organization among the Pennsylvania and Ohio miners is weakening on account of the failure of several strikes and an enforced reduction in wages. There are evidences of a greater or less reduction of the labor force in several leading industries. Unless all signs fail, it is probable that any general decline in demand for labor will be accompanied with a series of strikes for higher wages.

INDUSTRIAL FEATURES.

[By Telegraph to BRADSTREET'S.]

From Baltimore, Md.: The industrial branches are busy. No complaints are heard.

From Minneapolis, Minn. Contractors have most of the large buildings erected nearly inclosed. The Chamber of Commerce is under roof, and the West Hotel is up to the seventh story and will be ready for roofing in a few days.

BREADSTUFFS ABROAD.

There has been no material change in the foreign-breadstuffs situation during the week. Bids at London and Liverpool have been few, and stocks are heavy. The foreign bears on wheat are bears on the size of the crops rather than on prices—much the same as they are on this side. The leading estimates of requirements of wheat during the coming year by the principal importing countries continue to vary quite as much as ever. Beerbohm, the London *Miller*, the statistician of the New York Produce Exchange and others considered as authorities have given out their estimates of "wants" and surpluses for export with reference to the wheat growing and consuming countries, and, while they are far apart in some particulars, they exhibit (as has been already shown in BRADSTREET'S) a striking uniformity in agreeing that there must come a time during the present crop year when the supplies which lag about the storehouses and in farmers' hands must come into active demand. The declining exports of breadstuffs from the United States during the past two months must speed the day when a renewed inquiry from the other side will be felt. As to the supplies of British home-grown wheat, Sir J. B. Lawes believes that the yield will be better than earlier reckonings anticipated.

In a letter to the London *Times* he expresses the belief that the crop will turn out to be a full average of 28 bushels to the acre, if not more. "This will make the wheat harvest of the United Kingdom, deducting the corn which must be saved for seed, equal to about 8,750,000 quarters, The consumption is, however, more than 25,330,000 quarters, so that the actual produce of the soil, even in a favorable year, is only equal to a little more than one-third of the quantity needed for the people's food. We must thus use some 16,000,000 or 17,000,000 quarters of foreign wheat. If, however, Sir J. B. Lawes is correct in reckoning that some 4,000,000 quarters are already in the country, we may need to import between now and next harvest only 12,000,000 or 13,000,000 quarters."

The gross amount of grain on passage, as per Beerbohm's London cablegram of the 25th inst., was:

	Wheat. Qrs.	*Maize. Qrs.*
To the United Kingdom	1,725,000	190,000
To continent	450,000	65,000
Total quarters	2,175,000	255,000
Equal bushels	17,400,000	2,040,000

Compared with the previous week:

To the United Kingdom	1,775,000	250,000
To continent	510,000	130,000
Total quarters	2,285,000	380,000
Equal bushels	18,280,000	3,040,000
Decrease, bushels	880,000	1,000,000

The gross imports of wheat and wheat flour at their equivalent in bushels of wheat have been from August 25 to October 6, 1883, 21,408,884 bushels, against 25,071,808 bushels corresponding period in 1882, and 18,166,138 bushels the corresponding period in 1881.

AMERICAN WHEAT MARKETS.

The week on the wheat and corn exchanges has been relatively dull and unsatisfactory. Speculative prices went off a fraction on Saturday, recovered 1c. on Monday, and declined again on Tuesday and Wednesday. Saturday witnessed some foreign orders and several shipments. A better demand from local millers was also experienced, but prices did not respond to any extent. The situation appeared to resolve itself into a waiting attitude on the part of those looking for higher prices. The bears meantime let go no opportunity to push prices downward. Foreign buyers have been looking out for available lots at bottom prices, but no extensive trades have been chronicled. Thursday saw slightly higher figures. Bad roads decreased the receipts at the west and the shorts were cautious. Friday was dull and tame and prices went off ¼@⅛c.

The receipts of wheat at tide-water for the week ending October 20 decreased to 1,238,104 bushels from October 13, when they were 1,339,695 bushels. The exports from the Atlantic ports for the week ended October 20 amounted to 822,828 bushels, against 683,570 bushels October 13.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended October 20 amounted to 1,588,321 bushels, against 1,992,423 bushels in the preceding week, and the shipments to 1,047,451 bushels, against 1,345,491 bushels in the week previous.

The visible supply of wheat in the United States and Canada (east of the Rocky mountains) October 20, as against the preceding week, showed an increase of 438,727 bushels.

The course of prices of wheat at New York and Chicago (1 P.M.) during the past week has been as follows:

	New York.				*Chicago.*
	Oct.	*Nov.*	*Dec.*	*Jan.*	*Dec.*
Fri. Oct. 19	$1.07	$1.07¼	$1.09⅝	$1.11¾	$0.92¾
Sat. Oct. 20	1.05¾	1.06⅜	1.08⅜	1.10⅞	.92¾
Mon. Oct. 22	1.07	1.07⅞	1.10⅛	1.12⅜	....
Tues. Oct. 23	1.06½	1.07	1.09	1.11⅜	.93¼
Wed. Oct. 24	1.06⅛	1.06¾	1.08½	1.11	.93⅛
Thur. Oct. 25	1.07	1.07⅜	1.09⅜	1.11¾	.93⅜

At 1 P.M. on Friday, October 26, December wheat at Chicago was quoted at 93⅛c., against 92¾c. on the preceding Friday.

INDIAN CORN.

The course of corn has been much the same during the week as that pursued by wheat. It declined on Saturday, advanced on Monday, and fell off again on two succeeding days, so that Wednesday night found it averaging lower than it began the week. Exporters have taken some little corn, but not much, ocean freights having stiffened up a portion of the time. The market has been particularly weak at the west owing to the arrival of new corn, and which is now coming this way. Supplies are increasing in all directions, and the buyers still maintain the mastery. Corn continued dull, and speculation quiet. Thursday's close showing but ½c. gain on better shipping demand and less receipts. Friday was dull, and prices on the near-by options scarcely changed. Those on later were about ⅛c. higher.

The receipts of Indian corn at the Atlantic ports for the week ended October 20 were 1,993,672 bushels, against 1,565,350 in the preceding week, while the exports from the same points amounted to 852,432, against 972,051 bushels. The visible supply of Indian corn in the United States and Canada, east of the Pacific coast, October 20 had decreased 1,168,637 bushels as compared with October 13. The total receipts of corn at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis, for the week ending October 20, were 1,854,581 bushels, against 2,189,296 the week preceding, and the shipments were 1,559,970 bushels, against 2,345,361 in the preceding week.

The closing prices of Indian corn daily during the past week at New York and Chicago (1 P. M.) were as follows:

	At New York.				*Chicago.*
	Oct.	*Nov.*	*Dec.*	*Jan.*	*Dec.*
Friday, Oct. 19	.55¼	.56	.57	.56⅛	.45⅛
Saturday, Oct. 20	.55½	.56	.56⅝	.56¼	.45
Monday, Oct. 22	.56½	.56¾	.57½	.57½	..
Tuesday, Oct. 23	.55¾	.56¼	.57⅛	.57⅛	.45¼
Wednesday, Oct. 24	.55¼	.55¾	.50⅝	.56¼	.45⅜
Thursday, Oct. 25	.55¾	.56⅛	.57⅛	.57	.45¾

Corn at Chicago at 1 P. M. yesterday was for December 45⅝c., against 45⅛c. for the option named on the preceding Friday.

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Oct. 19.	*Oct. 26.*
No. 2 flour	$2.40 @3.15	$2.25 @3.00

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Flour has continued dull and drooping, but the week closes with a better inquiry for good trade brands and a steadier feeling as to values in some quarters, although the general market is not firm. Wheat has fluctuated to the extent of 1c. up and down from last week's prices, but the close is only a shade under the rates then current. Exporters have exhibited more interest at times, but little business has been done. Speculation has been quite active. Corn shows no material change and attracts little attention either from shippers or speculators.

From Cincinnati, Ohio: The flour trade is confined to local demands almost entirely and is dull. Stocks have not, however, materially increased. The wheat market is weaker. Corn is unchanged.

From Chicago, Ill.: Wheat is weak and depressed by unfavorable foreign markets, increasing stocks and the absence of shipping demand, but bad weather and the prospect of decreasing receipts renders the bears cautious about selling short, and business is small. There are no outside orders to buy. Corn is in good shipping demand. Stocks are light, and the prospect is for decreased receipts, but speculative buying is light and there is no disposition to take large lines for future delivery. Oats are quiet and receipts are larger; the demand is moderate. The prospect of increased stocks of provisions is adversely affected.

From Milwaukee, Wis.: Wheat shipments continue in excess of receipts and the stock has fallen below 1,000,000 bushels for the first time in many months. The market is steady at the recent decline, but operators have lost confidence owing to the enormous amount in sight. The flour movement is large, receipts averaging 100,000 barrels weekly. Local millers are increasing production slightly, making nearly 25,000 barrels per week. The weather is cool and cloudy. Winter wheat is doing well; corn turns out badly damaged by the September frost.

From Minneapolis, Minn.: The movement of wheat is fair, and the receipts average about 120,000 bushels daily. The market is steady at $1 to $1.02 for No. 1 hard wheat. The damage by frost is not serious. The mills are sending out about 19,000 barrels of flour daily. The product of the mills from January 1 to October 24 is about 2,000,800. barrels.

From Omaha, Neb.: The crops are very large and in good condition, but at present the market appears to be well supplied and prices rule low. Farmers are holding on to their wheat and corn, hoping for a better market, and the result is that collections are poor and money close.

From Topeka, Kan.: The grain trade has been light. Flour is in very good demand.

From Baltimore, Md.: Transactions in wheat have been rather moderate, but the markets rule steady. The corn market was quiet and prices not materially changed.

From Savannah, Ga.: The grain market is firmer and the demand continues good for large lots.

From New Orleans, La.: Receipts of corn are 200,000 bushels; wheat 165,000 bushels; exports trifling. The stock of corn is 500,000 bushels and of wheat 200,000 bushels. The market is nominal. Corn 55c.; wheat $1.08. Flour is quiet and the supply is more liberal.

From Memphis, Tenn.: Oats are dull at 34@35c. per bushel. Corn is quiet, the demand being about equal to the supply. Cornmeal from first hands is $2.55 per barrel. Flour rules quiet.

From Nashville, Tenn.: Flour is steady and wheat firm, and the demand is good. Corn is quiet but in light demand.

WINTER WHEAT.

From Lawrence, Kan.: Fall wheat in the best of condition.

From Minneapolis, Minn.: The weather is cloudy and there has been but little rain during the week. Farmers are pushing their fall work, which is well advanced.

PROVISIONS.

The speculative market for hog products, after a decline on Saturday, advanced 5@10 points on Monday, which gain was well held, except on the earlier options on Tuesday. Wednesday's market weakened. The gain had the effect of bringing into western markets increased numbers of hogs—already exceedingly plentiful—and, as had been promised, the opinion was held that any stiffness in rates at a better figure would greatly increase receipts and thus tend to tip prices over again. The demand for pork has been better on home accoun as the week advanced. For lard the call has been moderate. Thursday witnessed some steadying owing to the very heavy short interest, but Friday brought another decline, as increasing receipts ot hogs and increasing stocks were reported.

Exports of hog products from the following places for the week ending October 20, 1883, were:

	Pork, barrels.	*Bacon and hams, pounds.*	*Lard, pounds.*
New York	3,829	5,626,658	2,646,620
Boston	138	841,554	240,855
Portland	....	....	....
Montreal	647	517,150	109,110
Philadelphia	171	600,000	....
Baltimore	100	4,089	7,500
New Orleans	7	200	....
Totals	4,892	7,589,651	3,004,085
Previous week	4,148	5,862,285	3,184,800

The total export of hog product from the abovementioned places from November 1, 1882, to October 20, 1883, was as follows:

	1882-83, *pounds.*	1881-82, *pounds.*
Pork	45,807,000	47,162,000
Bacon and hams	407,937,134	357,351,701
Lard	274,520,002	238,765,530
Totals	738,264,136	643,299,231

Prices of lard and mess pork at New York during the week were as follows:

	Lard, per lb., —*October.*—		*Pork, per bbl.,* —*spot mess.*—	
	This week.	*Last week.*	*This week.*	*Last week.*
Saturday, Oct. 20	7.80c.	7.73c.	$11.50	$11.50
Monday, Oct. 22	...	7.60	....	11.50
Tuesday, Oct. 23	7.85	7.60	11.50	11.50
Wednesday, Oct. 24	7.75	7.65	11.50	11.50
Thursday, Oct. 25	...	7.80	11.50	11.50
Friday, Oct. 26	...	7.80	11.50	11.50

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Provisions trade without change. The stock of cured meats is very low and no business of note has been done in green meats.

From Chicago, Ill.: The prospect of increased stocks of provisions is doubtless affected by heavy receipts of hogs and declining prices. Pork, lard and short-rib sides are freely offered for future delivery, The demand for consumption is small. Hams and other meats are in good shipping demand. Stocks of full cured are scarce. Receipts of cattle are large and the demand good.

From Kansas City, Mo.: Provisions are steady, and packing-house products are in good jobbing demand. Cattle receipts have increased 50 per cent. over last week, but prices are 5c. to 10c. lower. Hog receipts are 3,000 less than last week, and prices have advanced about 10c. The market has fluctuated considerably, closing rather weak.

From Omaha, Neb.: The produce market is more active, and prices have an upward tendency.

From Savannah, Ga.: Provisions have improved, and the demand is better.

From New Orleans, La.: Provisions are firm, and the stock is light.

From Memphis, Tenn.: Potatoes are unsettled, and round lots from the track range from $1.55 to $1.65 per barrel. Apples are higher, and sound ualities are worth $3.50 to $4.50 per barrel.

THE NEW YORK DRY GOODS MARKET.

Another poor week's business has to be chronicled for the dry goods and kindred trades. The cause is easily found in the Hebrew holidays of Monday and Tuesday, and the mild and rainy weather prevailing latterly. Commission merchants and jobbers alike have done but a poor and irregular business for the week—the rush and activity of July and August has gone, and though there has been a good near-by trade since then still the bulk of the season's business is over. Business with retailers remains quiet, and will undoubtedly continue so until there is a decided change in the weather.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Dry goods are quiet, and sales are limited to immediate wants.

From Boston, Mass.: The weather has not been so favorable for the dry goods trade as last week, and a quiet tone runs through all departments. Jobbers continue to receive a fair number of orders, but visiting buyers are not so plentiful. From first hands there has been a very light trade. Prices of leading cotton fabrics are steady.

From Providence, R. I.: The print cloth market is quiet and steady; 64s are quoted at $3^{11}/_{16}$c., and 56x60s at 3¼c.

From Philadelphia, Pa.: Jobbers have been doing a moderate trade, but as a rule the week's business has hardly realized expectations. A better business is looked for as soon as retailers' stocks become more generally disassorted. The package trade has ruled quiet.

From Pittsburgh, Pa.: Dry goods continues in good demand, but not so active as a few weeks since, attributable in part to the mild weather.

From Cincinnati, Ohio: The dry goods trade continues fair. The demand is confined largely to staples, principally woolens and clothing. The trade is beginning to prepare for next spring's business, and is moderately active in that direction.

From Cleveland, Ohio: Dry goods jobbers are reporting business brisk and collections better.

From Dayton, Ohio: The dry goods market is quiet.

From Cleveland, Ohio: The demand for woolen goods is not brisk for local consumption, owing to the unfavorable weather.

From Peoria, Ill.: Dry goods are fair, with reasonable collections.

From Detroit, Mich.: In dry goods jobbers report that fall trade has increased about 10 per cent. over last year, with somewhat improved collections during the last week or two.

From Kansas City, Mo.: In dry goods the demand for heavy fabrics has increased with colder weather, and business continues very satisfactory.

From Topeka, Kan.: Dry goods are better than other lines.

From San Francisco, Cal.: This week has been the best of the present season in dry goods. The business done has been strictly conservative, country dealers buying only to meet immediate needs.

From Wilmington, N. C.: Dry goods are quiet in all branches.

From Baltimore, Md.: Dry goods are reported in good condition and sales are up to the average of last year at same period.

From Norfolk, Va.: Dry goods jobbers say business is fair for the season and fully up to last year.

From Savannah, Ga.: The dry goods trade continues steady and sales for the week have been very good.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: With some of the larger houses trade has increased a little under the influence of the colder weather, but the volume of sales generally is about the same as last week. Manufacturers are well satisfied with the situation and expect to show a full average business for October. The heaviest part of the fall trade will be over this month.

COTTON.

The market at New York for spot cotton during the week has been dull. Sales have been moderate and prices show but little change, advancing $1/16$c. on Wednesday, and closed last night at 10⅝c., against $10^{9}/_{16}$c. last week. The sales for the week foot up as follows: For export 119 bales, for consumption 2,319, for speculation 1,870, and in transit 1,900 bales, the total aggregating 6,208 bales, against 4,707 last week. Included in the above are 1,200 bales to arrive. The deliveries on contract amount to 200 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	*Last week.*	*Last year.*
Ordinary	8 6-16c.	8 5-16c.	8⅛c.
Strict ordinary	8 13-16	8¾	8 9-16
Good ordinary	9 11-16	9 9-16	9⅜
Strict good ordinary	10	9 15-16	9 13-16
Low middling	10 4-16	10 3-16	10¼
Strict low middling	10 7-16	$10^{3}/_{8}$	10½
Middling	$10^{5}/_{8}$	10 9-16	10 11-16
Good middling	$10^{7}/_{8}$	10 13-16	10 15-16
Strict good middling	11	10 15-16	11⅛
Middling fair	11½	11 7-16	11⅜
Fair	12¼	12 3-16	12⅜

STAINS.

	This week.	*Last week.*	*Last year.*
Good ordinary	7½	7 15-16	7¾
Strictly good ordinary	8¾	8⅝	8 9-16
Low middling	9⅜	9 5-16	9¼
Middling	10¼	10 3-16	10 3-16

The market for spot cotton closed dull.

The future market has been dull, and a rather weak feeling has prevailed. Sales have been moderate, and show a large falling off from last week. Quotations show an advance of 7 points for near months and 5 for later ones. The total sales for the week aggregate 492,300 bales, against 735,400 last week.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
October	10.57	10.49	10.56
November	10.57	10.49	10.47
December	10.66	10.59	10.48
January	10.80	10 74	10.57
February	10.95	10.90	10.69
March	11.08	11.04	10 80
April	11.20	11.15	10.92
May	11.32	11.27	11.03
June	11.43	11.38	11.11
July	11.53	11.48	11.23
August	11.62	11.57	11.32

The market for futures closed barely steady.

The southern markets have been quiet and steady. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	*To-day.*	*Last year.*
Galveston	16,626	10⅛	10¼
New Orleans	48,300	10 3-16	10¼
Mobile	6,600	10⅛	10¼
Savannah	30,200	9 15-16	9⅞
Charleston	7,000	10¼	10 3-16
Norfolk	12,353	10 3-16	10 5-16
Baltimore	3,411	10½	10½

The total receipts of cotton at the ports since September 1 are 1,219,571 bales against 1,110,136 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	198,423	198,433
New Orleans	305,626	210,504
Mobile	57,652	84,832
Savannah	247,489	146,892
Charleston	176,670	164,840
Wilmington	34,535	30,231
Norfolk	123,775	140,254
Baltimore	5,116	2,410
New York	1,722	6,006
Boston	4,496	15,630
Philadelphia	4,651	8,218

The total receipts for the week were 252,629 bales, against 255,460 last week, and 240,964 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 109,937 bales, against 122,648 bales last week and 109,973 bales for the corresponding week last year. The shipments for the week were 82,218 bales, against 82,673 bales last week and 96,499 bales for the corresponding week last year. The stocks for the week were 205,876 bales, against 176,391 last week and 121,326 for the same week last year.

Below will be found the receipts at each of the ports for the week ending October 26, 1883, with comparisons for last week and the same week one year ago:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	6,882	9,516	2,042	6,863	2,454	2,174
New Orleans	8,661	28,033	5,541	3,897	13,324	22,528
Mobile	2,634	2,042	2,748	1,693	1,094	542
Savannah	6,135	7,183	6,968	6,624	7,681	8,247

The Liverpool market for prompt delivery uplands has been steady, with a moderate demand which was freely supplied. Quotations advanced one point on Thursday. The closing price last night was 6d., against $5^{15}/_{16}$d. last Friday.

The market at Liverpool for prompt delivery uplands has been steady. Prices have slightly improved, showing an advance of 6 points for near months, and 4 for later ones.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
October	5 63-64d.	5 56-64d.	6 11-64d.
October-November	6 62-64	5 55-64	6 6-64
November-December	5 59-64	5 54-64	6 3-64
December-January	...	5 54-64	6 2-64
January-February	5 60-64	5 56-64	6 3-64
February-March	5 63-64	5 59-64	6 5 64
March-April	6 2-04	5 62-64	6 7-64

The market for futures closed easy.

The sales for the week at Liverpool were 70,000 bales (of which 48,000 were American), against 53,000 (of which 35,500 were American) last year. The sales for export were 4,300 bales, against 6,100 bales last year. The sales for speculation were 2,100 bales, against 530 bales last year. The amount forwarded was 4,600 bales, against 8,500 bales last year. The stock in port is 470,000 bales (of which 253,000 are American), against 448,000 bales (of which 161,000 were American) last year. The total imports for the week were 40,000 bales (of which 29,500 were American), against 61,000 bales (of which 52,000 were American) last year, and the amount afloat 148,000 bales (of which 88,000 are American), against 221,000 bales (of which 140,000 were American) last year.

The Manchester market closed firm and generally dearer, especially for yarns.

The Havre market closed quiet and steady.

COTTON MARKETS.
[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The cotton market is steady. Middling uplands are quoted at 11⅛c. and middling gulfs at 11⅜c.

From Philadelphia, Pa.: Cotton has declined ⅛c. for spot sales and closes dull with little demand except for immediate requirements.

From Cincinnati, Ohio: The cotton market is unchanged.

From Louisville, Ky.: Cotton is firm and active; provisions are steady, but stocks are light.

From Baltimore, Md.: The demand in the cotton market was almost confined to spinners, and recent sales were on a basis of 10¼c.

From Norfolk, Va.: Cotton is now coming in freely.

From Wilmington, N. C.: Cotton is active, and the demand is freely met. Receipts are 5,000 bales, an increase over last year.

From Savannah, Ga.: Cotton is in good demand, with sales steady but not showing the same activity as last week. Receipts continue fairly good.

From New Orleans, La.: Liverpool's larger sales and improved spots have stimulated spots here, but heavy receipts, larger quantities expected, and increased estimates and slow goods trade have depressed futures, which dropped several points on winters and springs. Novembers are unchanged. Octobers are up 9 points. The cotton movement is liberal.

From Memphis, Tenn.: Cotton sales Wednesday amounted to 900 bales, exporters 850, and spinners 50. Trade is fairly active in all branches. General merchandize and plantation business seems to have some advantage over other lines.

COTTON CROP REPORTS.
[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: The weather is variable. The reports as to the cotton crop are better.

WOOL.

The consumptive demand for wool has continued moderate, and the volume of business during the past week has been comparatively small in all markets. There has been no weakening of values, but the lull in demand has checked any tendency to advance prices, and here and there has developed a little more anxiety to realize at current rates. As a general thing, however, holders are in a position to stand a pretty long siege of dullness if nothing else should supervene to shake confidence. A particularly strong feature of the situation is the absence of heavy stocks pressing for sale at any point. An inventory of stocks has been made by an eastern firm this week, and discloses the fact that the available supply of domestic wools is almost unprecedentedly small in the leading markets. Boston stocks are estimated at a little over 14,000,000 pounds, and in Philadelphia a careful computation shows only about 5,000,000 pounds. These statements indicate that an enormous amount of wool has already passed into consumption or into the hands of manufacturers. It is difficult to determine where all the wool that was supposed to have been clipped this year has gone to, as there appears to be no important accumulation at any point in the interior. Country markets show no sign of weakness. Foreign advices are stronger, especially for English combing and Australian wools.

AMERICAN WOOL MARKETS.
[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The demand for wool is moderate and prices remain about the same. Choice fine fleeces and choice fine delaine and combing wools are firm, but the tendency of other grades is easier, and if sales were forced concessions would have to be made. The sales of the week have been 2,638,800 pounds of all kinds. Included in the sales are Ohio and Pennsylvania fleeces at 37@38c. for X, 38@40c. for XX, and 41@41½c. for XX and above. Michigan fleeces have been selling principally at 35c. per pound, which is a poor quotation for good average lots. Combing and delaine fleeces are in demand, and have been selling at 40@43½c. for fine delaine, and 44@46c. for fine combing, including choice lots at the latter rate. Unwashed wools are in demand, and considerable sales of Texas, territory and western at previous prices, some 350,000 pounds spring Texas selling at 24@27c. per pound. California wool is quiet, and no sales of any importance. A lot of 125,000 pounds spring sold at 24c. per pound. Pulled wools are quiet, but prices unchanged. The sales of supers have ranged from 20@42c per pound, including choice eastern and Maine at 40@42c. per pound. In foreign wool the business has been light and no sales of importance. An import of 525,000 pounds Rosario carpet goes direct to the manufacturers.

From Philadelphia, Pa.: Trade has been slow in all lines, but the indifference of buyers does not appear to have weakened confidence in values, which rule very steady on all descriptions.

IRON.

There is no material change in the pig iron trade. Plump offers of $20 for No. 1 American, for speculative purposes, have been refused. No sales at less than $20.50 are reported. No public following of the cut in price to that figure has been heard of and no mention is made of the blowing out of other furnaces than those already announced. The market is firm at current quotations, and the quantity of business done may be called fair, more particularly in grey forge and No. 2, although in no sense so if compared to what is customary at this season of the year. Bar iron has not improved. Profits are very small even on large lots, and some mills in Pennsylvania are running on part time only. Manufactured iron generally is moving but moderately. There are no new features in the steel-rail market. Scotch pig is firm, with light stocks and moderate receipts.

THE AMERICAN IRON MARKETS.
[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Foundry irons are drooping, and move slowly. Forge is selling in larger lots, but at even weaker prices. Muck bars are fairly active. Bessemer is neglected. Merchant bar is selling freely for present wants, in small lots, at low prices. There is a fair inquiry for good-sized lots of common for car work. Plate is comparatively strong and active; shipyard deliveries are large. Bridge iron is moving in large lots, and inquiries are numerous. Steel rails are selling more freely in 1,000 to 5,000 ton lots at steady prices.

From Pittsburgh, Pa.: Pig iron is unchanged and weak. The demand for bar iron is light, and prices are low, but the volume of business is believed to be as large as it was at the same time last year.

From Cleveland, Ohio: The recent iron failures have not unsettled the market, trade being flat and prices too low now to be affected, though the demand may fall off to some extent.

From Cincinnati, Ohio: The pig iron market is unsatisfactory. The continued decline has caused some furnaces to contemplate going out of blast, and others have notified their agents not to sell at present prices. Manufactured iron is without change. Stocks are fair.

From Chicago, Ill.: Bar iron and nails are less active. Prices are steady. Pig iron is weak and slow. Demand is restricted to current consumption, and manufacturers are more conservative in the production of iron goods.

From Detroit, Mich.: Iron continues very dull, there being only hand-to-mouth demand at lowest prices.

HARDWARE.
[By Telegraph to BRADSTREET'S.]

From Cleveland, Ohio: Hardware and manufactured iron are satisfactory.

From Savannah, Ga.: Hardware in good demand and sales have increased over last season.

COAL.

The anthracite trade in the east remains dull. It is brisk north and west. In fact west of Buffalo there is a lack of sufficient cars to transport the quantity of coal ordered, and rates are stiffly held and trade is quite satisfactory. Prices obtained here are of course not up to circular rate, as they have not been at any time thus far during the year. Bituminous coal is quiet and steady, and is going freely into consumption. The output from the Maryland bituminous coal regions this season will naturally far exceed that of 1882, inasmuch as there have been no three to six months' strikes. Work will not be discontinued, so far as known, at the mines during part of the first half of November Last week's anthracite tonnage was 733,753 tons, an increase of 54,835 tons over the corresponding week of 1882, making the total for the year 24,782,710 tons, an increase of 2,461,087. Coke is quite active, but nothing definite is known as to the rumored advance in price to take place January 1.

PETROLEUM.

The week, as a whole, has been as dull as any for over a year past. Trading has been very light, and until Thursday practically nothing had been done. There was no well news of importance, and "a waiting attitude" was the only explanation offered. On Thursday rumors of a bullish monthly report for October started prices up some, and the shorts, rushing in to cover, helped the advance. In sympathy, as usual, holders of refined withdrew from the market, and prices of that commodity were firmer. There was no well news on Friday and business was done entirely in a pyker's market. At the close prices were somewhat weak, but the general feeling is better than for some time past.

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, October 20.....	1.10	1.10¼	1.09¼	1.10
Monday, October 22.....	1.10¼	1.10⅝	1.09¾	1 09⅞
Tuesday, October 23	1.09¾	1.09¾	1.09⅛	1.09⅛
Wednesday, October 24.....	1.09⅛	1.09⅜	1.08⅞	1.09⅛
Thursday, October 25.....	1.09⅜	1.11⅛	1.09½	1.11⅜
Friday, October 26.....	1.11⅜	1.11½	1.10¼	1.10⅜

Until Thursday refined continued dull, with little demand in the absence of special reports from the other side. Crude in barrels for export has been in fairly good demand during the week. Prices to the date named had not been changed.

Prices with comparisons at the close of preceding weeks were, last evening:

	Sept. 28.	*Oct. 5.*	*Oct. 12.*	*Oct. 19.*	*Oct. 26.*
Certifi's, crude..	1.15⅞	1.13⅛	1.10⅜	1.09⅞	1.10⅜
Refined, 110°....	8⅜	8⅜	8⅜	8⅜	8⅜
Refined, 70°.....	8½	8½	8½	8½	8½
Crude, in bbls...	7⅛@8	7⅛@8	7⅜@7⅞	7⅜@7⅞	7⅛@8
Case, plain.....	9¾	9⅞	10	10⅛	10⅛
Naphtha.....	5½	5½	5⅝	6	6

The export of petroleum from the United States, crude equivalent, for the week ending October 20, was 11,238,273 gallons, against 15,122,972 in the preceding week. The total export from the United States since January 1 was 522,791,614 gallons, against 512,378,458 gallons in the corresponding portion of 1882, a gain in the current year of 10,413,156 as compared with the gain of 9,386,219 gallons reported last week. The total exported from New York city during the week ended October 20 was 8,586,273 against 12,682,854 in the preceding week, and during the year, to October 20, 428,545,293 against 403,865,501 gallons in a like portion of 1882. This shows an increase in shipments on the year from New York alone, as compared with 1882, of 24,676,792 gallons (crude equivalent) against but 24,043,906 gallons to October 13, and as against an increase from the country at large of only 10,413,156 gallons.

OCEAN FREIGHTS.

The rates for petroleum and for grain for some days have been high, and the movements of those commodities have been correspondingly restricted. The limited quantity of tonnage in port and the small amount to arrive soon will explain these rates. A falling away in petroleum exports, as compared with preceding weeks, is also to be noted. There has been some degree of chartering to arrive, and later there has been an easing tendency. Berth rates have been about at previous levels. The foreign movement has been light. Friday charter rates stiffened again.

OCEAN FREIGHTS ELSEWHERE.
[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The market is firm both for grain and oil tonnage, as the spot supply of vessels is very light. There is, however, little chartering demand. Some vessels bound for this port are already chartered, chiefly for petroleum. The Liverpool line grain room is engaged up to November 10.

From Baltimore, Md.: There is little inquiry for ocean tonnage. Steamers of regular size are quoted 4s. 9d. @5s., and convenient sail vessels 5s. 1½d. @ 5s. 3d. for prompt loading to Cork for orders. The quoted rates to Liverpool are 5¾ @6d. per bushel, but there is no near steamer room offering except conditionally. Ocean freights to Liverpool are: steam 5¾ @6d. per bushel; to Cork for orders, sail 5s. 1½d. @5s. 3d. per quarter, and steam 4s. 9d. @5s.

From Wilmington, N. C.: The tonnage in port is small. There is a good inquiry for cotton vessels.

From Savannah, Ga.: Ocean freight is in fair demand. Vessels have arrived freely this week and loading berths well filled. Coastwise tonnage is in fair demand.

From New Orleans, La.: Cotton freights are firm. Nothing is doing in grain charters. Steam to Liverpool is 5/16d.; Havre ⅝c.; New York, sugar, $5; molasses $2; rice 75c.

BOOTS AND SHOES.
[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The presence of about fifty large buyers has imparted some life to the market, and in a week or two more some activity may be expected. The buyers are now examining samples and appear to be in no hurry to give orders. Salesmen who have been out with samples brought home few orders, but new work at the factories has not yet been started on.

LEATHER.
[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Leather is selling freely from first hands to manufacturers at steady prices.

TOBACCO.
[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: Leaf tobacco is firm and active. New crop hogsheads are generally of good quality, and bringing high prices.

From Wilmington, N. C.: The tobacco crop is one-fourth short, but the quality is excellent. The market is good.

WHISKY.
[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: Whisky is firm at the slight advance recently established. The market is dull. Buyers are not responding to the advance.

LUMBER.
[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The approach of winter has apparently caused no diminution in building, and the result is a continued demand for lumber and building materials.

From Cleveland, Ohio: The lumber business is very satisfactory.

From Minneapolis, Minn.: The lumber market is quiet. There is only a moderate demand and prices are unchanged. The mills will close for the season soon after the 1st, with fully 150,000,000 feet of logs uncut.

From Wilmington, N.C.: Timber has improved. Receipts of lumber are larger. Shingle stocks are small.

THE BOSTON FISH TRADE.
[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The market is well supplied with all the leading kinds of fish. The mackerel fleet has been landing some large fares and prices have eased off on the lower grades. Codfish are in liberal receipt and selling at lower prices. Pickled herring are in very large supply and cheaper than usual. Smoked herring are also on a lower basis. Trade in prepared codfish and canned mackerel is larger than usual this season.

SPECIAL LOUISIANA TRADE REPORT.
[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: Coffee is steady; fair is 12¼c. Oilcake is 50c. higher, owing to freight having advanced to 21s. Cane products have declined owing to liberal receipts. The reported yield is greater and the estimates are increasing. Rice is steady.

SPECIAL CHICAGO TRADE SITUATION.
[Special Correspondence to BRADSTREET'S.]

Chicago, October 24.—Money is meeting an increased demand, and bankers report their discount rates fuller than at any preceding time this year, with rates firm at 6@7 per cent. New York exchange is quoted at par@25c. premium per $1,000, and amount making by shippers small. The movement of money to the interior is only fair, the heaviest consignments being to the wheat and live stock sections.

The jobbing trade, although less active than during the first half of the month, maintains a liberal volume for the advanced stage of the season. The dry goods houses are receiving a steady line of patronage from firms who are ordering goods with which to replace certain descriptions of stock that has been reduced by an active consumption, and the tone of the market is steady. Millinery is meeting a fairly satisfactory sale, and like reports are made by houses handling collateral lines of goods. There is also a good mid-autumn trade in clothing, boots, shoes, hats and caps. Leather is more fully called for from manufacturers; the previous scarcity noted in fine calfskins continues, and full prices are demanded. Bar iron and nails show little change; the demand keeps up well and prices are sustained. Hardware, metals and tinners' stock show about the same movement noted last week, and with the exception of a weaker feeling in sheet iron, which exhibits considerable irregularity in prices, there are no changes in values. Pig iron is selling slowly in job lots. Stocks of Lake Superior charcoal are moderate, and sales are not pressed, but southern remains weak under a pressure to sell without finding a corresponding response from buyers. Sugars and coffees are actively called for, and prices firmly supported. The receipts of wheat maintain a liberal volume considering the previous free arrivals; the shipments are moderate; stocks in store are steadily on the increase, and the market is languid, closing prices to-day being nearly down to the lowest figures of the year; yet they fail to call out any considerable demand from strong buyers for the purpose of bidding for an advance. There is, however, no disposition to sell short, and scalpers who put out lines cover when prices show the least possible signs of an upward turn.

Corn is meeting a fairly good shipping demand and stocks are moderate, but the receipts are larger than previously anticipated, and while there is no disposition among the bears to put out large lines and stand short, there is an equal conservatism on the part of the bulls who buy cautiously and show a

disposition to take small profits, and the market is destitute of features of interest.

The speculative and consumptive demand for mess pork and lard is small; the bulk of the trading is confined to brokers who, as is their custom when they are without outside orders, buy for a scalp, and the market maintains the same apathetic position noted last week; the confidence of dealers in an early and permanent advance is also shaken by a material increase in the receipts of hogs. The demand for short-rib sides to fill sales for this month is active; shippers to consuming points are also taking a fair amount, and sellers for prompt and this month's delivery are enabled to realize full prices, while the deferred futures are weak and trading only fair, values being affected by liberal supplies of hogs and a prospect of a further increase in receipts after the close of this month. There is a good shipping and speculative demand for timothy seed, and, although the arrivals are liberal, they meet a quick sale. Flaxseed is also freely taken by crushers at steady prices. Clover is in good demand and firmly held, with predictions of an early advance. The following exhibits the stock of grain in Chicago elevators on dates named:

	Oct. 22, 1883. bushels.	Oct. 23, 1882. bushels.	Oct. 24, 1881. bushels.
Wheat	7,428,000	2,548,000	3,758,000
Corn	2,068,000	936,000	7,973,000
Oats	235,000	188,000	419,000
Rye	823,000	237,000	375,000
Barley	80,000	125,000	207,000
Totals	10,534,000	4,034,000	12,732,000

PROGRESS OF THE PANAMA CANAL.

The Paris correspondent of the *Times* gives the following account of the state of the works and the prospects of the canal: "M. Dingler, director-general of the works and a civil engineer of good standing, recently arrived in Paris to submit his plan of campaign for the season of 1883–84. The amount of cubic meters to be removed, as estimated in the original surveys, is exceeded in the definite programme based on soundings and experiments by machines and manual labor; 80,000,000 cubic meters had been calculated on, whereas there will be 100,000,000. These, however, it is calculated, will cost less than the 80,000,000 would have done. In the original specifications three-fourths of the isthmus to be cut through were reckoned as very hard rock. It is now affirmed that the very hard rock does not exist, and even the hard rock is much less thick than a survey had indicated. There are geological explanations of this phenomenon. The soil being thus much less refractory than was originally supposed the mode of cutting has been changed. The embankments of the canal, which in the rocky part would have been almost like vertical walls, will be flatter, involving the removal of more cubic meters. This accounts for the total of 100,000,000 meters instead of 80,000,000. But the first excavations, according to the engineers, would have cost 10 francs a meter, whereas the new work will only cost on an average a third of this sum. The 100,000,000 of cubic meters to be removed, with the accessory labor, expenses of administration—in short, with everything included, may be expected to cost in all 500,000,000 francs. With 100,000,000 francs for meeting the unforeseen, a total of 600,000,000 francs is the expenditure indicated by M. de Lesseps for the completion of the canal, provided, of course, there is no new miscalculation. There is another very important point. It was believed at the outset that the canal might be ready in 1888, viz., five years. Last year this calculation became a certainty. According to the new plan of campaign about to be submitted to the consultative commission, composed of admirals and the chief engineering authorities, the completion of the canal in 1888 is no longer doubtful, but if the directorate of the company wished, by increasing the machines and opening new work-yards, a thing acknowledged to be easily practicable, the date of completion might, it is said, be accelerated by some months, perhaps by a year. The unexpected fact is reported that at some yards, whither machines had been brought to perform the excavations, the negro workmen hired in great numbers merely as hodmen asked to be allowed to do the excavating themselves, and have, in fact, succeeded in doing it cheaper. The machines were, therefore, conveyed to another yard. It appears from reports of travelers that M. de Lesseps' popularity in the isthmus is as great as here. The workmen are astonished at the care with which they are treated, and the regularity with which their wages are paid. Lord Granville's statement that her Majesty's government could never have two different policies, one at Suez and another at Panama, produced a lively impression in the United States of Colombia, and another impression—an impression of 'attentive supervision'—at Washington. A New York paper has said that the government of the United States had a good preceptor, who cost it nothing—viz., the English government. By doing in the future at Panama exactly what the English government would do at Suez, it would be sure of not going wrong. It may be added that M. de Lesseps has very dexterously confided the execution of the two entrances of the canal to leading American contractors, and public opinion at New York and Washington has become very favorable to the enterprise. M. de Lesseps is not the man to miss such an opportunity. He therefore wishes to hurry on the work as fast as possible, in order that the canal may be finished while the favor lasts, and there is no doubt that after the new issue operations will be resumed with renewed vigor. At M. de Lesseps' age it is natural for him not to wish to delay the moment when a second apotheosis will take place, for few enjoy it even but once. In any case it seems certain that the Panama canal will be traversed in a few years as the Suez canal is now."

HAS GOLD APPRECIATED?

The following is taken from the London *Statist:*

"Mr. Soetbeer, in two articles contributed to the *Deutsches Handelsblatt*, makes an interesting communication to the question as to the general fall of prices in recent years, which was discussed by Mr. Goschen, at the Bankers' Institute, last spring. His text is a comparison of the average prices of a hundred articles of commerce during the years 1847–1882. According to the table which he prints the average rise of prices, as compared with 1847–50, has been:

	Increase per cent.		Increase Per cent
1851–55	14½	1871–75	35.7
1856–60	21.7	1876–80	27.2
1861–65	27.4	1881	23.7
1866–70	24.6	1882	23.8

The figures for each of the ten years, 1871 to 1880, were:

	Increase per cent.		Increase per cent.
1871	28	1876	32.7
1872	36.8	1877	30.7
1873	41	1878	25.2
1874	39.7	1879	19.9
1875	33.1	1880	26.1

These figures, we think, corroborate in a very striking manner the main conclusion that there has been an appreciation of gold in recent years. Whereas in 1871–75 the average rise of prices, as compared with 1847–50, was 35.7 per cent., the average rise in the last two years is a little over 23½ per cent. only, showing a fall of about 12 per cent. during the last ten years. The fall is even more striking when 1872, for instance, is compared with 1882; and would be still more striking if we could compare 1883 with 1873, the average rise in 1873 having been no less than 41 per cent., while prices in 1883, as we all know, are still lower than they were in 1882, when the rise was only 23½ per cent. The difference between the two latter years, namely, 1873 and 1883, must be at least 17½ per cent. The permanency of the fall is also established by a fact obvious in the table, that the last two years were years in which prices had recovered from a previous level of depression, the increase per cent. in 1879 over the average of 1847–50 having been only 19.9 per cent. Although, therefore, prices at the present time and for the last year or two are lower than they were ten years ago, they are hardly to be considered the prices of a time of depression, but rather they are prices such as have resulted on the recovery from a previous depression. Because they have not risen further there is a common impression that the period continues to be one of reaction against former prosperity; but the truth is that the rise of prices two years ago proceeded as far as the circumstances of the money market would permit, and last year was really the culminating point of a period of inflation. Still, the resulting level of prices was lower than the level which was reached ten years before."

GERMAN PROTECTION AND FREE TRADE.

The report of the Austrian consul in Dresden, Dr. Scherzer, urges the following facts as illustrating the results of the protectionist system in Germany. For three years, remarks Dr. Scherzer, the question of protectionism has been agitating the old and the new world, and a commercial policy has been reintroduced which England, with some trifling exceptions, has long since abandoned. Germany was the first to adopt it, and the best hopes were held out that the new system would improve the economic condition of the country and the foreign trade. What now are the results? The total export trade of Germany amounted in 1878 to 6,400,000,000 marks, that of France to 5,885,000,000 marks, that of England to 11,372,000,000 marks, and that of the United States of America to 4,758,000,000 marks. In the year 1882 the figures were as follows:

	Marks.		Marks.
Germany	6,340,000,000	England	12,870,000,000
France	6,854,000,000	United States	6,484,000,000

Calculated per head of the population, the result of the foreign trade was as follows:

	Marks. 1878.	1882.		Marks. 1878.	1882.
Germany	145	137 − 8	England	332	360 + 28
France	157	180 + 23	United States	100	124 + 24

While Great Britain accordingly shows an increase of 28 marks per head of the population since 1878, and France and the United States an increase respectively of 23 and 24 marks, in Germany there has been a falling off of 8 marks. It would not be just to make the protectionist system followed in Germany alone responsible for this deterioration, but nevertheless public opinion in that country is becoming more and more adverse to a restrictive policy, and a proof of this is that the Reichstag has rejected all proposals to increase the duties.

THE EXPORT TRADE OF FRANCE.

The Glasgow *Herald* of recent date has the following:

The decline in the French export trade is attracting attention in Paris, and has been the subject of a report to the Minister of Commerce by M. Felix Faure, Deputy for Havre, who was recently Under-Secretary of State for that department. Within the last ten years the exports of French manufactures have decreased in value about 10 per cent. The fall in the prices of raw material—iron, cotton, and coal—is one reason given to account for the apparent falling off in the exports, but others are adduced which have not been generally noticed by economists. With regard to the trade with England, M. Faure admits that we take direct fewer manufactures than formerly. Silk stuffs, trimmings, and ribbons to the United Kingdom fell from 231,000,000 francs in 1865 to 204,000,000 francs in 1869, 153,000,000 in 1875, and 105,000,000 in 1881. Made-up articles of clothing at the same time fell from 18,000,000 to 8,000,000. With regard to silks, allowance must be made for changes of fashion, new fabrics of woolens having largely taken the place of silks, both for dresses and upholstery. Next, there being no duties in England, M. Faure remarks, that country had become a depot for goods afterwards shipped to North or South America, the East, and Australia; but as relations between France and those countries became established, goods have been sent direct from France, without passing through England, and the exports to England decreased. The next reason he gives is ingenious, and has not perhaps before been suggested. If France sends less of her manufactures abroad, he says, it is certain that she sells more to foreigners in France. The number of wealthy strangers who visit France increases considerably every year, and they purchase French manufactures not only to consume in France, but to take away with them in their trunks. M. Faure, nevertheless, admits that the export trade is not so flourishing as it should be, but he attributes the stagnation partly to French workmen, who, by their demands in matters of wages and conditions of labor have increased the cost price of productions, and partly to merchants and manufacturers who are wanting in intelligence and enterprise.

TRADE EMBARRASSMENTS.

There were 209 failures in the United States reported to BRADSTREET'S during the past week, 29 more than the preceding week, 72 more than the corresponding week of 1882 and 92 more than the same week of 1881. Compared with the preceding week the middle states had 58, an increase of 14; New England states 24, a decrease of 1; southern states 33, an increase of 9; western states 58, a decrease of 13; Pacific states and territories 36, an increase of 20; Canada 30, a decrease of 1. Among the firms reported embarrassed were Benjamin L. Coffin, wholesale hosiery, and S. L. Merchant & Co., importers of cements, New York city; Maule Brothers & Co., lumber, Evert P. Maule & Co., leather, John W. Smith & Co., manufacturers of doors, etc., and Stern, Troutman & Co., wholesale hats, Philadelphia; Eddy, Harvey & Co., wholesale hats and furs, Chicago; John Campbell, iron, Ironton, Ohio; John N. Glidden, iron, Cleveland, and The Arnold Furnace Company, Niles, Ohio. In the principal trades they were as follows: General traders 32; grocers 29; liquors 19; hardware 11; clothing 11; carriages 8; drugs 7; manufacturers 7; shoes 7; dry goods 6; grain, flour, etc, 6; hotels and restaurants 5; harness 5; fancy goods 4; furniture 4; iron 4; hats 3; jewelry 3; produce 3; lumber 3; stationers 3; leather 2; stock brokers 2; bakers and confectioners 2; coal 2; tobacco and cigars 2.

ALABAMA.

COLUMBIA.—R. H. Walker, general store, has assigned to E. C. Thomas.

ARIZONA.

YUMA.—H. Weaver, hotel, has assigned.

CALIFORNIA.

FRESNO.—Chinda & Co., fruit, have given a bill of sale and left town.

HALF MOON BAY.—C. F. Proctor, saloon, is reported to have left town.

KINGSBURY.—Alfred Mayfield, harness, is reported to have left town.

LOWER LAKE.—L. H. Thompson, wagon maker, has been sold out by the sheriff.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

Nos. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 3, 1883.

NOTES OF THE WEEK.

The October cotton report to BRADSTREET'S is now coming in. The summary thereof will be given next week. In calculating as to the probable outturn of the crop, it should be borne in mind that the crop of 1882 was a phenomenal one, and that a large falling off in the number of bales grown is possible. During the week the failure of Morris Ranger, the Liverpool speculator, was announced. Counting on a large crop from America he made short sales to an enormous extent. The big crop was not grown and his downfall was inevitable. The one practical point advanced in relation to the matter is that speculative contracts at Liverpool should be covered by margins. This done, in the event of a crash the losses are better distributed and the ill-effects thereby lessened.

The stock market has run into a condition of extreme dullness during the week, offering a great contrast to its convulsive activity last week. The rise in prices then was based on nothing but the excessive short interest in the market, and when this had been eliminated by covering there remained nothing but manipulation of large operators, who have large amounts of stock on hand for which they seek buyers. In the complete absence of the general public from Wall street this is not an easy thing to do. Mr. Keene is credited with doing most of the work of manipulation, and has made Oregon Transcontinental very active. The other Villard stocks seem to be dead as far as trading is concerned.

New York city is very badly off as regards its form of government. For some years the voters have been led by the daily newspapers to believe that great advantage would inure to the city by the election of this or that man to the mayoralty. This particular era began with the election of Mr. Cooper as mayor. Preceding the election the *Sun* rallied the Cooper forces with the cry, "No king, no clown can rule this town," the reference being to Mr. Kelly. Mr. Cooper was elected, but no sooner did he attempt to carry his views into practice by the removal of particular officials than the *Sun* proceeded to show that the mayor could only remove at the end of a judicial trial, a very certain way of reducing the mayor to the dignity of a clown. The other daily journals of the city have contributed no more nor less than the *Sun* to the right solution of this local government difficulty. Something might have been expected from the *Times* by reason of the reputation gained through aiding the Tweed exposure, but it is only energetic in preaching political morality. The New York daily journals are, in short, doing two things—extending the use of the telegraph as scandal-mongers and scolding.

They do very little, indeed, by way of informing the public. Having followed the lines of least resistance—surface lines—so long they have come to actually repel men having at once the capacity of scientific explorers and the adaptability of journalists. Wholly intent upon printing that which will interest the greatest number of readers they are unable to attend to that which would result in the greatest good to the greatest number. While drawing princely incomes they neglect to adequately study and care for the interests of the city from which these incomes are for the most part drawn. Take the case of the *Herald*. Its proprietor enjoys the revenue of a dukedom, but its enterprise in relation to the conduct of city business is measured by its art in procuring a copy of the report on city treasury frauds for publication in advance of other journals. The daily journal, as exemplified in New York, has driven the pamphleteer, as once known, out of existence, and this without continuing his habit of searching investigation. The work of New York daily journals in relation to the city's business was far more serviceable fifty years ago than now. Then principles were worked out and given due attention; to-day a given phase of the city's business is of value in proportion as it will warrant sensational headlines. It is believed that the future good or ill direction of the larger American cities will mainly depend upon the degree of intelligent attention from their daily journals. The dailies should report authoritatively, at frequent intervals, on the condition of a given city's affairs from the state of the treasury down to the least important department. Had this been done in New York the frauds unearthed of late would have been well-nigh impossible. Instead of giving "interviews" with Tom, Dick and Harry at particular junctures the daily journal should be able to speak to the point by interviewing itself. The matter is of profound importance, and nothing is more certain that if the already established New York journals do not prove equal to the occasion another journalism must be erected to do the work.

We give place elsewhere to an important report of the New York Chamber of Commerce in regard to the stock-watering question. The report is emphatic in asserting that the consent of the state should be a prerequisite to increasing the capital stock of a given railroad. Along with this vigorous report the announcement is made that the New York State Railroad Commission has refused to permit the New York & Sea Beach Railroad Company to increase its capital stock from $500,000 to $600,000. This is an important step. The power to so interfere is a momentous one. Its exercise must ever be carefully guarded. The degree of success attained by the New York Commission in the just exercise of the authority conferred upon them will form an important precedent for the future. The work of the Massachusetts Railroad Commission for a number of years is properly used as an argument in favor of like commissions in other states. It will be well if, when the record is made up, the work of the New York Commission will answer the same purpose.

The decision in relation to the New York & Sea Beach Railroad marks one of the most important functions of the Railroad Commission. The duty of passing upon applications to increase capital has heretofore devolved upon the State Engineer and Surveyor, and this duty has been performed in an entirely perfunctory way. The corporations have done as they pleased. Under the act creating the Railroad Commission, this function was conferred upon the Railroad Commissioners and in this case the board sent their expert to make an examination. He reported wrongful charges, and the board voted unanimously against granting the application to increase capital. It is to be hoped that this is an augury of better days for both the public and honest investors.

In a speech delivered recently in Philadelphia Mr. William D. Kelley, who has been observing the state of labor in Europe, gave his fellow-citizens a very harrowing description of the impoverished condition of the English laborers, which sad condition was, he declared, the result of free trade. The effect of free trade in America, he said, had been similar. He traced the extended bankruptcies of 1840 to the same cause. He said that Great Britain's policy was beginning to react upon herself in nearly every direction; that her carrying trade was being paralyzed for want of traffic, and that her ship-owners were praying for a war, so that their deserted ships might be used for the transport of troops. The laborer's condition in England was, however, the most deplorable of all. Despised and kept down, he was doomed to wretchedness, poverty and want. He was virtually a slave, a social outcast, working for a pittance that barely afforded him the necessaries of life. Similar pictures are given of the condition of labor abroad, and similar inferences regarding the same are drawn by all who, like Mr. Kelley, are ardent supporters of extreme protectionist principles.

It seems, however, that it is possible to draw from the same state of facts conclusions entirely different from those arrived at by Mr. Kelley. In the current number of the *Princeton Review*, for example, Mr. David A. Wells devotes some space to an examination of the "pauper labor" argument for protection, and lays down without reserve the proposition that the continuance of the protective policy will inevitably and rapidly produce the very result deprecated by the advocates of that policy, and that it has already done so to a considerable extent. Mr. Wells calls attention to the fact that during the first half of the period of the existence of the United States the "pauper labor" argument never put in an appearance, the claim that protection was necessary being based almost exclusively on the "infant industry" argument. About the year 1840 the claim that American labor should be protected against foreign pauper labor was brought forward, and has ever since remained the chief consideration impressed upon the popular mind in connection with the advocacy of a tariff for protection. Wages, Mr. Wells says, are higher here than in Europe for the reason that owing to our great natural advantages a given amount of labor, intelligently applied, will yield a greater return than in almost any other country. The competition of the pauper labor of Europe is to be welcomed for the reason that the main thing which pauper laborers in Europe and everywhere else want is food, and that the competition which is deprecated will result only in the exchange by the pauper laborers of a day's labor in making things which the American agriculturist wants and cannot advantageously produce himself for products which represent only a fraction of a day's labor in the United States. So much for the "pauper labor" argument of which so much use is made by Mr. Kelley and those in sympathy with him.

RECENT CONTRIBUTIONS TO SOCIAL PHILOSOPHY.

There has probably never been a time when social and economic questions attracted more attention than to-day, and never certainly have they been discussed with more zeal and acumen. On every side fundamental conceptions of the state and of property are being subjected to close and searching criticism, and presumptions in favor of existing institutions receive very little consideration. Time-honored notions of the functions of the state are losing ground, and new ones are coming into vogue. Whatever view may be taken of the general condition of affairs, the discussion referred to cannot but have a beneficial influence. In the process of discussion the exact terms of the problems requiring solution are likely to be defined, and that circumstance in itself will be a great gain. Furthermore, the distinctive features of the conflicting systems will be brought into relief and a clearer and perhaps a more sympathetic understanding of the conditions of the various problems and of the merits of each side thereof will emerge. Truth has everything to gain and nothing to lose by publicity and the healthful conflict of ideas.

Among the most interesting recent contribution to social and economic discussion is Professor William G. Sumner's book on "What Social Classes Owe to Each Other." In this book the writer approaches his subject from the standpoint of what has come to be called, by way of distinction, orthodox political economy. He makes it clear at the outset that he has no sympathy with the socialistic tendencies of the time. The question proposed for discussion, however, if intended, as it appears to be, to cover the whole subject of the general expediency of state interference, seems to us to be stated too narrowly. Professor Sumner assumes that if anybody is to benefit from the action of the state "it must be some of us—that is, some class or interest in the state." This seems to us by no means logically necessary. It is surely quite conceivable that the benefits of state action may in given instances extend to all classes in the state, in which cases the question would stand not as Professor Sumner has it, What ought some-of-us to do for others-of-us? but what ought all-of-us do for all of us? or what does the state owe to itself or to the individuals composing it as a whole? The distinction is an important one and cannot but affect the entire treatment of the subject.

Professor Sumner has a very poor opinion of the entity known as the state at its best, and says that his notion of it has dwindled with growing experience of life. He is consequently of the opinion that, under a wise system, state interference would be at a minimum. He insists upon the necessity of distinguishing clearly between the ills which belong to the struggle for existence and those which are due to the faults of human institutions, the latter of which alone can be corrected by associated effort. Social improvement, the writer thinks, is not to be won by direct effort; it is secondary, and results from physical or economic improvements. For this reason he looks with suspicion on all schemes of direct social amelioration. In view of the general attitude of Professor Sumner, his views regarding some special matters much discussed of late will be found of particular interest. He shares the belief rapidly becoming general that a more thorough and intelligent organization of labor is a necessity, having regard to the interests of the workingman. Trades unions especially ought, he says, to be perfected so as to undertake a great range of important duties for securing the performance of which government inspection is now relied on. The safety of workmen from machinery, the ventilation and sanitary arrangements required by factories, the special precautions of certain processes, the hours of labor of women and children, the schooling of children, the limits of age for employed children, Sunday work, hours of labor—these and other like matters ought, in the writer's opinion, to be controlled by the men themselves through their organizations. Professor Sumner recognizes that wealth is now becoming a power in the state, and that, like every other power, it is liable to abuse unless restrained by checks and guarantees. Legislative and judicial scandals show that the conflict has already been begun between democracy and plutocracy. The struggle is likely to be a serious one for the reason, as the writer thinks, that there is a plain tendency of all civilized governments toward plutocracy. The chief need seems to be, he says, more power of voluntary combination and coöperation among those who are aggrieved by the aggressions of corporate power. He sees no ground for hope, however, in the employment of political machinery as a remedial agency.

Another recently published book of much interest, bearing upon the general subject discussed above, is Mr. Richard T. Ely's "French and German Socialism in Modern Times," in which the author presents a summary of the ideas of the most influential modern socialists and of the principles of social democracy in so far as they have been formulated. One prime merit of the work is that its treatment of its subject is not unsympathetic, differing favorably in this respect from most of the presentations which have preceded it in English. The author recognizes that the opponents of socialism have nothing to gain by misrepresenting the principles of its advocates. We have not space to notice the points of difference between the various schools of socialistic philosophers and economists. The most influential of them, however, concur in regarding state action as the chief means whereby the social amelioration for which they strive is to be attained. Professor Sumner and those who agree with him declare that there is no way of overcoming the evils which belong to the struggle for existence save by energy and self-denial—that these ills do not cure themselves. The socialists, on the other hand, insist that good institutions do not come to us in this world of themselves, that it was intended that we should labor to obtain them, and to that end use all the instrumentalities Providence has committed to us, the state included. Some of the socialists claim to have discovered a law of the constant increase of governmental functions in modern times, and certainly there are not wanting facts in support of the claim. Some of these facts we have already commented on, but the book before us calls attention to one which deserves particular mention as furnishing some measure of the extent to which socialistic tendencies in legislation and administration have prevailed in the home of orthodox political economy. It appears that while the population of England was a little more than trebled between the years 1685 and 1841, the expenses of the government in the latter year were more than forty times those for the year first mentioned. Facts such as this afford food for reflection for the orthodox political economists. They go to show that the advocates of state interference have some grounds for claiming that modern tendencies make against and not for extreme individualism.

CHICAGO AND THE TRAFFIC BY WATER ROUTES.

There has been a surprising falling off in the shipping business of Chicago this year, the total of vessels and tonnage that arrived being less than in any year since 1878, the clearings fewer than in any year since 1878, and the tonnage cleared lower than in any year since 1879. The arrivals for the ten months ending with October were 10,213, or 1,785 less than in 1882; the tonnage, 3,289,566 tons, or 1,009,382 less than in 1882; clearances, 10,427, or 2,090 less than in 1882, with a tonnage of 3,695,851, or 768,979 less than in 1882. If the arrivals are as numerous in November and December as they were last year, there will still be a shortage of 1,785 vessels and more than 1,000,000 tons, as compared with 1882, and the clearances would, on the same supposition, fall off over 2,000 vessels and over 700,000 tons. Of the arrivals the first ten months of this year, 85 were foreign vessels, against 149 in the corresponding period of last year; clearances, 93, against 182. The arrivals from foreign ports were 40, against 91 last year; clearances to foreign ports 142, against 134. One cause of the decrease this year is the shipment of lumber directly west from the Michigan mills instead of through Chicago, as formerly. This, however, accounts for only about 600 vessels. There was an increase over last year of 250,000,000 in the number of shingles received in Chicago between January and October 1, but a considerable falling off in lumber, sills and coarse material. In coal there has been an increase. There must have been a decline in the grain traffic. Flour seeks the better means of transportation (steamships in preference to sailing vessels and cars in preference to boats), and the tendency of these latter years to manufacture grain into flour before shipping it to the consumers' market may account for a part of the shrinkage. Traffic by water has not increased in anything like the proportion of business by rail, but there has been a considerable growth in the average tonnage of vessels. There were 13,174 arrivals in 1868, but their tonnage was only 2,984,591, while the tonnage of the 10,213 vessels that have arrived thus far this year was 3,289,566. The tonnage of the clearances increased from 3,020,812 to 3,695,851, though the number of vessels fell off from 13,255 to 10,427. Rates have been better this year than last, running up to 4¼@4½c. per bushel on grain from Chicago to Buffalo, the figures now being 3¾c. for corn and 4c. for wheat. Last year the highest rate for corn was 8¼c., and that was not reached till the last week of October. In 1881 there were no charters above 4c.; after June and from August on the figures were from 3¾c. down to 2c. In 1880 the rate for corn ranged from 5c. in September to 7@7½c. the last weeks of the season. This year's business must be called a pretty satisfactory one, considering the great odds that water transportation has to contend with as against the rail routes and the downward tendency of carrying rates everywhere. Between 1878 and 1882 the average wheat rate by water from Chicago to New York fell from 10.1c. to 8.7c. per bushel, the ocean steamer rate from New York to Liverpool from 15.22c. to 7.76c., and the rail rate from Chicago to New York from 17.7c. to 14.6c. It is interesting to notice in this connection that the rate from San Francisco to Liverpool advanced during that period from 30.21c. to 33.82c., rising to 46.20c. in 1881.

THE ENGLISH AGRICULTURAL LABORER.

I stated in your issue of September 29 that the English farmer has suffered, or is suffering, a loss of agricultural labor. The social phenomena connected with the fact are of such signal importance that they deserve a little further explanation. Stated briefly, the fact is as follows: There has been a noticeable and growing decline in the population of rural England. Where agriculture has been the sole business of the locality, the number of inhabitants has greatly diminished. The farmer will tell you that the quality of the residue has greatly diminished; that he pays more wages now and gets less work than he did a quarter of a century ago, and that matters are going from bad to worse. Farmers, as I presume you find out, are inveterate grumblers, and cry wolf till one's ears are deaf to their lamentations. About the beginning of harvest they always tell us, through their organs, that the crops will be a failure. This is partly a tradition, partly due to a foolish and vain hope that they will get a rise in the market by the cry of a coming scarcity. They tell us so constantly that they are going to the dogs that one never puts on an air of sympathy while they are lamenting, because one has learnt to distrust the sincerity of their woe. But they are right about the laborers, and have to thank themselves for the fact.

A generation ago any agricultural village in England procured an abundance of hands whose skill in their own calling was varied and exact. A good farmhand could drive a furrow over a fifty-acre field with a precision which was almost artistic. Like the children of Benjamin, they could go to a hair's breadth and not miss. Now, good as the soil of England is, much of it, and that not the worst, is very uneven ground, over which a steam cultivator, even if it were in frequent use, would make rather ragged work, and where consequently the plowman is wanted for neat and effective cultivation, for a crop of from 30 to 35 bushels an acre. Again, ditching and draining in some of our wet soils are arts which require nearly as much skill as plowing; for not only must the farmhand do his work straight, but he must, by rule of thumb, estimate the fall which he can distribute over the space through which the drain is carried to its outfall. He knew, again, how to mow the thick grass so as to leave the field even, and to reap so as to show a short and equal stubble. Much of this work is now done by machinery, but much can never be, owing to the nature of the ground. He could build a hay or cornrick in the open, with just that increasing diameter which the material would bear, and with complete regularity. He could thatch it with the minimum of straw and the maximum of protection from rain, knowing the precise inclination at which the thatch should be put so as to secure these ends. He could clip a hedge as a

Dutchman does a box-tree, so as to have it even and strong.

He could take his part in shearing sheep, cleaving to the wool so as neither to leave the coat ragged or to nip the sheep's skin. He had no little knowledge of farming, and was quick to see, if he could not arrest, the symptoms of disease in horse, cattle, sheep and pigs. He was often a very neat butcher if his services were required. He knew as much about agriculture as his employer, and very often a great deal more, for his faculties had been concentrated upon land, and especially the land on which he had labored, and his forefathers before him. I am convinced that those old-fashioned farm laborers supplied the best illustrations in their humble way of Captain Galton's theory of hereditary genius. Their qualifications are described as I have given them in acts of Parliament, and ordinances of quarter sessions during the last four centuries, as I could show your readers if need were to quote them.

He was expected to do all this on 12 shillings a week: to live in a cottage, very often without a scrap of garden to it, for which he paid at least a sixth of his earnings, to be ready for his employer's call, to be exceedingly deferential to the squire, and to be attentive to the ministrations of the parson. Up to a comparatively recent time no books on agriculture, even those written by the most enlightened persons, ever thought or hinted that it was as important in agriculture to keep up the breed of laborers as it was to improve that of farm animals and stock. On such wages it was difficult to live, impossible to save. The game laws, with all their terrors, were, I suspect, sometimes useful to him, by supplying him with occasional, but furtive food. I remember an old shepherd telling me that he did not think he had done much wrong in his life except not having enough to eat. I don't know whether he thought this was an offense or a judgment, but it struck me as oddly pathetic. In his old age the workhouse was inevitable, where he was always rheumatic.

A few years ago the landlords and farmers used to have solemn and heavy banquets, and, after the feasting was over, would present prizes to the virtuous peasant. His qualifications for these rewards were length of servitude or success in avoiding the public charity of the poor law. Sometimes, more rationally, they were for skill in some of the multiform particulars of his calling. Of late years those absurd and degrading exhibitions have been dropped. Mr. Disraeli frequently presided at them, and one would have given something to have known what he really thought of the pageant.

The sons of these laborers have fled from this destiny. Some of the strongest young men became navigators, as they are called, i. e., railway workmen. When the railways were finished and the country was opened up many of the younger people betook themselves to the towns, where there were better wages, not much dearer or worse lodging, and more independence. Not a few emigrated. I have come across, in your eastern states, some well-to-do farmers who left England as laborers a quarter of a century ago, and have continuously thriven since. For a time the benevolent rejoiced at the clearing out, and the farmer chuckled at the lessening of the parish rates. Latterly he has come to see that sometimes an immediate gain is a future and permanent loss, but he rarely sees that the loss is of his own making.

Some dozen years ago a laborer who is now well known in England, Joseph Arch, who had, I believe, sharpened his faculties by preaching to his fellow rustics, conceived that they could be stirred to better themselves. He devised a laborer's union, and strove to unite them with a view of improving or increasing their wages. Besides the general machinery which the ordinary advocates of trade unions adopt, Arch laid down three maxims for the conduct of his followers. Keep away from drink. Educate your children. Keep away from the risk of getting on the parish. The bitterest foe of trade unions would hardly challenge the wisdom of this advice. But they suggested a change in the traditional mode of an English peasant's life, which, if exerted, would bring with it infinitely more radical changes, by setting up sobriety, intelligence and independence in place of sottishness, ignorance, and a stolid acquiescence in the inevitable. The more the lesson was learned, the more moveable the agricultural laborer became.

A good many years ago I predicted that the greatest danger which English agriculture ran was the exodus of the agricultural laborer. As farms became larger, farmers more gentlemanly and expensive in their habits, as rents rose, and the small economies of agriculture were neglected, the risk became nearer and nearer, till at last it has reached reality. But I never hear English farmers and English landlords discussing, or even reflecting on the way in which the old system—a good farmhand to every twenty acres of arable land—can be restored. Till the process is discovered more land in England will go out of cultivation, rents will fall, and agricultural skill will be dissociated from agricultural capital.

A landlord's rent is—whether the farmer owns or occupies the soil—as inevitable a consequence as any other natural phenomenon. It grows by the fact that agriculture becomes more apt in getting more produce with equal cost, or equal produce with less cost, and this skill becomes the common property of all who follow the calling. The first start in English roots was made during the fourteenth century, when the English agriculturist learned from the Dutch the art of growing winter roots. The next was a century later, when the artificial grasses, clover, saintfrin and triphrin, toxy, ryegrass and other true grasses became part of the rotation of crops. The third was due to the improvements in the breed of live stock, by which, in course of time, animals were brought to maturity rapidly, their size was increased, and their produce made greater. I have before me a register for ninety-two years of the clips of wool to the tod (28 pounds) on a Leicestershire farm. At first (in 1773) from five to six fleeces went to the tod; at last (in 1869) two to three clips supplied the same quantity. The fourth economy was the judicious supplementing of natural with artificial manures, and the use of fertilizing food. The last was the prudent substitution of machinery for human labor, and sometimes of steam power for animal forces.

But, do what you wish, you cannot do without men; and it is as certain that English agriculture will deteriorate if adequate and competent hands are not found to carry on the work of husbandry as it is that the same result will ensue if you could eliminate root crops, or artificial guano, or improved herds of stock, or artificial manures, or machinery from modern agricultural science. Hitherto it has been singularly progressive; it runs great risk of now becoming rapidly retrograde. But, unfortunately, those who interpret the present situation of agricultural industry are always assigning what is the result of a complexity of causes to one, or a few, or, at best, to all but the right ones. As I am writing, I have just read a letter in the *Times* newspaper, our most copious daily paper, the correspondence of which is often very valuable. Sir James Caird is one of our shrewdest public men. He was long in Parliament, is an experienced agriculturist, as well as an excellent official. He sets down the present depression of the English agriculturist to three causes—to a failure of crops, to losses of live stock, to the increasing imports of foreign produce. These have influenced our husbandry over and over again in its past history, without inducing widespread ruin. But he leaves out the one curse which has never till now affected the English farmer, the deterioration of labor. The peasant has fled from his ungenial, ill-paid, miserable condition, and the problem before the landowner and farmer is now, how can you recall to his ancient employment the man who is, and always will be, the most important factor in the only true fertility, human skill in manipulating the soil. This question may, perhaps, be worth consideration even in the United States. It is of profound significance here. JAMES E. THOROLD ROGERS.

Oxford, England, October 18.

PRESENT AND PROSPECTIVE PRICES OF PETROLEUM.

The anomalous condition of the speculative market for crude petroleum suggests the inference that the statistical position of oil need not be expected to exercise necessarily any very potent influence on prices. For four months quotations for pipe-line certificates have ranged between say $1.07 and $1.15. The greater portion of the time $1.08 and $1.11 have marked the limits. As compared with the corresponding portion of the preceding year this would be regarded as a monotonously dull market; but there is no new Cherry Grove district to increase the daily production 33⅓ per cent. within as many days, and to fall away again within one season, and so relieve depressed prices. While we have not the disturbing influence of a heavily increased production a noticeably declining yield may be regarded as sufficiently significant. Oil-field "exhaustion" scares have been sprung on an unsuspecting trading public long before the present, so that talk of that kind is now received with a wide margin. Notwithstanding this, the fact stares one in the face that the total production of the Pennsylvania and southern New York petroleum regions has declined from about 96,000 barrels daily in September, 1882, to about 67,000 barrels daily during the current year, and that the excellent home and foreign demand for petroleum is, in some respects, larger than ever. Drafts on the stocks of oil held by the great pipe-line companies (the basis of certificates in which speculation on the petroleum exchanges takes place) have been reported for three months past, and are still enforced in order to meet the consumptive demand. It first became noticeable in August when stocks in tank were discovered to have fallen away about 50,000 barrels. As the grand total of stocks amounted to 35,000,000 barrels approximately, the loss of 1/7 of 1 per cent. of the total excited no special attention beyond the fact that it might mark the beginning of a greater loss. The record for September justified the latter view, the daily average of runs of oil from the wells to the tanks being about 65,484 barrels, against daily average shipments from the tanks to interior refineries and to the seaboard of about 77,357 barrels. This made an average daily loss of oil from stocks amounting to 11,873 barrels, or an approximate total loss from stocks in September of 356,190 barrels. Yet prices did not appear seriously disturbed, as might have been inferred after the extreme sensitiveness to the statistical position of the product noted in 1882 and earlier in 1883. The closing quotations for certificates of crude during August ranged from $1.08 to about $1.10, and during the latter part of the month they fell back again to about $1.08⅜. During the latter portion of September some effect was noted, and the range was $1.11, $1.13, $1.14, and even higher. But these figures were not firmly maintained, and, as is well known, have since given way to lower ones.

This would be perhaps more difficult of explanation if it were not for the fact that the loss from stocks was smaller during October than in September. The daily runs from October 1 to 27 averaged 65,500 barrels, and the shipments about 71,916 barrels, or over 5,000 less than were called for in September, thus leaving a net shortage daily in October of 6,416 barrels, or 192,480 barrels gross loss in twenty-seven days of the past month. In all, then, the loss from stocks in tank during three months has been about 600,000, or nearly 2 per cent. (15/7) of the aggregate quantity stored above ground. Not before, for a number of years, have stocks been drawn on to meet the demand. Hence the irregularity of the indifference of speculative prices to the situation.

On the other hand, however, there may be excellent reasons for this indifference. Pennsylvania and southern New York state do not contain all the petroleum obtainable in large quantities, as has been maintained by many until quite recently. Southern California is finding oil within its boundaries in sufficient quantities to warrant the construction of pipe lines to transports and refineries to render it available for illuminating purposes. Capitalists from the United States who have invested heavily in the Mexican petroleum regions stoutly maintain the existence there within reaching distance of large deposits of the valuable fluid. In this connection it is unnecessary to add anything concerning the Ohio, West Virginia and Canadian oil wells.

In round numbers about one-third of our average annual production of oil (based on the yield in 1882), or, say, 10,000,000 barrels is exported annually. Of the quantity so sent abroad, by far the major portion goes to Great Britain and the continent. That which goes to India, China, Japan and South America in no sense rivals the takings of Great Britain, Germany, Belgium, France and Italy, not to specify the exports to Spain, Turkey, Austria, Holland and elsewhere on the continent. This reference to the situation of the more important of our foreign markets for petroleum gathers significance in the light of the more recent accounts of the development of the Caspain (Russian) petroleum industry, as well as that in Roumania and Austria-Hungary, not to mention that in Bavaria. It is now more than a year since BRADSTREET'S called attention to the character and growing importance of these then puny competitors for the petroleum trade of the East in the most exhaustive report on the subject which had at that time been made in any American newspaper. Recent accounts published abroad more than corroborate the opinions which were expressed in the letter printed last year in this journal, which was that a new factor is likely to appear ere many years in determining the price of American petroleum. The *Journal de St. Petersbourg*, the official organ of the Russian government, recently said: "Many German merchants have just made for the first time large purchases of petroleum at Baku. Up to now the Russian petroleum, though extensively used in Austria and Hungary, has not been used in Germany. The low price of the Russian rouble has greatly encouraged German purchasers, and the excellent quality of the Russian oil and the new facilities for railroad transportation make it almost certain that Russia will soon supersede America in the petroleum market of the whole of Europe."

BRADSTREET'S Berlin correspondent, writing under date October 9, says: "The introduction of Russian petroleum into Germany is apparently on the increase. During the week from the 15th to the 22d of September 5,026 barrels, mostly on account for Berlin dealers, were imported from St. Petersburgh to Stettin, the well-known port on the Baltic, and there are expected several more shiploads in the course of the autumn. The petroleum was in American barrels, with the mark of 'Noble Brothers.'"

The production of oil at Baku, on the Caspian, in 1882, was six times as large as it was eight years previously, the gain from year to year having been as follows:

	Barrels.		*Barrels.*
1875	800,000	1879	
1876	1,400,000	1880	3,000,000 to 4,000,000
1877	2,000,000	1881	
1878	2,500,000	1882	5,000,000

The Nobel Brothers, Baku refiners and shippers, may be called the Standard Oil Company of the Caspian, in that beginning at Balakhani, six miles from Baku, in 1875, they now practically monopolize the shipping and refining of petroleum from that region. There are now 375 wells at Balakhani, as against two in 1875, and the yield is so abundant that the correspondent of the London *Post* says

"the oil is flowing 300 feet high, at the rate of 2,000,000 gallons per diem, forming a huge black fountain visible in the clear atmosphere for many miles around." There are 60 miles of pipe lines, twenty iron steamers, 200 to 250 feet long each, running up to the mouth of the Volga, and 60 or 70 steamers on the river, besides 10 large sea-going steamers—all engaged by the firm in their oil traffic, besides the steamers, etc., of others. Nobel Brothers are said to employ over 7,000 persons. The total annual production of oil in the United States may be called at the present rate perhaps 26,000,000 to 28,000,000 barrels, or about five and a half times only what the Baku wells produced last year.

An American capitalist at Baku is reported to be arranging to lay a pipe-line from Baku to Batoum, 540 miles west, across the isthmus to the Black sea. As yet American oil is going abroad rapidly and in unprecedented quantities. This demand makes a better price for it here than it could otherwise retain. Decreasing supplies at home must also eventually tend to raise the price; but, on the other hand, if met by a vigorous competition for sales in Europe, the opposite effect may be produced. The "exhaustion theory," as applied to the Pennsylvania wells, has few believers. The prospects for ultimate and serious competition in eastern markets speak for themselves.

OCCASIONAL NOTES.

Note brokers, whose operations in the east have done so much to complicate trade and obscure the real condition of persons asking credit, form but an inconsiderable element in the west, and mercantile paper is therefore much less an object of suspicion there than here. Borrowers there are brought face to face with lenders. In the east some of the concerns that have recently gone down marketed their paper at pretty good rates within a few days of their failure, but not to banks that were familiar with their business. It is true that the weakness of many tradesmen in the east was known before their suspension, but it is a great deal more true in the west. The paper of large concerns in Chicago whose recent failure was a surprise to the public had long been in disfavor among careful discounters. One firm has, under embarrassment, made a transfer of its property to a lawyer, which is given out as an ordinary sale, but people who had investigated their affairs refused to grant them credit. There are several others similarly situated that are likely to add their names to the insolvency list soon.

English financial journals are discussing certain frauds which have come to light in connection with the management of the London and River Plate Bank, and some of the facts elicited may not be without interest here. It appears that certain securities were deposited with the bank, coupons upon which were to be paid by the bank from time to time. These securities were stolen, with the connivance of one of the bank officials, who, however, when an audit was made, managed to get possession of one batch of securities after another to show them to the auditors, although in fact all the securities were not in the bank at the same time. Large transfers of the securities took place, merely on worthless checks being given, without any actual payment of money in exchange for them. Large numbers of these securities were pledged also without arousing suspicion. These latter features of the case are of interest here, for the reason that very similar transactions are not unknown among us, as some recent instances show.

The whole case is interesting, as illustrating the fact that even in the most conservative communities financial security is only to be maintained by unceasing vigilance. One point in particular is brought into relief by the developments in the case, viz.: that there are ingenious ways whereby a thorough audit of the affairs of a bank may be avoided by unscrupulous officials, and that measures should be taken to guard against the successful employment of those means. It has been recommended, wisely, we think, that the officers conducting the audit should require all the securities to be actually before them at the same moment. The London *Statist* recommends further that in addition to the regular audits there should be arrangements made for the investigation of the accounts and the examination of the securities at uncertain times, when, perhaps, the officer chiefly responsible is absent. Such a system would certainly go far to render the occurrence of frauds such as those referred to very rare. The point is one worthy of the attention of all interested in the management of financial institutions.

The visits of a number of distinguished men to this country recently may be counted among the signs that the United States and its people and institutions are objects of considerable interest to our "kin beyond the sea." That there are very substantial reasons for the interest manifested is evident, and those reasons are growing in force every day. To one class of Englishmen in particular those reasons must have been, on the whole, of an agreeable nature. We refer to the literary class, one of the most distinguished of which is at present among us diffusing his "sweetness and light." To the British publishers, also, the Americans have, by this time, become favorably known. Some of the largest of these have established branch houses among us, and it is a noteworthy fact that the cost of the publication of such books, published by them, as appeal to an audience here, has been greatly lessened. Some of the standard British publications, indeed, have a wider circulation here than in England. Such is the case with the "Encyclopedia Britannica," of which, according to the London correspondent of the Manchester *Guardian*, there are sold in America three times as many copies as find buyers in the United Kingdom. This would seem to indicate that our progress is not, as some of our ill-tempered critics assert, wholly of a material character.

In *John Swinton's Paper* there is something said regarding daily journalism in the great cities of this country which has much truth and point in spite of the exaggeration incident to the writer's pronounced point of view. He says that one looks in vain over the daily papers of New York city, upon which so many presumably intelligent men are employed, for any information regarding the actual social movements of the times. Those papers, he says, "give us chronicles of crime, records of sports and amusements, displays of Wall street debauchery, the deeds of political gamblers of both parties, news of the sluggers and the police, 'society' twaddle, army and navy intelligence, sketches of accidents and incidents, Washington gossip, muck-heaps without end and daily boluses of stilted 'editorial.' Look in them for the real things of the times in New York—the struggle for life, the battle of industry and of the community with corporate or moneyed power, the invasions of public right, the alarming changes that are being wrought in society, the monstrous death-rate of the city, and the spread of all sorts of abominations that were once unknown here. Look for the warnings they ought to give, the things they ought to tell, the 'editorials' they ought to write in the interest of their readers. Where is the sound of the trumpet? where the voice of the watchmen on the walls of the press? The worst feature of the whole business is that the obnoxious and dangerous things of the times have reached their present threatening growth under that which the press is in the habit of calling its 'watchful eye.' Worse still, if possible, they have reached that growth with the assistance of the chief daily papers of the city."

The annual convention of the National Cotton Planters' Association to be held at Vicksburg, Miss., will, without doubt, be a meeting of much interest to all interested in the cultivation of the great southern staple. The convention, though strictly speaking that of the National Cotton Planters' Association, is nevertheless intended to embrace all who may be interested in the cause of southern progress. We notice that some people in the south are displeased with what they consider the egotistical tone of the Planters' Association circular. For instance, the Nashville *Artisan*, referring to the Vicksburg meeting, says: "This will be a meeting of great interest and value to all who may attend; but we would like to quietly suggest to one or two of the distinguished (at least in their own minds) gentlemen who are leaders in the association that if they would by some process acquire a little modesty and dispense with a modicum of their self-assumed greatness, and allow others, while recognizing the fact of the importance of the Cotton Planters' Association as a factor in the growth of the south, to believe that it was not the sole and entire combination and aggregation of all the business and sense thereof, it would add very much to their efficiency and value. Listen to the following from their circular letter: 'We of the south are entering upon a new era. Many already call it the New South, but until the principles of the National Cotton Planters' Association shall be put into universal practice this will be a misnomer.' Do you hear that, now? When the great and glorious principles held only and solely by our ancient, time-honored and all sufficient order become universal the world will progress. You have a grand and great institution, gentlemen, but there *are* other societies and other organizations in the world, and they all help to keep the country prosperous and successful."

An illustration of the unhealthy growth of the Canadian cotton manufactures is found in the Montreal cotton mill of Valleyfield, which produced 6,000,000 yards of bleached goods in 1881, but finding that 9,000.000 yards were imported, in spite of the tariff, expanded its capacity to 20,000,000 yards. A meeting of the stockholders has just been held to provide for a floating debt of $150,000 and a mortgage of the same amount. The Stormont mill, of Cornwall, reports a deficiency of $16,000, and will have to ask the indulgence of its creditors. The St. Croix mill, at St. Stephen, N. B., is also crying for quarter.

The finances of France remain in an unsatisfactory condition. According to the Paris correspondent of the London *Economist* the receipts for the first nine months of 1883 show a deficit of 47,000,000 francs as compared with the estimates. This unfavorable result has caused the Minister of Finance to revise his estimates for next year. The estimates for the year were made up on the basis of the receipts of two years before, with the addition of an expected increase based on the average increase for five years before. This year, however, the revenue has remained almost stationary, the increase in the first nine months being only 8,000,000 francs instead of 55,000,000 counted upon. M. Tirard does not believe it prudent to count upon a recovery in 1884, and therefore has determined to modify his first calculations. It appears that the registration dues, which showed a remarkable increase in the years between 1875 and 1881, have suffered considerably from the termination of the speculation in the latter year. This fact is a curious illustration of the unsoundness which has characterized French financial methods, public and private, in the recent past. The duty on sugar and that on alcohol also show deficits. The receipts from the tobacco duty and the returns from the post office are the only ones that show any elasticity. It appears, however, that the condition of the savings banks is improving, notwithstanding the feeling of uneasiness induced among depositors in the provinces by the financial operations at the capital two years ago.

We are glad to see that a movement is on foot in England to commemorate the services of Professor W. Stanley Jevons to economic science by the founding of a studentship which will pepetuate his name in connection with the subjects to which he devoted the best part of his life. No student of economics in recent times has done more than Professor Jevons to extend the influence of that science. He was completely abreast of the ideas of the age, and he used with force and skill the new instruments of research which the improved circumstances of modern times afforded. This was especially shown in his scientific employment of statistics, which was at the basis of much of his most useful work. His insight and his sympathy were strikingly displayed in his writings on social economics, a branch which modern tendencies render of increasing importance. It is in the interest of social order and welfare that services such as he has rendered should receive fitting recognition. It is suggested by the committee in charge of the matter that the memorial to Professor Jevons should take the form of a studentship of the annual value of not less than £100, the holder of which shall devote himself to economic research.

Mr. John Morley's speech, opening the Liberal Conference at Leeds, was in many respects a significant utterance. It indicated plainly enough that a new political force has entered upon an active existence in England, and that henceforth the course of political action will be determined, not by the small group of men composing the executive committe of the House of Commons, but by the wider constituency whom they, in theory, represent. Mr. Morley made a strong plea for organization, saying that it should be recognized that there would be a great peril in democratic institutions if for great solid parties small groups were substituted, and if, instead of union upon points of substantial agreement, there should be a splitting up on points of minute difference. There was, he said, no question as to the desirability of parliamentary reform in the abstract. Upon that there was substantial agreement. The present system under which the exercise of the franchise by workmen in certain cities of the kingdom were surrounded with difficulties and obstacles, and they themselves allowed only one-thirtieth or one-fortieth of the voting power of some voter living in the west of England, was a juggle and a mockery of representation which the radicals were resolved to bring to an end. The meaning of the great gathering over which he presided was, he said, that the men of the associations—the men who won the elections of 1880—felt, as a matter not of formula but of inmost conviction, that the arbitrary exclusion of large sections of intelligent and industrious men from the political power they desired to have was an anomaly, a blot and a danger which it was not wise to retain longer in the political life of the country.

SPECIAL CORRESPONDENCE.

AFFAIRS AT BERLIN AGAIN.

Berlin, October 9.—An observation of the Stock Exchange alone would give us a wrong idea of the activity and commercial life in this country. Though the new quarter has long begun, bringing in as usual large sums in rents, interest on mortgages, railway and other preference shares, government and municipal loans, and dividends of innumerable shareholding companies, the Exchange does not stir. In reading the reports, however, from the mining districts and coal mines, in examining the engineering works and ship-building yards, hearing the accounts of the manufacturers of all sorts of trades, one is impressed with the idea that if there is not very great activity everywhere there is at least in general much life, which forms a great contrast to the stagnation of the Exchange. So an important provincial newspaper wrote some few days ago about the iron and metal market in Silesia: "Business in the raw-iron market is continuing at the same rate as during the last few weeks. Though the quantity of raw iron produced by the furnaces of Upper Silesia has not considerably exceeded in the meantime the limit of 7,700 tons per week, raw-iron consumption is on the increase. Including the quantities exported, the amount of raw iron dispatched from the furnaces every week exceeds 8,000 tons. The growing demand diminishes the store of raw iron as the actual consumption continues to exceed the production. Prices for raw-iron, in consequence of the favorable condition of the market, were very firm and disposed to rise. There is likewise great activity in the cast-iron industry and sister trades, though a part of larger orders, which fully occupied some of the Silesian works for a long time (as, for instance, cast-iron coverings of the shafts for new mines), are finished, and new orders for important work have not yet been given; but a number of other small orders have kept activity up to the same pitch. Most boiler manufacturers have sufficient work, some of them for a long time. Of bar iron considerable quantities have been sold. The latest contracts, it is said, have given to such works as had not enough to do for the last quarter of this year orders which it will take a long time to carry out. The sheet-iron business is prospering. Prices of several articles in the metal market have been on the increase. Considerable and continuous sales of zinc, good business in sheet zinc, and in consequence the increased consumption of raw zinc, together with the regular exportation of such, produced a noticeable decrease of stores and a partial rise in prices. The lead business, too, has been more brisk during the last week than before."

The reports from other mining districts are similar though not quite as favorable, but from all sides a rise in the price of coal is announced.

The Leipsic autumn fair is no longer so important as it used to be, especially since Berlin became a great trading town, still it continues to be a considerable commercial centre and acts as a sort of barometer in trade. One of the largest circulated and most influential newspapers here writes as follows of the fair: "Though we cannot give the fair a very good report, still it was better than the preceding one. The yarn exchange was animated, and raw calicos were pretty much in request. As the spinning and weaving manufactories have full work for months to come they need not lower their prices. Finer shirtings were much in demand, though patterned goods were not much sought after. The linen business was very animated, and inferior as well as better sorts of half and pure linen, Saxon and English linen have been bought in great quantities. The transactions in linen pocket handkerchiefs were important, Silesian as well as English, of which the well-known Monopole handkerchiefs were preferred. In articles of raw linen and jute business goes on satisfactorily. The rise of German industry in jute latterly, and its brilliant success after so many unprofitable years, deserves our recognition. Pure woolen flannels were in high demand, which could not be met, as there are no stores and the manufactories have orders for months to come. Prospects for the spring season are not bad, as, in consequence of the fine weather, the stores of last summer have been nearly exhausted."

The same report says in another place: "Fine woolen goods are very much in request, and of the better articles great quantities are bought, particularly neckhandkerchiefs for gentlemen, hoods, capotes and pelerines. Among the latter the chenille

pelerines, hitherto only made in France as a novelty of special refinement and elegance in make and taste, attract attention, and are sure to become very popular. The fichus and capes of chenille too made in Saxony, which are superior to the French article in this branch, have again become the fashion. There was also some business done in home-made woolen shawls."

Of course, reports of the sale of *all* articles in the fair of Leipsic are not entirely as favorable as the above, but one must not forget that it has become the custom to give orders for many articles to traveling salesmen who show patterns, and this explains that even such manufactories have full work whose wares did not sell well at the Leipsic fair. Besides, as before mentioned, many merchants buy their stores in Berlin and other less important trading places, and not a few go direct to the manufacturing districts to make their purchases.

The statistics published some few days ago give a still more striking proof of the improvement of German commerce than these individual reports. According to the same the imports into Germany from January 1, 1883, to the end of August, compared with those of 1882 during a like period, were as follows, expressed all in metrical hundred weight:

	1883.	1882
Raw cotton	1,339,834	1,114,716
Raw iron	1,867,775	1,701,402
Iron, and finished and half finished manufactures	267,560	270,049
Iron ore	5,757,468	5,188,664
Jute	212,019	155,938
Wheat	5,103,863	4,522,968
Rye	4,304,552	4,824,710
Oats	1,119,007	2,267,649
Barley	1,620,514	1,799,497
Indian corn	1,071,826	799,132
Rape and rape seed	598,319	421,003
Linseed	337,859	356,185
European timber	13,073,032	11,460,451
Machines	207,303	181,817
Coffee	790,823	761,427
Flour	893,929	375,111
Tea	19,115	9,502
Petroleum	2,026,672	1,859,991
Coal	14,140,885	13,449,796
Crown coal	21,066,044	19,038,965

The exports during the same period were as follows:

	1883.	1882.
Chlorialium	618,684	629,775
Raw iron	1,622,601	1,278,288
Iron, finished and half finished manufactures	6,301,249	5,020,375
Of which:		
Bar iron	977,794	975,381
Rails	1,196,103	1,102,434
Iron wire	1,430,619	1,450,235
Cement	2,200,424	1,865,110
Iron ore	12,156,760	10,566,559
Wheat	612,386	232,938
Rye	97,112	68,142
Oats	332,256	107,410
Barley	531,586	444,847
Rape and rape seed	66,151	83,614
Potatoes	2,353,183	766,947
Musical instruments	64,404	63,270
Locomotives	93,190	84,025
Machines	502,295	464,094
Flour	893,929	375,111
Sugar	2,433,972	1,215,553
Coke	3,870,994	3,064,999
Coal	54,501,143	46,916,957
Raw zinc	337,640	365,880
Sheet zinc	107,959	93,443

To this generally favorable exhibit August's report furnishes a fairly satisfactory continuance. The exportation of raw iron rose from 144,872 metr. cwt. in August, 1882, to 254,545 metr. cwt. in August, 1883, of which there were exported to:

	1883, *metr. cwt.*	1882, *metr. cwt.*
Austria-Hungary	49,058	34,546
France	46,177	32,681
Belgium	99,432	36,476
United States	16,200	8,500

In addition, the exportation of iron and steel in finished and half-finished articles to the United States is expressed by the following numbers:

	Total, metr. cwt.	*Rails, metr. cwt.*	*Iron wire, metr. cwt.*
1883	25,921	428	17,685
1882	90,654	....	71,878
1881	83,710	27,437	37,879

The exportation of locomotives considerably increased in August. There were shipped to:

	1883, *metr. cwt.*	1882, *metr. cwt.*
France	2,160	1,129
The Netherlands	4,058	372

Coals were exported in the month of August in the years named to:

	1883, *metr. cwt.*	1882, *metr. cwt.*
Russia	411,473	181,775
Austria-Hungary	1,977,359	1,874,651
Switzerland	461,465	481,854
Belgium	744,246	640,585
The Netherlands	2,629,222	2,561,058

Importations of wheat and barley decreased visibly in August, but rye and Indian corn increased. Of the latter 71,420 metr. cwt. were imported from the United States instead of 461 as in August, 1882.

I think that these figures sufficiently prove that the unaccustomed quietness of the Stock Exchange, at a time when there is usually much business going on, is no evidence of stagnation in our commerce and industry. Besides this, we must state that the Stock Exchange, notwithstanding the small amount of business done, is, in general, firm, or rather unaltered, as far as prices of different stocks are concerned. The fluctuations in prices are too insignificant, and due to too trivial causes to be able to regard them as indications of an altered tendency on any day. The frustration of the intended meeting of Emperor William and the Czar Alexander, the report of which was constantly noised abroad—rightly or not, I cannot say—made no impression upon commercial people or the Exchange. The new phase of things in Bulgaria caused no sensation either. Everybody rejoices in the Russian Minister-Generals, Sobolew and Kaulbars, having to quit Sofia just at the moment when they considered themselves more masters of the country than at any other time, and thought Prince Alexander was thoroughly caught in their toils. But not the least apprehension was entertained that the Russian national pride—chafing at the "ingratitude" of the Bulgarians and the indignity offered the generals by their expulsion—would excite a storm against the liberated "little brother" and kindle a new flame in the East. The Servian "Svcuptschina" (national assembly) drove the ministry Piroschanci, which was on good terms with our ally, Austro-Hungary, to resign, but the Exchange remained unmoved, though it was generally supposed that the alteration of opinion in Servia was due to Russian machinations. But what shows much more the general confidence in the preservation of peace is the circumstance that the turbulent manipulations against Alphonso, of Spain, the tendency of which was aimed more against Germany and her emperor than the young king and his country, though they disturbed the Exchange somewhat—such a violent outbreak not being expected—no bounds in the price of stocks manifested any real or widespread uneasiness. The expectorations in the French newspapers concerning the nomination of the King of Spain to the colonelcy of a German regiment and the offensive reception of Alphonso XII. in the capital of France on that account warns Germany to be still more careful to keep her army in readiness, though there is no fear of an outbreak of war being at hand. One might say that the Stock Exchange is more troubled by the financial than the political state of affairs in France, as it takes no impulse thence, notwithstanding the report of the subscription to the Panama loan, opened in Paris, being satisfactory.

However improving and progressive the means of communication all over the city of Berlin are, there seems to be as yet little inclination to introducing vehicles set in motion by electric power. Vienna, surpassed in so many respects within the last twenty years by the capital of the German empire, will, however, be ahead of its rival in this point. The renowned firm of Siemens & Halske, of this city, who in August obtained a charter from the Austrian government for building a tramway connecting the northern with the southern part of Vienna, and being moved by electric power, has now signed a contract by which a large banking house in Vienna has to find two-thirds, while the rest is to be advanced by Siemens & Halske, the total capital being estimated at about 2,500,000 florins (about $1,062,500). L.

BRAZILIAN FINANCES AGAIN.

Rio de Janeiro, September 27.—According to the report of the Minister of Finance, which was presented to the General Assembly at its opening in May last, the total funded and unfunded indebtedness of the empire of Brazil on March 31 last was as follows:

		Brazilian currency.
FOREIGN DEBT.		
Diverse loans to Deember 31, 1882, £15,002,500 at par of 27d	Rs.	133,355,555$556
New loan of January, '83, £4,599,600 at par of 27d.		40,885,333$333
INTERNAL DEBT.		
6 per cent. apolicies	335,397,100$	
5 per cent. apolicies	1,996,800$	
4 per cent. apolicies	119,600$	
		337,513,500$000
Gold 6 per cent. loan of 1868	23,588,000$	
Gold 4½ per cent loan of 1879	46,721,500$	
		70,309,500$000
Old debts, anterior to 1827		313,964$662
Estates of deceased persons and absentees		3,971,503$632
Emancipation fund		4,066,253$161
Private loan		700,000$000
Loans from Orphan's Fund		15,818,517$205
Dec. 31, 1882, loans from savings banks deposits		17,454,763$341
Dec. 31, 1882, loans from "Monte de Soccorro" deposits		723,968$862
June 30, 1882, loans from miscellaneous deposits		10,945,019$628
Public deposits		3,462,500$242
Treasury bills (4 and 5½ per cent.)		46,651,500$000
PAPER CURRENCY.		
National treasury	188,041,087$	
Three banks of issue	22,955,900$	
		210,996,987$000
Debts of past years*		509,575$552
Total	Rs.	851,016,942$174

* This is an unpaid balance on an appropriation of 800,000$ for accounts in "*exercicios findos*," or expired fiscal years in which the accounts were not paid from the regular appropriations. The debts are so numerous and complex that no estimate can be made as to their amount, some dating back to 1845. The above entry is only a small fraction of the total.

To this total should be added the difference between the par of exchange and the current rate (21½d.) on the foreign debt in order to reduce it to the common standard. This difference amounts to 44,573,250$650, which makes the total indebtedness of Brazil on March 31 last rs. 905,590,192$824, exclusive of the current and unsettled accounts of the various departments, which, at a rough estimate, cannot be less than 10,000,000$. An eminent authority on these matters, the historian Pereira da Silva, places the total public debt of the state, in round numbers, at rs. 920,000,000$000, or about $500,000,000 at the par of exchange.

In addition to these the government has granted interest guarantees of 6 and 7 per cent. on about 240,000,000$* of capital invested in railways, and nearly 30,000,000$ invested in sugar usines. The greater part of these investments is guaranteed at 7 per cent., and the annual charge upon the imperial treasury is now nearly 10,000,000$, the appropriations asked for in the last budget project amounting to 9,729,197$132. The total interest charges upon the treasury are, therefore, in round numbers:

Interest on public debt	46,000,000$000
Interest on guaranteed railways and usines	10,000,000$000
Total	56,000,000$000

In view of the fact that the total revenue of the empire will not exceed 128,000,000$000, it is clearly evident that this interest charge of 56,000,000$000 a year, or nearly 44 per cent. of the revenue, is dangerously high. It must be remembered that the state is expending vast sums in the construction and prolongation of its own railways (the last budget project asked for special appropriations to an aggregate of 15,645,595$698); that these lines, with the exception of the Dom Pedro II. line to Barbacena, are built through unproductive regions, and cannot be reproductive for many years to come; that large subsidies are being regularly paid to navigation companies, and that the country is supporting a disproportionately large army of public officials and employés. In such a state of affairs it is evident that the revenue is hopelessly insufficient to meet the expenditures, and that no new impost can be devised which will meet the regular annual deficit. It is generally conceded that Brazil is steadily losing ground both in her industries and in her commerce. Her preëminence as a coffee producer has kept her commerce alive, and the steady introduction of foreign capital, both with and without guarantees, has preserved an industrial and commercial activity which the normal life of the country could not possibly have produced. During the last fiscal year nearly all the custom-houses of the empire showed a decided falling off in receipts; in fact, that tendency has been apparent for several years, and has been met only by constant increases of taxation. At this port the customs receipts in 1878–79 amounted to 41,687,089$366; in 1879–80 they fell off to 41,448,779$643; in 1880–81, through increased taxation and a considerable increase in exports, they went up to 43,189,322$900; in 1881–82 they fell off to 40,584,332$380, and in 1882–83 they were again increased to 40,772,705$248. Reverting to the twenty-five years under review, and comparing the growth of foreign trade with that of taxation, expenditure and public indebtedness, we have the following significant results:

	1854–55.	1879–80	*Increase, per cent.*
Foreign trade	175,874,320$000	394,673,100$000	124
Revenue	36,985,478$482	120,393,289$636	226
Expenditure	38,740,319$788	150,132,550$966	288
Public debt	155,257,005$713*	817,520,348$190	426

* This amount does not include many of the small items of public indebtedness, but includes 45,000,000$ of paper money. The exact amount is not given because the statistics are not at hand. It is probable, however, that complete data would change the result very little.

The full bearing of these comparisons will be better appreciated when it is known that Brazil is now making no progress worthy of note in the development of wealth and industry, that her people are heavily burdened with taxation, and that there is no disposition manifest to cut down expenditures and stop the employment of public funds in subsidies and costly public works. She has now reached a point where the redemption of old loans can only be met by the issue of new ones, as was the chief purpose of the loan of January last. That this fact is becoming known is clearly shown, that this last loan was floated with great difficulty, and that the terms upon which it was finally taken were very disadvantageous to the imperial treasury. While the preceding loan of 1875 (£5,000,000 at 5 per cent.) was emitted at 96½ per cent., this loan of 1883 (£4,000,000 at 4½ per cent.) is issued at 89 per cent., and is being taken, it is said, very slowly even at that price. Another foreign loan is of course out of the question for the present, and a national loan could not be made without great sacrifice to the state and serious injury to the apolices now in circulation. And yet the floating debt of the government is now nearly 50,000,000$, and there is urgent need of more money to meet the impending obligations of the treasury. Just how far the productive industries of the country can be relied upon to meet these increasing expenditures—and the revenue receipts are generally anticipated some months by the issue of treasury bills—will be shown by the following table of exports (official values) for 1879–80 and 1881–82,* a comparison with 1854–55 not being possible for want of statistical data:

	1879–80.	1881–82.
Cacao	1,002,500$000	986,000$000
Castanhas	1,473,800$000	1,082,000$000
Coffee	126,259,900$000	104,752,700$000
Cotton	5,186,700$000	9,662,300$000
Diamonds	1,007,100$000	861,200$000
Hair	209,500$000	334,100$000
Hides, undressed	8,079,900$000	7,891,100$000
India rubber	12,242,500$000	12,005,400$000
Mandioca flour	335,000$000	107,600$000
Paraguay tea	2,521,900$000	2,697,800$000
Rum	336,500$000	281,200$000
Sugar	31,333,700$000	36,445,900$000
Tobacco	7,660,800$000	7,912,300$000
Wool	138,300$000	151,200$000
Totals	Rs. 198,788,600$000	185,142,800$000
Diverse products	23,160,200$000	31,567,000$000
Totals	Rs. 221,948,800$000	216,709,800$000
Decrease		Rs. 5,239,000$000

Of the above products, coffee, sugar, rum, cotton and tobacco are more or less dependent upon slave labor, and will therefore be injured by the impending extinction of slavery. In some parts of the empire cotton and tobacco are being cultivated on small estates and under conditions which are making them less dependent upon slave labor. As to the others, however, they are destined to suffer serious loss, as the planters employ the system of large-scale cultivation and are therefore dependent upon slave or contract labor. As they are making no adequate provisions for the loss of slave labor the injury or ruin of their industries is only a question of time. As the influence of impending emancipation is permanent, and as the diminution in exports indicated above is likely to continue until this labor crisis has passed and the country is relieved from its present burdens of taxation and maladministration, it is reasonable to expect that these financial embarrassments will continue, and that unless the government and its parliament show some disposition to reform affairs the day of financial bankruptcy is not very far distant.

* The exact total cannot be stated, as the capital of two costly lines has not yet been fixed. The aggregate of 240,000,000$ was given by the Minister of Agriculture in the Chamber of Deputies, August 16.

THE INDUSTRIES OF PROVIDENCE.

Providence, October 25.—In considering the business interests of the city of Providence, it should not be forgotten that they represent but a single factor of the industries operated by Providence capital. Others being located without the city limits they can hardly be reckoned in the actual representation. The manufacturing interests of the city are largely mechanical, but the great manufacturing industries—the cotton, woolen and worsted mills, and print works—situated out of the city and in many instances out of the state, might properly enough be termed Providence industries for they are owned and managed by people who live here. They form, however, no feature of this report. The general industries of the city are not so prosperous as they were in the fall of 1880, for the reason that there has been an overproduction of almost every commodity manufactured here. One large manufacturer thought that the trouble might be owing to the tariff preventing us from finding a market for our goods, while England has the world in which to rid herself of her surplus productions. The woolen industries furnish but little profit. Many of the large mills have been closed because there was a line of goods on hand they did not care to increase, and also because there was no outlet. Cotton and print cloths have been dull. In these lines there is a branch of business done now which is in marked contrast with that of former times. There is a large business in furnishing to order certain styles of goods, for instance, umbrella and rubber cloths. One concern operating 50,000 spindles is mentioned as making twenty different kinds of goods, adapting its machinery for the variety and styles demanded.

The jewelry interest is probably the only one for which Rhode Island is noted that is confined almost exclusively to Providence. At the present time there are nearly 200 establishments in the city engaged in the manufacture of jewelry and silverware. The trade during the year has been somewhat depressed, though now it is more active. The articles manufactured comprise every kind and variety of jewelry, ornamental and useful silverware. The average number of hands employed is about 3,500, and about one-third more pieces of jewelry are now made for the same amount of money than were turned out in 1880. The value of the same amounts to $5,775,975 annually. The earliest manufacturers of silverware in Providence were Sanders, Pitman and Cyril Dodge, who began business not long after the Revolutionary War. In 1805 the town had four jewelry establishments engaged mostly in the manufacture of silver spoons, gold heads and finger rings, but the business was not extensive, only about thirty men being employed. In 1817 the business was pretty generally

* Report of Minister of Finance, 1883.

abandoned, but in 1820 there were 300 men engaged, producing $600,000 worth of jewelry during the year. Since 1820 there have been great fluctuations in the trade, and at times it has been almost entirely abandoned.

The manufacture of machinery, screws and engines is a leading industry. Screws were first made in Providence in 1834, and the establishments here have been improving their machinery and increasing their capacity since that time. No screws (to speak of) are now imported. Nearly all that are used in the United States are made here, and of these 87 per cent. are made in Providence.

The production of print cloths in this city amounts to about 2,340,000 pieces annually. In 1855 the production of the state was 36,244,000 pieces. The first printing done in Providence was by a French gentleman named Dubosque, who had been attached to the French navy, but who had married a Rhode Island lady. In early life he learned the art of calico-printing in Alsace, and in 1795 introduced the business here. He occupied the old chocolate mill on the site of the Franklin foundry. The cloth printed was imported from Calcutta, and the printing was done with blocks and the calendering by friction on a hard surface with flint-stones.

The following exhibit is the result of a recent canvass of the industrial establishments of Providence:

Number of establishments.	Name of industry	Cap. invested.	No. hands employed, not including youths	Average daily rate of wages for one year.	Total value of product for one year.
30	Bakeries	$225,000	300	$1.62½	$450,000
5	Braids	4[illegible]458	600	95	700,000
75	Blacksmiths	95,000	165	1.72	197,300
7	Bookbinders	54,000	85	1.28	90,000
4	Bleacheries	975,000	400	1.25	750,000
147	Boots and shoes	527,225	125	.83	138,987
11	Box packing & paper	65,800	160	1.30	182,000
14	Brass founders	88,000	53	1.75	140,000
5	Cotton goods	950,000	2,800	1.30	1,400,000
8	Chemicals, drugs, etc.	2,000,000	250	1.70	2,600,000

4	Pork packing, etc	290,000	95	1.83	1,501,625
3	Print-works	800,000	750	1.55	700,500
8	Woolen mills	1,200,000	900	1 35	1,500,000
4	Worsted mills	900,000	600	1.30	875,000
48	Miscellaneous	675,300	500	....	800,000
2,383	Totals	$28,957,659	26,278	$1.51	$43,121,033

With the industries named are included (see reference letter) A, wheelwrights; B, tailors and dressmakers; C, ice cream; D, artificial stone; E, insulated telegraph wire.

CONDITION OF ST. LOUIS' INDUSTRIES.

St. Louis, Mo., October 29.—In local manufacturing a tendency to dullness has been present for some weeks, and a positive decline is now unmistakable. In some lines the quiet almost amounts to stagnation. With a few striking exceptions, the metal-working establishments are receiving scarcely any new orders, and their old ones are chiefly filled. The architectural-iron industry is busy, but the work is upon contracts made quite a while ago, and for a month past there has been but little business taken in. Stove foundries are also crowded with work, for during July, August and early September orders came in for all the goods that some of them can finish this year. But the indications are now that most of the work done next January and February will have to be carried over. All other kinds of foundries are forced into comparative idleness by the lack of new work. Such concerns as are exceptions have special lines, patented articles, etc., which keep them fairly busy. The stamped-ware companies, file works and establishments turning out saw-mill machinery, have quite a satisfactory volume of fresh business. But the chain works are less pushed than at any time for more than a year past. Factories of both iron and wood-working tools are dull.

The agricultural implements manufacturers are, perhaps, as well crowded with a steady current demand as any. Some railway-supply industries have an excellent business ahead. Boiler factories, however, and repair shops for general machinery are dull. In the miscellaneous small industries there is not the activity noticeable through the summer and early fall.

Taking the last twelve months, some have been very busy at times when they were usually quiet. Others are much busier now than they had expected to be. In a word, industrial activity as a whole has fallen away considerably without producing any apparent feeling of despondency.

RECENT LEGAL DECISIONS.

[Prepared expressly for BRADSTREET'S.*]*

An agreement whereby an employé receives a share in the profits for his compensation does not make him a partner, according to the decision of the Michigan Supreme Court in Hamper's Appeal, decided recently.

The phrase "damages by the elements excepted" in a lease covers destruction by fire without the lessee's fault, according to the opinion of the Michigan Supreme Court (by Judge Cooley) in the case of Van Wormer vs. Crane, decided October 3.

According to the decision of the Wisconsin Supreme Court, in the case of Briffitt vs. State of Wisconsin, beer is presumed to be intoxicating, and proof of a sale of beer is sufficient proof of a sale of intoxicating liquor in a prosecution for the illegal sale of such liquor.

Persons with whom a firm has been accustomed to deal not having personal notice of the dissolution of the firm, are not affected by it, according to the opinion of the Kentucky Superior Court in the case of Dils et al. vs. Parker et al., decided on October 24.

An action for deceit will not lie against a person for obtaining credit by falsely and fraudulently representing himself to be "a person safely to be trusted and given credit to," according to the opinion of the Rhode Island Supreme Court in the recent case of Lyons vs. Briggs. The court held that to maintain such an action against a person obtaining credit by false representations of his solvency, the false representations must consist of definite statements of fact, as distinguished from expressions of opinion.

In order to support a prosecution for forgery or false uttering it is not necessary that the instrument purporting to be forged should be perfect in its resemblance to the kind it was designed to represent. It is sufficient that it was calculated to deceive. State vs. Ferguson, decided by the Supreme Court of Louisiana in October. In this case an order addressed to a merchant in these words, "Please let George have $16 worth and charge the same to Mr. George Barrett," was held sufficient to ground a prosecution for false uttering.

In the case of Burkhard vs. The Travelers' Insurance Company, decided by the Supreme Court of Pennsylvania on October 1, it was held that stepping off the platform of a car through a hole left in the floor of a bridge for repairs when the train had stopped on the bridge on a dark night and the hole was not visible and the assured had no notice of or reason to apprehend such danger, was not a "voluntary exposure to unnecessary danger" within the meaning of an accident insurance policy.

The mere grant of the right to build a railroad between given termini creates no implied obligation on the part of the state not to grant thereafter the right to build other railroads parallel with it between the same termini, nor does it imply an obligation on behalf of the state that other railroads with their tracks and switches shall not thereafter be granted the right to cross the state in a different direction, and thus to pass over its tracks and switches. The East St. Louis Connecting Railway Company vs. The East St. Louis Union Railway Company, decided by the Illinois Supreme Court on October 1.

Money received as a pension from the federal government is exempt from seizure for the pensioner's debts even after it has come into his possession, according to the decision of the Kentucky Superior Court in the case of Moxley vs. Andrews, decided on October 24. Although pension money is exempt in the hands of the pensioner from seizure for his debts, he cannot, however, dispose of it by will to the exclusion of his creditors, according to the opinion of the same court in the case of Luthery et al. vs. Bacon et al., decided on the same day.

The case of Just vs. Greve, recently decided by the Illinois Appellate Court, Second District, was one in which the appellee, for a consideration, sold out his interest in a furniture business to the apellant, his partner, and agreed that he "would not commence again or work for any other person in the same business in said village." The court held that in an action for damages for the breach of this contract the appellant could not recover for prospective damages, but that successive actions would lie for damages as they subsequently accrued from time to time.

A firm received certain bonds, with coupons attached, and gave a receipt therefor, in which it was specified that "we agree to return all of the aforesaid bonds, with the coupons attached not due, to said Grannis (the person from whom obtained) on the first day of July, 1878, and agree to pay to said Grannis 10 per cent. interest on the face of said bonds from July 1, 1877, to July 1, 1878, for the use of said bonds, interest to be paid semi-annually, as the coupons become due on said bonds." The debt so contracted was held by the Supreme Court of Georgia not to be a fiduciary debt within the meaning of the Bankrupt act, so as not to be discharged by the bankruptcy of the signers of the receipt. Grannis et al. vs. Cubbedge et al., decided October 23.

Where the purchaser of cotton, ordered to be bought and agreed to be furnished of a certain grade, pays a draft for the same in advance of delivery and sampling, he is entitled to recover back the price paid should the cotton on being sampled and graded be not found of the proper quality, even where part only of the shipment falls short of the grade demanded. Lindsay et al. vs. Rives, decided by the Supreme Court of Louisiana in October. The court said that the purchaser in such a case may retain what comes up to the grade and return what does not, and that the cotton falling short may be considered as the property of the agent or vendor, who is liable in either capacity, and will be subjected to the payment of the price.

In the case of Enders vs. Skannal, recently decided by the Louisiana Supreme Court, it appeared that the plaintiff, under a written contract and for a valuable consideration, acquired the privilege of erecting a saw-mill on defendant's land, and cutting and sawing timber therefrom. Before the expiration of the time allowed by the contract plaintiff's employés were driven from the place by violence, and plaintiff was compelled to remove the mill. In an action for damages for breach of the contract, the court held that the jury in estimating the damages was not limited to the actual pecuniary loss resulting from the breach of the contract, but might treat the mode of its violation as an offense and award damages therefor.

In a recent case in Alabama it appeared that a mortgagee of land indorsed satisfaction upon the mortgage and intrusted it to the possession of the mortgagor, pursuant to an agreement between them. The mortgagor, being in possession of the lands, sold and conveyed them to another person, to whom he showed the acknowledgment of satisfaction indorsed on the mortgage, and who paid the purchase money without notice of the agreement. The Supreme Court of Alabama held (in Turner vs. Flinn) that under the circumstances the mortgage could not be established and enforced against the purchaser. The court based its decision on the familiar principle that when one of two innocent persons must suffer from the wrongful act of a third he who gave the aggressor the means of doing the wrong must suffer the consequences of doing the wrongful act.

A policy of life insurance contained a proviso that it should be null and void in case the insured "shall under any circumstances die by his own hand." In an action upon this policy the Ohio Supreme Court Commission held that while it was competent for the parties, by plain stipulations, to qualify or restrict the popular meaning of words in a policy, yet a proper construction of the policy required that the words "under any circumstances" should be disregarded as too general and indefinite, and that whereas in the case before the court there was no qualification of the expression "shall die by his own hand," the popular and legal definition would obtain, and that the death of the insured was not within the proviso if at the time he was under the controlling influence of insanity, although he intended to take his life and understood the physical nature and effect of his act. Schultz vs. The Home Life Insurance Company of New York, decided October 23.

The rule that the language of a promise is to be construed most strongly against the promisor cannot properly be applied to the construction of a guaranty, according to the decision of the Ohio Supreme Court in the case of Morgan et al. vs. Boyer et al., decided October 23. The court held that a guarantor, like a surety, is bound only by the express terms of his contract; that the language of his promise is to be understood in its plain and ordinary sense, as read in the light of the surrounding circumstances, the situation of the parties and the object of the guaranty, and that where the language is equally capable of each construction that one will be adopted which construes it to be limited, and not that which construes it to be continuing. The guaranty before the court for construction in this case was as follows: "Mess. Morgan, Root & Co.—The bearer, Mr. A. H. Bowles, is visiting your city, buying a few goods in your line, and anything you may be able to sell him will be paid promptly as agreed on, which I herewith guarantee. H. A. Boyer." This, the court held, was not a continuing guaranty.

BUSINESS NOTES.

The proposal of Boston capitalists to invest in a new banking establishment at Minneapolis, Minn., was eagerly met by local capitalists, and $500,000 has been secured for the purpose. In a few months the new banking house will be opened.

A recent issue of the Glasgow *Herald* states that 293,023 tons of new ship-building have been launched on the Clyde during nine months of 1883, an increase of 293,023 tons over the same time last year. The total tonnage launched during the present year is 30,593 in excess of the total quantity launched during 1874 to a like date.

The large sausage manufacturers of Chicago turn out some 130 tons of the article a day, the industry employing 600 to 700 persons, and the butchers make 9,000 pounds a day in addition. A good many are shipped to Frankfort, Germany, and then brought back to this country as the genuine Frankfort sausage, which is worth twice as much as the American goods.

The Pittsburgh *Dispatch* says that the demand for window glass is remarkably good, considering the lateness of the season. Western trade, however, has not been as favorable as usual this fall, probably on account of the condition of the stock, but several of the glass houses are now scarcely able to fill orders for sorts. Very little glass had been received from eastern markets.

There were 196 failures in the United Kingdom reported in *Kemp's Mercantile Gazette* for the week ending October 17, against 213 in the corresponding week of 1882, and 237 in the like week in 1881. The total for England and Wales was 167, against 192 and 218 in corresponding weeks respectively in 1882 and 1881. Scotland had 23, against 19 and 11, and Ireland 6 against 2 and 8 in like weeks in 1882 and 1881.

The St. Paul *Pioneer Press* says that but little reliable information has been obtained in regard to recent experiments in grinding frozen wheat. Samples of flour made from the damaged grain are very soft and it works up sticky in dough. It also lacks strength, but if used sparingly is said to make very little difference. The real value of the grain can be better decided after the flour has been given a fair trial by the bakers.

London *Nature* says that the Russian Geographical Society is taking an active part in the International Congress which is to be convoked by the United States for the unification of the meridian. Delegates from the Academy of Sciences and from the Russian ministries of war, and posts and telegraphs, will constitute a committee at St. Petersburg, and the conclusions of this committee will be supported at Washington by one or more Russian delegates.

The New England *Grocer* says there are more than 1,000 different varieties of steel pens manufactured in the United States. The value of the domestic and import trade is said to be $1,500,000 annually. The stationery, publishing, notions, dry goods and hardware trades are the principal retailers of pens throughout the country. As near as can be ascertained between 22,000,000 and 23,000,000 pens are manufactured weekly, Birmingham alone supplying between 15,000,000 and 16,000,000 pens weekly.

Coal operators at Clinton, Summit county, Ohio, about 63 miles south of Cleveland and 13 miles from Akron, and in the vicinity thereof, are considerably excited owing to the discovery at a depth of 396 feet of a six-foot vein of true anthracite coal. It confounds the current geological theories respecting the rock formation of that portion of the state, but coincides with the long-since published theory of a young geologist of local note, under whose advice the drilling took place. There is talk of a "salted mine," of course, but in the meantime the land thereabouts is being rapidly taken upon lease.

The following national banks have been organized: The People's National Bank of Langhorne, Pa.; capital $50,000; John Wildman president, Gove Mitchell cashier. The First National Bank of Princeton, Ky.; capital $50,000; R. B. Ratliff president, G. E. Hamilton cashier. The First National Bank of Texarkana, Texas; capital $50,000; J. W. Buchanan president, W. A. Kelsey cashier. The First National Bank, Concordia, Kansas; capital $50,000; Hamilton M. Spalding president, F. J. Atwood cashier. The Quarryville National Bank, Pa.; capital $60,000; George W. Hensel president, A. S. Harkness cashier. The Marshall National Bank of Unionville, Mo.; capital $50,000; Hugh D. Marshall president, Finis E. Marshall cashier. The Whitney National Bank of New Orleans; capital $400,000; James T. Hayden president, James M. Pagaud, Jr., cashier.

The leading feature of the British labor market for the week ending October 17, as reported by the London *Labour News*, was the ending of the North Staffordshire colliers strike, after having lasted for over five months. The men resumed work at former wages. The horsenail makers' strike for an advance of 3d. per 1,000 was announced. The engineers strike was increasing at Sunderland, and over 1,000 apprentices recently joined the strikers. Building, ship-building and marine engineering were very busy. Labor was still in great demand on railways and tramways. Work was very brisk in the colliery districts. Both the manufactured and unmanufactured iron trades were doing fairly well. On account of low prices the textile trades were only meeting the present demand. Dock labor was quite good, but a great number were still unemployed. Emigration continued good.

The International Labor Conference now holding at Paris is attracting widespread attention. Delegates from the English trades unions are honored participants, and an address was adopted at the opening (Monday) extending the sympathy of the conference to workingmen of all countries, and recording its protest against wars. Henry Broadhurst, M.P., was elected honorary president. He called on the conference to be practical in its acts and suggestions, and said that English trades unions are progressing and will support their continental brethren. French speakers urged the workmen not to abandon politics, the only means for struggling against capital. International legislation was suggested for the protection of children. An extremist advised the employment of force, but foreign delegates dissented. They doubted that universal legislation was feasible owing to international competition. They preferred the lawful progress of a revolution by successive reforms, enabling workmen to enter Parliament and thus assist in making the laws. A resolution was adopted Wednesday saying that the principal end to be pursued is to limit the hours of labor and thus render supportable the position of the workingmen of all nations. The speakers urged the French workingmen to devote more attention to business and less to politics, and to organize trades unions. Resolutions were also adopted looking to the prevention of competition in the matter of wages by emigrating trades unionists going abroad to obtain work.

The Philadelphia *Times* says that the best sealskins come from the Antarctic waters, principally from the Shetland islands. New York receives the bulk of American skins, which are shipped to various ports. London is the great center of the fur trade of the world. In our own country the sea-bear of the north has the most valuable skin. Since 1862 over 500,000 have been killed on Behring island alone. In 1867 there were 27,500 sea-bears killed; in 1871 there was a very large decrease, only 3,614 being killed. There were 26,960 killed in 1876, and in 1880 the number killed was 48,504, a large increase. Sea-otter fur is about as expensive as any, and some 48,000 skins are used yearly. Over 100,000 martin or Russian sable skins are annually used. Only about 2,000 silver foxes are caught every year, and about 6,500 blue foxes. Other fox skins are used more or less. About 600 tiger skins are used yearly, over 11,000 wildcat skins, and a very large trade is being carried on in house-cat skins; about 350,000 skunk and 42,000 monkey skins are utilized annually. The trade in ermine skins is falling off, as is also the trade in chinchilla. About 3,000,000 South American nutrias are killed every year, and a very large business is carried on in muskrat skins; about 15,000 each of American bear and buffalo skins were used last year. There are also used each year about 3,000,000 lamb, 5,000,000 rabbit, 6,000,000 squirrel, and 620,000 filch skins; also 195,000 European hamster, and nearly 5,000,000 European and Asiatic hares.

RAILROAD TRANSPORTATION.

At the regular monthly meeting of the New York Chamber of Commerce on Monday Mr. C. S. Smith, on behalf of the Special Committee on Railroad Transportation, submitted the following report:

The Special Committee on Railway Transportation, to whom were referred the following resolution:

Whereas, The Chamber of Commerce having learned from the Court of Appeals that there is no existing law to prevent such flagrant stock-watering operations as those perpetrated by the telegraph companies, be it

Resolved, That the Special Committee on Railway Transportation of this chamber be and is hereby requested to report at a subsequent meeting of the chamber what amendments to existing laws are necessary to check this growing evil;

Beg leave respectfully to report that they understand the application of the phrase "stock-watering" in the resolution above quoted to be confined to corporations who perform public service under charters derived from the state or nation, to whom have been granted the power of eminent domain, and who, in some cases, enjoy large land grants and loans from the public purse. The word "corporation" in this report will be construed in this sense only. While the matter of stock-watering only is referred to this committee, yet, as this specific question is so intimately and almost inseparably connected with the general questions of the proper relations of corporations to the public, your committee believe that they need offer no apology to the chamber for giving some necessary latitude to this inquiry. From Poor's Manual (an acknowledged statistical authority) for 1883, page 3, we copy the following: "It is safe to estimate that the actual cash expenditure upon all the railroads of the United States within the past three years did not exceed $1,050,000,000, a sum $973,646,482 less than the increase in the period named of capital and indebtedness of the several companies. Of course such an enormous increase of liabilities over actual cash outlay is greatly to be regretted, and is well calculated to create a distrust of all securities, good and bad."

When it is considered the intention is that this enormous creation of fictitious or nominal capital shall be made to pay a dividend by a necessary increase of charges for service, this fact looms up into startling importance.

The question where and at what point the private rights of owners and managers of corporations cease and the rights of the public commence, your committee concede to be an exceedingly delicate and difficult one to decide, but the experience of other countries and communities furnish valuable precedents, and as these questions will remain continual elements of disturbance until some equitable adjustment is arrived at, they should have the careful study of the best men in the land. Your committee offer the following propositions, the substance of which they believe should have a fair trial:

1. That stock-waterings similar to the late issue of $13,000,000 of Manhattan Elevated Railway stock constitute a grave offense against the community and should be made a misdemeanor by law.

2. That capitalization of surplus earnings should be prohibited by law; that increase of capital, either by stock or bonded issues, should be defined by strict legal formulas, easily understood and only permitted for good and sufficient public reasons, and not because it can be shown that a corporation can be made to pay a fair dividend on an increased capital.

3. That the public welfare requires that corporations should be subjected to government supervision and control, "state or national, or both, as the case may be," by means of commissions or other methods.

4. That such government supervision should have power to regulate and control, within reasonable limits, the charges of these corporations.

5. That ordinary differences arising between these corporations and their customers should be decided by government commissioners without the expensive and tedious delays incident to a lawsuit. That larger and more important questions should be, as now, referred to the legislatures or the courts.

6. That there should be no fixed limit to the rate of cash dividend corporations acting under such supervision as above indicated may pay to their stockholders, by reason of superior management of their affairs or of increased prosperity, but such questions should be left to the legislative power which created them, to decide upon the necessarily varying conditions of each case.

Your committee support the above propositions by the following considerations:

Propositions No. 1 and No. 2, relating to stock-watering and increase of capital, your committee believe to be so obviously just that they will not detain the chamber by offering any argument in their support, but they beg to refer, in further illustration, to extracts from a report adopted by the National Board of Trade, and the report for 1865 of the Massachusetts Railroad Commission, which are herewith submitted in the Appendix marked A and B.

Proposition No. 3, regarding government supervision, your committee have to say that that is no longer an experiment; the government supervision of railroads and of banks, fire, life insurance and trust companies, has worked for the public good as well as that of those institutions.

There is a painful distrust pervading the public mind regarding our corporate management. It is believed generally that these corporations are largely managed in the private interests of a few large owners, with little regard to the interests of smaller holders and investors. That reports as to their true condition are only attainable by the few. To this belief may be largely attributed the prolonged depression even in our best corporate securities.

The distrust felt in foreign markets of many of our corporate managements, and the frequent allusion in foreign journals to "Yankee tricks" in such connections, has not, your committee are sorry to say, been without foundation.

Propositions Nos. 4 and 5, regarding control by government of rates of service, no intelligent and disinterested man will now pretend that competition between different lines of railway or telegraph companies will sufficiently protect the public in the matter of rates. Pooling on through traffic has, to a great extent, abrogated competition, and local traffic, except at some favored points, and where water competition prevails, is necessarily deprived of the benefit of competition. The recent arbitrary refusal of the executive committee of the trunk lines to make a concession asked for by the representatives of the entire dry goods trade of the country, in the matter of the classification of dry goods on the west-bound traffic, proves the principle "might makes right" prevailed in their decision on this important matter. The following table now in force upon the Union Pacific Railroad (unless recently changed) demonstrates the necessity of government interference to protect its citizens from flagrant injustice:

Rates from New York—	*Per* 100.
To San Francisco	$2 25
To Salt Lake City	4 95
To Ogden City	4 05
To Dillon, Montana	3 45

San Francisco is 850 miles beyond Ogden City; Dillon is 400 miles beyond Ogden City.

The experiment of giving the railroad commissioners reasonable control over rates and classifications has worked well in Georgia, California and Great Britain, and your committee believe this power should be extended to the railroad commissions of this and other states. The English Parliament granted to its railroad commissioners, a few years ago, with considerable hesitation, what would be regarded in this country as almost despotic powers—the power to hear and decide controversies without appeal—and has since extended and confirmed these same powers, which permit the commissioners to supervise rates by requiring their approval of all railroad tariffs. The chamber will doubtless agree with your committee in opinion, that state supervision of railroads has worked well wherever the commissions have not been controlled by the corporations, and under an awakened public opinion such control must become rarer in the future. We believe, and we are glad to state, that many prominent railroad men now agree with this opinion, that a national commission should now be established for the control of inter-state commerce, and endowed with adequate powers.

Proposition No. 6, assuming that corporations are working under the government supervision and legislative control recommended in this report, your committee believe that fixed limitations upon the rate of cash dividends should be done away with, as this would relieve the public from any implied obligation to pay 10 per cent. dividends on watered stock; would permit higher returns than 10 per cent. where the risks and service justified it, and would take away, in many instances, the governing motive for an increase of nominal capital. It cannot be denied that the two greatest corporations chartered by this state, to wit, the Western Union Telegraph Company and the New York Central Railroad Company, have increased their nominal capital by three to four times the amount of their actual cash cost, and that they continue to pay dividends upon such increased capital. That this has been accomplished under existing laws of this state can no longer be doubted, since the recent decision of the Court of Appeals in the Western Union case. Your committee are instructed to report what amendments to existing laws are necessary to check the growing evil of stock-watering. We have not as yet been able to give this important subject sufficient study to formulate the exact amendment required, and we simply submit this as a preliminary report, and ask further time to report amendments to existing laws. In this connection, however, we submit, for the information of the chamber, the sections of the General Railroad act of Massachusetts governing the increase of capital (see appendix "C"), and at a future meeting will submit amendments to the laws of this state, as requested in the resolution.

All of which is respectfully submitted.

Signed by the committee.

The appendixes "A," "B," and "C," referred to in the report, respectively consist of extracts from the report of the National Board of Trade, the Massachusetts Railway Commission of 1865 and the General Railroad act of Massachusetts. The first relates to the inception of the Western Union Company and the combinations that have been formed through its promoters in the interest of stock-watering enterprises; the second condemns the methods of capitalization; the third relates to the regulation of railroad corporations by the state of Massachusetts. Section 228 of the General Railroad act of this state says:

"And if any railroad corporation owning a railroad in this commonwealth, and consolidated with a corporation in another state owning a railroad therein, increases its capital stock or the capital stock of such consolidated corporation, except as authorized by this act, without authority of the legislature of this commonwealth, or without such authority extends its line of road, or consolidates with any other corporation, or makes a stock dividend, the charter and franchise of such corporation shall be subject to be forfeited and become null and void."

The report was unanimously adopted.

MARITIME EXHIBITION AT MARSEILLES

The *Journal of the Society of Arts*, of a recent date, says: Almost concurrently with the Nice Exhibition of the coming winter a maritime exhibition, the first of a series, is announced to be held in the Palais de l'Industrie, Marseilles, from the 15th of November to the 13th of April. Products, specimens, machines, models and drawings may be exhibited, and the following is an abstract of the classification:

1. Navigation—models and specimens of vessels, engines and appliances, armament.

2. Furniture, clothes, hygiene.

3. Cereals and other products, preserved food and beverages.

4. Harbors, lighthouses, maritime establishments, packing and *manutention* (the handling and delivery of goods).

5. Life-saving appliances.

6. Natural or manufactured products in use on board ship; mineral and metallurgical industries; the chemical arts.

7. Produce of waters, alimentary and non-alimentary, and their preparation.

8. Tackle and methods of fishing and hunting.

9. Application of science to navigation.

Public trials of apparatus will be made, and conferences and lectures arranged during the time the exhibition remains open.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

It has been a tame, almost a dead, market in Wall street during the week; beginning rather lively, and each day dropping more and more down to a dead level of stagnation, prices have been on the decline, sinking of their own weight, as it were. All the symptoms are exhibited of the slow recession of the wave which last week dashed upward with such irresistible fury, and swept away the money of so many unfortunates who happened to be caught in it. The first break of that wave was on Thursday of last week, when in the height of the furore to buy stocks, either to cover shorts or go long, the cliques who manipulated the move opened their tin boxes and showered out on the crazy crowd such a mass of long stock as drove prices down 2 to 4 per cent., and gave a sudden pause to the market. On Friday there was a further unloading, but at this point the market was in no state to stand up under any more such selling, and since then the most adroit and dashing manipulation has had to be resorted to in order to sell stocks without causing a general slump in prices. It is the same old story—the fatal want of a public to buy stocks. The local public of the street is comparatively small; it is large enough to work up a sudden and furious dash like that of last week, made possible by the excessive short interest in the market, but when the shorts have been made to cover, the sustaining force in the market is gone, the large operators and the cliques who have heavy loads of stocks on hand find no one to sell to; then begins again the struggle to sell, the turns and the twistings, the spurting up of this stock and the spurting up of that, and the efforts to sell others under cover of their movements, which in the end bring us down to a dead-and-alive market such as we have had the latter part of this week. It has been compared to the galvanizing of a corpse.

The purpose of the manipulation and the manipulator himself have become evident to the street. The market is said to be in the hands of Mr. Keene, and so far as one can see he is left alone on the bull side. The other large operators whose interests are on that side do not seem to think the time propitious for bulling the market. At any rate they look on, their stocks showing few signs of animation. Such a state of affairs four or five weeks ago would have been the signal for a smashing raid on the market by the bear leaders, but the bear army has suffered so terrible a punishment by the Northern Pacific corner and the raid immediately following it that the leaders are left almost without a following. The average trader will not buy, or at least seems extremely chary about doing it, and he is too timid, after recent events, to sell short. Hence, business is dwindling away, just as the more cool-headed observers expected it would after the violent transitions of the past few weeks. Another cause of the disinclination to trade is due to the tactics resorted to by the bull operators, in locking up their stocks instead of putting them on the loan market for the use of those who have sold short and need to borrow for delivery. The use of stocks for borrowing purposes is part of the regular business of the stock market. It makes the usual buying and selling for speculation possible. Without a fair supply of market stock which can be borrowed, trading in the stock is paralyzed; hence it is that strictly investment stocks exhibit but slight fluctuation in price compared with the highly speculative stocks. The investment stock is not in the street, or only a small amount of it is; the bulk of it is in the strong boxes of investors all over the country. The bear operator cannot sell it short because he cannot borrow for delivery; the bull operator does not buy it, because it is in the hands of people who would not be likely to part with it unless at some price which they considered to be above its value, consequently the transactions in these stocks are small, and represent in the main merely the buying and selling of investors. To lock up a speculative stock, of which there is a large quantity floating in the street, is done to force the shorts in it to cover, and usually it has that effect; but it leaves the stock on the hands of the operator who has bought it, and for the time being kills trading in it. As the locking-up is known to be one of the customary forms of manipulation, it does not induce people to buy it; on the contrary, it generally scares them away, as they know that the clique who have it desire to sell, and will supply it in quantities to suit. Hence the usual effect of locking up a stock is first to cause a great activity in it and advance of price consequent on the scramble to cover; after that, a deadness in it which is not unfrequently disturbed by a sudden tumble in the price, as the owners find their burden too heavy to carry, and are forced to sell. Jersey Central has been locked up by the pool in it, Mr. Gowen being the leading spirit; and now there is scarcely a deader stock on the list. Michigan Central was called in and locked up last week, and there was such a scramble to cover shorts in it as sent the price up about 10 per cent. The short interest being out, the stock is in nearly the same moribund condition as Jersey. In fine, refusing to lend speculative stocks on the market is just as well recognized a device in speculation as selling stocks short, and after the spurt due to covering is over, it leaves them in the same or worse condition than before. The extreme form of such locking up is a corner, and that absolutely kills the cornered stock. Since Northern Pacific preferred was seen to be virtually cornered there has been no trading in it either way, or only an insignificant amount.

The Villard stock which has continued active has been Oregon Transcontinental, and this is due to Mr. Keene. It is understood that he bought heavily of this stock in one of its early great breaks, supposing that it had struck bottom. Afterward so many unfavorable facts came out about the condition of the company that the stock fell far below the figures at which he loaded up, and he has never been able to get out. The Oregon Transcontinental has been about the most active stock on the list this week, and the skill with which it has been manipulated has really excited the admiration of the street, as everybody knows who is doing it, and for what purpose it is done. It would seem also that when Mr. Keene was bulling the market last week Mr. Gould embraced the favorable opportunity to unload a line of Western Union, and possibly Missouri Pacific. Some one must have had to take it, and it looks as if Mr. Keene found himself with a much heavier load of Western Union on his hands than he cared to have. One stock has sprung into prominence this week which, since it was placed on this market about a year ago, remained obscure until this time. This is Canadian Pacific. The circumstances attending its manipulation reflect extreme discredit on the Canadian government officials at Ottawa, who must certainly have acquiesced in this business, and must infallibly have a very prejudicial effect on all Canadian securities. The stock had been greatly advanced in price by the clique who work it, and, at the proper time, they caused a dispatch to be sent from Montreal stating that the Canadian government had guaranteed 3 per cent. dividends on the stock for the period of ten years. Upon this they evidently expected to be able to sell out, and, by well-recognized tricks of the stock market, they made quite a hurrah over it; but the tricks were exposed in time to prevent their being successful. A great deal of mystery seems to surround this guarantee business, but the only thing which does seem to stand out clear is that no such guarantee can be given without the sanction of the Canadian Parliament, which does not meet for a month or two. The misrepresentations made, and the evident control the Canadian Pacific syndicate have of the Canadian press and the party in power at Ottawa are matters of grave import to the Canadian people. It is quite evident that reform is urgently needed there. Wall street is used to the tricks of corporations, and knows how to discount them; but the introduction of a Government as a factor in stock speculation is something new. Meantime, investors had better leave Canadian Pacific severely alone. Things seem to be shaping for an explosion up north.

The loan market shows scarcely any effects of the movement of money west, and rates are 3 and 3½ per cent. on call. The foreign exchange market is also quiet, with posted rates the same as last week, viz., $4.82@$4.85. Gold is coming this way in small quantities, but there must be an extremely narrow margin of profit in importing it, if any. The Bank of England discount rate remains at 3 per cent. Government bonds continue quiet and strong. The following were the closing quotations yesterday:

	Oct. 19, bid.	*Oct. 26, bid.*	*Oct. 26, asked.*
U. S. 4½s 1891, registered	114¾	113½	113¾

The bank statement of Saturday showed a decrease in all the items except circulation. The reserve, which on the previous week was reduced slightly below the 25 per cent. line, suffered a further small loss of $290,325, leaving it at $307,550 below the legal level. The following are the comparative totals of the statement of October 20 and October 27:

	Oct. 20.	*Oct. 27.*	*Differences.*

COMMERCIAL.

SUMMARY.

The movement of general merchandise during the week, as reported by special telegrams from leading trade centers to BRADSTREET'S, has been of more moderate character than for some weeks past. At a number of cities the October trade will compare favorably with that in the corresponding month last year, while at most distributing points the volume of traffic for August, September and October will measurably exceed that taking place in the like three months in 1882. Jobbers in general lines at eastern centers are mainly doing a reassortment trade. In various portions of the west the unfavorable weather has continued to interfere with general trade. In some portions of the northwest the movement of goods has continued to be active and in excess of the rate of distribution at the east. The tendency of farmers at some points to hold back their wheat and corn for higher prices has had an unfavorable effect on traffic returns. The industrial situation is no worse than it has been for some time past. The glassmakers, bituminous coal miners in western Pennsylvania, and various other trades to a lesser extent have been involved in disputes with their employers as to wages, and in some instances have already capitulated. The iron industry is practically unchanged. No new furnaces have blown out; sales are moderate, and production continues somewhat in excess of consumption. There are uncontradicted assertions also of sales of No. 1 X 50c. below regular quotations. Some large contracts for steel rails for use in the spring are being considered. Makers of rails quote at $37, but it is believed that buyers are delaying contracts in expectation of bettering that rate. Scotch iron is selling more freely to take advantage of low canal freights. The coal trade, generally speaking, is good. No more is heard of the rumored stoppage of work at the mines. Wheat on Thursday advanced to about ⅝c. over the close on Friday of last week, but lost ¼c. yesterday. Indian corn advanced about ¾c. to Thursday evening, and added another ¼c. yesterday. There has been no substantial gain in demand. It is the opinion that little real gain is likely to be made in prices of these cereals before January 1. Provisions are slightly higher, due, for the greater part, to manipulation. Ocean freights are dull, and exports generally are light. Wool has been dealt in to a fair aggregate, but chiefly in small lots proportioned to the immediate wants of manufacturers. Prices rule steady. There were 195 failures in the United States reported to BRADSTREET'S during the past week, 14 less than the preceding week, 41 more than the corresponding week of 1882 and 60 more than the same week of 1881.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Money is in good demand. Bank loans are higher than at any previous time during the year. General trade is good, but more conservative in character.

From Boston, Mass.: The main features of the business situation are about the same as last week. With the close of October the heaviest part of the fall trade is over, and a lull of a few weeks may be expected in leading departments of manufactured goods. The election excitement continues to interfere with the local jobbing trade, and very little will be done until after Tuesday next. In regard to the results of the fall trade it is found that a very satisfactory feeling exists among jobbers of dry goods, clothing, boots and shoes and crockeryware. October's business did not come up to expectation, but taking August, September and October together, the volume of trade has been quite large and ahead of last year for the same time. Sales of wool for the week are considerably ahead of last week, and the largest for four weeks previous. Money market continues quiet and steady. Bank discount rates are 5@6 per cent., with some transactions at 6½. Banks continue to scrutinize paper closely.

From Philadelphia, Pa.: The general business situation exhibits no important change. Trade is less active, as the bulk of fall wants in most lines have been provided for, but there is still a steady moderate business in progress in all departments. A conservative feeling prevails, and operations are closely proportioned to actual wants.

From Cleveland, Ohio: The general trade movement continues satisfactory, with an improvement in some lines and a better feeling owing to colder weather.

From Toledo, Ohio: Trade is satisfactory in all lines. Collections are slow and money is scarce. Interest is 7 to 8 per cent. Exchange 1/10 of 1 per cent.

From Evansville, Ind.: The weather is clear and cool, having had heavy rains during the first of the week. Trade in all branches is quiet, though manufacturers report better than dealers. Money is close, and but little is in circulation.

From Indianapolis, Ind.: There is an average volume of trade in merchandise, but business is not particularly active, and goods are sold on close margins. Collections are somewhat dull.

From Chicago, Ill.: Money is firm and active on call at 6 per cent.; on time, 7 per cent. Bank deposits are decreasing. Collections are fair. Exchange is 50c. premium. Shippers' bills are scarce.

From Peoria, Ill.: General trade is slightly improved and collections are fair. Money is plentiful when good security is offered.

From Detroit, Mich.: In general lines of business purchases are said to be for immediate wants, as a rule, though an average fair trade is being done. Collections fair.

From Louisville, Ky.: Trade is moderately active and good for the season. October clearings were 20 per cent. larger than for the same month in the preceding two years. Money is in steady demand and fair supply at 7 per cent.

From St. Louis, Mo.: General trade is feeling the effects of the lull which precedes the holiday activity, but is good enough for the season. The bank surpluses are about exhausted to the loanable limit. The 8 per cent. rate is very firm, and exceptional 9 and 10 per cent. loans have been made. New York exchange is 50c. premium. Prime commercial bills are 50c. discount.

From Burlington, Iowa: Business continues good in all lines. Local trade is satisfactory, and jobbers are filling a good line of orders. Collections are reported good.

From Milwaukee, Wis.: Business in all lines of merchandise is fair and collections satisfactory. Money is easy at 7 to 8 per cent.

From St. Paul, Minn.: Merchandise movement is fairly steady. Trade is healthy without increase. Buyers are conservative, operating only for actual needs. Collections are better and improving. General sales are somewhat restricted by the backwardness of marketing. Western railroad freighting is steady without a rush, but exceeding that of last season. Money shows a tendency to easier rates, though still very close. The banks decline outside paper, the regular demand being excessive. City and county bank balances are at the minimum. Eastern exchange is held easy between banks, though the demand is fairly active.

From Minneapolis, Minn., General lines of the jobbing trade are steady and satisfactory, as a very close money market is reported. At the banks the demand for money by produce dealers is unusually pressing; much of it goes to the country and comes back slowly. This requires large shipments from the east and gilt-edged paper is refused daily from outside parties at the bank. All they can do is to take care of their regular customers. Eastern exchange quite unchanged.

From Lawrence, Kan.: General trade has been good the past week, with a large shipment of produce. Money easy and collections good.

From Topeka, Kan.: General trade is still depressed on account of unfavorable weather. Money is in active demand, but the banks are able to supply all legitimate demands. Collections are good.

From Omaha, Neb.: Collections are reported improved, and it is believed trade will continue to increase during November owing to low prices and the limited demand of late. The fall trade has been held back until now.

From San Francisco, Cal.: Business during October about equaled that of the corresponding month in 1882.

From Baltimore, Md.: The business situation shows no material change over last week. Some prominent houses report sales satisfactory, and in excess of last year, but generally October trade has been disappointing. Values are unsettled, and operators are moving cautiously. Money rules easy, with slight street demand, banks reporting fair demand from their customers. Rates quoted at 6 per cent., four months. With some exceptional transactions call loans on collateral can be obtained at a lower rate.

From Richmond, Va.: Many outside merchants are here in attendance on the State Fair, and Richmond dealers are reaping a rich harvest in taking orders.

From Norfolk, Va.: There is very little change in the general outlook. The State Fair at Richmond draws some trade temporarily from Norfolk, and the political excitement has a depressing influence. Weather fine. Collections fair.

From Wilmington, N. C.: General business is very quiet.

From Savannah, Ga.: Trade is less active, although jobbers have been busy filling orders. On Wednesday business was stagnated in consequence of a fire which consumed 312 buildings. The value of the property destroyed will approximate $1,000,000.

From New Orleans, La.: General trade is fair.

From Galveston, Tex.: The general jobbing trade has been dull. New York exchange is ⅜ discount.

From Memphis, Tenn.: Trade in all lines is pretty active, especially in breadstuffs and plantation supplies, and prices in these lines are firm.

From Nashville, Tenn.: The jobbing trade has been more quiet.

INDUSTRIAL.

Ten Pittsburgh companies have taken out charters during the past few days to furnish light and heat from natural gas, the largest, The Union Light and Heat Company, having a capital of $1,000,000. Kalamein is being widely introduced as a chemical coating for sheetiron pipes, tubes and wire in preference to galvanizing. The Pittsburgh glass manufacturers met on Tuesday, but refused to make overtures. The workmen are equally resolute and defiant. Stocks of window glass are low. An iron, tin and terne-plate company will build a mill at Hubbard, Ohio; capital $180,000. The coke syndicate is quietly gaining control of additional capacity, in view of the increasing demand for that fuel. Pittsburgh commercial interests anticipate a favorable outcome of the pending negotiations for lower freight rates. The roads concerned in the Connellsville coke traffic have endeavored, through their representatives, to agree upon a satisfactory division, without so far coming to terms. Representatives of the Pennsylvania Railroad, the Baltimore & Ohio and the new Pittsburgh, McKeesport & Youghiogheny Company meet in Philadelphia on Saturday to agree upon a division of traffic. The latter company, controlled by the Vanderbilt interests, demands one-third of the traffic. Thus far it has tapped a very small part of the field, and for this reason its claim is regarded as unfair. The Pennsylvania company will abandon coal mining and transfer its interests in mining to a syndicate, headed by William L. Scott, of Erie. The output of the mines is 3,000,000 tons per annum. It is stated the Pennsylvania Railroad will receive $1 per ton royalty, besides the tonnage. Of 15,000 miners in the Pittsburgh district, all but 1,000 are at work. These are in the fourth pool on the Monongahela river, Pa., and are resisting a reduction. The 2,000 miners on the Low Grade road, western Pennsylvania, are still out. New coal screens on the Pan Handle road are giving rise to complaints by the miners. Fifteen hundred striking miners in eastern Ohio and 500 in Mercer county, Pa., have returned to work. Seventy striking workmen in the East St. Louis railroad yards returned to work. About 300 of the 1,800 striking printers of Philadelphia have returned to work, and there are indications of a break. Large numbers of Italian, German and American railroad hands have been discharged in different localities. Discharges of skilled workmen in mills and shops are announced in a few places.

INDUSTRIAL FEATURES.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Some woolen mills have shut down.

BREADSTUFFS ABROAD.

The tone of the English market for wheat has not suffered material change during the week. Prices are steadily held. There has at times been more firmness, but no appreciation in values. Waterside stocks at Liverpool are reported to be very heavy. Granaries at both London and Liverpool are full, and there is considerable grain in barges for which room cannot be found. Foreign advices add that wheat stocks at nearly all ports are very large. The same discrepancies exist in popular estimates as to the available wheat for export in the different countries having a surplus, and a similar variation is noted in estimates on probable requirements. There is some uniformity, however, on the main points at issue—that there will be enough wheat to go round, although, say the heralds of low-crop figures, reserves will be heavily drawn on, and the next year will be begun with very low stocks carried over. Some authorities suspect the slowness with which the wheat market revives may be due to plans to corner that product. But others scout such an idea. There is a very general impression that no permanent advance in quotations appears probable until after the holidays. On these points the *Northwestern Miller*, of Minneapolis, says—quite in accord with views previously expressed in these columns—that low prices and dull trade will rule in breadstuffs "until the present visible supply is greatly diminished, or until a huge corner is engineered. The signs are not right for the corner scheme, and all indications are that the holidays will have passed before any legitimate rise in prices comes to gladden the hearts of the bullishly inclined. Legitimate causes may possibly combine to advance flour before that time, but there is little to hope for in the grain markets."

The imports into the United Kingdom for the week ended October 30, for the previous week and for the same week last year, were as follows:

	Oct. 30, 1883.	*Oct.* 23, 1883.	*Oct.* 31, 1882.
Wheat, qrs..	275,000@280,000	325,000@330,000	400,000@405,000
Corn, qrs....	140,000@145,000	155,000@160,000	25,000@ 30,000
Flour, bbls..	165,000@170,000	215,000@220,000	110,000@115,000

The stocks at Liverpool are as follows: Wheat, 4,250,000 centals; corn, 420,000 centals; flour, 280,000 sacks and 4,400 barrels.

The quantity of wheat and maize on passage, as per Beerbohm's London cablegram of the 1st inst., was:

	Wheat. *Qrs.*	*Maize.* *Qrs.*
To the United Kingdom	1,925,000	200,000
To continent	490,000	60,000
Total quarters	2,415,000	260,000
Equal bushels	19,320,000	2,080,000

Compared with the previous week:

To the United Kingdom	1,725,000	190,000
To continent	450,000	65,000
Total quarters	2,175,000	255,000
Equal bushels	17,400,000	2,040,000
Increase, bushels	1,920,000	40,000

The following shows the stock of breadstuffs at Liverpool, as reported officially by cable October 31, with a comparison of the stock July 1, 1883:

	Oct. 31, 1883.	*July* 31, 1883.
Wheat, bushels	6,916,666	5,466,152
Corn, bushels	700,000	320,312
Flour, sacks	280,000	184,000
Flour, barrels	44,400	4,800

From the above it will be seen that though the stock July 1 was excessively large, it is still larger now.

AMERICAN WHEAT MARKETS.

For the ten days ended Tuesday evening the option market for wheat had gained a fraction over 2½c. per bushel from the lowest point touched this season. On Wednesday it lost a portion of this. Saturday, Monday and Tuesday last showed a steadiness in the wheat speculative market which was accepted as encouraging, to say the least, November ruling 1c. higher per bushel than on Friday of last week. But Wednesday dropped this cent, or the greater part of it, and the situation proved to have no more stability than for some time preceding. There were some very heavy purchases made Tuesday, one being for half a million bushels, January delivery, at $1.13⅜c. By Wednesday evening January wheat here was quoted at the close at $1.12. The Liverpool cotton failure, a failure of a German grain house—neither of which had any actual effect here—both exerted an influence on the market of an unfavorable nature, and prices eased off. Exports have not revived any and do not promise to immediately. The increased firmness for cash wheat noted Tuesday, as well as the appreciably higher range to the option market, when in combination with stiffer ocean freight rates, rather reduced than otherwise the already low rate of exports of wheat. There was a good option demand on Thursday, and prices advanced ½@¾c. per bushel. The hand of manipulation was visible, however, as exporters were not in any way at the bottom of it and the legitimate demand here was not large. The market was barely steady on Friday, losing, in fact, ¼c. on options. There were no features of note.

The receipts of wheat at tide-water for the week ending October 27 decreased to 1,202,990 bushels from October 20, when they were 1,238,104 bushels. The exports from the Atlantic ports for the week ended October 27 amounted to 932,034 bushels, against 822,828 bushels October 20.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended October 27 amounted to 1,576,135 bushels, against 1,588,321 bushels in the preceding week, and the shipments to 1,302,963 bushels, against 1,047,451 bushels in the week previous.

The visible supply of wheat in the United States and Canada (east of the Rocky mountains) October 27, as against the preceding week, showed an increase of 307,956 bushels.

The course of prices of wheat at New York and at Chicago (1 P.M.) during the past week has been as follows:

	New York.				*Chicago.*	
	Nov.	*Dec.*	*Jan.*	*Feb.*	*Dec.*	*Jan.*
Fri. Oct. 26..	$1.07⅞	$1.09¼	$1.11½	$1.13½	.93⅛	.94⅛
Sat. Oct. 27..	1.08⅞	1.11	1.13⅜	1.13½	.95	.90
Mon. Oct. 29.	1.08¼	1.11	1.13¼	1.15¼	.95⅞	.96⅞
Tues. Oct. 30	1.08⅜	1.10⅞	1.13⅛	1.15¼	.95⅜	.96⅞
Wed. Oct. 31	1.07¾	1.09⅞	1.12	1.15¼	.94½	.95½
Thur. Nov. 1.	1.08½	1.10⅜	1.14½	1.14⅝	.95⅛	.96¼

INDIAN CORN.

In sympathy with wheat corn advanced ⅞c. on Saturday, but this gain ebbed slowly away during Monday and Tuesday, and on Wednesday fell ¾@1c. per bushel to 55⅛c., or 1⅛c. below Saturday's closing price. There has been little or no business, and this lack of activity is shown in the declining prices of Monday and Tuesday, in the fact of unfavorable weather reports, and which ordinarily might be expected to advance quotations. The trading in corn on Thursday was active, the deliveries were large, and in the face of reduced supplies in sight, prices advanced ¼@¾c. per bushel, partly in sympathy with wheat. Friday corn was steady, and quotations closed at a small advance, ¼@⅝c.

The Milwaukee crop authority, Mr. Tallmadge, estimates the total yield of corn this past season at 1,621,100,000 bushels, the largest crop of Indian corn, with one exception, ever harvested—and this in spite of the ravages of frost. The reports from Wisconsin, Michigan and Minnesota put the injured corn at 50 per cent., the damage in some instances—in Wisconsin—being total. Mr. Tallmadge's estimate of the yield by States is:

Maine	800,000	N. Hampshire	800,000
Vermont	1,800,000	Massachusetts	1,200,000
Rhode Island	300,000	Connecticut	1,200,000
New York	20,000,000	New Jersey	10,000,000
Pennsylvania	40,000,000	Delaware	4,000,000
Maryland	16,000,000	Virginia	35,000,000
N. Carolina	35,000,000	S. Carolina	15,000,000
Georgia	30,000,000	Florida	4,000,00
Alabama	32,000,000	Mississippi	30,000,000
Louisiana	15,000,000	Texas	65,000,00
Arkansas	34,000,000	Tennessee	75,000,000
W. Virginia	15,000,000	Kentucky	75,000,000
Ohio	70,000,000	Michigan	25,000,000
Indiana	100,000,000	Illinois	17,000,000
Wisconsin	25,000,000	Minnesota	20,000,000
Iowa	165,000,000	Missouri	190,000,000
Kansas	190,000,000	Nebraska	90,000,000
California	3,000,000	Dakota	6,000,000
Other states and territories			5,000,000
Total			1,621,100,000

The receipts of Indian corn at the Atlantic ports for the week ended October 27 were 1,651,978 bushels, against 1,993,672 in the preceding week, while the exports from the same points amounted to 1,073,671, against 852,432 bushels. The visible supply of Indian corn in the United States and Canada, east of the Pacific coast, October 27 had decreased 731,800 bushels as compared with October 20. The total receipts of corn at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis, for the week ending October 27, were 1,924,137 bushels, against 1,854,581 the week preceding, and the shipments were 1,545,872 bushels, against 1,559,970 in the preceding week.

The closing prices of Indian corn daily during the past week at New York and Chicago (1 P. M.) were as follows:

	At New York			At Chicago.	
	Nov.	Dec.	Jan.	Jan.	Dec.
Friday, Oct. 26	.56	.57½	.57⅛	.45⅝	.45½
Saturday, Oct 27	.57	.58½	.58	.46⅜	.45⅞
Monday, Oct 29	.56⅞	.58⅛	.58	.46⅜	.46⅜
Tuesday, Oct. 30	.56⅜	.58	.58	.46¼	.46
Wednesday, Oct 31	.55½	.58	.57⅛	.46¼	.45⅜
Thursday, Nov. 1	.56¼	.57¾	.57¼	.46¾	.46⅛

Corn at Chicago at 1 P. M. yesterday was for December 46⅞c., against 45¼c. for the option named on the preceding Friday.

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Oct. 26.	Nov. 2.
No. 2 flour	$2.25 @3.00	$2.25 @3.00
Superfine flour	3.00 @3.25	3.00 @3.25
Com. extra flour	3.70 @3.90	3.50 @3.90
West India shipping flour	5.35 @5.40	5.40 @5.45
South American shipping flour	5.05 @6.10	5.50 @6.00
Winter wheat, family flour	5.20 @6.25	5.10 @6.75

* Afloat.

The visible supply of grain, comprising the stocks in granary at the principal points of accumulation at lake and Atlantic ports, and on rail and on the Mississippi river, and afloat on New York canals, destined for tide-water:

	Oct. 27, 1883.	Oct. 20, 1883.	Oct. 28, 1882.	Oct. 29, 1881.
Wheat, bushels	30,616,382	30,306,426	16,078,308	21,252,678
Corn, bushels	10,531,544	11,263,344	3,669,145	26,449,035
Oats, bushels	5,360,341	5,211,038	4,186,410	4,366,769
Barley, bushels	1,804,814	1,609,091	2,139,919	2,656,375
Rye, bushels	2,274,614	2,311,373	948,793	1,250,184
Total bushels	50,683,765	50,711,272	27,022,575	55,980,001

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Wheat has ruled higher under more active speculative buying, but the export demand has continued light. About 150,000 bushels have, however, been taken by exporters within a few days. General orders are so far below the views of sellers that little business can be done. Corn has been dull both for export and on speculation, but closes a shade stronger. Local consumption absorbs all offerings of low grades. Oats have been active, and close rather higher both for spot lots and futures. The flour trade is more active, and, while no higher, values are maintained with more confidence on all grades.

From Chicago, Ill.: Wheat is active, with speculative trading in futures. The shipping demand is light and the market is nervous. The bulls are manipulating the market to sell on. Corn is firm. The shipping and speculative demand is good. The strength in futures is due to light receipts and decreasing stocks. Oats are steady, with an active shipping demand for car-lots. Receipts are liberal.

From St. Louis, Mo.: Wheat has been booming, but has weakened, and is unsettled. Other grains are fairly steady, with moderate movement. Flour continues unsettled, with some export, but mainly for southern demand.

From Milwaukee, Wis.: The indications point to an increased movement of wheat this month, unless the weather interferes. Bankers report increasing orders from Minnesota for currency, showing that farmers are more inclined to part with their grain. The flour movement is large, chiefly from Minneapolis. The local production continues light, averaging about 4,000 barrels daily, and some mills are idle. No shipments via Welland canal last month.

From Minneapolis, Minn.: The weather is fine and farmers are well up with their fall work. Threshing is progressing satisfactorily. Wheat is moving fairly, but many are storing their grain, the price being unsatisfactory. The grain market is stronger and 2c. higher, $1.03@$1.05 for No. 1 hard. Millers are getting a full supply. The average receipts are 90,000 bushels daily. The output of flour is 20,000 barrels daily. The market is a little slow.

From St. Paul, Minn.: Wheat is held by many farmers for better prices.

From Omaha, Neb.: Prices in grain are reported firm, with an upward tendency, and a better demand is apparent.

From Topeka, Kan.: Grain is steady, but offerings are light. Flour is active.

From Baltimore, Md.: The flour market is quiet, with moderate inquiry. Grain holding steady.

From Wilmington, N. C.: Breadstuffs are neglected.

From New Orleans, La.: The stock of corn is one-third of a million bushels and of wheat is one-eleventh of a million bushels. The market is nominal.

From Nashville, Tenn.: Flour is steady and in good demand. Wheat is very steady. Corn is quiet but steady.

WINTER WHEAT.

[By Telegraph to BRADSTREET'S.]

From St. Paul, Minn.: Some farmers are still sowing, under the fine weather.

From Milwaukee, Wis.: Winter wheat looks well, and the weather is favorable.

From San Francisco, Cal.: The recent rain enabled farmers to begin plowing.

PROVISIONS.

The speculative market for hog products has been only fairly active, and prices, after advancing several points on Saturday with no visible cause therefor, steadily fell away again. The receipts of hogs continue heavy. The export demand for western lard has not been brisk. On Saturday English buyers were at the markets, and on Wednesday purchases of lard were made on both English and German account. On Thursday prices were slightly advanced, as claimed owing to manipulation at the west. Friday witnessed no material change here. At the west the reports as to stocks are claimed to be too small in order to influence prices.

With October concludes the year observed by the provisions trade. The features of the year have been the unwarranted high prices in the first half thereof, terminating in the collapse of the attempted corner by McGeoch, the Chicago speculator, and the to be expected reaction in prices during the latter half of the year. During the year mess pork at Chicago dropped from $21.50 per barrel November 3, 1882, to $10.20 September 26th last, since when there has been a moderate revival. Lard was 12c. per pound in November last year, and highest 12.10c. May 7, 1883, since when it has declined to 7.20c. on October 27. Short ribs declined from 11.75c. in November, 1882, to 9.90c. in March last, advanced to 10.50c. and to 10.75c. in April and May respectively, and declined to 5.60c. September 26 last. The shrinkage in the price of prime steam lard during the year, as shown by a table of comparative prices in the *Commercial Bulletin*, is 40 per cent., but in prices of mess pork and of short ribs the loss has been fully 50 per cent. The trade begins the year 1883–84 in much better shape than its predecessor. Prices are low and hogs plenty. The delayed distribution of hog product of late months—since the lowered prices—is believed to have been due to forcing supplies on to dealers in excess of ability to market the same.

Exports of hog products from the following places for the week ending October 27, 1883, were:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds.
New York	4,328	4,803,011	2,104,206
Boston	516	548,556	221,465
Portland	....	....	....
Montreal	265	1,637,600	99,700
Philadelphia	472	1,872,700	173,600
Baltimore	45	....	105,815
New Orleans	32	5,400	2,520
Totals	5,658	8,867,267	2,712,236
Previous week	4,892	7,589,651	3,004,058

The total exports of hog products from the above places from November 1, 1882, to October 27, 1883, were as follows:

	1882–83, pounds.	1881–82, pounds.
Pork	46,938,600	47,728,000
Bacon and hams	416,804,401	359,297,234
Lard	277,232,238	240,910,235
Totals	740,975,239	647,935,469

The prices for provisions during the week have been:

	Oct 27.	Oct. 29.	Oct. 30.	Oct. 31.	Nov. 1.	Nov 2
Lard, western spot	7.50c.	7 50c.	7 75c.	7.75c.	7 75c.	7.80c.
Lard, November	7.53	7 70	7.51	7.49	7.55	7.63
Lard, December	7.50	7.50	7.50	7.45	7 54	7.61
Mess pork	$11.50	$11 50	$11 50	$11.50	$11.50	$11.50

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Pork is active, with speculative trading, and is firmly held. There is no shipping demand. Lard is active and firm. Trading is confined to speculative futures, and there is scarcely any call from shippers. Meats opened firm, but lost the advance. Stocks are 58,500 barrels of pork, 33,000 tierces of contract lard, and 580,000 pounds of short ribs. Brokers denounce the reported stocks as far below the actual amount, and say they were made to influence prices.

From St. Louis, Mo.: Provisions are weak and dull owing to the continued mild weather. Cattle are of poor quality and in small offering. There is a fine shipping demand, but nothing to satisfy it with. Hogs are in excellent supply, and prices tend downward. Packers are buying freely and beginning to kill.

From Wilmington, N.C.: Meats are steady with a liberal demand.

From Savannah, Ga.: A fair trade has been done in provisions, and the demand is good for cured meats.

From New Orleans, La.: Provisions are unchanged, and stocks are strong.

From Memphis, Tenn.: The supply of live stock last week exceeded those of the preceding week. The market has ruled steady for all grades of fat cattle, and the demand for that class of live stock is active. The common grades drag and sell slowly.

From Nashville, Tenn.: Cattle are active and in good demand.

THE NEW YORK DRY GOODS MARKET.

There has been no activity during the week in the dry goods trade; purchasers are reported to be buying only from hand to mouth. The importing houses and domestic commission firms alike report a general dullness. Cottons, velveteens and dress goods have been the most active in the order named. Silks, satins and plushes are quoted rather slow. Woolens have been exceedingly quiet, with the exception of a small request for a few heavy goods. The jobbing trade report business quiet, as a rule, though a fair order trade is setting in, which it is expected will improve. The retail trade is not as active as it should be, the weather still continuing adverse to their interests.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: The trade in dry goods is declining.

From Boston, Mass.: From first hands there has been a very light movement, with no change in values except in a few instances where concessions have been made to clear up accumulations. Jobbers report a moderate trade, but considerably smaller than early in October. They feel well satisfied with the season's business. Retailers have had two or three splendid days, and their stores have been crowded with customers.

From Providence, R. I.: The print cloth market is reported dull; 64s are quoted at 3 11/16c., less 1 per cent., and 56x60s at 3 3/16c.

From Philadelphia, Pa.: There has been no general activity. Jobbers' orders are mostly for small reassortments, and the package trade continues very quiet. In most departments values rule steady. Collections are reported prompt.

From Pittsburgh, Pa.: The dry goods trade continues satisfactory for the season, and will improve under the influence of the existing cooler weather.

From Chicago, Ill.: Dry goods is in fair order demand. Sales are larger than at this date last year. Stocks are closely trimmed. Millinery is in better demand than last week.

From Peoria, Ill.: In the dry goods trade some activity is reported, with a good demand anticipated.

From Indianapolis, Ind.: In dry goods trade is fair but not heavy.

From Louisville, Ky.: Dry goods are having a satisfactory movement on reassorting orders. The fall trade was unusually large.

From Detroit, Mich.: In dry goods a fair trade is reported, with collections moderately good.

From St. Louis, Mo.: Winter dry goods are selling well, and the trade generally is fairly active for the season at steady values.

From Burlington, Iowa: Dry goods slow; improvement with colder weather.

From Minneapolis, Minn.: Jobbers of dry goods report trade good for the season. Demand for heavy winter goods is less active than usual, owing to mild weather.

From St. Paul, Minn.: The dry goods trade is good without marked vitality, mostly on orders. The lumber-camp demand is backward, making shirtings, blankets and mackinaws slow. For western trade it is conservative, but better than last year. The aggregate orders show a greater than usual demand for department goods.

From Lawrence, Kan.: The dry goods and clothing trades are in excellent condition.

From Topeka, Kan.: Dry goods still continue satisfactory.

From San Francisco, Cal.: Dry goods during the past week have been dull.

From Baltimore, Md.: The dry goods market is dull and feverish, and while there has been a fair distribution the margin of profits has been small and unsatisfactory.

From Richmond, Va.: Dry goods, like other lines, is active.

From Norfolk, Va.: Dry goods jobbers are fairly active.

From Wilmington, N. C.: Dry goods and clothing, owing to continued warm weather, are inactive.

From Savannah, Ga.: Dry goods stocks are full for all demands made upon it. Trade in this line is more uniform and unchanged.

From Galveston, Tex.: The dry goods trade has continued dull during the past week, with only moderate collections. The weather is cool and pleasant.

From Memphis, Tenn.: Dry goods jobbers report that business is very fair and collections coming in satisfactorily.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Trade in clothing has fallen off, but it is as large as usual at this season, and the situation is satisfactory. Manufacturers say they have no cause for complaint. A large quantity of goods have been distributed, collections are easy, and the outlook is promising. With colder weather a spurt in the overcoat trade is expected, but aside from this business in a wholesale way will be light until about the turning of the year.

From Chicago, Ill.: Clothing is slow.

From Cleveland, Ohio: The wholesale clothiers anticipate, from present indications, a full average fall business, though the backward season has injured the retailers and affected collections unfavorably. The same may be said of all branches, and heretofore purchases have been mostly to fill immediate wants.

From St. Paul, Minn.: Sales, mostly orders, are well sustained, the volume being equal with last year.

From Savannah, Ga.: The clothing trade among jobbers is fair and satisfactory and even with last year; retail trade backward.

COTTON.

The New York market for spot cotton during the week has ruled slow. Sales have been moderate, aggregating 5,364 bales, against 6,208 last week. They have been as follows: For consumption 2,570, for speculation 2,194, and in transit 600 bales. Included in the above are 1,545 bales to arrive. The deliveries on contract amount to 700

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 10, 1883.

NOTES OF THE WEEK.

The stock market has been very dull during the past week, but generally has been on the rise under the same influences which were spoken of last week. The leading bear operators appear to have given a seeming consent to the efforts made to advance prices, as they expect to sell again from a level which offers a better chance of profit. In the absence of outside buying it is hard work for the bull cliques to do much, and they seem to have little dash left in them, taking profits on every little rise. The cliques who have specialties, like Canadian Pacific and Pacific Mail, are working them vigorously. The Northern Pacifics are very quiet, but Oregon Transcontinental is kept active. The usual harmonious meeting of the trunk line managers at Commissioner Fink's office on Thursday was made the occasion for giving a stimulus to the Vanderbilt properties. A better market might be expected for a time at least were it not such evident up-hill work to advance prices. Something may be done, however, despite the apathy of the public.

The proposition to abolish the present system of convict labor in the state prisons has been carried in the state of New York by a large majority. This is as it should be. A system under which the labor of the convict is farmed out to contractors, and the idea of discipline is lost sight of, is one which has no reason of existence in an age of intelligence. Now that the people have declared against the practice, however, there is need of a careful inquiry as to the conditions under which labor may be employed in the prisons with advantage both to the state and to the prisoners themselves. Labor of some sort there must be in the prisons; the problem is to ascertain under what regulations it may be made to play a useful part in the reclamation of criminals, and at the same time to relieve to a considerable extent the burden of taxation which the abandonment of the old system will entail. As we have often insisted, making labor the prominent part of the punishment for crime, particularly under the conditions which the contract system imposes, is on many accounts impolitic, and is injurious in its general effect. There can be no doubt, on the other hand, as we have also shown, that labor, if properly enforced as a part of the system of punishment, may become a powerful agent in the reformatory process, as involving mental instruction, training in some useful work and the living a quiet and orderly life, free from evil associations and injurious indulgences. We believe that such a regulation of labor in the prisons is possible, and further that under such a system of regulation, and always with a view to the discipline of the convicts, their labor may be made to yield to the state such a return as will render the burden of taxation involved merely nominal, in comparison with what is feared.

Among the most gratifying results of the elections just held must be counted the signal defeat of Mahone and his allies in Virginia. The vote of Tuesday has, it appears, reversed the conditions which have existed for a year past. The Democrats will have control of both branches of the legislature by a large majority. This result leaves the control of legislation in the hands of the debt-payers, and affords the state an opportunity to redeem its character. Mahone's greatest losses, it is said, have been in the white-counties of the southwest, which have heretofore sustained him on state issues. The Virginia senator's defeat has been a sore disappointment to those high in the councils of the Republican party, who have supported his pretensions in the hope of being able to split the "solid south;" but there can be little doubt that, even from the standpoint of political expediency, the alliance has been, and could not be otherwise than, a mistaken policy for the party. The events of Tuesday have shown that it is impossible to use the Virginia complication as a wedge to break the southern solidarity, since large numbers even among the staunchest Readjusters deserted the coalition when it was seen to be merely a cloak for schemes of Republican aggrandizement. Mahone shows no willingness to accept the verdict just given at the polls as final. Through his organ at Richmond he declares that he has not abandoned his hold on Virginia, and he indicates his purpose to renew the agitation of the debt question. It is to be hoped that if Mahone ever again presents himself or his tools for the suffrages of the people of the state he has done so much to disgrace, he will be buried under such a majority as will convince him, beyond the possibility of a mistake, that his corrupt and unscrupulous career is at an end and cannot be again resumed.

One of the tidal-wave governors of last year, a man distinguished for ability, audacity and unscrupulousness, has been relegated to private life, at least for a little time to come. General Butler possesses uncommon faculties and a disposition to exercise them to the best advantage, which could not fail to render him a man of mark without the adventitious aid of official station, and it is probable that the world will not hear less about him now that he is forced to retire from the governorship of Massachusetts. Indeed, he has already announced his intention to contest the state again in 1884. New York, which was carried by Cleveland by an unprecedented majority last year, is now at best a doubtful state. Pennsylvania, which also elected a tidal wave Democratic governor a year ago, has resumed its place in the Republican column. Governor Pattison was nominated for the first place in the state mainly because he had made a respectable and trustworthy financial officer in a position where corruption had previously run riot. Coming after a venal era, his negative merit of integrity was unduly exaggerated. When called to the higher post it was soon seen that he had neither the insight nor the will which must combine in a really efficient party leader. One of the results is seen in the elections of Tuesday. On the whole, the tidal-wave governors of 1882 have been rather disappointing.

The President has made some changes in the civil-service rules which appear to be prompted by a desire to aid the reform, and which seem likely to increase the efficiency of the new system. Among these amendments is one providing that no person, while under enlistment in the army or navy, shall be examined for the civil service; another enlarging the authority of the commission over technical examinations, and a third declaring that competitive examinations for promotion shall be introduced so far as they may be deemed useful. The most important change made, however, is an amendment to the eighth rule, which distinctly prohibits the appointing power—alike in every department and in every post-office and customs office to which the rules extend—from making any discrimination in selections for appointment on account of any political or religious opinion or affiliation. The importance of this alteration will be understood when it is recalled that under the rules any violation of either of them by any executive officer is a good cause for his removal, and that under the Civil Service act the commissioners are authorized to make investigations concerning the enforcement of the act in such particulars. It seems evident that if the reform movement is to be a failure, it will not be because of the hostility of the present executive.

As England is the best foreign field for American inventions, the modification made in her patent laws in the last session of Parliament, and which go into effect on January 1, 1884, are of general interest to American inventors, especially as the reduction of agent and government fees for provisional and final specifications affords encouragement to the taking out of a larger number of patents. The extension of provisional protection to nine months is a valuable feature in the new arrangements, and not less so the granting to the inventor the right of publishing his invention six months prior to the application for a patent. Hitherto previous publication—even the taking out of an American patent previous to the application and the filing of a specification for a British patent—has invalidated any claim to the latter. The establishment of an annual tax in place of the stamp duties that had to be fully paid up on the issue of a patent, such annual tax to date only from the fourth year after the invention is granted, enables the patentee to test the marketable value of his property before committing himself to the full outlay for maintaining it. This is not all. The wranglings over conflicting claims to a patent that have hitherto taken place before the British Patent Office officials are put an end to. The decision of these officials in the case of valuable inventions was by no means decisive, litigation only being transferred to the Court of Chancery. The unjust provision by which a foreign invention could be secured in England by the first applicant, irrespective of his abstract right to it, is done away with. Patents are henceforth only to be granted to inventors or their assignees.

According to the annual report of the Commissioner of Internal Revenue the total receipts from all sources of internal revenue taxation for the fiscal year ended June 30, 1883, were $144,553,344, as compared with $146,523,273 for the year 1882, and $135,229,912 for the year 1881. The aggregate receipts for the first three months of the current fiscal year were $29,671,178, a decrease of $7,926,401 as compared with the receipts for the corresponding period in the previous fiscal year. Regarding the reductions of taxation, the Commissioner says that the aggregate amount of the reductions will be not less than $43,000,000, including $6,000,000 tax on the capital and deposits of national banks.

THE OCTOBER COTTON REPORT.

The cotton report to BRADSTREET'S for October, given below, is based on 1,093 replies received in time for publication. This report justifies the hesitancy expressed on September 29 in connection with the September report, namely: "It is too soon to expect reports indicating approximately the actual outturn of the crop in bales, as the weather for the next six weeks, as affecting the picking, will have much influence on the ultimate yield." It was further pointed out, as follows: "Generally, the plant has been so much injured by the drouth that a top crop is out of the question, but with favorable weather a top crop may be gathered in localities." The weather has been generally favorable for picking, and, in consequence, the prospect for the ultimate yield has improved. Beyond this, a top crop has developed in localities, but these are neither numerous nor of wide extent. In considering the trade meaning of this and the September report, it should be borne in mind that a calculation based on five reports to BRADSTREET'S during 1881 and 1882 showed that a given number of men engaged in reporting on the spot the condition of the cotton crop unconsciously underestimate the yield, or the prospects thereof, 8 per cent. These reports comprised two November reports as to actual yield, and three reports as to cotton on plantations. As to how much more gloomy, if at all, 1,200 men are likely to be at an earlier date in a bad season than November 20, those most interested are as well fitted to determine as is the Editor of BRADSTREET'S.

Following is our customary general table:

CONDITION OF THE COTTON CROP ON NOVEMBER 1, 1883.

States.	Quality of staple as compared with last year.				Weather since October 15.				Per cent. crop gathered on November 1	Percentage of area reported	Number of replies received	Number of counties reported	Cotton counties of over 500 acres
	Same	Worse	Better		Bad	Fair	Good						
North Carolina	39	64	15	118	58	38	23	119	67	100	118	62	63
South Carolina	35	53	12	100	9	20	71	100	85	98	81	31	32
Georgia	52	67	15	134	3	13	179	195	92	98	196	100	122
Florida	6	11	3	20	..	..	24	24	88	100	24	4	20
Alabama	36	46	15	97	7	18	82	107	87	95	174	50	62
Mississippi	35	49	13	97	18	31	49	98	84	98	127	60	70
Louisiana	20	30	20	70	..	9	47	56	88	95	56	38	40
Texas	41	42	41	124	2	52	70	124	68	98	127	60	121
Arkansas	17	57	23	97	10	65	28	103	83	88	204	108	73
Tennessee	8	21	7	36	13	29	31	73	54	100	105	63	37
Virginia, Missouri and Indian Territory	3	7	4	14	..	1	13	14	31	..	14	9	..
Totals	313	472	165	950	318	211	558	1,087	82	93	1,093	595	657

The weather in North Carolina has been, on the whole, unsatisfactory. In South Carolina the weather was better, and in Georgia, Florida and Alabama about all that could be desired. In Mississippi, Virginia and Texas the weather for the six weeks was from fair to good, while from Arkansas and Tennessee the reports of bad weather are rather numerous. The reports as to the amount of the crop picked on November 1 show that the highest percentage had been secured in Georgia. For the entire cotton belt the reports indicate that 82 per cent. of the crop had been picked on November 1. The average date of the replies is November 1. On September 29 we said: "Should the weather continue favorable for picking it is thought that by far the larger part of the crop will be picked by November 1." The quality of staple is distinctly below that of last year.

The table following gives the tenor of replies from 14 counties of North Carolina, containing 52 per cent. of the cotton area of the state. The average of replies as to decrease of yield in each county is given both in this and the succeeding tables. The fourth and fifth columns in the following table and in the tables for other states, show the changes in the percentages of decrease and increase in the yield from last month in the September report:

CONDITION OF COTTON IN THE LARGER COUNTIES OF NORTH CAROLINA ON NOVEMBER 1.

Counties.	No. of replies.	Ac're'ge 1883-4	P. cent. decr'se in yield from last year	Increase over Sept. report.	Decr'se from Sept. report.	Weather since Oct. 15	Quality of staple compared with last year.
Anson	4	27,000	50	..	..	Fair.	Same.
Edgecombe	3	55,000	22	12	..	Fair.	Same.
Franklin	4	28,000	29	1	..	Bad.	Same.
Halifax	3	37,000	17	..	..	Bad.	Worse.
Johnson	3	25,000	34	9	..	Bad.	Worse.
Lenoir	2	34,000	33	11	..	Fair.	Worse.
Mecklenburg	5	46,000	30	1	..	Good.	Better.
Northampton	2	38,000	34	14	..	Fair.	Better.
Pitt	3	33,000	25	3	..	Bad.	Worse.
Richmond	3	30,000	43	6	..	Fair.	Worse.
Robeson	4	37,000	46	..	4	Fair.	Worse.
Wake	3	59,000	6	..	14	Bad.	Same.
Wayne	2	36,000	36	..	..	Bad.	Worse.
Wilson	3	24,000	19	..	3	Bad.	Same.

To further explain: The figures in the fourth and fifth columns indicate that for the counties opposite the percentage of decrease reported now is better or worse than in the September report and the extent.

The 13 counties of South Carolina named in the following table represent 62 per cent. of the cotton area of the state:

CONDITION OF COTTON IN THE LARGER COUNTIES OF SOUTH CAROLINA ON NOVEMBER 1.

Counties.	No. of replies.	Ac're'ge 1883-4	P. cent. decr'se in yield from last year	Increase over Sept. report.	Decr'se from Sept. report.	Weath'r since Oct. 15	Quality of staple compared with last year.
Abbeville	4	90,500	50	..	5	Good.	Better.
Anderson	3	73,000	50	10	..	Fair.	Worse.
Barnwell	2	85,000	37	..	..	Good.	Same.
Darlington	4	66,500	40	..	9	Fair.	Worse.
Edgefield	4	93,500	39	..	9	Good.	Better.

The above tables show that the outlook has grown worse rather than better in the large counties of North Carolina. In South Carolina the situation is reported less favorable. An improvement is noted in Georgia, while the situation is about the same in Florida and Alabama. From Mississippi a distinct change for the better is reported. Louisiana and Texas are unmistakably better. Arkansas is about the same, and Tennessee somewhat worse.

THE TROUBLE WITH STEEL-RAIL PRICES.

The announcement by the Lackawanna steel rail mill that it has placed 30,000 tons of Bessemer rails at $35 per ton has caused some excitement in the trade, it being claimed that this figure will necessitate the shutting down of smaller rail mills or others which cannot produce rails at as low a cost price. Mr. Thomas Carnegie, of the Bessemer and Homestead steel rail mills, Pittsburgh, is quoted as saying that if the steel rail manufacturers continue reducing the price of rails he will have to close his works and throw 5,000 men out of employment. He said he would try to meet the cut of the Lackawanna company, but "could not tell" how long he would run on that basis; probably a short time only.

This situation naturally calls attention to the steel-rail trade in general. It is a matter of easy remembrance that the past twenty months have witnessed a steady decline in prices of steel rails at home, and it may be added that English rails have suffered similarly, though to a less extent. The price of domestic steel rails at the mill in January, 1882, was $56.50 per ton, a decline of $3.50 within thirty days. The close of that year saw prices at $39 per ton, a loss of $17.50 per ton during the calendar year 1882. Early last spring quotations were made at $38, during the tariff revision agitation, and the outcome a few months later was $37.50 per ton for good lots. The early fall saw actual prices down to $36.50, though the nominal quotations were from 50 cents to $1 per ton higher. The action of the Lackawanna company last Saturday in cutting under to $35 marks a decline from $60 since December 1, 1881, or a loss of $25 per ton in twenty-three months.

The steel-rail trade in Great Britain, according to reports in London trade journals just at hand, is scarcely if any better off than its sister industry in the United States. As *Iron* puts it, "the outlook in the immediate future before the steel-rail manufacturers is grave in the extreme." Prices there are lower now than since 1879, one railway having contracted for 4,000 tons at a price under £5 per ton delivered in the Thames, leaving the inference that not more than £4 10s. at the works was realized by the makers, equivalent to $21.87

per ton, reckoning £1 equal to $4.85. Thus we find English makers crying out that prices pinch the cost of production, while receiving about $13 less per ton than American makers, who now find themselves (in some instances) similarly placed.

The apparent uncertainty existing in Mr. Carnegie's mind as to the effect on his works of such a price as $35 per ton for rails, and his evident disinclination to express himself respecting the new rate, lead to the belief that the main trouble lies in the uncertainty as to whether prices, now low, have in fact touched bottom.

As in Great Britain, the trouble here in the steel-rail industry lies in the unwarranted increase in producing capacity. The mills, now that the building of railways has materially slackened, find themselves competing for sales in order to keep their rollers in operation. Hence prices have steadily declined, while the aggregate production has been thus far fairly well maintained. In Great Britain the exports of steel rails in nine months of 1883 were 579,421 tons, as against 552,555 tons in nine months last year, and the home consumption has been about the same in both years. Other exports of British iron and steel have declined. The enormous strides made by the steel industry abroad is shown by the increased production in 1882, 1,673,649 tons, as compared with 410,000 tons in 1872. Of the 1,673,649 tons of steel ingots produced last year in Great Britain 1,325,000 tons were rolled into rails. Now, however, the demand for British steel ingots has so declined that there is an excess supply. The rapid development of Bessemer steel production in the United States has been quite as remarkable, the rolling mills in this country having turned out 50,000 tons more than those in Great Britain. The continent has also made rapid strides. The world's production of Bessemer steel in 1882 is estimated to have exceeded 5,000,000 tons, and it is believed that the quantity of steel rails rolled was not less than 3,750,000 tons. This rate of rail production would relay all the railways in existence in six years' time. The world will require many more steel rails, but the new process for making steel rails has been so rapidly extended that the capacity is, for the time being, in excess of the demand. This situation has been experienced by the domestic pig iron furnaces, and a restrictive policy had to be adopted by some mills, while others went out of blast to stay. The rail-mill outlook is for the discontinuance of those who cannot compete. An opinion has been expressed that the attitude of Mr. Carnegie and others is assumed to pave the way to reducing wages of employés, inasmuch as the season approaches for renewing contracts between mill owners and their employés. The question of wages may enter into that of continuing work at some mills, but the point at issue lies much deeper. Everybody cannot go into the steel-rail business. In fact there appears to be too many engaged at it in the United States and Great Britain already.

TWENTY YEARS FOREIGN TRADE.

The fact that the foreign trade of the United States for nine months of the past year showed an excess in the value of exports over imports of more than $50,000,000, as compared with a similar excess of importations during nine months of 1882, has been widely discussed and many favorable inferences respecting the conditions affecting international trade have been drawn. This is another outcropping of that species of argument which finds in an export trade balance a favoring circumstance, and bespeaks forgetfulness of the fact that commerce between nations in its widest sense is not a cash business. In order to sell abroad one must in the long run, to a certain extent at least, become a customer for foreign goods. This is shown by an examination of the fluctuations of our international trade balance in the light of varying commercial success in the past twenty years.

It is a matter of easy conjecture that during the fiscal years 1863 to 1872, inclusive, our foreign purchases annually exceeded in value those of our exports. Owing to the draft on resources made during the civil war, and the earlier period of recuperation therefrom, it was quite natural that the soil should to a large extent remain untilled, and that our industries should fail to make themselves felt in foreign trade exhibits. During the latter half of the period noted, however, an army of men had again become producers. Meanwhile the annual balances due to foreign countries for goods purchased had been accumulating. In 1863 the value of the total exports of domestic produce and merchandise was $203,964,447, and that of the importations was $243,335,815, an excess of the latter amounting to $39,371,368. This "unfavorable balance" increased year by year, until in 1872 it was: exports $444,177,586 and imports $626,595,077, or an excess of purchases valued at $182,417,491. During the ten years noted the aggregate of excess of imports over exports was valued at $966,784,299.

The ten succeeding years show almost the exact reverse of this; that is, with the exception of 1873 and 1875, the reports for the fiscal years from 1873 to 1882, inclusive, furnish excesses of exports as compared with imports. The first year named, in this second decade, marked the height of commercial prosperity, and the year following, the beginning of that period of contraction which continued to make itself felt upon the entire community with increasing effect until the close of 1879, when the second commercial expansion took its rise. The record of imports and exports during this term of years is quite in accordance with the situation. The imports, valued at $642,136,210 in 1873, again exceeded the exports, but by a greatly reduced amount as compared with 1872, $119,656,288. From that year onward the purses of the people, six years in succession, felt the effects of the preceding expansion of credits and anticipation of wants, and demands on foreign merchants steadily declined, touching $437,051,532, the lowest point, in 1878. From that time an increase took place, reaching $445,777,775 the next year, and $667,954,746 in 1880. In 1881 there was a slight decline in the total value of importations—to $642,664,628—since which time they have mounted to nearly $725,000,000 each in 1882 and during the fiscal year last past. The value of the exports during this period cannot be said to have suffered, as did the side of the account last treated. It is needless to go further than to specify the wide agricultural development and the increasing harvests in excess of the home demand during the past decade, in order to make this clear. The value of the exports in 1873 amounted to $522,479,922. It declined to $513,442,911 in 1875, the smallest total within the period noted. In that year the excess value of imports was $19,562,725. In the succeeding year the total value of exports was $540,384,671, from which annual sales in foreign lands steadily increased until they were valued in 1881 at $902,377,346. The deficient crops permitted a decline the succeeding year, and the total was $750,542,257. That year, however, brought the most bountiful harvests in the history of the nation, and our exports in the last fiscal year aggregated $823,833,656 in value.

The following table gives the record of the ten years sketched above, in more detail, with the percentages of the total value of exports due to exports of agricultural products:

Year ending June 30.	*Exports of mdse.*	*Proportion agr'l prod.*	*Imports of mdse.*	*Excess of exports.*
1873.....	$522,479,922	77.6	$642,136,210	*$119,656,288
1874.....	586,283,040	79.1	567,406,342	18,876,698
1875.....	513,442,711	70.9	533,005,436	*19,562,725
1876.....	540,384,671	76.6	460,741,190	79,643,481
1877.....	602,475,220	72.6	451,323,126	151,152,094
1878.....	694,865,766	77.0	437,051,532	257,814,234
1879.....	710,139,441	78.1	445,777,775	264,661,666

1883.....	823,833,656	77.0	723,180,914	100,652,742
1883†.....	839,945,162	....	728,551,696	111,393,466

* Imports. † Year ending September 30, 1883.

Appended to the table is an abstract from the last report of the Bureau of Statistics, showing the record for the fiscal year ended September 30 last. Perhaps as significant as anything else shown are the percentages indicating our dependence on farmers and live stock breeders for the so-called favorable export balance, which, it has been noted, declined to $25,902,683 for the year ended June 30, 1882, and has since exceeded $111,000,000. In order to show this more clearly we have been at some pains to compile from official sources the following, which shows the quantity of wheat and wheat flour (in equivalent bushels of wheat), the number of bales of cotton, the number of bushels of Indian corn and cornmeal (in equivalent bushels of corn), and the number of gallons of petroleum which have been exported in each of the ten fiscal years last past:

Year ending June 30.	*Exports wheat and wheat flour, bushels.*	*Exports cotton, bales.†*	*Exports hog products, pounds.**	*Exports Indian corn and cornmeal, bushels.*	*Exports petroleum gallons.*
1873....	$52,014,715	2,676,000	690,063,605	40,154,274	187,815,187
1874....	91,516,398	2,811,000	623,415,255	35,985,834	247,806,483
1875....	72,912,817	2,674,000	473,308,273	30,025,026	221,955,308
1876....	74,750,682	3,232,000	550,331,129	50,910,532	213,660,152
1877....	57,043,936	3,028,000	764,170,273	72,652,611	309,198,914
1878....	93,139,260	3,356,000	1,007,467,860	87,191,990	338,841,303
1879....	147,687,040	3,466,000	1,143,309,938	87,884,892	378,310,010
1880....	180,304,176	3,861,000	1,230,702,175	99,572,329	423,964,699
1881....	186,331,614	4,505,000	1,233,015,127	93,648,144	397,660,102
1882....	128,271,802	3,551,000	964,803,259	44,000,000	515,022,092
1883....	154,971,133	4,724,000	788,649,540	41,700,000	505,931,621

* Bacon, hams, sides, shoulders, pork and lard. † Year ending September 1.

From 52,000,000 bushels of wheat (including that sent abroad as flour), exported in 1873, the quantity increased to 91,000,000 in 1874, and declined to 57,000,000 in 1877, when it increased rapidly to 186,331,614 bushels in 1881, declined to 128,271,802 in 1882, and to about 154,971,133 bushels in the last fiscal year, nearly 300 per cent.—as much as was sent abroad in a twelvemonth ten years ago. The exports of cotton in 1882–83 (to September 1) were 4,724,000 bales. Ten years before they amounted to but 2,676,000 bales, or 56 per cent. of the shipments of the last fiscal year. The causes which have led to the decline in shipments of hog products and provisions in the past two years are well known. The heavy gains in exports of mineral oil and its products nearly offset the decreased shipments of Indian corn, in large part due to the 30 per cent. diminished harvest in 1881, as compared with 1880. It is by the use of our expanse of fertile soil, then, that we have been enabled to maintain the alleged "balance of trade in our favor." It is of course unnecessary to remind one that this may not always prove true, with rapidly increasing population and a declining average production on old-tilled soil. Thus far, however, farmers and live-stock men are still furnishing 77 per cent. of our total exports, about the same proportion as in 1873, although the total value of shipments abroad was then but 63 per cent. of what it is now.

The "favorable trade balances," *i. e.*, excesses of exports during twenty years past, it is to be feared will not look so one-sided when compared with the aggregate of excesses of imports during the same period. From 1863 to 1872, inclusive, the ten years' excesses of values of imports aggregated, as noted above, $966,784,299. This sum, added to the excess value of imports in 1872 and in 1875, amounts to $1,106,003,312. Eight of the ten years, from 1873 to 1882, inclusive, gave excesses of exports aggregating in value $1,225,447,486. Since the close of the fiscal year 1882 we have exported something over $111,393,466 worth of produce and merchandise more than we have purchased, which indicates sales abroad in the neighborhood of but $230,000,000 in twenty-one years in excess of the value of our purchases in foreign lands.

THE ELECTIONS AND THEIR MEANING.

The elections of 1883, looked at from any other point of view than that of the thorough-going partisan, cannot but be regarded as encouraging upon the whole. In the downfall of Mahone in Virginia one of the most flagrant offenders against political morality has been signally rebuked. In Massachusetts the citizens have pronounced against Butlerism, though by a majority so small (upon a very large vote) as to indicate that the movement headed by the fickle and boisterous demagogue who has just been retired was, in part at least, an expression of real popular needs. Of the other states in which elections have been held the most important have been carried by comparatively small majorities, an indication that former party affiliations have influenced only to a very slight degree the action of the independent voters. This has been the case in Pennsylvania, which has been carried by the Republicans, thus reversing the decision of last year, though by a majority smaller than the state has been accustomed to give for the Republican candidates. In New York the great Democratic majority of last year has been very much reduced, and the party has lost both branches of the legislature. The experiment in municipal reform which has been going on in Brooklyn for the last two years, and which has been watched with interest by the country, is to be continued for another term; Mayor Low, with whose name the reform has been associated, having secured a reëlection.

As we have said, the results of the election are encouraging to the friends of good government throughout the country. They indicate that the independent spirit so strikingly manifested in the elections of last year is likely to continue a permanent force in the politics of the country. That the independent movement is an intelligent one, and not the result of a reaction merely, is rendered apparent by the fact that the popular verdicts of last year have been in many instances reversed, though not in such a way as to indicate a return to the old situation of parties. In most cases the old political issues—which, indeed, have been kept alive latterly only by a system of political galvanism—have been dis-

regarded, the claims of the respective parties upon the suffrages of the people being based largely upon considerations of local interest or of administrative or economic expediency. These indications are very promising. They appear to insure, as the general outcome of the elections seems to imply, a vigilant and efficient popular criticism of the legislative and administrative policy of the great parties or of the want of such a policy on the part of either of them. It is a fortunate thing for the country that the conditions to which we have referred exist. An independent and critical attitude on the part of those who really hold the balance of political power in this country—the independent voters—puts the politicians on their good behavior, and thus tends to secure increased attention to public needs, reforms of administrative abuses, and more careful legislation than is possible under the unchecked ascendancy of any particular party. Such an attitude on the part of the independent classes is peculiarly valuable at a time when, as at the present time, economic questions of the highest importance are pressing for solution.

The campaign just ended has not been without impressive lessons to political managers. These gentlemen have been taught that the prestige of recent success is by no means sufficient to carry through a ticket freighted with objectionable candidates, and that the adoption of a policy distinctly distasteful to independent citizens, or the failure to adopt or enforce a policy of any kind is likely to bring about their summary expulsion from power. It is well that this critical temper has been manifested as unmistakably as it has been on the part of the public. The politicians have long sinned grievously in all of the particulars pointed out, and in none more than in the one last mentioned. Their persistent evasion of plainly-presented issues has done more to foster the corruptions and abuses which have pervaded recent politics than any other cause, perhaps more than all other causes combined. It is their system of ignoring the issues of the time which has degraded the great parties from the position of exponents of measures and policies to that of "organized appetites," or but little better. In considering the attitude of the great parties toward the tariff some months ago we pointed out the evils of this supposed politic system, and we need not repeat ourselves here. It is no new doctrine that a party without a policy swiftly degenerates into a faction, and that, to use the impressive words of Bolingbroke, "faction hath no regard to national interests," and "therefore will bear anything, share in anything, justify anything." If the evils inseparable from the growth of faction would be avoided there must be a division of parties upon the pressing issues of the day. The politicians who are living on the galvanization of dead issues have already too long darkened counsel. They should be made to give way to new men of conviction and principle, who will recognize and endeavor to solve the unsentimental, but none the less important, questions which have been growing into prominence since the close of the war.

THE APPRECIATION OF GOLD.

Some months ago Mr. Goschen, who has in past times held office in the English goverment, and is held to be a great authority on questions of finance and trade, and especially on monetary matters, called the attention of the House of Commons to what he believed was the dominant cause in the low prices which, as he believed, were prevailing. He subsequently repeated his opinions with a certain amount of statistical particulars, which seemed to him to confirm or support his views, and he subsequently delivered a more elaborate statement of his position in an address which he delivered at the Bankers' Institute. Mr. Goschen's theory excited no little interest in certain circles. Every country always possesses a number of persons, very estimable, sometimes very opulent, and apparently always very disinterested, who are anxious to reconstruct the currency, and believe that if this can be done active trade and high profits will inevitably follow. The theory which they advocate implies some kind of inflation. Sometimes it is the issue of a lower denomination of convertible paper money, the least dangerous of the dogmas, though this always renders the operation of maintaining the necessary balance of specie and paper more frequent and more difficult; sometimes it is a proposal to issue paper to an unlimited or, at least, to a very large amount against securities, an exceedingly dangerous process, and one which always has, as far as my knowledge of the history of banking goes, ended in a crash; sometimes they take up the latest and apparently the most seductive form of currency-mongering, the theory of bimetallism. I know a number of persons, fathers of families, people in solid credit, habitual churchgoers, and whatever else may seem to guarantee solvency, sobriety, sanity and character, who are as mad about the currency as any poor creature is who fancies in his asylum that he is the Pope of Rome, the Emperor of China, or the President of the American Republic.

I am persuaded that my friend, Mr. Goschen, though he may be right in his conclusion, is entirely wrong in his premises, and that he has served up to the bankers, the theorists, and the speculators, an enormous bowl of gruel which is the product of a singularly small amount of oatmeal. He took twenty-two articles which had been selected for certain purposes by eminent English economists, and calculated their average price for 1845–50. This price he represented by 100. From thence he proceeded to 1857, when he added to or deducted from each number the rise or fall in the article. Thence he proceeded to 1866, when the highest amount of aggregate prices was realized, and from January 1 of that year onward to January 1, 1883. The first aggregate number, which he calls the index number, was of course 2,200; the highest was on January 1, 1866, when the number was 3,564. Thence prices rapidly fell, were restored in 1873, when they were at 2,947, and thence have gradually sunk, though with some slight variations, having reached their lowest level on January 1, 1879, when they were 2,202, and standing on the first day of the present year at 2,343. From these facts, which appear to be indisputable, Mr. Goschen infers a great exaltation in the price of gold, or, if you will, in its purchasing power, and Mr. Gibbs, sometime governor of the Bank of England, argues the necessity of at once adopting bimetallism as a means of saving British trade from going irretrievably to the dogs.

Figures are proverbially two-edged tools to those who seek to grasp them and cannot catch their instruments by the handle. In the first place, the twenty-two articles selected by the eminent economist were of very different value for purposes of inference, *i. e.*, for the cost of production, and for the equation of supply and demand. No reasonable being would conceive that the price of indigo, tin, copper and cochineal are as important factors in determining whether the appreciation of gold is a fact or not, as those of wheat, wool, tea and sugar are. If the aforenamed articles become scarce there may be a great economy induced in their use; if they become exceedingly plentiful, the demand may not be correspondingly enlarged, and the plenty may be induced by many causes with which the cheapness or dearness of gold, *i. e.*, its purchasing power, as interpreted by demand and supply, may have absolutely nothing to do.

In the next place, national causes may seriously influence prices, and political events as seriously. Every commodity the plenty of which depends on the seasons, especially if the product be important and is derived from a narrow or special geographical area, may be affected by causes which have nothing to do with the plenty and scarcity of gold. The area from which so principal an article as wheat is derived is getting wider and wider, and the scanty produce of a year in one place may be relieved by the abundance of the year in another. But in 1870 the principal source of foreign wheat was the United States, and a bad harvest there would have been felt severely in England. At the present time the cheapness or dearness of cotton depends greatly on the American crop, the cheapness or dearness of maize entirely. At the late meeting of the Social Science Congress at Huddersfield, in Yorkshire, over the trade and economical section of which the writer presided, a paper was produced which showed that if one take the nine principal articles of human consumption, wheat, cotton, wool, sugar, wood, tea, butter, cattle and sheep, it would be found that when the prices of 1870 and 1882 were compared there would be found a rise of nearly three per cent. on the whole instead of, as Mr. Goschen would suggest, a fall of about twenty.

Again, political causes may force very serious fluctuations in prices. If the average prices of cotton and cotton manufactures be taken at 100 in 1850, they rose to 295 in 1866. Who does not discover in this the effect of the civil war in the United States? In 1873 iron and coal were enormously enhanced in price. The cause is to be found in the Franco-German war, and in the prodigious demands for English products after the cessation of the struggle. Indeed, from 1853 to 1873 English prices were constantly affected by political events. First, there was the Crimean war, then the Indian mutiny, then the civil war in America, then the Franco-Austrian and the Austro-Prussian wars, and finally the great war between France and Germany. During the last ten years, with the exception of the struggle between Russia and Turkey—the effects of which on European commerce were comparatively trivial—the European continent has been at peace, and all countries have been striving to outstrip each other in productive energies.

Economists agree that the value of commodities depends in the long run on the cost of their production. But the ingenuity of man has been unceasingly and increasingly devoted to lowering the cost of production. This is stimulated at once by the struggle for individual success and by the inventive energy of nations. Hostile tariffs, when they have not been actually or virtually prohibitive, have increased these energies. Besides, when an individual or a number of individuals have embarked their skill and capital in an undertaking, though the abstract economist treats capital as mobile and the transfer of it and labor to a growing industry from one that is depressed as a regular and natural process, the practical economist knows that such a mobility and such a transfer are at the best tendencies, and not very vigorous tendencies either. In 1873 the demand for English iron and coal led to the creation of many works and the opening of many pits which would neither have been constructed or sunk had it not been for exceptional demand. Now some of these may be abandoned or shut up, we may be sure not without a struggle. Many, however, are kept going at low profits and low prices, especially when they are under joint-stock management, for the shareholders in joint-stock enterprises are content with less profits than private traders are, and will go on hoping when private persons lose heart.

Furthermore, the shortening of credits by means of instantaneous transfers through the telegraph has had a prodigious effect on trade and prices. As it materially economizes the currency by making it more efficient, it should cheapen the use of gold, and so tend to raise prices. But it operates more powerfully in the opposite direction by lessening cost, and so it tends to lower prices. I have little doubt that the rapidity with which mercantile intelligence is communicated and acted on has materially assisted in making the stock of the precious metals an international factor in currency and exchange, and to make what Adam Smith calls the money of the great mercantile republic more mobile and more manageable. They who have followed the facts see that much of that which a few years ago was characteristic of the foreign exchanges has now become so modified that it has ceased to be accurate, and no one, as I am aware, recognizes this so clearly as Mr. Goschen does, whose work on this subject, published some twenty years ago, was once classical.

There is only one way by which additiona quantities of the precious metals have cut upon values, when the country does not produce sufficient of those metals for its own consumption or convenience, and this is through the foreign exchanges. Now the first evidence that such an effect is likely to be produced is a great exaltation of prices in the country which originates those metals, not in the particular locality in which they are obtained, for here exceptional causes may have immediate sway, and, in particular, the disproportion between the industry which produces the metal and the industries which supply the wants of the producers. Here the excess of supply will be first manifest. But it takes a very long time for the new additions to lower the value of existing stocks. Every producing interest favors the process, hence prices are gradually heightened. But I am convinced from my own researches that it took many a century for prices to be solidly affected by the Spanish discoveries in America. Though the resources of the Mexican and Peruvian mines were squandered wholesale in the Spanish wars of the sixteenth and seventeenth centuries, the trade of Europe was inadequate to distribute them.

But though any dealer in goods would energetically assist a rise in prices, he will

do his very best still more energetically to obviate a fall, unless indeed it be by cheapening the process of production, when he will suffer no further fall, if he can help it, than what may be sufficient to give him a control over the market. He will in his collective capacity—*i. e.*, as one of the great body of producers and traders—economize the use and increase the efficiency of the precious metals to the uttermost. He will get rid of every possible element of cost. He will clear out the middleman, and extinguish as far as he can all intermediate profits. He will scan the market keenly, and not without the coöperation of his fellows; will regulate production as far as possible in amount and stint it as far as is safe in supply. The instincts of every one who produces and sells are found against a falling market, even those of workmen who anticipate, though not quite correctly, that a decline of wages will follow a decline of prices, an opinion to which statistical evidence gives a complete contradiction. I do not indeed affirm that there has been no fall in prices; on the contrary, there are many important articles in which a fall has unquestionably been effected. But there has been no fall in the rate of English wages; on the contrary, there has been a general rise, and we still lack any evidence to prove that gold has been appreciated.

JAMES E. THOROLD ROGERS.
Oxford, England, Oct. 25.

THE WORLD'S MONEY.

The director of the mint, in his annual report, reiterates his estimate that the amount of gold and gold bullion available for immediate coinage in the United States is about $606,000,000—a statement which has been greatly criticised by experts—and makes additional estimates as to the world's money which, possibly, may not meet with less severe criticism. The mint bureau certainly should have the best means for accurate information on the subject. Nearly all of the gold and silver obtained from our mines is in some form deposited in the mints and assay offices, or exported through the custom houses. Records are kept of the character of every deposit, and of the locality of the production of domestic bullion. The gold product for the calendar year 1882 declined $2,200,000, while the silver product increased $3,800,000. The deposits of gold bullion for the first eight months of 1883 show also a decrease as compared with the corresponding period of last year, while the silver deposits show an increase. The estimate for the present calendar year is that the production of gold will be at least $500,000 less, and that of silver at least $2,000,000 greater, than that of the previous year.

Director Burchard's estimate of the coin in circulation in the United States is $846,595,749, of which $606,196,515 is gold, and $240,399,234 silver. The director bases this estimate on the statistics of the mints and assay offices as to the amount taken from the mines, on the reports of the Treasurer of the United States as to the amount in the Treasury, and on the Custom House returns of the amounts exported. To all adverse criticisms upon these statements he simply answers "the amount is there." The director's returns, so far as they are based on actual figures of the government, and not upon estimates, can probably not be successfully combated. His statement as to the total United States circulation is subject, unquestionably, to greater exception, for it is based, to some extent, upon estimates. His conclusion is, that on October 1, 1883, the total United States money in circulation was $1,070,364,021, as against $1,051,248,386 on October 1, 1882, or a net increase during that calendar year of $19,115,635. Mr. Burchard takes no account in this estimate of the unredeemed legal tender, demand and interest-bearing notes, which he considers as out of circulation. He does include the gold and silver bullion in the Treasury, and he states that it may properly be counted as a part of the metallic reserve, for the reason that it is capable of conversion into coin. The statement as to the paper currency is based upon the returns of the national banks of June 22. Since that date several calls of 3 per cent. bonds have been made, with the result, as the Comptroller of the Currency estimates, of an aggregate retirement of national bank circulation of some $12,000,000. This sum should properly be deducted from the estimate of Director Burchard as to the amount of money in active circulation, which would reduce his net gain of the calendar year to $7,000,000.

The returns as to the coinage of foreign countries contain some interesting facts. In Great Britain no gold was coined in 1882. The best estimate of the gold coin in circulation in the United Kingdom is 110,000,000 pounds sterling, and of paper money 43,721,000 pounds sterling. The gold coinage of France in 1882 amounted to 3,742,000 francs, and the silver coinage to 7,159,859 francs. Mr. Burchard puts the total paper circulation of the thirty-eight principal countries at $3,832,920,903; the gold circulation at $3,333,433,000, and the silver coin at $2,712,226,000.

MEXICAN PRESIDENTIAL METHODS.

In a recent issue of the *Mexican Financier*, published in the City of Mexico, exception was taken to a statement in BRADSTREET'S to the effect that General Diaz had procured his election to the position of President of the Supreme Court in order to secure his succession to the presidency in the event of the death or disability of his friend Gonzalez. As Mexican politics must be considered in connection with the business interests of Mexico, it may be worth while to make a fuller presentation of the facts alluded to in BRADSTREET'S, and objected to by the *Mexican Financier*.

The Mexican Constitution of 1857 provided that in the case of the death, disability or unauthorized absence from the Federal District of the President of the republic the President of the Supreme Court should succeed to the presidency. If the Chief Justice happened to be at odds with the administration the chance of the President ever getting back again into power, when once he had been thus superseded, was small. It was this possibility of permanently losing his office by an adverse "temporary" occupation of it that made Diaz, during his late term of office, struggle so heroically against an attack of illness and the possible consequent succession of Senor Lic. Ignacio Villarta, a pronounced opponent of his administration, who then was President of the Supreme Court. By declaring each day that his health was improved, by appearing in public when ill enough to be in bed, by the judicious filibustering of Congress to the end that his absence from his official post did not require official recognition, Diaz succeeded in staving off the danger that menaced him. The opening required by law—that the President must declare his disability, or that it must be declared by Congress—did not occur, and so the presidency did not come into the hands of Villarta. The "election" of Diaz to be President of the Supreme Court when his other self, Gonzalez, was "elected" President of the republic, was a transparent operation. It made the maintenance of his grip upon Mexico absolutely sure, and it assured also a harmony of purpose between the executive and the judiciary of the republic that—especially in the contingency of political cases submitted to the courts—would be of the first importance and value.

The recent constitutional amendment has vested the succession to the presidency in the president of the Senate—an officer elected monthly. To meet this new phase of the situation, Diaz became a senator, and, therefore, is eligible at any time to be made president of the Senate, and thereafter to be President of the republic should the office become—or be made—vacant. In other words, besides being in line for the occupation of the office should it be vacated accidentally, he now is in a position to resume the presidency temporarily should occasion require his personal presence at the head of affairs. By "an arrangement" with Gonzalez, that pliable functionary can proclaim his disability to hold office, or can absent himself from the federal district without the permission of Congress, and thus vacate his office. Diaz having been previously, and as a part of the "arrangement," elected president of the senate, then will become President of the republic—and while holding this position can arrange for a general election under conditions very favorable to himself. When this amendment was adopted, an alternative amendment was offered providing that upon the vacation of the presidency the office should vest in a committee of four senators (insaculados), who would discharge its functions until a new President should be elected. The Diaz party naturally opposed this arrangement, so unfavorable to the fortunes of their leader, and were able to defeat it by securing the adoption of the present amendment—that virtually secures to Diaz his continuance under any circumstances at the head of affairs.

That Diaz will abuse the power vested in him does not follow necessarily from the fact that he possesses it. As already has been pointed out in BRADSTREET'S, he has done a great deal for Mexico, for which not only all Mexicans, but all friends of civilization, must be grateful. He has tranquilized the country, he has organized a fairly stable government, he has encouraged the growth of a wholesome commerce. But while all this is to be remembered to his credit, the fact must not be lost sight of that he attained to the presidency by usurpation, and that his first consideration in governing the republic is, and always has been, himself. As in the case of a Stalwart turned Reformer, there is room for hoping that Diaz will continue the good work that he has so well begun; but there are bad streaks in his record.

OCCASIONAL NOTES.

Another attempt is to be made the coming winter to induce Congress to make an appropriation for constructing the Hennepin canal. The Illinois and Mississippi River and Canal Commission have just held a meeting in Chicago, at which vigorous resolutions were adopted and the speakers set forth the need of a strong lobby. One of the objects is the enlargement of the Illinois & Michigan canal at a cost of $2,298,919, making a waterway ninety-six miles long, the annual expense of maintenance to be $50,000. There are three other schemes, any one of which would involve an expenditure of $6,000,000 to $7,000,000. The connection with the Mississippi river would be made near Rock Island. It is estimated that 20,000,000 tons of freight are brought east from Iowa, Minnesota, Nebraska and Dakota every year, and the canal would be a bidder for a large portion of this business. A new survey was made by order of the last Congress, and the advocates of the project, among whom is a large representation of the business ability of the west, say the time is now ripe for beginning the work. But the drift of public sentiment against shouldering such enterprises on the general government is so strong that the success of their undertaking is extremely doubtful.

The fruit crops of Michigan have been unsatisfactory this season. The quantity of peaches gathered was fair, but the quality was poor. The cold spring was unfavorable, and many dropped from the trees during the summer. In the southern part of the peach country the disease known as "yellows" has prevailed, entire orchards being affected by it. No remedy is known, and it is causing much anxiety. The early fruit sold at good prices this season, but the late varieties were marketed at low figures. The apple crop is the poorest for a score of years, and it is claimed that there are not enough to supply the home demand. The price in first hands is about $1 per bushel. Pears have yielded handsomely, and bring $8 to $12 a barrel. Quinces, too, are a good crop. Strawberries, cherries and grapes were a disappointment owing to cold weather in the spring and the fall. Vineyards have been greatly extended during the past few years, but much of the fruit was destroyed this year by one night's frost.

The Chicago *Tribune* has published reports from Illinois, Wisconsin, Indiana, Michigan and Iowa showing a pretty satisfactory economic condition of the rural population. Of 118 replies to the question, "Are the farmers borrowing more than usual from the banks to carry their stuff?" 94 are negative. It is well-known that grain is being held back in large quantities, much of it by the farmers themselves, and these replies indicate that they are financially strong. Yet great amounts of money have recently gone west, taking the form of investments in business enterprises. Dakota has perhaps been the most conspicuous objective point. Ninety-four replies state that money is tighter than last year at this time, and 45 easier; 95 say that mercantile trade is good, and 45 say it is not; 25 represent the stores overstocked with goods, while 113 are to the opposite effect; 72 reply "yes" and 68 "no" to the question, "Are the farmers paying their store bills promptly?" while 106 say that the manufactories are running on full time and 10 on half time; 98 reporting that the mills are making a good profit, and 16 the contrary. To the question, "What proportion of the farmers' products remains on their hands?" 73 reply "large," 47 "average," and 25 "small." Thirty-nine reporters say that present prices are satisfactory to the farmers, and 101 say they are not. As to the feeling about the future, "hopeful" is the reply of 90, "uncertain" of 28, and "discouraged" of 12. These five states are in the very heart of the best producing area of the country, and the presentation is an encouraging one.

As whatever concerns the better application of mechanical and chemical principles is of general value, it is with satisfaction we note the result of late investigations carried on in Germany with reference to boiler explosions. The researches in this line to which we here refer appear to throw light on numerous mysterious occurrences of the kind, and to suggest, at the same time, means for their avoidance. With the universal use of steam in operating elevators in business buildings and apartment houses, as well as driving the machinery of manufactories, the public cannot be too much on the safe side. For a vast number of boiler explosions one is at no loss for the causes that have led up to the catastrophes—negligence of engineers in not keeping the boiler properly supplied with water; ignorance shown in the unreasonable weighting of escape valves; weakness in the shell of the boiler from unsuitable material or the effect of corrosion, being among the most prominent. But in instances where construction was in all respects perfect and the boilers were under skilled and unintermitting supervision, explosions disastrous to life and property have again and again occurred, baffling engineering ingenuity in the endeavor to discover the fault. A German professor of eminence propounds the theory, which has been satisfactorily tested abroad by a body of engineering experts, that the prime cause of explosion in many hitherto unexplained disasters has been the insufficiency of air both in the water in the boiler and in the vapor above the water-line, thus occasioning a sudden and powerful expansion of both, sufficient to rend the plates. The tendency of heat is to drive the air out of water, and, with the steam generated within the boiler deprived of its due modicum of air, the result is an explosion. That a host of explosions occur at the period of "firing up," after the furnace has been banked or suffered to get low for a considerable time, is a fact tending to confirm the correctness of the theory. The remedy is manifestly in the supply of fresh water and also a drawing off of a portion of the air-exhausted water in case of a boiler that has been left inactive for a period with the fires still in.

It is the same story that comes from all the stock exchanges of the world, and the universal distrust is a striking illustration of the unification of the markets everywhere. There are special causes at work in some countries, but all are under the common cloud of commercial depression. In one important respect we are much better off than the continental countries. The credit of our government is unquestioned, and it is engaged in no foreign enterprises likely to involve it in trouble. Its 4½ per cent. bonds, therefore, sell at 115, while those of France are quoted at 108, Russians at 78; our 4s at 122, Austrians at 84, Hungarians at 77, Belgians at 105. Even British consols sell relatively lower than our bonds. In spite of the industrial depression in England, its securities are much firmer than those of France, and considerable capital has gone from the latter to the former country to accept a lower rate of income than could be obtained at home because more confidence was felt in the investment. In addition to the strained relations of France with China and its prodigal expenditures, the recent conversion of the 5 per cent. rentes into 4½ per cents has complicated affairs. The former holders of the 5s think that the terms of refunding were unjust to them, and they are charged with the purpose of embarrassing the financial operations of the government in the coming fiscal year. They aver that M. Tirard was in league with speculators for a decline, and so adopted the most objectionable plan of refunding. Leading securities in France have fallen to prices at which they yield a larger income than corresponding ones in this country. This is an anomaly. Yet there are more sellers than buyers, and the Paris bourse is a quiet place.

French enmity against Germany, it appears from some journals, is extending even to the exclusion of all German table waters from France. Mineral waters are apparently no longer to be received on their merits; the locality of their origin is to be inquired into, and all coming from the hated Prussia are to be rejected by the patriotic Frenchman. One French journal which advocates the crusade against the German waters compares the French and foreign springs, talks of the superiority of the native waters, and urges its readers to confine themselves to the home sources of supply. If, however, Frenchmen must drink other than native waters they may be permitted to take Bohemian or Hungarian waters

—German productions must in all cases be avoided. This kind of "boycotting," one would think, is a rather ridiculous means for avenging France's insulted dignity. But perhaps we take the matter too seriously. It may be that the trade in mineral waters in France needs "protection" and encouragement, and that the shrewd dealers are taking advantage of an old grudge to help along their industry.

The London *Economist* has an article in support of the resolution adopted by the Leeds Conference in favor of a redistribution of the seats in Parliament, on the basis of numbers. It says that the whole representative system in England from top to bottom is vitiated by the factitious preponderance which it assigns, without cause or justification, to a numerical minority. A system under which one county with 12,000 inhabitants returns the same number of members as another county with 500,000 inhabitants can, it says, afford no possible security for the attainment of the first object of popular institutions, the accurate reflection and effective execution of the national will. The *Economist* is of opinion that the selection of population as the governing standard will be found in the end to be the most logical and the most convenient course, notwithstanding the fact that it has been much criticised in many quarters. The adoption of a redistribution on the numerical basis would, it says, shift the political center of gravity completely to the north, that is, unless the metropolitan boroughs are granted the additional members due them on the score of population. The town and country populations are now represented by an almost equal number of members, while, on a numerical basis, the former are entitled to almost precisely double the representation of the latter. Whatever may be the details of the system adopted, the journal mentioned thinks that a large curtailment of the political influence of the landed interest is certain. The apprehensions felt regarding the probable consequences of enfranchising the agricultural laborer it considers much exaggerated for the reason that the towns will always be in a majority of two to one, and that the governing power of the future will be urban, not rural, opinion.

The wreck register issued by the British Board of Trade shows that during the year 1881–2 the number of wrecks, casualties and collisions on the coasts of the United Kingdom exceeded that for 1880–1 by 85. There are records of 3,660 wrecks, resulting in the loss of 1,097 lives. Only 606 cases involved total loss, and there was loss of life from 236 vessels, or about one in fifteen of those lost or damaged. Of the total number of wrecks 686 were collisions, and 2,974 were wrecks and casualties other than collisions. Of the latter class of wrecks 809 occurred on the east coast of England, 586 on the south coast, 1,046 on the west coasts of England and Scotland and the east coast of Ireland, 79 on the north coast of Scotland, 161 on the east coast, and 273 on other parts of the coast. A large proportion of the casualties occurred to British vessels. It is gratifying to notice that the number of wrecks (other than collisions) caused either by the vessels being unseaworthy or by the officers, pilots or crew being ignorant or careless has decreased during the twelve months.

The judicial statistics of England and Wales for 1881–2 show a slight decrease in the total number of the criminal classes at large and known to the police as compared with the numbers in 1880–1. There has, however, been an increase in the number of indictable offenses reported by the police. There has been a considerable increase in the number of persons proceeded against for minor offenses and a slight increase in the number of persons committed to prison. The number of persons tried for criminal offenses during the year was 15,260, of whom 11,699 were found guilty. The total cost of the trial of prisoners on indictment was £115,263. The number of prisoners in the government local prisons during the year was 189,524, while that of those in the different convict prisons was 12,171. The total police and constabulary force was 33,173, an increase of 1,141 over the previous year.

SPECIAL CORRESPONDENCE.

AUSTRALIA.

San Francisco, October 30.—Advices from Australia and New Zealand, per City of Sydney, reveal nothing special in the general business situation. Money was still stringent, the banks pursuing a conservative policy. Several shipments of American goods arrived in Sydney during September, with every line in the market fully stocked. This fact bears out the accuracy of previous warnings in BRADSTREET'S. Oregon lumber and California redwood brought average prices. Salmon lower; dried apples dearer; tobacco advanced 1d. per pound in response to the rise reported in the United States; rosin £8 for pale amber; kerosene 1s. 6d. for low test, 1s. 10d. for high. New Zealand is a competitor in lumber, breadstuffs and hops, although Australian hops are shipped to London and quoted on the market.

Wool is arriving freely and fetches, according to quality and condition, from 8d. to 21d. per pound; the latter quotation is for fellmongers' scoured, the former the lowest range for greasy parcels. Sydney is now dividing the home-wool trade with Melbourne, and from the success of these sales it is safe to predict that so far as Australian fleece is concerned the market will be localized, instead of being concentrated as formerly in London. The advantage of this to local trade is apparent. Mort & Co., of Sydney, in their review of last year's wool transactions, state: "From the very commencement of our sales, which opened on the 23d October, there was great buoyancy in bidding, with a full attendance of French, German, American and English buyers, who were armed with unlimited orders and most anxions to do business, which the sequel shows was well up to English values. In the light of the unsatisfactory result for the most part, to those growers who preferred relying upon the home market (London) to accepting colonial rates, it must be a matter for regret that buyers' disposition to operate did not meet a freer response." This experience will certainly check the custom of shipping wool to London for sale, instead of realizing in the local market. The quantity of wool did not suffer much diminution from last season's drouth in New South Wales, but the quality was inferior. The export from New South Wales for the year was 272,193 bales, an increase of 30,610 bales, Victoria showed a decrease of 22,051 bales, South Australia an increase of 2,943 bales, and Queensland about the same, or a net increase as compared with 1881–82, despite the drouth, of 13,500 bales. European and American buyers were beginning to arrive in anticipation of the present season's sales, which open in October. The wool crop is unusually light. From Melbourne the advices differ little from Sydney correspondence.

New South Wales has a close quarantine of live stock, therefore recent American shipments have not been exempted. An auction sale of 116 registered pure American merino rams and 58 ewes, from W. G. Markham, Avon, New York, is advertised to take place at the quarantine grounds, Sydney, October 24, pedigrees guaranteed back to 1812. The weight of fleece, pedigree, etc., of each sheep is given, and the auctioneers make a strong point of the value of the cross between Australian and American merinos in the product of wool. The sales of stud sheep in Sydney this year realized about £48,000, an increase of £15,000; Melbourne sales realized £32,000, proving that Sydney is becoming the leading market for the sale of blooded sheep. All the colonies except New Zealand were represented at the Sydney sales. A special feature at the sale was the California stud sheep. Mort & Co. state that "this combination afforded the grandest display of high-class sheep ever submitted for public competition in the colonies, and that it was appreciated is evidenced by the large attendance at the sales and the satisfactory prices realized."

The progress of the colonies, as illustrated by revenue, is not quite satisfactory, although really indicating a healthier condition of trade and an absence of speculation and over importation. New South Wales collected £1,390,000 for the quarter ended September 30, a decrease of £360,000. Victorian revenue for the September quarter aggregated £1,310,000, a decrease of £13,000. South Australia, total revenue September quarter, £495,000, being a decrease of £32,000. Queensland shows an increase of £59,750, chiefly in customs and railroads, in a total of £709,000 for the September quarter, compared with the corresponding period of 1882. New Zealand statistics have not been published, but semi-official advices by the mail state that they are up to the estimate.

The population of Australia and New Zealand at the close of 1882 was 2,936,409. As immigration is being promoted by several colonies the net gain in 1883 will be very considerable, the Malthusian doctrine finding few adherents in the colonies. The total imports for Australia and New Zealand in 1882 were £63,844, 359; total exports, £50,633,335, a total foreign commerce for the year of £114,517,794, or $572,088,970.

The United States' share in this vast commerce was small. Would it not be good statesmanship to make concessions, postal or otherwise, to secure an adequate part of it? The average rate of revenue, etc., per head of the population for the various colonies is tabulated below:

	Revenue.	Taxation.	Expenditure.
	£ s. d.	£ s. d.	£ s. d.
Victoria	6 7 1	2 12 8	5 16 11
New South Wales	9 5 7	2 7 7	8 1 6
Queensland	8 16 11	3 7 11	8 0 3
South Australia	7 4 0	2 5 1	7 8 1
Western Australia	8 4 9	4 8 7	6 15 3
Tasmania	4 11 4	3 1 5	4 3 4
New Zealand	7 13 10	3 18 6	7 10 2
	Debt.	Imports.	Exports.
	£ s. d.	£ s. d.	£ s. d.
Victoria	24 7 10	21 1 1	18 3 8
New South Wales	20 9 1	26 12 5	20 18 3
Queensland	52 17 5	26 11 10	14 17 6
South Australia	42 9 10	23 2 9	18 9 9
Western Australia	16 12 2	16 14 9	19 3 8
Tasmania	16 14 10	13 16 10	13 3 0
New Zealand	58 8 1	16 18 1	13 1 5

An annexation convention or conference is to meet in Sydney soon to take into consideration the question of "Pacific Annexation." That is, to consider the policy of federating all the Pacific islands into a great Anglo-Saxon republic of states, nominally under the British crown, but really truly autonomous states. This movement has received a great impetus from the stupid opposition of Earl Derby, the Secretary of State for the Colonies, who combines with great ability at least one vice which sometimes renders him incapable of sober thought. His threat to use the Queen's ships to suppress the exploration and colonization of New Guinea never could have been written by a sober man. The more important colonies, including New Zealand, will be represented by their ministers at the Sydney conference. It will be the first practical step toward federation and independence. The New Zealand Parliament has passed a bill appointing a commission to decide upon the terms on which any of the Pacific islands should be admitted into a Pacific Confederacy, with New Zealand at its head. The colonists of Fiji have already memorialized the crown in favor of annexation and federation, being tired of the petty tyranny to which they are subjected in a crown colony.

A shipment of frozen meat from New Zealand to London spoiled on the voyage, causing heavy loss and disappointment.

The valuable shipment of live stock from New Zealand, with twenty Australian sheep, have been quarantined for ninety days. Allusion was made to the New Zealand cattle in a recent issue of BRADSTREET'S. There is no cattle disease in the colony, and quarantine seems unnecessary. The shipment is at the risk of American citizens.

The City of Sydney brought 843 ingots of tin and $790,960 gold, chiefly on account of the Bank of New Zealand.

THE MICHIGAN LUMBER FAILURES.

Grand Rapids, November 7.—The past week has been an unusually exciting one at this city, owing to the failure of several prominent lumber firms. The trouble began October 31, when M. J. Bond, lumber manufacturer, gave real estate and chattel mortgages to the Old National Bank to the amount of $50,000. On the evening of November 2 Frank Chickering, also a lumber dealer, made an assignment, with liabilities estimated at $150,000; assets nominally the same. Bond and Chickering had indorsed largely for each other, and on November 3 M. J. Bond assigned, with liabilities estimated at $170,000; assets about the same. As a natural result of these failures, the firms of Chickering & Kysor, saw mill, at Fife Lake, Mich., in which Frank Chickering is interested, and Porter, Byrne & Co., in which M. J. Bond is the company, were compelled to assign. On November 5 the firm of Wetzell Brothers, one of the largest shippers of lumber in the city, owing to Chickering's failure and inability to meet notes due and coming due, assigned. Liabilities $150,000 to $175,000; assets nominally $150,000. On the same day the bank of Rice & Messmore, at Cadillac, Mich., suspended payment. This firm held quite an amount of Chickering's paper, which brought on a run which they could not withstand. On November 6 Messmore Brothers, clothing merchants, of Cadillac, as a result of the bank's suspension, closed their doors. The lumber firms mentioned are composed of men who started with but little capital, and have in all cases been doing a business out of proportion to the capital employed. Money is usually tight at the banks here at this season of the year. Banks have loaned heavily and are trying to call in funds. The new assignment law in this state shuts off preferences, and debtors have been unable to secure the banks for loans asked for, fearing they would be thrown into bankruptcy. The failure of the crop diminished the demand for the coarser grades of lumber, of which there has been a large supply. A great deal is stacked, waiting higher prices. There has been a great deal of accommodation paper issued to meet demands, and to this reprehensible practice of "swapping paper" the failures are to be largely attributed. The disasters, it is thought, will have no serious effect upon general trade except to tighten the money market. Jobbers report trade fully up to expectations and collections fair.

AUGUSTA, GA., COTTON MILLS.

Augusta, November 3.—The past year has not been favorable to cotton manufacturing interests in the south, the demand having been limited and ruling prices consequently low and profits small. At present all of the cotton manufactories here are running on full time, with a fair demand for their product at small profits. The mammoth cotton mill of the south, The John P. King Manufacturing Company, began operation this week. The capital stock is $1,000,000, and its capacity 26,500 spindles and 800 looms; all of the machinery, except 150 looms, is now in position and ready for work. The building of this mill was commenced in May, 1882. Charles Estes, its president, was the general superintendent of its construction, and it is said to be the cheapest built and one of the most perfect and substantial cotton factories in all its details in the south. Under the present management its success is almost assured. During the past year the Enterprise Manufacturing Company have enlarged their mill and nearly doubled its capacity, which is now 25,500 spindles and 602 looms. This manufactory, which is second to none in the south, is under able management and is doing a prosperous business. Its goods are very popular. On account of the short cotton crop the volume of business done this fall is comparatively light, and collections rather poor, and the outlook for the immediate future not flattering.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Under a general agency to look after and preserve certain property the agent has the power to employ another to watch and protect the property, according to the opinion of the Kentucky Superior Court in the case of Bruen vs. Grahn, decided October 31.

An agreement to pay a subsisting debt, or even its actual payment, is not a consideration upon which a court of equity will decree the specific performance of an agreement for the sale of real estate, according to the decision of the Supreme Court of Appeals of Virginia in the recently decided case of Smith vs. Phillips.

One whose name has been forged to a negotiable instrument may maintain an action against an indorsee of such an instrument to compel its surrender on a release therefrom, and the courts have equitable jurisdiction to grant such relief, according to the opinion of the Indiana Supreme Court, in the case of Hardy et al. vs. Brier.

A self-killing by an insane person understanding the physical nature and consequence of his act, but not its moral aspect, is not a death by suicide within the meaning of a condition in a policy of insurance upon his life, that the policy shall be void in case he shall die by suicide. So held by the Supreme Court of the United States in the case of the Manhattan Life Insurance Company vs. Broughton, decided on the 5th inst.

Where there is a submission to two arbitrators with a provision that if they cannot agree a third is to be called in, the inference is that the decision of two out of the three is to be binding, and that an award made by two of them will be upheld, according to the decision of the Kentucky Superior Court in the case of Greenwell vs. Embree, decided October 31. In such a case the umpire can properly act only in case of the disagreement of the arbitrators, and when he does act he is necessarily bound to consult with the arbitrators to learn their differences, and he may act on their representations without calling the witnesses.

In a case in the Texas Supreme Court where both the appellees and all the appellants except one were citizens of the state of Texas, and that one did business in said state and was the mercantile partner resident in New York of two of the other appellants, and, as such partner, was sued jointly with them for the value of certain goods on which the appellants were alleged to have wrongfully caused a writ to be levied, the court held that the partner resident in New York was not entitled to have the cause removed from the state court in

which it was instituted to the United States Circuit Court. Leon et al. vs. Thomas et. al., decided recently.

When a taxpayer, under a belief—held to be justified by the circumstances—that there was a legal charge against his property upon a tax duplicate in the hands of the county treasurer, paid the amount thereof to that officer, when in fact no such charge appeared on the duplicate, and the payer was under no legal or moral obligation to pay the same, the Supreme Court of Ohio held that he might recover it back as a payment made under a mistake of fact. Woolley vs. Staley, decided October 30.

In the case of Brooks vs. Coquard, decided by Judge Treat in the United States Circuit Court at St. Louis on the 2d inst., it appeared that the defendant, a banker and broker in St. Louis, agreed to sell to the plaintiff, a resident of Boston, Mass., 392 shares of the common stock of the Louisiana & Missouri Railroad Company at an agreed price per share. The agreement was made by telegraph on February 14, 1881, and the stock was to be delivered at New York city on the following day. On that day the defendant notified the plaintiff that he would not deliver the stock as contracted for, whereupon the plaintiff brought suit for $5,000 damages. Judge Treat held that the contract must be considered as closed on February 15, and that the plaintiff was entitled to damages at St. Louis rates on that day, viz., 1 per cent. advance on 392 shares, or $392.

Where the taxing power is conferred upon a municipal corporation it must be exercised within the limits of direct authority, and no inference or presumption can be indulged to extend it beyond what is positively granted, according to the decision of the Kentucky Superior Court in the case of the City of Paris vs. Moran, decided on the 30th ult. In this case the court held that an act authorizing the city of Paris to levy a tax for school purposes upon the "assessed property" within the city should be construed as embracing only such property as could be legally assessed by the corporation for other purposes, and therefore did not embrace lands used for agricultural purposes only, and remote from the settled portions of the city.

The question as to the proper rate of duty upon a cotton cloth known as "cotton Italians," and extensively used for coat-linings, was involved in the case of Newman vs. Arthur, collector, decided by the Supreme Court of the United States on November 5. The collector exacted duty on the cloth at the rate of 5½ cents per square yard and 20 per cent. ad valorem, on the ground that it came within the description of "cotton goods exceeding 200 threads to the square inch, counting the warp and filling, colored, stained, painted and printed," under clause 3, schedule A of the Revised Statutes. The importer claimed that the goods should pay only 35 per cent. ad valorem as "manufactures of cotton not otherwise provided for." The court sustained the action of the collector, holding that "cotton Italians," although not expressly named in the law, came clearly within the description referred to under clause 3, schedule A.

The cases of The United States vs. Fisher and The Same vs. Mitchell, also decided by the Supreme Court of the United States on the 5th inst., involved the question as to the power of Congress to regulate the salaries of United States officers from year to year by means of appropriation bills, regardless of previous statutes definitely fixing the compensation to which such officers should be entitled. The first of these cases was that of the chief justice of Wyoming, whose salary was fixed at $3,000 per annum by a statute which had never been repealed. In the Legislative, Executive and Judicial Appropriation bills of 1877, 1878 and 1879, however, Congress appropriated for the salary of the chief justice of Wyoming only $2,600 annually, and provided that this should be "in full compensation" for his services. The chief justice brought suit in the Court of Claims to recover the amount of the deficiency, and recovered a judgment in his favor. This judgment, however, was reversed by the Supreme Court on the ground that the act fixing the complainant's salary was not a contract with him; that Congress had full power at any time to change the rate of compensation, and that it was the evident intention of Congress in the several appropriation bills mentioned to suspend the earlier statute fixing his salary at $3,000, and to reduce that salary during the time covered by such appropriation bills to $2,600 per annum. In the second of the cases, in which a similar point was involved, the court said that it did not wish to be understood as deciding the question whether a simple failure by Congress to appropriate any or a sufficient sum to pay the salary of an officer fixed by previous law was of itself an expression of purpose by Congress to reduce that salary. Under these decisions Congress seems to have power to regulate by means of appropriation bills, and without any separate and specific legislation, all salaries over which it has control.

The case of Chalfant vs. Payton et al., decided by the Supreme Court of Indiana on the 1st inst., was a suit on certificates of membership issued by a marriage benefit association to one Moody, and by him assigned to the appellant. The contract of membership provided that in case the applicant paid the association a certain sum of money down, and agreed to pay such dues and assessments as it might demand on expressed terms from time to time, it would pay the applicant, at the end of two years, a specified sum, on condition that the applicant should not get married within that time, but if he should marry within that time, then the association was to pay him a certain sum for each day that he remained single after the execution of the contract. The court held that the contracts contained in the certificates were contrary to public policy and void, that they were properly classed as wagering contracts on the probabilities of Moody's marriage, a matter in which the appellant had no interest, that the certificates would be void in the hands of Moody as being wagering contracts, and that they were likewise void in the hands of the appellant to whom they were assigned. The court held further that there was no law authorizing marriage benefit companies, that their existence was illegal, and that where money was voluntarily paid by one to become a member of such a company, it could not, in the absence of fraud, be recovered back.

The question of the constitutionality of state laws regulating inter-state commerce was considered by Judge McCrary in the United States Circuit Court for the Southern District of Iowa in the case of Kaeiser vs. The Illinois Central Railroad Company, decided on October 24. It appears that the general assembly of Iowa adopted an act which provided a tariff of maximum charges for the transportation of freight and passengers by railroad. The act referred to, by its terms, applied to "all railroad corporations organized or doing business in" the state and provided that the tariff of rates established should "be considered a basis on which to compute the compensation for transporting freight, goods, merchandise or property over any line of railroad within the state." The suit abovementioned was brought to recover damages for overcharges upon freight shipped from points in Iowa to points in Illinois or Wisconsin over part of defendants' road in Iowa and over connecting lines in the other states named. The defendants' answer set up that the statute under consideration neither had, nor was intended to have any extra-territorial operation beyond the limits of Iowa, or any application to or effect upon contracts for the conveyance of persons or property from a point in one state to a point in another state. Plaintiff demurred to this answer, and his demurrer was overruled by Judge McCrary, who held that the act in question was unconstitutional on the ground that if applied to through shipments of freight upon lines extending into or through several states it must be held to relate to a subject which is in its nature national, and that if the power of the state to pass such an act be conceded, it necessarily includes the power to discriminate against the commerce of other states in the Union, and any state regulations having that effect could not be upheld under the Constitution of the United States, as interpreted by the federal courts. Judge McCrary held that the following propositions regarding the power to regulate commerce may be regarded as settled, at least as far as the federal courts are concerned: 1. The transportation of merchandise from place to place by a railroad is commerce. 2. The transportation of merchandise from a place in one state to a place in another is "commerce among the states." 3. To fix or limit the charges for such transportation is to regulate commerce. 4. A statute fixing or limiting such charge for transportation from places in one state to places in other states is a regulation of commerce among the states. 5. The power to regulate such commerce is vested by the Constitution in Congress. 6. This power of Congress is exclusive, at least in all cases where the subjects over which the power is exercised are in their nature national, or admit of one uniform system or plan of regulation. 7. The state cannot adopt any regulation which does or may operate injuriously upon the commerce of other states.

BUSINESS NOTES.

In view of the cotton centennial exposition to be held at New Orleans next year, the annual convention of the National Cotton Planters' Association soon to be held at Vicksburg, Miss., is of special interest. One of the objects of the convention is to bring together the manufacturers and growers of the staple, a matter of some moment both to northern and southern people.

The total number of failures in the United Kingdom, reported to *Kemp's Mercantile Gazette* for the week ending October 24, was 190, against 244 and 232 respectively for like weeks in 1882 and 1881. The total for England and Wales was 167, against 227 and 220; Scotland had 19, against 15 and 10, and Ireland 4, against 2 and 2 for corresponding weeks in 1882 and 1881.

It is claimed that the nickel deposits recently discovered in the northern part of Churchill county, Nev., are the richest in the world. Samples of the ore have yielded from 29¼ to 66¼ per cent. of the metal. The Pennsylvania mines have hitherto had a monopoly of the trade, but their ores average only 2 per cent. There are some mines in Oregon, but they have not been worked much.

A report from a mining engineer states that the deposit of tin at Cajalco, Cal., is very rich. The yield thus far is 250 pounds of block tin to the ton of ore, while thirty-five mines of Cornwall, England, average only 60 pounds. The openings already made, he claims, show 600 tons of tin bars. The metal has hitherto never been mined in this country, though small deposits have been found in many states. We consume about 25,000 tons a year.

The following national banks have been organized: The German American National Bank of Peoria, Ill.; capital $100,000; Valentine Ulrich president; William Oberhauser cashier. The First National Bank of Greene, Iowa; capital $55,000; A. Slimmer president; C. H. Wilcox cashier. The First National Bank of Clay Centre, Kan.; capital $50,000; H. H. Taylor president; F. H. Head cashier.

Jay Cooke has purchased a license from Jacob Reese to manufacture rails by the latter's process, and is about instituting legal measures against the Pennsylvania Steel Company at Harrisburg for an alleged infringement of patent. Negotiations have been jolting along for a long time between the Bessemer Steel Association and Mr. Reese for an adjustment of conflicting interests, but they were once more terminated by the patentee last Tuesday, who has declined to accept the proposition of the company.

The want of suitable fuel in the iron districts of Hungary has retarded the iron industries there. It is added, in a report on the situation dated at Buda-Pesth, that the deposits of iron in Hungary are equal to those of the neighboring countries. Over 125,000 tons of iron ore are exported annually from upper Hungary. It is estimated that the forests of Hungary contain over 6,175,000 acres, and there is an annual growth of over 14,000,000 cubic feet of timber there, a third of which would produce over 500,000 tons of charcoal pig iron. Hungary has at present forty-one pig iron works and fifty-two blast furnaces in operation. The annual production of pig iron in Hungary amounts to 167,500 tons, of which 17,600 tons take the form of castings.

The latest attempt to construct a successful electric railway is the one now nearly finished between Portrush, Ireland, and the Giant's Causeway. This railway has been built by a company of shareholders, who raised £45,000 to construct six miles of rail. The gauge is only three feet. The rails are laid level with a gravel surface. The grades are very heavy, in parts as steep as 1 in 35, and the curves are also very sharp. It has been proposed to connect it with an electric railway from Derrock, and thus to have a narrow gauge road from Ballemena to Larne and Custerdall. The power is obtained from a waterfall and the current is conducted over a separate rail parallel to the railway, being taken off as wanted by brushes attached to the train, in control of train employés.

The *English Mechanic*, of October 26, in speaking of the future of the telephone, says that on account of the position taken by those holding telephone patents in Great Britain and in the United States much has been done to check invention. Several very good inventions have been made, one of which is Prof. Dolbear's, which is only affected a very little by induction or bad weather. Another system is that of Mr. A. F. St. George, by means of which it is claimed that messages can be sent long distances without much hindrance from inductive action and which is very easily worked. There are other improvements which await only a favorable opportunity for introduction, and there are signs that before very long such companies as hold control of existing patents will be ready enough to adopt any really useful improvement instead of buying it up and practically burying it.

The Philadelphia *Bulletin* of the American Iron & Steel Association this week enumerates 74 nail factories throughout the United States, whose annual capacity is 11,376,000 kegs. This capacity will be supplemented by 1,000,000 kegs on the completion of works under way. There are at present 5,008 nail machines, and 391 will be added, of which 20 are to be in Massachusetts, 74 in Pennsylvania, 83 in West Virginia, 40 in Alabama, 20 in Indiana, 54 in Illinois and 100 in Wisconsin. Pennsylvania leads with 27 works, 1,425 machines and 3,264,000 capacity. Ohio ranks second in capacity, viz., 2,200,000 kegs. West Virginia third; capacity, 1,668,000 kegs. Last year's production of cut nails and spikes was 6,147,097 tons, and with producing capacity double this limit it is to be presumed that prices will decline and restriction become more or less general from time to time.

The October report of the Silk Association of America shows that the imports of raw silk at New York and San Francisco for that month of 1883 were 2,783 bales, valued at $1,726,741. Imports of waste silk and pierced cocoons at the same ports aggregated 50 packages, valued at $14,282. Silk piece-goods importations at New York were valued at $2,092,566, showing an increase in value of $390,010 over those in the like month in 1882. Imports of plushes have fallen behind those in October last year considerably, being valued at only $99,770, against $138,845. The total value of imports of manufactured silk, however, has been steadily increasing, being $3,355,832 for October, 1883, against $2,860,778 for October, 1882, $2,861,195 in 1881, $2,152,798 in 1880, and $2,030,568 in October, 1879.

The London *Labour News*, of October 24, says work in the colliery districts was quite plentiful, but there was still agitation respecting wages. On account of continued low prices in the iron trade it was rumored that wages were to be reduced. Building and marine engineering was very brisk, as was also shipbuilding in northern ports. Railway construction continued good, and navvies were wanted. The various industries at Birmingham were doing fairly well. The wrought-iron trade, at Bromsgrove, was unsettled on account of the recent reduction of 10 per cent. in wages. The textile trades were quite good. Work was very dull in the lace and hosiery factories at Nottingham. There was plenty of work on heavy goods at Halifax and Leeds. Work in the boot and shoe trades was increasing. Dock labor at east of London was deficient to supply the demands for employment. Emigration continued heavy.

The statistics of the Universal Postal Union for 1881 show that the United States ranks first in number of post offices, with 44,512; Great Britain takes second place with 14,918, Germany has 11,088 and France 6,158. Japan, with 5,094 offices, is far in advance of Russia, British India, Austria, Italy and Spain. Switzerland has one post office to every 985 inhabitants, and the United State one to every 1,126. The United States conveyed the most postal cards, Germany next, and Great Britain and Austria in order. In respect to the number of letters and postal cards to each inhabitant the countries ranked as follows: Great Britain, 38.7; the United States, 27.3; Switzerland, 19.9, and Germany, 15.8. The United States had 91,571 miles of railroad; Germany, 20,573; France, 16,822, and Russia, 14,439 miles. In number of newspapers conveyed in domestic mails the United States ranks first, with 852,180,792; Germany second, with 439,089,900; France third, with 320,188,636, and Great Britain fourth, 140,789,100. In gross postal revenue Germany has 205,324,215 francs; the United States, 194,630,444 francs; Great Britain, 175,690,000 francs, and France, 152,968,569 francs. Great Britain, Germany and France had a net revenue in 1881 ranging from 68,525,100 francs to 19,900,440 francs, but the United States, Russia and Japan had a deficiency in revenue in the same year ranging from 14,418,075 to 1,320,846 francs.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

A holiday in the week has cut off one day's trading, and contributed, as holidays always do, to make business duller than it would naturally have been. It can scarcely be said that the election influenced the stock market, though, as usual, it was greatly talked about as a factor in stock speculation. The results of Tuesday were so considerably mixed that as much could be argued from them one way as on the other, and the market has gone along in much the same fashion that it would have done had no election occurred. It has been dull and quiet to a marked degree, and though there is a great deal of talk about investment stocks being constantly bought and taken away from the street by permanent investors, a careful watching of the daily transactions does not indicate that the buying is large. Stocks which are rightly classed as investment securities have not risen in price except where the rise has been well known to be due to the operations of one or two of the leading operators, who have put them up for effect on the general markets. As was said last week, the prices at which good investment securities are now quoted offer little temptation to great speculators to purchase them, for they are not so low as to afford any wide margin for a decided rise in the near future, and the cost of carrying them eats up possible profits. These operators prefer the better class of lower-priced speculative stocks, in which a quick rise of 5 or 8 per cent. may be effected on a sharp upward turn of the market. Mr. Keene's hand is still at the helm, and the course of speculation has been mainly directed by him during the week, as it was last week. The public is as much out as ever it has been, and the large bear operators seem quite content to have some one put the market up, so that a better level be obtained from which to sell again. As things stand now there is slight temptation to sell, and no little risk of being "squeezed."

The locking up of speculative stocks, in the way spoken of last week, has had the effect of making all the small shorts in them cover their sales, and practically eliminated the short interest; but it has also left these stocks on the hands of the operators who effected the move, and they remain there with no buyers at present in sight. Mr. Keene is supposed now to have accumulated all, or nearly all, the floating stock of Michigan Central, which stock led the upward way when the market was turned immediately following the development of the corner in Northern Pacific preferred. Jersey Central is also pooled in the hands of Mr. Gowen and the Reading party. No one buys the stock; and to sell it short would be simply walking into a trap. As a consequence, these two stocks have virtually gone on the "dead list," the transactions in these from day to day being quite nominal. In Jersey Central there has not been a single transaction for a whole day together of late. The party who had to buy in Northern Pacific preferred, to get the vote authorizing the issue of the second mortgage bonds, still keep the stock locked up, and very little has been done in it in consequence. How this will end it is quite impossible to conjecture. The bears on the property seem to be waiting developments. Oregon Transcontinental, on the other hand, has maintained its activity; and there can scarcely be a doubt, from its actions in the market, that some one is selling it, though the selling is very adroitly and carefully done. It is put up on small bids, and by the "washing" process; and when a satisfactory figure has been reached large blocks are sold on a scale down. When it has fallen under the weight of the sales 3 per cent. or so further selling ceases, and the bidding up process begins again, while the rest of the market (which is, however, very restricted) is stimulated to help the thing along. The many allegations made about this company when the downfall of all the Villard properties began are now confessed to be true even by the Northern Pacific people themselves. For example, an "insider" in the Northern Pacific Company, probably one of its highest officers, was quoted in one of the evening papers on Thursday as saying: "Nobody claims that Oregon Transcontinental has its securities in hand, but it has good collateral for them, and as soon as the new bonds are sold Northern Pacific can reimburse Oregon Transcontinental, and the company will be able to take up its securities." The only property the Oregon Transcontinental Company has to represent its capital of $40,000,000 consists of the securities referred to; and it will be seen from the above that they are, as alleged, "in pawn." Money has been raised on them to lend to the Northern Pacific Company, which cannot pay it back, being quite out of funds. To raise money the new bonds must be sold; and even when they are sold it is not easy to see how the Oregon Transcontinental Company can get all its pledged property back. There is a great deal of mystery still surrounding the affair, which does not promise to be cleared up very soon. A rumor was current during the week that certain large holders of Northern Pacific preferred stock, resident in Philadelphia, had revoked the proxies given to the directors to vote in favor of the issue of the bonds; but this was strenuously denied by the Northern Pacific officers, who asserted they had more than enough votes to authorize the issue.

The meeting of the presidents and their subordinates of the trunk line roads on Thursday, at Commissioner Fink's office, was reported to have ended, as usual, harmoniously; and the report was used to stimulate the market in the last hour of business that day, when quite a little spurt in prices was effected. The meeting was called to bring the delinquent Erie, Grand Trunk and Baltimore & Ohio roads to terms, each of them having been detected, it is alleged, in flagrant rate cutting against the Vanderbilt and Pennsylvania lines. The Erie was asserted to be the worst offender, and so open were its operations in the way of cutting that a general rupture of pool relations between the several lines seemed to threaten three or four weeks ago. The differences were patched up in some way, it is supposed, mainly because the season of navigation is about to close, when all the lines are expected to have enough business to do without resorting to underhand methods to obtain it. The Vanderbilt interests, however, are reported to have insisted on an important modification in the east-bound pool contract; this being no other than the condition that any road may withdraw from the pool on giving two months' notice so to do. Heretofore Commissioner Fink has arranged the percentage of each road in the pool at the end of the fiscal year, and the contract then ran for the whole year. This arrangement, it seems, has been made to work so disadvantageously to the Vanderbilt lines that the managers have insisted on the modification referred to. Under the new rule if the Erie or any other road persists in cutting rates, a notice of withdrawal served upon it by other lines may compel the delinquent to stop, under threat of having the pooling arrangements entirely broken up. Among the stocks in which an advance has been recorded this week Canadian Pacific must be numbered, the price having been pushed up to 63½, and it is said the clique who are working it expect to take all the stock off this market and sell it at higher prices in London. They talk 70 for it if they get their guarantee arrangements through satisfactorily. They have made the stock quite active in the market and appear to have it well in hand. Nothing has come out during the week which throws more light on the position of the Canadian government officials than we had before; but it is reported round the street that the "deal" is sure to be a success, because "all the Canadian politicians are in it." Yesterday it was sent out over the news-tape that the guarantee contract had been signed by the government officers. The Gould stocks have been distinguished by their inactivity, and Mr. Gould, as is his custom, seems disinclined to aid much in a bull movement which he does not himself lead. He supports his stocks, and whenever the market stiffens up they go with it; but he gives merely a negative assistance to the people who are now working to advance prices. Judging by the present aspect of things, it is not unlikely the market may advance, when he will doubtless be found on hand again, ready to supply any quantity of his stocks to whoever is buying.

Loanable funds on call are a drug in the market. Any amount may be had at 2 per cent., and even 1½ per cent. has been recorded. The circumstance has been the subject of much comment, and it seems to be agreed that in the prevailing distrust of mercantile credit much money which went to the discount of commercial paper has been diverted to the uses of the stock market, for call loans, when made with ordinary prudence, are a safe and ready way of using money. In addition, there is the very slight call for money consequent on the slow movement of the crops, and the comparative deadness of speculation. Foreign exchange rates are now up to $4.83 and $4.85½ again, at which rates gold cannot profitably be imported, but a considerable amount arrived this week before the rates rose, on transactions made when they were lower. The Bank of England discount rate remains at 3 per cent., and the bank's reserve has only fractionally changed its relation to the liabilities this week. Government bonds continue steady and firm. The following were the closing quotations yesterday:

	Oct. 26, bid.	Nov. 2, bid.	Nov. 2, asked.
U. S. 4½s 1891, registered	113½	113½	113¾
U. S. coupon	114½	114⅜	114¾
U. S. 4s 1907, registered	121¾	122	122⅛
U. S. 4s 1907, coupon	121¾	122	122⅛

The bank statement of Saturday last showed few changes of importance, but it was favorable to the extent of showing an increase in the reserve of $995,025, bringing it up $687,475 above the 25 per cent. line, below which it had slightly sunk in the preceding statement. The following are the comparative totals of the statements of October 27 and November 3:

	Oct. 27.	Nov. 2.	Differences.	
Loans	$324,912,100	$323,554,600	Dec.	$1,357,500
Specie	52,452,800	52,352,600	Dec.	100,200
Legal-tenders	24,380,500	25,181,600	Inc.	801,100
Deposits	308,563,400	307,386,900	Dec.	1,176,500
Circulation	15,349,900	15,417,300	Inc.	67,400

From San Francisco, Cal.: Exchange on New York is 15@20c. premium. Commercial paper is 7@8 per cent. discount.

THE FOLLOWING WERE THE CLOSING QUOTATIONS FOR STOCKS ON THE DATES NAMED:

COMMERCIAL.

SUMMARY.

The general merchandise movement east and west, as reported in special dispatches to BRADSTREET'S, is of moderate proportions only. In such lines as dry goods, millinery, notions, groceries and boots and shoes the country merchants appear to be well stocked, and such orders as reach the jobbing merchants are for reassortment. The marked exception to the above is in boots and shoes at Boston, where many buyers are congregated to make selections for the spring season. One cause of the special dullness at the west is found in bad roads and unfavorable weather. In some sections, where farmers are holding back their grain for better prices, the demand on the country storekeeper has also fallen away. From most leading distributing centers word comes that the aggregate of the business done during the autumn to date will compare favorably with the corresponding time last year, and that the existing dullness in many instances is no more conspicuous than was to be expected at this season. The industrial situation has not changed much during the week. The Rhode Island woolen and cotton mills while claiming to be working at the minimum of profit are, nevertheless, at work. The pig iron furnaces since the blowing out of superfluous stacks have not been piling up stocks. The cut in prices of steel rails of $2 per ton, to $35, was the result of the failure of the Bessemer rail mill proprietors to arrange for a restriction of the output on a basis that those continuing should pay those stopping $2 per ton for every ton sold, whatever the price. About 60,000 tons have been sold at the cut rate. Some western mills only are likely to be affected; but Ohio pig-iron makers have offset this situation by selling their output on the Hudson river. Wheat has been manipulated for a rise, which from November 2 until the 7th inst. amounted to an average of 3c. per bushel. The loss since amounted to nearly one-half the gain. Indian corn acted in sympathy with wheat, gaining in the aggregate between the dates named about 3⅜c. per bushel and losing about 1c. since. Provisions also experienced some gain. Pork advanced 50c. per barrel, and lard gained about 25 points. The market closes quiet and firm. Petroleum is firm; certificates 2c. higher. Ocean freights are dull and weak. Consumers of wool have continued to purchase supplies in small lots, as required for current wants. There were 219 failures in the United States reported to BRADSTREET'S during the week, 24 more than the preceding week, and 70 more than the corresponding weeks of 1882 and 1881.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: There is not a large trade, but a fair legitimate demand for groceries and dry goods. Business of all kinds is satisfactory being on a better basis than for a long time. Money is in good demand at previous rates.

From Boston, Mass.: All departments of trade suffered from the election excitement the past week, and there are no new features worthy of special comment. There is a fairly satisfactory feeling in regard to the fall business, and while no particular rush is looked for during the present month, a confident feeling prevails that the volume of trade will be up to the average. An additional number of boot and shoe buyers have arrived, and nearly all the leading cities are now represented here. Factories are beginning on new contracts. Sales of wool show a considerable falling off from last week. The money market is steady, with bank discounts ranging from 5@6½ per cent.

From Providence, R I.: The wholesale trade, and in fact trade generally, is dull.

From Philadelphia, Pa.: There is a good deal of complaint of dullness in the merchandise market, but business as a general thing is not quieter than usual at this advanced stage of the season. In most lines the results of the past three months' trading have been fairly satisfactory, and in some departments, notably dry goods, notions, etc., the volume of trade has exceeded that of the corresponding period last year.

From Cleveland, Ohio: There is no noticeable change in general trade since last week. The banks have sufficient funds for all requirements.

From Cincinnati, Ohio: There is apparently a general shortening of credits. The volume of trade has been healthy, though not large.

From Chicago, Ill.: Money is firm at 6 per cent. on call and 7 per cent. for time loans. Demand is above supply, and country bankers are free borrowers. Large amounts are absorbed by pork-packers. Exchange is 50@60c. premium. Liberal amounts are made by shipments of provisions. Collections are slow.

From Detroit, Mich.: The volume of business in general lines averages fair. Collections are better than was anticipated. The money market is very firm at 7 per cent.

From St. Louis, Mo.: General trade is in moderate volume and conditions are fairly good. Money is easier at 8 per cent. and currency is moving in from the country. New York exchange is active at 50c. premium. Prime commercial bills are 50c. discount.

From Kansas City, Mo.: General trade is rather quiet. Collections are slow on account of bad roads. Dry goods maintain a steady movement and sales are fully up to the average of the season.

From Milwaukee, Wis.: Trade in mercantile circles is fair, and money is easy.

From Minneapolis, Minn.: Collections are improving with the increased movement of wheat, and trade is in a healthy condition. The money market continues close with the demand in excess of the supply, the movement from the interior is not heavy, and large amounts are daily shipped in from the east. Eastern exchange is quiet at 50c. per $1,000 discount between banks.

From Baltimore, Md.: The general trade situation remains unchanged, and with the exception in a few departments no activity is noticeable. As a rule purchases are confined to actual wants, and there seems to be an unusual degree of caution exercised.

From Wilmington, N. C.: General business is improving; collections are fair and the weather is pleasant and favorable for gathering the crops.

From Savannah, Ga.: The weather is very dry and warm and the crops are suffering for rain. This has also had its effect on trade which, although steady, shows less activity.

From New Orleans, La.: There is good demand for money to carry the heavy receipts of cotton and sugar. All securities are strong and higher. General trade is good.

INDUSTRIAL.

It is announced that the Bessemer steel-rail interests have virtually resolved to reduce wages, owing to the decline of 12 per cent. in the price of steel rails during the past twelve months. The falling off of orders and the decline in inquiry increases the probability of a partial suspension of production. It is probable that on January 1, when wages for the incoming year will be fixed, employé and employer will agree. A meeting of the Western Window Glass Association was to have been held Thursday, but the absence of some members of the joint committee prevented. The glass-workers expect but little from the proposed conference, as they are quite determined to refuse any concession. The stubbornness of the workmen is due, to a considerable extent, to the hostility of the manufacturers to trades unions. The Pittsburgh bottle blowers, who have been out on strike for several months against a 20 per cent. reduction in wages, have issued a notice ordering the boycotting of all the druggists using bottles not bearing their union seal. A coöperative iron mill has been started at Allegheny City, Pa. An extensive steel works has been erected in Pittsburgh, also a new bridge works and an establishment for making wrought iron. Additions have been made to a large number of factories and mills. The Millvale Iron Works have added several patent puddling furnaces. The strike of the miners on the low-grade division of the Allegheny Valley Railroad has practically terminated.

INDUSTRIAL FEATURES.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Mills on textiles are generally running as usual, but there is complaint of an unsatisfactory condition of affairs in many quarters, and one mill of 150 looms on carpets has shut down within the week. The spring season is just commencing in the carpet trade, and orders are reported backward as a rule.

BREADSTUFFS ABROAD.

Foreign cables this week have ruled firmer, and in this respect have aided an advancing home market. Yet there appeared to be some doubt as to whether the upward movement had the qualities which would sustain it. British advices indicate that American dealers are loth to compete with Russia and India. A leading English authority says that for the season preceding winter the present will long be remembered, and that the low price of wheat will long be remembered in that it continues during the three months when exports from the United States to Great Britain have been only one-half what they were in preceding years, including the corresponding season in 1882. Drawn from a visible supply of wheat of about 14,000,000 bushels a year, as against 28,000,000 bushels this fall, the exports from the United States were double what they are now, a strong instance that New York merchants have retired from the competition which their stocks would encourage them to make were they satisfied with the terms which India and Russia accept. "Assuredly," adds the *Miller*, "America appears to trust the future."

The quantity of wheat afloat from India to the United Kingdom equals one-third of the whole. The situation in France remains unaltered, farmers being very busy with their autumn sowings, and the markets commanding a good attendance neither of buyers or sellers. The Netherlands have been the scene of difficult and dragging markets. In Germany the majority of farmers are busy over a good potato crop, while most of them have already begun their autumn sowings of wheat. The soil is generally in good condition, a great contrast to last year. The New York *Produce Exchange Weekly* has been charged by the London *Economist*, the Cincinnati *Price-Current*, and various other papers with having stated that the United States and the Dominion of Canada, from both coasts, would have no more than 115,000,000 bushels of wheat for export for the crop year 1883-4 to all countries. The *Produce Exchange Weekly* says it has never made such a statement. In its issue of September 14, 1883, in a preliminary estimate of the wants for and supplies of wheat for Europe it did estimate North America would have, probably, 115,000,000 bushels of wheat for export to Europe during the crop year 1883-4. Accompanying this statement was a further statement that the West Indies, British Columbia and South America usually took from the United States 18,500,000 to 200,000,000 bushels, that Canada's wheat crop was deficient, and that that country would probably require to import 8,000,000 to 10,000,000 bushels. It is probable that the estimate of 115,000,000 bushels surplus wheat for Europe was an excessive estimate, as it is now quite certain that the winter-wheat crop of the United States in 1883, as compared with that of 1882, is deficient by more than 100,000,000 measured bushels. This deficiency will be still further augmented by the short weight and the inferior quality of the red winter crop of 1883. This is indicated by the reports of the official grain inspection of the receipts. The low grade of wheat at New York in store means, says the journal named, less flour and less export surplus.

Beerbohm reports quantity of grain on passage November 8, 1883:

	Wheat. Qrs.	*Maize. Qrs.*
To the United Kingdom	1,825,000	170,000
To continent	430,000	55,000
Total quarters	2,255,000	225,000
Equal bushels	18,040,000	1,800,000
Compared with the previous week:		
To the United Kingdom	1,925,000	200,000
To continent	470,000	60,000
Total quarters	2,415,000	260,000
Equal bushels	19,320,000	2,080,000
Decrease, bushels	1,280,000	280,000

AMERICAN WHEAT MARKETS.

On Friday, October 20, wheat for that month touched $1.05¾. On Wednesday evening last, November 7, the current option touched $1.11¼ per bushel, a gain of 5½c. per bushel. An advance was not noted until on Saturday last, when November wheat jumped from $1.08¼ to $1.08⅞, a gain of ⅝c. per bushel in one day. Trading from that time until and including the middle of the week was active, and prices continued to gain steadily. The advance on November on Monday was 1⅛c. per bushel, and on January ⅞ of 1c. On Wednesday the movement was continued, and a gain of 1¼c. per bushel was noted, November closing at $1.11¼ bid and January at $1.15⅜ against $1.13⅞ on Monday night, a gain of 1½c. Tuesday being election day, of course the Exchange was closed and there were no transactions.

Many of the large dealers went onto the bull side in wheat, and the bears in general have been doing active work in the way of covering their shorts. The live question of the hour was, had the advance come to stay? The gain has been mainly since Friday last, when the quotation for the current option was but $1.08¼ against $1.05¾, a gain of 2½c. in two weeks. In the five days succeeding, the advance was 3c. per bushel, and the buyer decidedly bullish. The visible causes of this change to a higher range of prices were decreased receipts at the west from farmers' hands, the approach of the close of interior water transportation and firmer cables from the United Kingdom. With exporters to support this condition of affairs the long-looked-for advance would become a reality. Exporters have indeed been buying liberally, but have been observed to realize on their purchases by liberal sales on the same or succeeding days. But the advance had not come to stay. Thursday lost ⅞@1c. per bushel. Trading was active and the market feverish. Friday recorded further weakness, and ½c. average decline in prices. Chicago advices showed the source of the rise to have been due to bull manipulation. The gain of 3c. afforded a profit, and active sales let prices down again.

The receipts of wheat at tide-water for the week ending November 3 decreased to 983,584 bushels from October 27, when they were 1,202,920 bushels. The exports from the Atlantic ports for the week ended November 3 amounted to 647,641 bushels, against 932,034 bushels October 27.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended November 3 amounted to 1,526,062 bushels, against 1,576,135 bushels in the preceding week, and the shipments to 1,067,192 bushels, against 1,302,963 bushels in the week previous.

The visible supply of wheat in the United States and Canada (east of the Rocky mountains) November 3, as against the preceding week, showed an increase of 55,126 bushels.

The course of prices of wheat at New York and at Chicago (1 P.M.) during the past week has been as follows:

	New York.				*Chicago.*	
	Nov.	*Dec.*	*Jan.*	*Feb.*	*Dec.*	*Jan.*
Fri. Nov. 2...	$1.08¼	$1.10⅛	$1.12¼	$1.14⅜	.95	.96
Sat. Nov. 3..	1.08⅞	1.10¾	1.13	1.15⅛	.95¾	.96¾
Mon. Nov. 5.	1.10	1.11⅜	1.13⅞	1.16	.96¾	.97¾
Wed. Nov. 7.	1.11¼	1.15⅛	1.15⅝	1.17½	.99½	1.00¼
Thur. Nov. 8.	1.10¾	1.12⅛	1.14⅜	1.16½	.98½	.99

INDIAN CORN.

Indian corn has followed much the same course as wheat in the matter of the advance. The lowest point touched here was 55¼c. per bushel on October 24, for the current option. On October 31 it had gained but ¼c. being quoted at 55½c. for the November option. At the close, November 2, the option for that month advanced to 57c., a gain of 1¾c. per bushel from the lowest point reached. On last Saturday evening the closing price bid was 58½c., a gain on that day of 1½c. per bushel. On Monday the gain was 1⅛c. to 59⅝c. per bushel, and on Wednesday to 60⅜c., an advance of ¾c. per bushel. The total gain from Friday night of last week to Wednesday night of this week amounts to 3⅜c. per bushel. The causes of this advance were, in brief, the decreased receipts at all points and the concentration in a comparatively few hands of the heavy stocks stored here. The deliveries on contracts necessitate the production of corn, of course, and this required a premium to meet the views of holders, and in order to induce them to part with the grain is produced the unusual spectacle of cash corn leading the options in price. Thursday, however, saw corn drop 1c. in sympathy with wheat. Transactions were limited, and the export demand and shipments much restricted. There was scarcely any revival in business in corn on Friday. Prices broke but recovered again. Cash corn was steadily held, and a gain of some 2c. remained.

The closing prices of Indian corn daily during the past week at New York and Chicago (1 P. M.) were as follows:

	At New York.		*At Chicago.*	
	Nov.	*Dec.*	*Jan.*	*Dec.*
Friday, Nov. 2	.57	.58⅜	.46¼	.46⅞
Saturday, Nov. 3	.58½	.59¼	.46⅜	.47⅜
Monday, Nov. 5	.59⅜	.60½	.47⅛	.48
Wednesday, Nov. 7	.60⅜	.61⅜	.48¼	.49¼
Thursday, Nov. 8	.59¼	.60¼	.47½	.48¼

Corn at Chicago at 1 P. M. yesterday was for December 48¾c., against 46⅞c. for the option named on the preceding Friday.

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Nov. 2		*Nov. 9.*
No. 2 flour	$2.25	@3.00	$2.30 @2.80

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Farm products are being held back for better prices.

From Philadelphia, Pa.: Speculation has been largely on the bull side in the grain market this week and has influenced a general advance in prices. Wheat is about 2c. higher and corn 2c. and 3c. higher than at this time last week. Exporters are doing very little in this market. Flour shows increased firmness in sympathy with wheat, but is not quotably higher and the market is quiet.

From Cincinnati, Ohio: The flour market has been heavy and millers talk despondingly. There is locally no sympathy with the advance in wheat and buyers purchase only for immediate consumption. There is a fair stock in store and wheat receipts have been lighter than last week. The market is strong and stocks are sufficient for consumptive demands. Corn has been active under a marked advance. Receipts are light and stocks moderate.

From Chicago, Ill.: Wheat is active and weak with no shipping demand. The supposed clique who manipulated the advance of the past few days have unloaded and gone short, weak tailers being closed out as fast as the margins expire. Wheat declined 1@1¼c. by noon. At 12:30 P.M. it was at about the lowest prices. Stocks are accumulating. Corn is active, influenced by the light receipts and a fair shipping demand, and advanced 1¼c. on covering by the shorts, who fear more mild weather will check shipments. Oats are arriving freely and are in fair demand.

From St. Louis, Mo.: Flour is in good supply but very dull, with scarcely any foreign or eastern movement. All grains are advancing, and holders are firm for higher figures. Corn receipts are quite light.

From Milwaukee, Wis.: Heavy rain in eastern portions of Wisconsin has checked the grain movement, but in the northwest farmers are delivering freely, and increased receipts are anticipated. Milwaukee operators bought a large amount at Minneapolis Wednesday for shipment east. The Washburn mills have withrawn from the market at that point which reduces the consumption of wheat 25 per cent. Coarse grains are moving freely. Kansas advices report frosty weather beneficial to the new corn, and shipments to this market will increase. Millers here are doing a light business. The average daily production is 3,600 barrels. The market is improving to-day with better demand from exporters, but prices bid are not high enough for business.

From Minneapolis, Minn.: The weather continues mild for the season, and fall plowing is about completed. Threshing is nearly all done and the movement of wheat has been large during the week. The millers of the city have purchased at interior points over 1,000,000 bushels during the last week. Receipts in the city are 970,000 bushels. The market is weak and lower. No. 1 hard is selling at 99c.@$1. Lake Superior navigation is almost closed for the season, with about 1,000,000 bushels of wheat in store at Duluth. Country elevators have large stocks. The flour market is rather easier and 15@20c. lower. The output at the mills for the week is 110,000 barrels.

From San Francisco, Cal.: A general rain over the state favors operations of the summer. Fall wheat is nearly all planted, and is showing a vigorous growth in some places. Wheat is firm at higher prices for spot.

From Baltimore, Md.: Flour is quoted firm and steady, with an upward tendency, The wheat market is firm, with prices slightly advanced.

From New Orleans, La.: Grain is nominal. Receipts of corn amount to 111,100 bushels. Exports are 200,000 bushels; of wheat trifling. The stock is: corn 200,000 bushels, wheat 125,000 bushels. Flour is dull. The supply is fair.

From Memphis, Tenn.: Flour is held firm and cornmeal is easy. Corn is almost dull.

From Nashville, Tenn.: Flour is in light demand, with fair prices. The wheat market has been active, with a good demand and good prices.

PROVISIONS.

On Saturday last the speculative market in hog products showed no material change from the day preceding. On Monday, however, the change was a surprise here, for no sustaining force was noted. The advance made at the west was attributed to manipulation. Tuesday increased this. Packers appeared to be in want of hogs, notwithstanding the heavy receipts of hogs of late, and prices continued firm. The net gain on November lard in the two days was about 20 points per pound. Western steam lard on Saturday was held firmly, but was in light request. The demand for pork was also light. Monday showed no special improvement except for lard for home demand, although there was a better western demand for pork. The demand on Wednesday was better for both pork and lard. There was a decline of a few points in lard on Thursday, and from 2 to 3 points again on Friday. Pork held firmly at the advance. Spot lard continued higher and firm.

The following shows the export of hog products for the week ending November 3, 1883:

	Pork, barrels.	*Bacon and hams, pounds.*	*Lard, pounds.*
New York	4,420	4,151,073	2,412,176
Boston	1,385	747,259	124,520
Portland	....	....	....
Montreal	396	540,400	46,200
Philadelphia	....	1,100,000	107,500
Baltimore	315	....	136,313
New Orleans	14	400	500
Totals	6,530	6,539,132	2,827,209
Previous week	5,658	8,867,267	2,712,236

The prices for provisions during the week have been as follows:

	Nov. 3.	*Nov. 5.*	*Nov. 7.*	*Nov. 8.*	*Nov. 9.*
Lard, western spot	7.75c.	7.75c.	7.75c.	7.90c.	7.90c.
Lard, November..	7 55	7 64	7.90	7.75	7 75
Lard, December..	7.55	7.62	7.80	7.75	7.75
Mess pork	$11.50	$11.50	$12.00	$11.87½	$12.00

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The provisions trade has been marked for its scarcity of seasoned meats and an active demand for all salable stock.

From Chicago, Ill.: Pork is active for January and February. Cash and near futures are quiet. The shipping demand is moderate. Option trading is mainly between local brokers. Lard is steady, with a fair business in cash and distant futures. Meats are quiet and a shade lower for futures. Full cured are scarce and in good demand from shippers, and are held firm. Hogs are weak and declining. Receipts to-day are 36,000. Estimated for the week 175,000. Cattle are firm and the demand is good.

From St. Louis, Mo.: Provisions are active and tend upward. Hogs are advancing on a strong shipping and packing demand and but small supply. Cattle are in poor offering and fair request, with an upward tendency.

From Kansas City, Mo.: The provisions market is quiet and the jobbing demand good. Cattle receipts are about the same as last week, and there is no material change in values. Hog receipts have slightly increased; values have advanced 10@12½c. The market has fluctuated considerably; the tendency is upward. Money rates are unchanged.

From Savannah, Ga.: Provisions and country produce have been in good demand. Heavy groceries are fairly active, while the lighter, such as canned goods, are less called for, and sales have weakened.

From Memphis, Tenn.: The meat market is ruling quite stiff, caused by increased local demand.

From Nashville, Tenn.: The cattle market is dull; receipts are heavy; the demand not equal to receipts. Prices are fair.

From New Orleans, La.: Provisions are firm. The stock is small.

THE NEW YORK DRY GOODS MARKET.

The volume of domestic business transacted by first hands has been of a moderate nature. Buyers have shown but little animation and are mainly on the lookout for "jobs" and novelties. In foreign goods, also, the demand has been light, the request being principally for fancy dress goods. The jobbing trade remains quiet and expect to continue so until some change in the weather has taken place. Retailers report an improved business in general, though heavy goods are moving slowly and furs not at all. With the advent of some good sharp weather business would improve all round.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Agents and jobbers have had a light business, and the market all through has been very quiet. No new features have been developed.

From Providence, R. I.: The wholesale dry goods trade is fair, and the season, notwithstanding the cry of dull times, has been nearly up to the average. The retail trade is only moderately active and some call it dull. Like dry goods the trade in millinery is backward, and there is a disposition among the larger dealers to buy sparingly and avoid the losses occasioned by being obliged to carry over old stocks. The print cloth market is dull, and sales are small; 64s are quoted at 3⅝c. less ½ of 1 per cent., and 56x60s at 3⅛c. There are about 115,000 pieces on hand.

From Philadelphia, Pa.: General trade has ruled quiet. Orders are mostly for small lots to keep up assortments. The market is steady, however, for all standard productions.

From Pittsburgh, Pa.: The dry goods trade is very satisfactory, and the movement is greater than at the like period last year.

From Cincinnati, Ohio: The dry goods trade has been without any marked features, the business being moderate in volume.

From Cleveland, Ohio: The dry goods and kindred lines of business have not increased as they should, and will probably fall behind last year in total sales for the season. The weather continues unseasonable, last week's cold snap lasting but a day or two.

From Chicago, Ill.: Dry goods are quiet, and the trade is materially interrupted by rains and bad roads. Country stocks are generally reported first-rate, but retailers want few goods just now and the demand is mainly for staples. Sales equal to those of this date last year. Millinery is in light demand, and country and city retailers complain bitterly that the bad weather is injuring trade.

From Detroit, Mich.: In dry goods jobbers are receiving a fair amount of orders for reassortment, but trade generally is not very active.

From St. Louis, Mo.: The jobbing dry goods movement is only tolerably active at steady values, but the retail business is improving both with fancy goods and staples.

From Burlington, Iowa: The dry goods movement is steady, and with a good demand.

From Minneapolis, Minn.: There is a good demand for seasonable dry goods, but the movement of heavy winter goods is not large, but in other lines there is a good trade.

From San Francisco, Cal.: Jobbers report dry goods dull during the past week. Stocks are accumulating.

From Baltimore, Md.: The dry goods market has continued very quiet both with the jobbers and commission houses, and not much activity is looked for until the new year.

From Norfolk, Va.: Dry goods jobbers are doing a fair business but anticipate a large increase.

From Savannah, Ga.: Dry goods continue steady, with a fair shipment for the week into the interior. Collections are fairly good.

From Memphis, Tenn.: Dry goods jobbers report sales as satisfactory and business good. Money is 8 per cent. Exchange is at par.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Business in the clothing trade has tapered off to fine proportions and a quiet market is expected for some weeks to come. The situation is satisfactory.

From Chicago, Ill.: Clothing is slow. Jobbers say orders are light, but not more so than is customary at this season, and they are not complaining.

From Savannah, Ga.: Clothing is backward and merchants are pushing sales on account of the continued warm weather.

COTTON.

The New York market for spot cotton during the week (which is one day short owing to election holiday) has been dull and trading very light. Quotations show a slight falling off, having dropped a point on Wednesday, to 10½c., and since remaining unchanged. The sales have been as follows: For speculation 500 bales and for consumption 1,895 bales. Included in the above are 500 bales to arrive. The total sales for the week foot up 2,395 bales against 5,364 bales last week. Deliveries on contract amount to 3,100 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	*Last week.*	*Last year.*
Ordinary	8¼c.	8 5-16c.	7 15-16c.
Strict ordinary	8 11-16	8¾	8⅜
Good ordinary	9 9 16	9⅜	9 3-16
Strict good ordinary	9⅞	9 15-16	9⅞
Low middling	10⅛	10 3-16	10 1-16
Strict low middling	10 5-16	10⅝	10 5-16
Middling	10½	10 9-16	10½
Good middling	10¾	10 13-16	10¾
Strict good middling	10⅞	10 15-16	10 5-16
Middling fair	10⅜	11 7-16	11 7-16
Fair	12⅛	12 3-16	12 3-16

STAINS.

	This week.	*Last week.*	*Last year.*
Good ordinary	7⅜	7 7-16	7 9-16
Strictly good ordinary	8⅝	8 11-16	8⅜
Low middling	9¼	9 5-16	9 1-16
Middling	10⅛	10 3-16	10

The market for spot cotton closed quiet.

The market for futures has been dull and barely steady. Sales have been light, and but very little interest is manifested. Orders from outside buyers are limited. Quotations show a falling off from last week of 10 points for near months and 8 for later ones. The sales for the week foot up 371,700 bales, against 446,600 last week and 465,300 for the same week last year.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
November	10.39	10.49	10.36
December	10.51	10.63	10.33
January	10.67	10.77	10.40
February	10.82	10.91	10.51
March	10.97	11.06	10.62
April	11.09	11.18	10.74
May	11.21	11.29	10.86
June	11.33	11.40	10.97
July	11.44	11.50	11.07
August	11.54	11.60	11.17

The market for futures closed barely steady.

The southern markets have been quiet and easy. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	*To-day.*	*Last year.*
Galveston	7,987	10 1-16	10⅛
New Orleans	45,800	10	10⅛
Mobile	4,500	9⅞	10
Savannah	15,000	9 15-16	9⅞
Charleston	7,000	10	10⅜
Norfolk	8,612	10 1-16	10 3-16
Baltimore	1,683	10⅜	10⅜

The total receipts of cotton at the ports since September 1 are 1,725,876 bales against 1,617,185 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	252,229	259,957
New Orleans	471,908	336,670
Mobile	80,616	116,987
Savannah	327,671	329,594
Charleston	219,339	219,262
Wilmington	47,332	43,249
Norfolk	197,164	231,022
Baltimore	8,340	4,624
New York	3,524	12,151
Boston	10,447	28,067
Philadelphia	5,016	12,704

The total receipts for the week were 267,025 bales, against 239,280 last week, and 259,968 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 121,563 bales, against 124,820 bales last week and 125,420 bales for the corresponding week last year. The shipments for the week were 97,608 bales, against 90,810 bales last week and 104,900 bales for the corresponding week last year. The stocks for the week were 266,141 bales, against 246,823 last week and 118,437 for the same week last year.

Below will be found the receipts at each of the ports for the week ending November 9, 1883, with comparisons for last week and the same week one year ago:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	5,441	5,665	1,814	5,563	3,427	2,788
New Orleans	10,586	28,894	17,755	9,778	13,398	19,661
Mobile	1,550	5,549	3,123	1,098	1,941	2,866
Savannah	7,971	7,488	5,601	6,029	4,195	7,211
Charleston	3,924	3,603	3,298	4,587	2,730	2,231
Wilmington	1,568	1,105	782	1,092	633	529
Norfolk	5,035	7,959	5,677	5,759	5,246	5,068
Baltimore	300	1,045	....	....	300	430
New York	520	126	....	68	42	1,047
Boston	656	585	500	....	1,191	835
Philadelphia	75	10	8	159	....	79
Totals	37,626	62,089	38,558	34,133	33,073	42,745
This day last week	32,358	51,391	40,167	34,398	32,424	34,788
This day last year	39,006	49,393	42,475	37,582	36,549	41,373

The Liverpool market for prompt delivery uplands has been dull and easier. Quotations for middling uplands dropped a point on Wednesday, and have since remained unchanged, closing last evening at 5 15/16d.

The future market for the week has been dull. Last night's closing quotations show a decline of 2 points for near months and 1 point for later ones.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
November	5 59-64d.	5 61-64d.	6 1-64d.
November-December	5 56-64	5 58-64	5 60-64
December-January	5 56-64	5 59-64	5 60-64
January-February	5 58-64	5 58-64	5 61-64
February-March	5 58-64	5 62-64	6 2 64
March-April	6	6 1-64	6 1-64
April-May	6 3-64	6 4-64	6 3-64

The market for futures closed quiet.

The sales for the week at Liverpool were 58,000 bales (of which 43,000 were American), against 65,000 (of which 42,500 were American) last year. The sales for export were 2,900 bales, against 7,400 bales last year. The sales for speculation were 970 bales, against 1,650 bales last year. The amount forwarded was 10,500 bales, against 14,000 bales last year. The stock in port is 438,000 bales (of which 228,000 are American), against 461,000 bales (of which 191,000 were American) last year. The total imports for the week were 78,000 bales (of which 51,000 were American), against 76,000 bales (of which 63,000 were American) last year, and the amount afloat 216,000 bales (of which 161,000 are American), against 284,000 bales (of which 197,000 were American) last year.

The Manchester market closed dull and lower, especially for yarns.

The Havre market closed steady.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The cotton market is quiet and sales are reported light. Middling uplands are worth 10⅞@11c., and middling gulfs 11⅛c.

From Philadelphia, Pa.: There is no change in prices, but a slow movement proportioned to the immediate wants of spinners.

From Cincinnati, Ohio: The cotton market has been dull. There is a fair demand for common grades, but prices are weaker. Stocks are light.

From St. Louis, Mo.: Cotton is drooping, in sympathy with other markets, and in only fair receipt.

From Baltimore, Md.: Cotton is quiet and steady, the demand being principally for immediate wants.

From Norfolk, Va.: There is very little change in cotton receipts. Exportation goes on briskly. Collections are fair. The weather is splendid.

From Savannah, Ga.: In cotton the receipts are still coming to market fairly. The demand is good at ruling prices, but factors being firm for full values buyers are off at the extreme limit and this restricts sales.

From Savannah, Ga.: Cotton receipts are good and sales prompt.

From New Orleans, La.: Since Thursday of last week ordinary good, ordinary fair and middling fair have declined ⅛c.; low middling and middling 5/16c. and good middling ¼c. Novembers are off 8 points, the winter months 11 points, and spring 10 points. The movement is liberal, particularly spots. Present prices are considered liberal. The favorite crop estimate is 6,000,000 bales, and is attributed to the heavy receipts, this week's being the largest known. The National Cotton Exchange says since September 1 the overland movement has been 133,340 bales; northern consumption 327,408 bales.

From Memphis, Tenn.: The cotton market is quiet, the closing price of middling being 7⅞c.

WOOL.

As a general thing the wool trade has continued quiet without important change in values. The latter are maintained with more than usual steadiness on a slow market, owing to the exceptionally small stocks in sight. It is beginning to be believed that manufacturers have bought more wool in the country this year than in former years, and if this is the case it is probably the principal cause of the present reduced supply in the eastern as well as in interior markets. There has been, however, a much larger consumption of wool than usual in consequence of the increase in the capacity of the worsted mills, encouraged by the preference that has been accorded to that class of production during the past year in all distributing markets.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: There is no change in the wool market since last week. The sales have been a fair average, amounting to 2,323,200 pounds for the week. Choice fine fleeces are firm, but all other grades are weak, although holders appear to have confidence in the future of the market. The sales of Ohio and Pennsylvania fleeces have been at 36@38c. for X, 38@40c. for XX, and 41@41½c. for XX and above, including choice selections. In Michigan fleeces the sales have been at 34@35c. per pound, principally at 34c., but held mostly at 35c., and one choice lot of 5,000 pounds sold at 36c., but this may be considered a fancy price. In combing and delaine fleeces the sales have been at 39@42c. for fine delaine and 44@46c. for No. 1 combing, including a choice selection at the latter rate. There has been a fair business doing in unwashed fleeces, and sales of Texas, territory and Montana at previous prices, although in some instances prices have been shaded. In California spring there have been sales of 100,000 pounds choice at 30c. and 100,000 pounds eastern Oregon at 26c. per pound. Pulled wools have been in fair demand and the sales have ranged from 40@43c. for choice supers and 25@38c. for common and good supers. In foreign wool there have been no transactions of any magnitude. A lot of new Australian has been sold on private terms, and there have been purchased for the United States some 6,000 bales at Melbourne, and this will probably be increased to 15,000 or 20,000 bales.

From Philadelphia, Pa.: Trade has continued dull, the week's sales aggregating only 500,000 pounds all grades. Prices, however, have ruled steady.

From Cincinnati, Ohio: Wool is in fair consumptive demand with no change in prices, and no effort to gather in stocks from farmers.

From Chicago, Ill.: Wool is quiet and steady. The demand is slow.

IRON.

The American pig iron market is very dull indeed. Prices are unchanged and sales are quite light. No. 1 X continues at $20.50 and No. 2 X $1 cheaper. Some weakness has been caused in the eastern market owing to the growing inroads by smaller Ohio furnaces, some of which have shipped their product as far east as Albany and Troy. Stocks are light, and it is seriously to be doubted if makers would sell 10,000 tons of No. 1 at the current quotation. Scotch pig iron continues at prices last quoted, but is very dull and but little is selling. The week's arrivals will aggregate about 1,000 or 1,200 tons, all but about 200 tons of which went directly into consumption. Sales were small. Manufactured iron at the east continues very dull, structural irons being in best request. Bar is as dull as ever, and margins of profit, where admitted to exist, are very small. Buyers continue apathetic. Sheets and plates are in light demand only. The drop in prices of steel rails is discussed at length in our editorial columns. It appears that the Bessemer mills long since recognized that too many rails were being produced in connection with the reduced demand therefor, and efforts have been making to curtail production. For two Friday afternoons in succession, well into the night, representatives of the steel rail mills, within a month, held sessions in Philadelphia having a satisfactory agreement on this point in view. But the outcome of neither gathering was satisfactory. Meanwhile, within ten days, it became known here that some of the smaller mills had cut under the nominal price of $37 per ton, to $35. Taking the bull by the horns the Lackawanna company on last week Friday disposed of 30,000 tons at $35. Sales at that figure in all to date are estimated to amount to 60,000 tons, distributed among several companies. Well-informed members of the trade say they would not be surprised to see prices of steel rails lower before they are higher. But, for that matter, they are inclined also to think that $20 per ton for No. 1 X will be touched prior to any higher figure. No disasters are expected in the iron and steel trade. It is possible that some western steel-rail mills may have to shut down in the face of the existing prices, but not the larger eastern works.

THE AMERICAN IRON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Pig iron moves slowly, and the market continues weak. Old rails, Bessemer pig and Spiegeleisen are dull. Merchant bar is irregular in price and demand, with sales chiefly in a retail way. Nails are fairly steady for jobbing lots. There is a steady, fair inquiry for structural iron at unchanged prices. The break in the price of steel rails to $35 for winter delivery has not brought out as many orders for large lots as expected, but there are plenty of inquiries for small lots on that basis.

From Pittsburgh, Pa.: There is a moderate demand for manufactured iron, which continues better than expected, owing perhaps to favorable weather.

From Chicago, Ill.: Bar iron and nails go off slowly, and sales are confined to small lots. Pig iron is dull. Lake Superior is in light supply, with no pressure to sell. Southern iron is plenty, and holders are anxious to realize. Round lots could be had at concessions.

From Cincinnati, Ohio: Pig iron is in fair consumptive demand. Wants are largely confined to better grades, of which there has been an apparently unsuccessful attempt to obtain a slight advance. Sellers are plenty. Manufactured iron is in fair demand and stocks fair.

From Cleveland, Ohio: The demand for iron is fair, the furnaces showing no disposition to accumulate stocks. Some dealers claim that no business at all would be preferred to any lower prices than at present.

From Detroit, Mich.: In iron there is a fair demand, but prices are unsatisfactory. The output of ore from the lake Superior district shows a decrease of 520,000 tons from last year to November 1.

From St. Louis, Mo.: The pig iron movement is moderately good. Some brands are getting scarce and are firmer. Manufactured iron is very firm at unchanged quotations, with fair sales which are increasing in some directions.

COAL.

The movement of anthracite from the mines continues to be fairly active. The companies claim, at least, that stocks are not accumulating, and all talk of a restriction of output at the mines in the current month has disappeared. In certain quarters, however, there is confidence expressed in an intention to permit mining on half-time only during December. The western trade continues the more active, and the demand for transportation facilities continues somewhat in excess of the supply. The demand for furnace sizes is somewhat less, owing to the stoppage of some of the anthracite iron furnaces. Domestic sizes, however, continue in good request. There is reported to be a general shading of prices which pales the significance of the admitted cut of 15c. per ton reported concerning the Delaware & Hudson Canal Company a month ago. Bituminous coal continues to leave the mines in large quantities and is readily taken up. Prices continue at $4@4.25. The production of anthracite for the week amounted to nearly 760,000 tons. This brings the gross tonnage of the year to over 2,500,000 in excess of that in a like portion of 1882, when that portion used at the mines and for railroad purposes is included.

COAL MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The coal market is depressed and sales are very light. The stock on hand is fair and prices remain unchanged.

From Cincinnati, Ohio: Coal receipts are large and the market is easy. Prices are nominal and stocks liberal.

PETROLEUM.

In the speculative oil markets dullness is the main characteristic. Operators have been kept waiting from day to day for several weeks to note the effect of alleged big finds in oil about to be brought in. Thus far none of them reported has succeeded in influencing pipe-line certificates very far away from $1.10. Prices went off a little on Monday, holders preferring not to carry oil over election. Wednesday there was some little animation, and prices recovered the fraction. Thursday was very dull. Porcupine wells Nos. 13 and 14 came in on Friday. They were expected to be heavy gushers, but are reported to be much less than that. On receipt of the news that they were doing about 500 and 200 barrels respectively for the first day the market advanced buoyantly, closing strong. The two wells will be drilled deeper to-day.

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, November 3.....	1.09¼	1.10⅜	1.09⅛	1.10¼
Monday, November 5.....	1.10½	1.10¾	1.09¾	1.09⅞
Wednesday, November 7....	1.09¾	1.10⅛	1.09⅞	1.10
Thursday, November 8.....	1.10¼	1.10⅞	1.10	1.10
Friday, November 9.....	1.10	1.12	1.10	1.12

The market for refined during the week has rather tended toward improvement, though to Thursday evening no gain in quotations was noted. The strengthening of German markets and the customary firm attitude of holders are the only causes noted. During the earlier portion of the week crude in barrels for export was moderately active, in response to a fairly good demand from France. Later this incentive to export disappeared. Oil in cases has continued quiet without noteworthy feature, and naphtha has been quoted steady without interruption.

Prices with comparisons at the close of preceding weeks were last evening:

	Oct. 12.	*Oct.* 19.	*Oct.* 26.	*Nov.* 2.	*Nov.* 9
Certifi's, crude..	1.10⅜	1.09⅞	1.10⅜	1.09	1.12
Refined, 110°....	8⅞	8⅞	8⅞	8¾	8⅞
Refined, 70°.....	8½	8½	8½	8¼	8½
Crude, in bbls...	7⅜@7⅞	7⅜@7⅞	7½@8	7½@8	7½@8
Case, plain.....	10	10⅛	10⅛	10⅛	10¼
Naphtha.....	5⅝	6	6	6	6

The export of petroleum from the United States, crude equivalent, for the week ending November 3, was 13,901,483 gallons, against 11,412,943 in the preceding week. The total export from the United States since January 1 was 548,117,040 gallons, against 539,604,802 gallons in the corresponding portion of 1882, a gain in the current year of 8,512,238 as compared with the gain of 10,376,202 gallons reported last week.

OCEAN FREIGHTS.

The charter market is dull, and in certain lines weak. The only ones which retain any life are those engaged in the West Indies and South American trade, for which there has been some demand. The position of the petroleum and grain markets here prevents a good business in those lines for the United Kingdom and the continent. Stocks of oil abroad are large, and prices there are relatively lower than in the United States. For this reason there has been a falling off in demand for cargo room. Grain is in much the same position, prices abroad being lower proportionately, and stocks there being very heavy. Berth rates have been fairly active.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The supply of tonnage continues light, but demand has not improved either for grain or oil vessels. Grain rates are a shade easier, owing to the slow chartering demand, closing at 4s. 7½d. @4s. 9d. per sail and steam to Cork for orders. Liverpool grain room by regular line steamers is held at 5½d., with but a moderate inquiry.

From San Francisco, Cal.: Freights are low. Contracts to arrive are greatly against charterers.

From New Orleans, La.: Cottonseed is quoted $12, but the product is declining, owing to freights, which have advanced not only on cottonseed products, but also on grain and cotton.

GROCERIES.

[By Telegraph to BRADSTREET'S.]

From Minneapolis, Minn.: Grocery houses report a good trade, mostly on orders from traveling men, but there is daily a fair representation of country dealers in the city.

From New Orleans, La.: Sugar is in buyers' favor. The better grades of molasses are scarce and in demand. Rice is firm. The movement of clean is good and of rough is active. Coffee is firm.

From San Francisco, Cal.: The grocery trade is dull, except coffee, which is firm.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Trade took a start on Wednesday and a steady increase is looked for during the month. There are now upward of sixty buyers here, and though they are very cautious about ordering, there is a good feeling and a promising outlook.

From Chicago, Ill.: Boots and shoes are in moderate request, the demand being largely for heavy work. Rubber goods are active.

LEATHER.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Leather is in fair demand and steady. Fine grades of calf are scarce and wanted.

From Baltimore, Md.: There is a better inquiry for all grades of leather, particularly in rough and in heavy stocks, with a tendency to better prices.

LUMBER.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Lumber is active, and yards are prepared to meet the demand which is largely for hardwood.

From Detroit, Mich.: The lumber market in coarse grades very dull. Stocks large.

From Minneapolis, Minn.: The lumber mills are mostly shut down for the season. The season's cut is considerably less than last year. The cut of logs the coming winter will be light, owing to the large quantity held over. The market is quiet and the cut steady.

HEMP.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The hemp trade is good, and receipts are light. Prices are firmer and stocks fair.

TOBACCO.

[By Telegraph to BRADSTREET'S.]

From St. Louis, Mo.: Tobacco offerings are of low quality and sales are light.

WHISKY.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Whisky is unchanged.

PEANUTS.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: Peanut receipts continue light, and prices are fully sustained.

NAVAL STORES.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: Spirits of turpentine are declining after the recent advance. Stocks in Atlantic ports are 32,000 casks. Rosin is generally held above buyers' views. Tar receipts and demand are steady. Crude receipts are meagre.

From Savannah, Ga.: Naval stores are ruling quiet, and the demand is nominal except for fine rosin. Spirits are dull, with a small demand from buyers. The stock on hand is fully enough to meet ordinary demands, but very little of it is in first hands.

ATLANTIC COAST FISHING INDUSTRY.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The dull season for fish has been entered upon, and a light trade is expected until after the holidays. Prices of codfish and mackerel are weak, but with a dull market quotations are nominally unchanged.

CHINA AND JAPAN.

[By Telegraph to BRADSTREET'S.]

From San Francisco, Cal.: The steamer Tokio took over $500,000 in specie to China Wednesday. The City of Pekin on Thursday brings later advices from China and Japan. Business there is very dull. Exports from both are of the average quantity.

TRADE EMBARRASSMENTS.

There were 219 failures in the United States reported to BRADSTREET'S during the past week, 24 more than the preceding week, and 70 more than the corresponding weeks of 1882 and 1881. Compared with the previous week the middle states had 41, a decrease of 11; New England states 29, an increase of 10; southern states 34, an increase of 3; western states 99, an increase of 37; Pacific states and territories 16, a decrease of 15; Canada 32, an increase of 5. The principal feature of the week has been the failures in the lumber trade in Michigan and the paper trade in Illinois and Wisconsin. The important failures reported were as follows: Lumber—Kellogg, Sawyer & Co., Kalamazoo; Frank Chickering, Wetzell Brothers, M. J. Bond, Porter, Byrne & Co., and Simon P. Swartz, Grand Rapids; Newton Jackson, South Bend, Ind. Paper—Rock River Paper Company, Chicago, and Beloit, Wis.; Hinman, Moody & Co., Beloit; Milan Paper Company, Milan, Ill. PHILADELPHIA.—Joseph D. Ellis, coal and lumber, has confessed judgment for $30,000, in favor of I. Jeanes, which is collateral for money loaned.

PHILADELPHIA.—John Hager, manufacturer of boots and shoes, was sold out by the sheriff and succeeded by his son, Milton S. Hager.

PHILADELPHIA.—William S. Ley, commission morocco, who recently failed, claims that his liabilities amount to $8,800, and that he has compromised with all but three of his creditors at 20 cents and has paid them. He says he will have nothing left, and has disposed of his stock. Nominal assets were about $3,000, and actual assets about $1,800.

PHILADELPHIA.—Judgments amounting to $17,567 and two mortgages to the amount of $15,500, aggregating $33,067, are recorded against Henry Loth, manufacturer of sewing machine cases, and execution issued. His warerooms were burnt out a month ago, and his loss was considerable.

PHILADELPHIA.—The Lubricating Packing Company was advertised to be sold out by the sheriff.

PHILADELPHIA.—Joseph C. Lukens, grocer, offers 40 cents.

PHILADELPHIA.—James MacDade, grocer, who was recently advertised to be sold out by the sheriff, has settled the matter by satisfying the judgment ($50) in favor of Joseph M. Walsh. There still stands against him a judgment for $204 in favor of Shaw & Brooks. He claims assets of $14,500, with liabilities of $8,500.

PHILADELPHIA.—The offer of Mace & Weeks, shoe manufacturers, not having been accepted, the sheriff sold them out, realizing about $22,000, against a judgment for $15,514.

PHILADELPHIA.—Evert P. Maule & Co., leather and manufacturers of morocco, were sold out by the sheriff on the 7th inst. There were probably $12,000 to $15,000 realized toward satisfying judgments of $12,000 and $17,000. Mr. Maule may arrange to continue business as agent.

PHILADELPHIA.—James L. Patterson, grocer, was advertised to be sold out by the sheriff.

PHILADELPHIA.—Michael Pryor, rags, has been sold out by the constable for rent.

PHILADELPHIA.—Joseph D. Stead, yarn manufacturer, is advertised to be sold out by the sheriff.

PHILADELPHIA.—Swyler, Haws & Co., wholesale provisions, made an offer to compromise with their creditors at 25 cents, which was refused by nearly all, and recently they assigned to Washington Butcher's Sons, to whom they are said to be indebted $3,500 to $6,000.

PHILADELPHIA.—W. H. Thomas, cigars, was sold out by the constable for rent.

PHILADELPHIA.—Wittig & Pollock, installment furniture, have obtained an extension of six, nine and twelve months.

PITTSBURGH.—The liabilities of Melville Black, men's furnishing goods, are $2,200; assets $1,000.

READING.—Execution for $13,997 has been issued against George W. Garst, planing mill.

READING.—F. J. Kantner, organ manufacturer, has been closed by the sheriff on executions for $10,500.

READING.—R. H. Savage, hat manufacturer, has been closed by the sheriff on executions for $8,500. At a meeting of creditors in New York an offer of 25 cents in six months, unsecured, was generally accepted. Liabilities $30,600, of which $23,775 is secured.

RHODE ISLAND.

PROVIDENCE.—Michael F. Murphy, dry goods, has assigned.

PROVIDENCE.—At a meeting of the creditors of The St. Croix Cotton Mill Company, on the 8th inst., it was voted to grant an extension.

BRADSTREET'S:

A Journal of Trade, Finance, and Public Economy.

PUBLISHED BY THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

Terms, $5.00 per year in advance, including postage.
SINGLE COPIES, TEN CENTS.

SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.

Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.

The synopses of recent legal decisions constitute an exceedingly valuable feature.

As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle-men.

THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 17, 1883.

NOTES OF THE WEEK.

It is now more than a year ago since this journal commented upon an unsafe practice which for several years past has prevailed to some extent among all classes of dealers—that, namely, of allowing purchases to be dated ahead, in addition to the usual credit granted upon the same. The immediate occasion of our criticism was the unsatisfactory condition of things then existing in the shoe and leather trade in Boston, where the custom of granting extensions of credit of this nature had grown peculiarly oppressive. We then pointed out the danger inherent in the system, showing how every extension of the credit principle, unless carefully guarded, tends to abuse, and, in particular, how the special practice criticised tended to bring about a spirit of speculation in trade. Events since then have abundantly demonstrated the soundness of our general position, and, although somewhat late in the day, measures are now being taken to prevent the recurrence of the evils involved in the system referred to. We notice that Shaw Brothers & Cassils, of Montreal, have issued a circular calling a meeting of the prominent houses in the leather trade in Canada to consider the question of limiting the maximum time for credit to four months and of decreasing the rate of discount. At present the time generally allowed in the trade there is six months, and frequently longer by dating ahead. The circular sets forth that, in view of the fact that the leather and sole finding business has in the past been attended with severe losses, attributable mainly to the unnecessary long terms of credit customary with the trade, a system of shorter credits and smaller discounts should be devised. The movement proposed is in the right direction, and should be successful.

The stock market during the past week has been most cleverly manipulated, and, despite the confessed absence of support from the outside public, prices have been advanced and held with a good deal of steadiness at the advanced quotations. It is abundantly evident that the large operators who have been putting up the market recently have several times attempted to unload some of the large amount of stock they have accumulated, and on each occasion a sudden and threatening break in prices followed; but so skillfully has the market been handled that an alarming drop has been averted every time, and after a brief pause prices have been slowly advanced again and an appearance of greater strength than ever given to them. If this can be continued for some time yet it is possible that some good outside buying may be attracted. The bull cliques have already done a good deal more than it was generally thought ten days ago that they could do. It seems to be a question o endurance between them and their opponents.

The convention called by the Commissioner of Agriculture to consider the subject of contagious diseases among animals has been in session at Chicago during the week. Representatives were present from twenty states and territories and from Canada. Favorable reports regarding the condition of western cattle were received, and some interesting papers on the prevention of contagious diseases were read. Professor Low, of Cornell University, expressed the opinion that the whole southern coast of the country was contaminated with a poison deadly to all bovine animals that had not been inured to it from the earliest dawning of life, and that this poison was steadily advancing northward, but as yet could not survive the winter frosts of the northern states. More must be known about it before it can be determined whether the disease can be stamped out. Hog cholera, he said, had been domiciled in all the great pork-raising districts, and the number of contaminated herds renders any effort to stamp it out a herculean task. Texas fever, he thought, was now to be fought only by the absolute movement northward of infected herds from the Gulf district. The lung plague is confined to a limited area, he says, and is an exotic which may be easily extinguished. Dr. Salmon, of the Agricultural Department, said that the losses from pleuro-pneumonia did not exceed $100,000 in a year. No case, he said, had been found west of the Alleghany mountains. There were no evidences of the disease at present beyond the immediate vicinity of a few large cities in the east. He thought that it would not be a very difficult task to free the country from all suspicion of this foreign intruder. Mr. J. H. Sanders, of the Treasury Cattle Commission, agreed with Dr. Salmon in thinking that pleuro-pneumonia was confined to a few localities on the eastern seaboard, and that it had not spread to any alarming extent. He said, also, that there had been no foot and mouth disease in this country except where communicated by recent importations, and that the outbreaks had been quickly stamped out. One source of danger, he added, lay in the sending of calves to the west, but the business was not profitable and was dying out.

The technicalities by the aid of which some of the politicians opposed to the Civil Service act have hoped to evade in part the operation of that law, are not likely to avail those gentlemen much. The politicians opposed to reform have been contending that, under a proper construction of the act, promotions in the service could be made without preliminary examinations. This point, among others, was recently submitted to the Attorney-General by the Civil Service Commissioners, and he has rendered an opinion in which he takes the view that the general rule to be deduced from the provisions of the law is that, to be eligible for appointment to any class, whether by way of promotion or otherwise, the applicant must have passed an examination for the purpose of testing his fitness for the place. From this it follows that all promotions must be made upon examination. The Attorney-General further holds that there is nothing in the Civil Service act to limit original entrance to the service to any particular class or grade; that being left entirely to the judgment of the President. The whole course of proceedings relative to the Civil Service act and its enforcement have heretofore given but very cold comfort to the politicians.

The Post Office Department has issued an order which will hereafter require prepayment at merchandise rates on various articles which have heretofore been allowed to pass through the mails as "printed matter" at the rate of one cent for two ounces. The Postmaster-General recently decided that articles of merchandise sent by manufacturers or dealers are subject to merchandise rates although they bear printing, holding that it was never the intention of Congress to classify matter having no other value than that of merchandise, as printed matter, because of any printing it might contain. He took the view that in fixing a low rate of postage on printed matter, Congress could hardly have designed to discriminate in favor of dealers in such articles of merchandise as might happen to contain or bear printing. It was rather its intention, in accordance with the long established policy of the government, to favor the dissemination of information among the people by admitting reading matter in the form of newspapers, periodicals, books and pamphlets to the mails, at the lowest possible charge, and at the same time to encourage trade and manufactures by allowing unsealed printed circulars, catalogues, etc., soliciting custom, and giving prices and descriptions of goods, to pass in the mails at equally low rates.

The report of the Ohio Bureau of Labor Statistics shows that of twenty-two strikes in that state in 1882 only five were successful. The time lost was, in the case of iron and steel workers in rolling mills, sixteen weeks, boiler-makers six weeks, stair-builders three weeks, and cigar-makers two weeks. Advances in wages ranging from 8 to 16½ per cent. without strikes were reported in twenty-three occupations during 1882. These facts are in themselves by no means proof that strikes do not accomplish their objects. No doubt wages were in many cases advanced through fear that there would be strikes, and there are many employers who need the menace of a strike to keep them from playing the tyrant with their employés. An interesting experiment in the way of arbitration is in progress in the boot and shoe manufacture at Cincinnati, and has thus far been a success. A "board of arbitration and conciliation" has been organized, composed half of employers and half of employés. Before this board comes every dispute, and pending a decision work is to be continued in the shops as if nothing had happened. If the board cannot reach a decision each side selects an arbitrator and the arbitrators an umpire. The decision of these three is final. Each factory has a shop committee, composed of the proprietor or a member of the firm and two persons selected by the employés, who hear any dispute in the factory, and if they cannot agree they refer it to the board. If any employer refuses to submit to a decision his shop is to be declared on a strike, and if any employé so refuses he is to be deprived of work in factories represented in the board. No employer or employé is allowed to interfere with anybody because he is a union or a non-union man. This organization has, in the few months of its existence, settled a disagreement in regard to the wages of shoe-cutters and fixed a wages scale for six months. There seems to be no good reason why the experiment should not be permanently successful.

LESSONS FROM THE RECENT FAILURES.

The leading features of some recent notable commercial failures should have the effect of directing the attention of the business community to the necessity of bringing about a considerable reform in commercial methods, particularly in the large centers of trade. The Shaws of Boston sank a large amount of capital in real estate operations which had little or no immediate connection with the needs of their business, and their dealings in this direction did much to cripple them. When they felt themselves on the brink of bankruptcy they attempted to raise their credit by getting possession of and using good business paper, and by giving out fraudulent statements as to their financial condition. They managed to have hundreds of thousands of dollars worth of their paper accepted by persons in the trade with whom they had dealings before the final crash came, and thus carried a number of other firms with them in their fall. The recent extensive failures in the clothing trade in New York city furnish an additional illustration of the extent to which unsound and even reckless financial methods may obtain in a business community of the first class. The firms involved attempted to carry on an enormous business on a capital largely fictitious, through the exchange of accommodation paper which afterwards turned out to be, in great part, worthless. It is also hinted that the failures were indirectly owing to the large real estate operations of the head of one of the principal firms, which operations involved the locking up of a considerable amount of surplus capital, which could not be rendered immediately available to meet an emergency. The Michigan lumber failures fall within the same category to which those above referred to belong. They tell the same story of reckless indorsements of paper and of locked up and unavailable capital. The failure last year of Follett, the New York note broker, was a particularly striking instance of the abuses which are possible under the credit system in the absence of proper checks. Mr. Follett, it will be remembered, was one of the largest note brokers in the city of New York. His business methods were very loose, but were nevertheless tolerated by his customers, who allowed him to hold their paper for long periods of time without making any but partial returns. Part of this paper he sold or hypothecated, using it sometimes as collateral for loans obtained in his own name. While acting as a note broker for his customers he was engaged in private speculations in grain and stocks, in which much of his own and his customers' money was sunk, and he also spent considerable sums in real estate speculations.

Such practices as those referred to above are, it is needless to say, inconsistent with sound and careful business methods. More than that, they strike at the very basis of the existing credit system. That system is a very sensitive and delicate contrivance, and, as common happenings in the commercial world indicate, it is peculiarly liable to derangement; its very success generating a spirit of confidence which, unless carefully checked and guarded, is readily abused. The credit system has been built up by the sustained and long continued efforts of commercial integrity, and, like liberty, it would seem to demand continual vigilance as the price of its perpetuation. It is not then enough that the mercantile community in the past have by the maintenance of a high standard of honor rendered the credit system a possibility; they must be watchful to preserve it, and must take well-considered measures to prevent its becoming impaired. These measures to be effective over a field of any extent, such, for instance, as is presented by any of our large trade centers, must be taken in concert, through the medium of organizations adapted to the special end in view. Modern conditions, as we have more than once pointed out, render increasingly necessary a more thorough and intelligent organization in almost every department of human activity, and in no department is such organization more necessary than in that of commerce, whose relations are becoming more widely extended with every year. The disclosures which have been made in connection with the failures referred to above would seem to indicate that there exists a very promising field for some system whereby a check upon the reckless use of commercial paper could be put in operation. The chief remedy for this particular abuse is doubtless to be found in increased publicity in regard to transactions in mercantile paper, and the way to that end is through a perfected organization of the commercial body in all its parts.

Some of the failures to which we have referred above, however, suggest other considerations to which we may properly call attention here. In a majority of the instances mentioned it will be noticed the failures were owing directly or indirectly to speculative operations on the part of the insolvent firms or persons. This is especially true of the case of Follett, which may therefore be singled out for the purpose of illustration. In such a case the holder of the funds or credits of his customers is in the position of a trustee, and is held to a strict account for all losses incurred in consequence of the unauthorized employment of his customers' money for his own purposes. But it will be at once apparent that this accountability amounts to nothing when the trustee in question has no property through which he can be affected. The mere civil liability of a person under such circumstances may then be dismissed as having no deterrent influence whatever. The question then remains, what can be done to eradicate the abuses referred to? And here we come upon one of the weak places in the existing legal system, or in its administration. The law which punishes the ordinary crimes against property with certainty and severity, overlooks, or the administrators of the law ignore, many of the more secret and dangerous offenses alike against property and against commercial security. It will not probably be questioned that more widespread evil is caused by a failure resulting either from dishonest trading or from reckless speculation with another's money than from an ordinary theft, and yet the former goes unpunished, while the latter calls down upon the offender the speedy vengeance of society. It is not to be wondered at that under such conditions failures such as those that have prompted these remarks are not uncommon. There is urgent need of the enforcement of such laws already in existence as apply to the misappropriation of funds or credits, and where these are insufficient suitable additions should be made to the criminal law so as to bring it abreast of the age. It is only in this way that the abuses to which attention has been called can be eradicated, or even brought under any sort of control.

BUSINESS LEGISLATION AT WASHINGTON.

The Forty-eighth Congress is about to convene. Its calendars are empty. The seven thousand bills of the last Congress have for the most part been sent to the junk dealer or to the pulp vat. What the attitude of the new Congress will be with respect to the business interests of the country must for some time remain a matter of speculation. The only certain thing about the situation is that business interests will receive only minor consideration, except where it can be made to appear that the political purposes of the parties which dominate in the respective houses will be promoted by some attention to commercial needs. It will be a winter of president-making, and politics will be paramount. Fortunately for the business interests of the country, however, the margin of votes in several of the northern "pivotal" states is so narrow that it will be possible for business men to assert themselves. Both parties have come to learn that that party cannot win in the coming presidential election which, from whatever cause, shall seem to put itself in antagonism with the best commercial interests of the country. The business community, in fact, holds the balance of power in the next presidential election, and if it shall choose to assert itself it can do much to secure wholesome commercial legislation the coming winter. The difficulty is that business men seldom understand their power in politics, and even more seldom know how to rightly use it.

But, whatever the result may be, measures of vital importance to the business community will be presented to the coming Congress. The Congress will be met at its threshold with a problem of the greatest importance to the commercial world, one which is at the foundation of all business. It was thought, when the National Bank Recharter bill was passed in the last Congress, that the stability of the national banking system was assured for a new term of twenty years. There are some alarmists, however, who think that it is now more seriously threatened than it at any time has been. There are manifold fears, and the gravest doubts, as to the future basis of banking. If the calls of the three per cents. are to be continued the country is certainly threatened with a possible contraction of $200,000,000 of national bank currency. The recommendations of the Secretary of the Treasury are not officially known. He is expected to recommend the repeal of the one per cent. tax on bank circulation, which, some have thought, would enable the banks to maintain their circulation at the present price of the four per cents. The various recommendations for a long, low rate bond may be dismissed as impracticable. It is not probable that the majority in the lower House will authorize a new bond. It is very doubtful whether it would be disposed to permit the banks to take out ninety per cent. of circulation on the market value of their bonds—a plan which the Comptroller of the Currency is said to favor. The misfortune about the situation as to the banks is that the necessary agitation of the question will possibly result in a general currency debate, and that the managers of the party in the lower House, unwilling to permit the question of greenbackism and of silver to enter as issues into the presidential campaign, may be disposed to non-action and to let the present uncertain condition of affairs continue. The greatest obstacle, in fact, to all wise commercial legislation will be the desire to avoid injurious issues in the presidential campaign.

The subject of reciprocity treaties may, in like manner, be embarrassed by political considerations. The Mexican treaty is pending in the Senate. That will be more removed from politics. It is believed to have gained strength during the congressional recess. Its friends are confident that it will be ratified. The investigation of the Treasury commission of last summer into the alleged frauds under the Hawaiian treaty has undoubtedly given strength to those who are opposed to the abrogation of the treaty, and as the vexed tariff question of sugar is involved in it, it is probable that the Hawaiian treaty will be undisturbed. No more progress has been made with the proposed commercial treaties with the Central and South American states, and with one or two European countries.

The question of revival of American shipping, so intimately connected with business interests, touches upon a vital point in the tariff, and may possibly, on that account, be placed under the political ban. If current report is true, however, the subject will be brought to public attention by a recommendation in the Postmaster-General's report that additional mail pay be given steamships carrying the American flag.

A bankruptcy law will again be proposed. In view of the opposition to it in the agricultural communities of the west and south, it is suggested that the draft shall exempt from the operations of the proposed law all agriculturists. Such an exemption undoubtedly would give the measure some additional strength in the sections which are hostile to it, but it is very doubtful whether the avowed hostility in the south and west to any measure which seems so desirable to the western business community can be placated.

Recommendations as to the retirement of the trade dollar are more likely to receive favorable consideration than most of the suggestions of the administration. No one seems to care about the trade dollar. The silver men themselves favor its retirement. The greatest obstacle in the way of the retirement of this coin will be a quite general belief that it is controlled almost wholly by a few large operators who have purchased it at a discount and who will be likely to receive whatever benefit may be derived from its retirement.

Business men will probably take some interest in the various measures which will be proposed as to a postal telegraph. The ultimate object of them all is to secure reduced commercial rates, and to make electricity a more practical agent for the transmission of commercial and social intelligence. It remains to be seen whether Congress can enact a law which will prevent the consolidation of competing lines in the interest of monopolies.

The canal question and the Mississippi river improvements will be urged by a very formidable combination. The western interests are believed to be already united. The promoters of the Mississippi river improvement scheme are said to have already made a combination with the Hennepin canal interest for the purpose of making a continuous chain of slack-water navigation from Lake Michigan to New Orleans. The

plan is a very comprehensive one, and if carried out would undoubtedly be of great benefit to the commercial public in the way of reduction of freights. If this plan could be put into operation inland water communication would be possible from Halifax and New York to New Orleans by the way of the canals, the great lakes and the Mississippi river. The friends of water transportation anticipate very formidable opposition from the railroad interest.

The craze as to river and harbor legislation has measurably subsided, and a river and harbor bill may be expected. It will, however, doubtless be confined to the great harbors, and unimportant streams will receive less recognition.

These are some of the principal commercial subjects that will be brought before Congress. The prospect of action as to any of them is uncertain. Much will depend upon the speakership campaign. The tariff is largely an issue in it. If the Democrats shall decide to reopen the tariff question the session will be one of continuing agitation.

NEW YORK'S WORK IN INDUSTRIAL TRAINING.

The workshops scattered over the United States, and which, in one respect, are training schools, admittedly do not come up to the requirements in the training of skilled artisans. In those of any magnitude individual practice is ordinarily confined to one special branch, and while those who enter them follow, as a matter of course, the best processes of fellow-workmen, they are, if without previous technical or scientific instruction, not in a position to apprehend fully the scope of their work, to execute their tasks in the easiest manner and with the best possible results, or to improve upon usages, unless by the accident of chance. Industrial training schools which take up teaching within the bounds of practice furnish a preparatory and needed outfit, besides adding materially to the number of youths disposed and qualified to enter on industrial vocations—the latter by an intelligent understanding of methods. A further service they perform is in separating the wheat from the chaff through the tests they apply in testing the capabilities of pupils, those not equal to the course of practice giving place to others, and so are in no danger of adding to the present large class of indifferent workmen, who spend listless and unprofitable years in drifting from one shop and one class of employment to another, and whom manufacturers are yet necessitated to employ in order to secure their full complement of hands. It is a patent fact that many, if not all, large industrial employers of skilled labor contemplate with some apprehension a dearth of this in the future. The remedy manifestly lies in increasing the facilities for youth acquiring technical industrial instruction. Now, what is the great manufacturing city of New York accomplishing in this direction? The category of our industrial schools which apply themselves to laying the foundation of an intelligent apprehension of the principles of art, or which actually instruct in handicraft, is a brief one. Under the former head the Cooper Union Institute is in the van as regards the number of pupils and the artistic and scientific scope of studies, which include descriptive geometry, applied mechanics and mechanical drawing, decorative designing, wood engraving and drawing, may be easily worked out, are invaluable branches of study. The proportioning mechanical constructive mark by arithmetical methods, the utilization of the higher mathematics to simplify formulæ applicable to industrial processes and provide for the mechanic rules which he may easily carry out, are certainly invaluable branches of study in this institute. The Industrial Art School of the Metropolitan Museum of Art, besides providing for mechanical drawing, have classes in carving, carriage building and construction. The Academy of Design, which dates from 1826, was originally founded for promoting the art of design with reference to manufactures, but it has abandoned this purpose to play quite another role, being mainly engaged in the exhibition of the works of artists, whilst retaining certain professors for classes in painting and sketching. The General Society of Mechanics and Tradesmen of New York, an association chartered in 1792 for benevolent purposes, maintains what is known as the Mechanic School, attended by 500 pupils, and supplies instruction to young men in free hand and in mechanical and architectural drawing, and to females in drawing from objects and designing. New York College has lately made a fresh departure, its authorities having had erected two workshops for teaching carpentry and blacksmithing under master workmen to such of its scholars as choose to engage in these. The instruction offered loses greatly in value through being confined to out-of-class hours, and that the pupils have already their energies sufficiently taxed in following the ordinary college curriculum. The lilliputian forges are much admired by the boys, and there are pretty devices in the carpentering shop. The New York Trade Schools, established three years since by a retired architect, consist of a group of one-story shops, in which bricklaying and masonry work, fresco painting, plastering, pattern-making for molders and machinists, turning and wood-carving are carried on. The pupils number 120, the limit of accommodation.

What would appear an urgent need for this city is the establishment of a large number of mechanical industrial schools in different districts. Such schools cannot be improvised by the classes they would benefit. Looking to the advantages that would accrue, public spirited manufacturers and business men might well combine for such extension, and from the number of those ready to apply for admission, they might, if on a sufficiently large scale, be rendered self-paying. On the part of the public, in various centers of industry, indications are afforded of a growing sense of the practical utility of such schools. We might point to the action taken by the Commercial Club of Chicago, comprising a number of its best business men, for raising $100,000 for schools in which shall be practically taught a number of leading mechanical industries. The excellent work done by the Worcester Free Institute, the Massachusetts Institute of Technology, the Manual Training School of the Washington University of St. Louis, and the Stevens Institute of Hoboken, N. J., with its well appointed workshop, need only passing reference. It is estimated that industrial trade schools advance the pupils who complete the course two years beyond the point of efficiency they would have reached in the same time in manufacturing workshops. This start has a money value, but the conclusive argument in favor of these schools is that they develop much mechanical ability that would otherwise be latent, thus really adding to the productive labor resources of the country. The importance of skilled labor as a factor in national trade and commerce may possibly in time induce national and state legislatures to afford substantial aid in the founding of trade schools, but meanwhile their extension remains dependent on individual organization.

GOVERNMENT INSURANCE.

New Zealand is in many respects the most enterprising of the Anglo-Saxon commonwealths of the South Pacific, and it is also the most communistic in its tendencies. By this phrase we mean government communism, as it were; in other words, the tendency of enlarging the functions of government to cover ground which has been considered to belong exclusively to the field of private enterprise. The colonial governments build railroads and telegraphs and operate them. They have established post-office savings banks in common; but New Zealand alone has entered upon the insurance field, and boldly competes with the life assurance and annuity companies of the world for business within the colony. This is an expansion of the functions of government which would hardly be sanctioned in this country, but it appears to work satisfactorily in New Zealand, which has more in common with the United States than any of its colonial neighbors.

The official report of the New Zealand Government Insurance Commissioner for the half year ended December 31, 1882, the latest published, is an interesting if not a remarkable document. The Government Insurance and Annuities Act was passed in 1874, and the total policies in force in the ordinary branch at the close of last year was 15,888, insuring £5,178,717 exclusive of bonus additions, showing a net increase in the half year of 2,082 policies and £483,-179 on the sum assured. The revenue on this branch for the half year was $94,789 1s. 5d., and the accumulated fund amounted to £704,888 14s. 11d., or $3,524,440 in round numbers.

The industrial branch showed equally satisfactory results. The policies in force at the end of the year numbered 7,551, assuring £177,183 for a total weekly premium of £156 5s. 8d. In the last six months of 1882, there were issued 6,288 new policies in this branch, assuring £158,527 17s. Of these, 2,613 were adult risks, assuring £137,363 17s. for a total weekly premium of £111 6s. 9d., and 3,675 policies, assuring, approximately, £21,164 for a weekly payment of 2d. each, were on the lives of children. Claims under sixteen infantile policies arose during the half year amounting to £66, and three under adult policies representing £65 19s. 6d. This is a new branch of the government insurance business and is apparently designed to popularize life assurance among the working classes, superseding in a great measure the ordinary friendly and benevolent societies. Premiums are paid weekly in small sums, and may be made by order on the assured's account in the Post Office Savings Bank, and by postage stamp cards where desirable. Thus, under government supervision and at the lowest cost to the assured upon English actuarial tables of life risks, habits of thrift and economical foresight are encouraged among the people of the colony.

The endowment and annuity branch does not call for remark, as the transactions are small, but a new departure has been made by establishing a special temperance section. This section was opened July 1, 1882, and before the close of the year 472 policies for £111,225 were issued, the annual premium being £3,281 11s. 4d. Only total abstainers from intoxicating drinks are admitted to the special advantages of this assurance class. In some corporate life insurance companies total abstainers are insured at lower rates, which appears also to be the case in the New Zealand Government Insurance Department. The death claims on forty-four policies on the ordinary branch in the last half of 1882, including bonus additions and allowances for prospective or intermediate bonuses, amounted to £19,857 16s. The mortality has been below the expected ratio from the first, while the interest on investments nearly reached the total amount payable under these claims.

We have thus presented the working of a free system of government life assurance, which apparently has been successful and satisfactory. There is absolute security to the assured, the revenue and credit of the colony being pledged to them by law. The balance sheet shows the assets to consist principally of government securities, guaranteed railway debentures, municipal and university debentures, all convertible into cash, and yielding £17,711 annual interest.

THE DEMAND FOR AND SUPPLY OF WHEAT.

The statistical position of wheat with respect to the world's demand and supply has been exhaustively discussed by foreign and domestic authorities, and, with the exception that all are agreed that there has been a greater or less deficiency in the crop of the past year as compared with that preceding, there is little unanimity in the views thus far printed. The Vienna congress reported 216,000,000 bushels shortage in Europe as compared with the crop of 1881–82, which meant, according to some accepted views of the exporting capacities of India, Australia, New Zealand, Chile and the United States, that the world's supply is some 70,000,000 bushels less than the demand. The heaviest probable shortage respecting the world's supply is that given some time since in the New York *Produce Exchange Weekly*—81,000,000 bushels. The other extreme in the list of published shortages also comes from New York, 22,500,000 bushels being the estimate of the *Millers' Journal*. Views abroad range from 68,000,000 bushels, on the part of the London *Corn Trade List*, to 40,000,000 given by *The Miller* (London), and 42,000,000 bushels excess of demand as compared with the supply, estimated by *Le Fermier*, of Paris.

These views are not so much discouraging owing to their variation of totals as to their wide divergence in detail. The published estimates are made up of lists of probable surpluses and requirements by countries which are so dissimilar as to appear to have no reference to the same year. It can hardly be thought presumptuous if, in view of this, the sufficiency of any or all of them be doubted.

The excess demands of the United Kingdom and of France are the most important, in that they are the largest in Europe, and the varying estimates put forth as to the crops and probable requirements of those countries by those who are generally recognized as authorities, may be fairly declared to render it doubtful if there is to be any so-called shortage at all in the supply of wheat in the current cereal year. There was likewise considerable difference between the earlier reports as to the probable yield of wheat in the United States in 1882–83. The highest totals presented were from 430,000,000 to 440,000,000 bushels, the latter being that given out in a preliminary report and estimate by this journal early in July. The estimates which departed furthest from this vary between 383,000,000 and 400,000,000 bushels. The Agricultural Bureau report points to a total yield of about 417,000,000 to 420,000,000 bushels, which is the view generally accepted at present, in view of the reduced estimate from the Pacific coast, the unexpected quantity of wheat-land plowed up, and the prevalent low grade of winter wheat which will be reflected in less flour per bushel and less exports both of wheat and flour. A crop of 417,000,000 bushels marks a shortage of 87,000,000 bushels as compared with 1882. The

quantity of wheat carried over at the close of the last cereal year, August 31, is estimated as follows:

	Bushels.
Reserves and visible supply, reported July 1	128,022,970
Visible supply, July 1, 1883	19,000,000
Reserves of wheat, July 1, 1883	109,022,970
Total domestic consumption during July and August, 1883	36,000,000
Exports during July and August	12,000,000
Total wheat disposed of during July and August	48,000,000
Added to visible supply during July and August	2,000,000
Total reserves accounted for to end of cereal year, Aug. 31, 1883	50,000,000
Leaving, August 31 last, of reserves	59,022,970

This reserve, then, amounted to about one and two-thirds times the normal, against a reserve, August 31, 1882, of but from one-half to four-sevenths of a normal stock on hand. The reserve of wheat on September 1, with the probable new crop of 417,000,000 bushels, furnished a total available supply of 476,000,000 bushels for the current crop year. The probable domestic demand is thus given:

	Bushels.
Food requirements, at 4 bushels per capita (say 55,000,000 population)	220,000,000
For reserve at .65 of a bushel per capita	35,750,000
For seed, say	52,400,000
For industrial uses, say	15,000,000
Total domestic requirements	323,150,000

If the foreign demand is to be as marked during the coming year as is expected by some observers there is no reason for doubting that at least one-half the quantity allowed for reserve may not be calculated as available for export after the precedent of one year ago. If 17,000,000 bushels may be so reckoned, the total in the calculation last given shrinks to 306,150,000 bushels. This apparently permits of a maximum quantity for export equal to 170,000,000 bushels, which looks enormous beside the preceding estimates of from 115,000,000 to 122,000,000 bushels as our probable capacity for supplying Europe in 1883-84. Those figures are to be explained, however, in the varying estimates as to necessity for full reserves, the total crop and the difference in the meaning of total export capacity and that for supplying Europe. The 170,000,000 bushels for export are reduced to the lower total by those who make the following changes in the previous calculations:

	Bushels.
Requiring a full normal reserve of 36,000,000, takes off the proportion estimated as a possible export	17,000,000
Canada will want, say	10,000,000
West Indies and South America	20,000,000
A lower total crop estimate of	17,000,000
	64,000,000

In this we find the 170,000,000 bushels reduced to 106,000,000 bushels, the probable excess with which to supply European demands. It is the extreme view of those who are impressed with the idea of a shortage in the world's supply. So far as is now known there is no reason to doubt the 417,000,000 bushels crop of 1883, nor to believe that one-half of the quantity of wheat counted out for reserve may not be considered available in a year of excessive demand. These considerations add 34,000,000 bushels to the 106,000,000 referred to, and suggest as a probable available European supply in the United States 140,000,000 bushels of wheat. Even with a full allowance for reserves the possible net European exports do not drop below 123,000,000 bushels.

Across the Atlantic the *Mark Lane Express* takes exception to the rampant estimates of shortages in the world's supply of wheat, and declares, without expressing an opinion, that there is no evidence of an insufficient quantity of wheat to go round during the current year, whether there be in fact any shortage or not. This view of the situation, coming as it does from the representative British farmer's journal, is more significant than if emanating from some print having the interests of millers and buyers more particularly in mind. The conclusion is reached from such an examination of the supplies present and probable in the United Kingdom as statistics afford—at best not conclusive. In the crop year ended August 31 last, the United Kingdom imported 160,000,000 bushels of wheat, with a home crop preceding it of 80,000,000 bushels. English authorities are variously estimating the last wheat crop in the United Kingdom, reports ranging from 7,000,000 to 8,500,000 quarters, or from 56,000,000 to 68,000,000 bushels. In calculating the probable British demand and supply the *Mark Lane Express* calls the home crop 56,000,000 bushels. The total annual consumption of wheat in the United Kingdom is given at 200,000,000 bushels, and stocks at British ports and in vessels at docks on August 31 last are declared to have been not less than 40,000,000 bushels, which, with the home crop at the lowest estimate aggregating 96,000,000 bushels, left 104,000,000 bushels to be imported between August 31, 1883, and September 1, 1884, but two-thirds the quantity received in 1882-83, when the total imported was 160,000,000 bushels. The gross imports of wheat and flour into the United Kingdom from August 25 to October 20 last were equal to 28,373,469 bushels of wheat, and the quantity on passage was about 15,000,000 bushels, a total supply to October 20 since August 31 of over 43,000,000 bushels of wheat, which leaves about 61,000,000 bushels required from abroad prior to August, 1884. It may be added that British millers were overloaded with stocks of flour, and that grain warehouses, other than those at the ports, were filled with foreign grain on August 31 last, so that the estimate of 40,000,000 bushels stocks of foreign wheat at that time is regarded as low. India and Russia have sold freely of their wheat in England this fall, while the United States has contented itself with piling up the largest visible supply on record and holding its wheat for higher prices. Russia will not export much more from its northern ports until May next. But with France requiring even 80,000,000 bushels of foreign wheat to meet its needs, as per the lowest estimate of the French crop, there appears to be no sufficient reason at present to think that the supply of wheat will not go round.

OCCASIONAL NOTES.

The new time system, according to which the United States will be divided into four time belts, throughout each of which the time will be uniform, will go into effect to-morrow at noon. It is strange indeed, in view of the advantages to be derived from the system, that it has not been adopted before this. In a business community and among travelers by rail it is of course of the utmost importance to have an accepted standard. Heretofore there have been more than fifty different standards in use at once upon the railroads of the United States and Canada. For the future the number of standards will be reduced to four, and between these there will be no variation in minutes, the difference being exactly an hour for each belt or section. The plan of a uniform time was tried in Great Britain as far back as 1848, when England, Scotland and Wales adopted Greenwich time as a standard for the railways. The railway standard has worked satisfactorily, and is now used for all ordinary purposes throughout the islands. The only difference between the English and the American case is in the great breadth of the country, which requires to be divided into several sections, whose standards differ by hours and each of which is comparable with Great Britain in regard to the matter of uniform time. The change is to be commended as in the direction of that general uniformity toward which the world is constantly moving, and which is destined finally to prevail in most other relations as well as in that of time.

Mr. Abram S. Hewitt, who has just returned from an extended visit to Europe, has had some interesting things to say regarding political conditions at home and abroad. Mr. Hewitt says that there is a great danger menacing the progress of liberty in Europe. In France the popular will expresses itself practically without check, and in England the checks which have heretofore existed are being rapidly destroyed. Progress in Europe, he says, is in the direction of communism, and owing to the disappearance of checks of various kinds it is likely to be very rapid in the near future. A complete change in the governments mentioned may be made in a single year and at one election. Unless in some way European nations can provide a way by which public opinion can express and enforce itself through a series of years the strange spectacle is likely to be presented of aristocratic governments having failed to secure the rights of property, while in the freest government in the world the conservative principle is respected and preserved.

Mr. Hewitt's observations during his trip have more than ever impressed him with the value of the institutions of the United States, and of the system of checks and balances which obtains here. The constitutional government under which the citizens of this country live, is, he says, the result not alone of the wisdom of its founders, but of a fortunate chain of circumstances which can never occur again. He is anxious to impress upon his countrymen the importance of keeping the constitutional system they now possess with all its limitations unimpaired. The duty is a high and by no means an easy one. The history of the race admonishes us that it is only by means of intelligent and dispassionate study of the questions that confront us, by constant vigilance and by striving for increased publicity regarding all the operations of the government, that the large measure of ordered liberty which we now possess can be retained.

The picture season in New York has opened briskly, with large stocks in the galleries and in the hands of dealers, and with active sales. Already the sales from the Academy exhibition have reached the handsome figure (for so early in the season) of $5,000. In all, about twenty-five paintings have been sold. Prices have been good, equaling—in some instances excelling—those of last season. Thus, J. G. Brown's "As Good as New" has sold for $1,000, the highest figure yet obtained, and from this top notch the figures have ranged: $500 for Thomas Moran's "Cloud and Sunlight," $400 for Leon Moran's "Eel Fishery," $350 for J. B. Bristol's "Saco River," $300 for Church's "Mermaid and Sea-Wolf"—and so on downward. These are paying prices, giving to the business of picture-making a substantial basis. From the study and sketch exhibition in the American Art Gallery sixteen pictures have been sold for an aggregate of $900—a better result, comparatively, than the actually greater sales at the Academy. The picture-purchasing power and tendency of the community is shown more truly by the stock in the hands of the picture dealers than by the quantity and quality of the work at the Academy and other exhibitions, for the dealers know what the public wants, and buy only that they may sell. Judged from this standpoint also, the season promises to be a good one. The importations from Europe are up to the average, and the tendency is manifest to bring in considerable stocks of medium-priced work rather than small stocks of high-priced work. Obviously, the picture business is becoming popularized. Added to these several promising evidences of an active trade in pictures in New York during the coming winter, there is good reason for believing that sales outside of the city will be large. The growth of this out-of-town trade, indeed, is one of the most important developments of the picture trade as a whole within the past dozen years. In this period a new business—chiefly western—has been built up that actually exceeds the entire business as it was twelve years ago.

The health authorities in their commendable study of diseases at the Chicago stockyards have found among the cattle several cases of "swell-head," as actinomycosis is popularly known. The disease manifests itself by tumors, large and small, on the face. The flesh is ulcerated, the tumor cartilaginous and attached to the bone, which becomes enlarged and very soft. There is much pus, which contains yellow masses of the microscopic plant known as actinomyces. The plant is a radiating fungus, like mold, and resembles the plant that causes ringworm and mange. It probably comes from a parasite on grain. It enters the system through a cavity in the teeth or between the teeth and the gum. Cattle sometimes recover in the course of nature and the disease is amenable to remedies, but after the jaw-bone is attacked death is pretty sure to be the result. The disease is contagious by contact, but not so far as is known through the air. It may be communicated to human beings, and several cases have been known in Germany, but the meat is not dangerous if well cooked. The animals that have the disorder are, however, invariably in poor condition. The disease is common in the west and is often misnamed tumor, tuberculosis, etc. It has not been recognized in this country until this investigation by Dr. W. T. Belfield, but has been known for a few years in Germany. That it is the product of a plant has been proved by introducing the plant into healthy animals. In the case of men it is always fatal.

The Manchester *Guardian* says that while England is commonly regarded as a great horse-breeding country, it is the fact, nevertheless, that the home supply is not adequate to meet the national requirements, and that if the English are exporters they are also large importers of horses. In the fifteen years 1868-82 inclusive the average annual import has been something over 14,500, while the exports have amounted to only about 4,200. In 1868 the number of horses imported was only 1,575; in 1872 the total had risen to 12,618; in 1876 it was 41,146; in 1877, 30,524; in 1878, 26,521, and in 1879, 15,246. The years 1880, 1881 and 1882 showed a large decrease, but the import in each case still exceeded 9,000. The exports have also fluctuated a good deal. In 1868 England exported 4,091 horses; in 1877 the number was only 2,258, but last year the export stood at 6,444. Recent statistics bring out a remarkable fact. While the average value of the horses imported was £28 each, that of the animals taken from English studs by foreigners was £60. This may be taken as a fairly accurate representation of the quality of the animals the English buy and sell. A large proportion of the imports are ponies and cart and cab horses, while the bulk of the exports are horses of a high class. That we should be so largely dependent upon foreign sources for horses of any description, says the *Guardian*, is a matter which demands attention. It is, for example, being found more and more difficult to obtain at home a sufficient supply of serviceable animals for the army.

Nature says that the arrangements for the International Forestry Exhibition which is to be held in Edinburgh next year have been settled. The classification of the exhibits ranges over a wide and interesting field. Practical forestry will be illustrated by implements, models of huts, appliances for floating and transporting timber, and wood-working machinery of every description. The department of forest produce will include a collection of the chief uses to which the raw and the manufactured material of the woods may be applied. The class of scientific forestry will deal with the botany of the forest, forest entomology, preservative processes applied to timber, fossil plants, parasites and numerous other subjects. Growing specimens of rare and ornamental trees and shrubs, rustic work in arbors, bridges, gates and seats, and dried specimens of ornamental objects will exemplify the division of ornamental forestry. The remaining departments will include pictorial illustrations of the trees, foliage and scenery of all countries, and the effects of blight, accident, parasitic growth and abnormal conditions, together with the literature of forestry, working plans of plantations, and examples of the economic condition of foresters and woodmen. The entries for the exhibition will close on October 4, 1884.

The *Pall Mall Gazette* prints a report of an interview with the distinguished English statesman, Mr Forster, who recently made a pleasure tour in the Levant, in the course of which he visited most of the centers of political activity in that quarter. The contrast which he drew between the condition of Turkey and that of Bulgaria under its present system of self-government is interesting and instructive. The progress of the Bulgarians since the treaty of Berlin has, he says, been surprising, and he is of the opinion that if foreign powers leave them to themselves they will work out a very creditable future for their country. Brigandage which continues to be the curse of all the region still under the Turk, has been almost entirely extirpated in Bulgaria. With the exception of a small district in the northeast, near the Varna railway there is no place in the country where law and order do not prevail. A striking indication of the progress of the people in civilization is found in their zeal for education. Universal free compulsory education has been established, and there is now a school in every village throughout the country, and there are scholars in every school. In the land still subject to Turkey, on the other hand, symptoms of decay are everywhere apparent. There is no security for life or property anywhere, and brigands terrorize the country. At one of the military posts on the Dardanelles the troops were barefooted and as ragged as beggars. It seems that none of the soldiers in the Ottoman service are paid except the regiments which parade before the Sultan. They are armed and fed and left to plunder for the rest. No one can secure a settlement for any claim without infinite delay, and when at last the account is paid, it is usually by an order upon the treasury of some distant province which, more likely than not, does not contain an available piastre. The regular rate of discount on these orders of the Imperial government is 50 per cent. Mr. Forster said that in his whole tour he had not met a single person of any nationality who even pretended to believe that anything but destruction lay before the Turkish empire and that too before very long.

Mr. Alfred B. Shepperson, of New York city, has issued the edition of his "Cotton Facts" for 1883, than which, we need scarcely say, no more convenient and trustworthy compilation is accessible to the cotton trade. In the issue for 1883 the statistics given in the last edition have been continued to the close of the season of 1882-3, and some new and interesting matter has been added, such as, for instance, statistics of the stocks at British and continental ports and mills at the end of each month and season since the season of 1879-80, and of the annual consumption of Great Britain and the continent since 1873, dates of the first frost in each of the cotton-growing states since 1871, receipts at Bombay from the different districts of India from January to July since 1875, and the details of Sea Island cotton crops since 1874. The information contained in the volume regarding crops, receipts

exports, stocks, home and foreign consumption, visible supply, prices and acreage of cotton, and manufactures of the same, render it a handbook of great usefulness to all concerned in cultivating, buying, selling or manufacturing cotton.

SPECIAL CORRESPONDENCE.

THE RAILWAY QUESTION IN GERMANY.

Berlin, October 22.—On September 1 I wrote that the Prussian Minister of Public Works perseveres in his task of converting private railways into government ones, having after a short pause opened negotiations with several boards of railway directors concerning purchase. Two more lines have since been considered important for the plans of government. Five of the private companies have, in their last general meetings, consented to the minister's proposals, and there is not the slightest doubt the rest will follow their example. The shareholders, indeed, have no choice but to sell; the government possessing already more than three-fourths of all the lines in Prussia, and the principal ones among them, have now full power to lower the profits of the still existing private companies, directly or indirectly, purposely or accidentally. In the negotiations between the government officials and those of private companies the important question with the latter is not as much to sell or not to sell as simply the price, and the same may be said of the general meetings of the shareholders. The matter, however, will be quite different in the Prussian Chamber of Deputies. Here the government's motions about buying rather extensive lines offer a new chance for discussing the question whether to have a mixed system, viz., preserving private as well as government railways, or having exclusively government lines. The discussion, it is true, will only have a theoretical, or, as they say here, "academical," character, as the majority of the assembly, composed mainly of conservatives and clericals, has already decided the question in favor of government by sanctioning the large purchases made by government since 1879. Considering the great and far-reaching importance of the subject, I think it not only interesting but profitable for the American reader if I shortly point out the reasons which induce the greatest number of the liberal members most strenuously to oppose the transferring of private into government railways.

Though not adhering to tradition, but rather disposed to innovations, the liberals are against sudden and over-zealous interference with the historical development of railways in Prussia. At a time when the government here had a very low opinion of the feasibility and use of railways (between 1830–40) private capital undertook the construction of the first line. The beginning was modest enough; Berlin and Potsdam, twenty miles distant from each other, were connected by rails. The locomotive reduced the journey to one-fifth of the time, but, notwithstanding, Frederick William III., the present Emperor's father, never went to Potsdam, his second residence, which he frequently visited, but in his carriage and pair, according to his old habit. The Prussian people, though very loyal and sympathetic with the King in all his joys and sorrows, [illegible]ed little enough for the dislike and suspicion entertained by their King for the steam-horse, and went by thousands per rail to Potsdam. The success of this short line soon encouraged private speculation to new and more extended enterprises. Nearly ten years elapsed after the construction of the Berlin-Potsdam railway before the government resolved to construct one, moved even then more by strategical reasons than any desire to relieve and further industry and commerce. When the first government line between Berlin and Koenigsberg was planned, the government stated that their principal purpose in the undertaking was to be in a position, in case of necessity, to transport as quickly as possible a considerable number of troops to the Russian frontier. Up to the end of the last five years there was a tendency to leave the construction of the great lines for the service of commerce and industry as well as their extension principally, if not exclusively, to private capital, whereas government for the most part paid attention to the strategical lines and only laid a line here and there for the completion of existing ones, or for the support of the pauper population in a region neglected by nature. Both the government and public throve by this system of divided labor, the former by being able to fix their entire energy upon such duties and tasks principally connected with themselves, the latter, when they had an open field, by enterprise.

Suddenly, four or five years ago, the government discovered that the state of things now prevalent for upwards of forty years in railway affairs was injurious and objectionable. All at once it was declared an unendurable anomaly, no longer to be borne, that extensive and important routes should be the property of private companies, that the price for transporting people and goods should depend upon the will and favor of private societies; nay, that even to their control should be intrusted the safety of the lives and property of our citizens. These complaints have been met. Everyone knows how exactly and carefully government boards control every private company during the construction and after the completion of a line; how carefully engines, carriages and all the other materials are examined, that the state of the line itself is looked after from time to time, and that every fault has to be remedied immediately. It is well known, too, that the fares for persons and goods must be approved by the government. Whence, then, this sudden fright concerning the life and property, whence the fear in fixing fares for persons and goods? Equally unfounded are the apprehensions raised about the easy, quick and punctual carriage of large bodies of troops. Every concession for the laying and working of a railway granted to a private company contains exact and most detailed prescriptions concerning the duties and obligations of the different boards of directors with regard to the transport of soldiers, materials of war and provisions. Neither the Danish war of 1864, nor the Austrian campaign of 1866, not even the mighty struggle with France in 1870–71, which certainly tested the power of private railways to the utmost, have given the least cause for murmurs or complaints. On the contrary private companies were highly praised in those days for the prompt and willing performance of all the requirements of military authorities. All the world knows that the success of the German armies, above all during the French war, was not a little owing to the extraordinary exertions made by the railways, most of them being then private ones.

Further, it is said that by uniting railways in the hands of government the management will be cheaper and, in consequence, the national property be economized. For the number of boards and officers might be diminished, as well as a legion of sub-officials; besides, one might be enabled to make a more profitable use of the rolling stock and other requisites. To this assertion, in the first place, the objection is raised that the government, according to experience in Prussia, far from managing any industrial undertaking cheaper than a private company or individual, is generally dearer. This repeated experience has at different periods, and till quite lately, caused the sale of public industrial establishments to private individuals. With regard to railways especially it is quite clear that those constructed and managed by government yield smaller profits than private ones. There will be, it is true, a more favorable proportion between the income and the expenses as soon as all the great commercial railways have passed into the hands of government. Still, the actual state of things, government having already the management of a great number of very profitable lines, suggests the conclusion that greater economy will not be possible; on the contrary, an increased outlay is more than likely. The projected reduction of officials, if carried out, can only be done at the expense of the safety and comfort of the public. In the offices and buildings any economy worth mentioning is scarcely possible. And with regard to the rolling stock we must not forget that an increased use also comprehends increased wear and tear, involving, therefore, more repairs and renewal. There had, moreover, always been an arrangement between private companies to settle the most advantageous use of the rolling stock. Economical grounds, therefore, say the liberals, are not a sufficient reason for converting private railways into royal ones.

Government now brings forward another argument, saying that the possession of all the railway lines will enable them to fix the fares not solely with regard to the rentability of the same, but principally with regard to the growth and development of commerce and industry. The opposition has some suspicion in reference to these favorable prospects. They fear that in fixing the fares the new protectionist policy will have too much influence, and the great manufacturers will obtain the principal advantage, greatly to the detriment of the general population. Discarding this view, however, the alleged aim of government is still more problematical. If we take into consideration the enormous increase in the budget, after the transformation of all the Prussian lines into government ones, regard for the income can and must not be put aside in any great measure. The least percentage of a reduced income in any single line would amount to a considerable sum, which the whole tax-paying population would have to make good. Besides, as already mentioned, private companies are not perfectly independent in their management, their fares being subject to the assent of government. And further, private railway companies in their own interest must promote the growth of commerce and industry, their welfare depending entirely upon the rise and fall of the same.

Thus far we have been only refuting the arguments of the state in favor of converting private railways into government ones. But the liberal party is prompted by positive reasons of a political as well as of an economical character to oppose government plans. The Prussian House of Deputies has but a limited right of voting the budget. Taxes once voted can only be repealed in concurrence with the other legislative factors of the country, namely the House of Lords and the crown. As to the expenditure, it is true, every item has to be voted again in the yearly budget, but the levying of the taxes once voted continues even though the rejection of one item or other should permit a diminution of taxes. Though they do not exactly fear Prince Bismarck might again go as far as before the commencement of the Prussian-Austrian war, in 1866, when being in conflict with the House of Deputies he declared: "When I want money I take it where I can get it," still, the liberal deputies are strongly opposed to voting such an enormous budget (as the transformation of railways would require) to a government which, owing to Prince Bismarck's influence and authority, is so powerful, in contrast to the limited constitutional influence of the Prussian Parliament, not to mention that financial politicians consider it rather venturesome to make the budget of the country dependent on the mutability of railway profits. Closely connected with the secret distrust, or at least unpleasant feeling, at placing such immense sums at the disposal of the government is the intense dislike of increasing the already vast number of officials by a horde of new railway dependents. The suasion, not to say pressure, of government in all elections would thus be preëminently increased. The election of the members of the town council of Berlin, which took place a few days ago, has impressed anew on everyone's mind what government can do by means of their dependent officials. All the officials who came voted to a man for the reactionary candidate. Finally the opposition advances the argument that the initiative of the people, already much limited in political as well as in commercial life, would be still more circumscribed by excluding them from railway speculations, though in Prussia, as we said in the beginning, private companies show to advantage in constructing and managing railways.

As soon as all the Prussian lines have been sold to government, there can be no doubt that Prince Bismarck will bring forward his original project, viz., the purchase of all German railways to the empire. For the present, that is for this year, according to the positive assertions of ministerial organs, the Prussian government will be satisfied with the acquisition of these eight lines, the purchase of which has been proposed. This self-denial on the part of government is evidently due to fiscal reasons. The Minister for Public Works means to compel the shareholders to reduce their demands, which, according to his opinion, are exaggerated.

This clearly intelligible intention of government has during the last week caused at the exchange a considerable fall of railway stocks, the price of which till then had been adequate to the expectations of the shareholders. The railway shares had scarcely fallen a per cent. or so when other stocks experienced a fall likewise. In fact there had for some time existed an opinion on the exchange that a good many papers had been quoted higher than was fair, but considering the lack of business prevailing during the last few months one was afraid to examine and sift thoroughly. Being then once compelled in a certain way to lower railway shares, the exchange picked up courage to lower other shares too, and so we have to record a considerable reduction in prices during the last week, if not in all branches of business, yet at least for a considerable portion of stocks. The immediate future will have to decide whether this operation has been performed under the influence of cool judgment or whether in many cases the momentary pessimistic disposition did not give the impetus to a widespread fall of stocks. Some kind of reaction has taken place already.

According to official returns the mercantile failures in the German empire amounted in August to 278, against 290 in August last year.

As I informed you before, the strange weather we have had this summer, the season of ripening and harvesting being for the most part cold and wet, has not only injured the yield of grain but also the crops of nearly all the bulbous plants. Still, the beets are said to be so sugary as to make up for the loss of quantity by their excellent quality. Competent judges are of opinion that the beet-sugar production of Germany in 1883–84 will be nearly as good as that of the preceding year.

CALIFORNIA NOTES.

San Francisco, November 6.—The production of silk has been set about systematically in California. Some fifteen years ago it was begun on quite a large scale, without reference to economic conditions, and it failed. Now, however, it has been taken up by women as women's work, and it gives evidence of success. At least it is very promising. It does not hold out inducements of large incomes with small expenditure, like the grapevine colonies, or orchard tracts, or olive and walnut groves, on irrigated lands, but it offers sufficient inducement to women and children to engage in it as a home work. It is light, clean, interesting and fascinating, as it involves the care of living creatures, whose progressive stages of development must be solicitously watched, whose food must be provided and whose imperative natural impulse is to reward this care by spinning, of its own integument, the most perfect thread for the manufacture of fabrics to clothe and adorn those whose gentle solicitude rendered its short but useful life possible.

The legislature of California has created a State Board of Silk Culture, and its first annual meeting was held a few days ago, at which prizes were distributed to adults and young people of both sexes for quantity and quality of silk. The meeting was an entire success, and great interest was manifested in the undertaking. A filature has been established in San Francisco by the State Board of Silk Culture, and one steam reel is in operation. A hand-reel is also in use for instruction in reeling, and there are now six young women who are nearly proficient in the art. When they have perfected their instruction they will be replaced by others. It is intended that these young women should be employed as teachers in the various institutions in which silk culture is to be introduced. Several hundred pounds of cocoons have been received this season, and one person alone promises 1,000 pounds of cocoons next season. It is thought that six or eight additional steam reels must be added to the filature next year, owing to the increased production of silk. The superintendent of the state filature is an Italian of experience in the business. California silk, so far, has been of prime quality; $1.25 per pound is paid for cocoons of first quality at the filature.

As the United States consumes over $1,000,000 of raw silk every month in manufactures, the outlook for silk culture in California is good. The demand for silk is steadily increasing with the increase of wealth, and the country should be in a position to supply its own wants. California alone could supply all the raw silk needed for the entire United States, but of course, with its scant population, the production cannot be large for some time to come, but when it becomes a home, or rather family, industry, as it promises to be, the output of raw silk will be surprisingly large in a few years. Five or six boys or girls in a family, with the mother's superintendence, can raise several hundred dollars' worth of cocoons. "Under very favorable conditions" (I quote from the bulletin of the State Board of Silk Culture), "with the help of four or five men for eight or ten days, they could earn from $500 to $1,000, and perhaps even more. By favorable conditions we mean the best mulberry trees near the house, the best silkworm eggs, a suitable cocoonery, knowledge of the work required and careful attention by all the workers." It is not all plain sailing, therefore. Joint stock silk culture has always been a failure. It is lacking in close, patient and intelligent attention.

Having incorporated and begun the erection of a cotton mill in San Francisco, the next thing the Californians have set about is to grow cotton to supply the raw material. Experiments in various valley counties, as noticed in BRADSTREET'S occasionally, proved that cotton was a crop which could be grown to perfection. The cost of labor stood in the way, however, and there was really no local demand for the cotton; manufacturers who used the material for a variety of purposes preferring to import it than to pay a fair price for the home product, which policy appears to be characteristic of Californians in a general sense. Considerable cotton, however, was grown in an experimental way this season, one wealthy firm having planted one hundred acres in Kern county, from which one bale an acre was gathered, realizing 12c. a pound or $60 an acre. The cost of picking by Chinamen is 10 to 15 per cent. higher than in the south, the Chinese only averaging sixty pounds a day each. The owners of this plantation have sent to Sweden to engage one

hundred suitable laborers for next season, and intend to be independent of Chinamen in future. They propose raising a large quantity of cotton next year. The Oakland cotton mill will create a home demand.

The whaling fleet is beginning to arrive, and report the worst season in the last ten years. There have been several casualties among the whalers, but nothing like the destruction of life and property in the Arctic sea that happened a few years ago. The success of the steam whaling enterprise from this port, reported heretofore in BRADSTREET'S, has led to the formation of the Pacific Steam Whaling Company at San Francisco, with a capital of $2,000,000. The promoters and shareholders are responsible parties, of the highest commercial standing on the coast. The company owns four steam whalers, built and equipped here; also the Mary and Ellen and the Thrasher, now on the voyage from New Bedford. It also owns the bark Wanderer, and another from the east. The cost of the four locally-equipped vessels is about $500,000. The same incorporators have incorporated the Arctic Oil Works Company, capital $1,000,000. A refinery is to be located in South San Francisco, at the water front, where wharves and piers are also to be built. The refinery will be of brick, and one hundred men will be constantly employed thereat. Everything will be in readiness for next season, and refined instead of crude oil will be shipped east. The refinery will be 470 feet long by 200 wide. Additions to the steam whaling fleet will be made when necessary. The machinery for the refinery is being constructed in the Union Iron Works in this city.

Owing to persistent litigation the production of gold is falling off, hydraulic mining being almost prohibited. In one sense this is matter for regret; in another it is not. Gold is needed for the world's commerce as a token or measure of exchangeable values, but when it is procured by the absolute waste and ruin of land a hundred-fold more valuable for agricultural purposes than the gold extracted, the stoppage of hydraulic mining must be regarded as a conservative measure in the interest of the commonwealth. This is the cold fact in regard to hydraulic mining in California, and it is an open question whether it is now possible to prevent the destruction of vast areas of arable land should no more hydraulic mining be permitted, there being such immense deposits of mining debris or tailings in the mountain streams which the annual freshets must carry down to the valleys. To hear the handful of men interested in this style of mining talk, one would be apt to think that agricultural land in California is of no value whatever, and that we would do quite as well without wheat or fruit raising. They have ceased, however, to be the potentialities they once were, and must subside. Silver production is looking up in California, very favorable developments being reported from the southern part of the state.

LETTERS TO THE EDITOR.

"CONVICT CONTRACT LABOR" IN NEW YORK.

To the Editor of BRADSTREET'S.

SIR—By the returns of the late election in the state of New York the majority has voted against the contract system of labor in the state penitentiaries. The very able editor of the New York *Times*, in an article on this subject, is endeavoring to explain the meaning of this vote.

I beg a moment of your time to say a word on the evil of this system, which the editor of the *Times* has, I fear, overlooked.

Labor, physical toil, as a punishment of criminals for their crimes has been made by the "contract system," as administered in the New York prisons, the sole and exclusive penalty during incarceration. The convict has been treated as a machine, and the toil imposed on him is regarded as the compensation he pays to society for his violation of its laws. To secure this compensation he is worked under a sale of his physical capacities by the state to an owner of his person, who secures this labor of the convict for the owner's profit. The state's share is what the buyer pays the state for the use of the man per day. This is the system which I have, for many years past, tried to show was prejudicial to society, a disgrace to its intelligence, and disastrous to the convict.

It degrades labor. To make it a penalty, the sole and chief, if not only, punishment is to impair its true character, for labor is largely the creative and causative power of the prosperity of a state. Why, then, should the punishment for crime be by law a stigma put on the convict as the exclusive penalty he must endure in a state prison?

Bad as this is, yet this stigma is placed on the convict by a sale of his labor to an individual who buys it for profit in the business in which the contractor is engaged. So that the laborer outside of a prison is encouraged in his toil by being told he is the creator of wealth and prosperity, while the convict in prison is doomed to toil as a penalty for crime.

Labor is a means to an end, for the true intent and purpose of punishment for crime is to endeavor to teach the convict that honest, free labor is far more for his real advantage than compulsory, involuntary toil in prison.

The sale of the convict by the state to a contractor—who works the man as a machine, for the convict has no voice or will of his own—is the evil the people of New York have redressed by their votes.

So far as I understand this vote, it declares that labor shall not longer be by law the only penalty inflicted for crime in the prisons of the state.

By no means does it declare that convicts shall not labor while incarcerated. The state must now combine labor with other agencies which are intended and directed to improve the prisoner—make him better fitted to regain his lost position in the community after his sentence has been carried out. Mr. W. F. Round, the able secretary of the Prison Society of the City of New York, has publicly stated that society loses millions of dollars from the crime-class depredations on the community. See his speech last week, or the week before, in your city.

This "contract convict labor" system in your prisons has been carried out by congregating prisoners in workshops. This congregation creates a crime-shop. This class after release from prison congregate, combine and by their united efforts despoil the community and cost it millions of dollars. Yet the advocates of this contract system defend it on the ground that it pays, that the prisons are self-supporting, that the state gains pecuniary profit out of its convicts. What a delusion!

The facts and figures, if carefully attested and digested, will show that your congregate system, your contract-convict-labor method of treating convicts, costs your people hundreds of dollars more than is obtained by the state for each dollar the state gets from the sale of the labor of its prisoners.

To meet the condition of affairs which the vote at your last election must establish requires that the subject of the treatment of convicts during imprisonment should be thoroughly examined. It has more than one side to it. The philanthropic, the benevolent, the mere humanitarian views of convict punishment are exhausted. The pecuniary or economic view is without value, as heretofore held by even wise men. Now, I think it is time for a philosophic consideration of this important subject.

You are ready for this. The time is most auspicious. You have the minds in your state able to cope with all the sides of the question. Do not fail to attempt this consideration. Begin. With earnest zeal and competent capacity you little know what the result will be that can be thus reached.

RICHARD VAUX.

Philadelphia, November 15.

ADMONITION FROM THE PACIFIC COAST.

To the Editor of BRADSTREET'S.

SIR—You will do well to keep your eye on the pooling arrangement between the Union, Central, Southern and Northern Pacifics. It is reported that the Northern Pacific will accept an annual subsidy from the old roads in lieu of freight as the Pacific Mail Company does, and that the old roads will enforce the special contracts. If so, look out for squalls. If these great corporations are too strong for Congress and own the United States courts everywhere else as they do in California, they don't own the people, and you may awake some morning to find a very serious interruption to the interstate traffic, which will force Congress to do right in the premises or lead—who knows—to secession. California does not feel that it is treated as part of the Union, although it produced the gold which preserved it, and held the key which locked the portals of the nation.

VIGILANCE.

San Francisco, November 8.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

A contract whereby one person agrees to devote his individual attention to the business of another's store, at a certain stipulated price per annum, is not a partnership transaction, according to the decision of the North Carolina Supreme Court in the recent case of Covington vs. Leak.

A mortgage upon shares of stock in a corporation is not within a statute authorizing mortgages upon real and personal property to be recorded, and the recording of such an instrument is not constructive notice to a subsequent purchaser, according to the opinion of the Kentucky Court of Appeals in the case of Spalding vs. Paine's administrator, decided on the 8th inst.

When the owner of a building has paid a sub-contractor, filing a mechanic's lien, a sum of money on account of his work without directing its application, the sum will be applied to those items for which the property of the owner might have been rendered liable by a lien. Nelson vs. Partridge's administrator et al., decided by the St. Louis Court of Appeals on the 6th inst.

The liability of a corporation to pay state taxes accruing upon "gross receipts" is not affected by the fact that the property and franchises of the corporation are in the hands of receivers appointed by a United States Court, according to the opinion of the Supreme Court of Pennsylvania in the recent case of The Philadelphia & Reading Railroad Company vs. The Commonwealth.

A description in a chattel mortgage is sufficient if it will enable a third person after reasonable inquiry to identify the property, and oral testimony is admissible in aid of the description, according to the opinion of the St. Louis Court of Appeals in the case of State rel. Blake vs. Cabanne et al. The same court held, in the case of Long vs. Uhlich et al., decided on the same day, that the recording of a chattel mortgage gives notice to all subsequent creditors of the mortgagors.

A clause in a bill of lading which provides that the carrier who is legally liable for any damage shall have the benefit of any insurance that may have been effected upon the damaged goods is not an unreasonable and unjust exemption from liability for negligence, and it may be enforced, according to the decision of the United States Circuit Court for the Southern District of New York in the recent case of Rintoul vs. The New York Central & Hudson River Railroad Company.

The adoption of a municipal ordinance prohibiting the sale of liquor abrogates a license issued pursuant to an ordinance authorizing the issuance of it, which was in force when the license was granted, according to the decision of the Iowa Supreme Court in the case of The Town of Columbus City vs. Cutcomp, decided on the 17th ult. The court (per Day, J.) held that licenses to sell liquor are not contracts between the state and the person licensed, giving the latter vested rights, but are merely temporary permits to do what otherwise would be an offense, issued in the exercise of police powers and subject to the discretion of the authorities, who may revoke them as they see fit.

In a recent case in the St. Louis Court of Appeals, where it appeared that the defendant company received packages of liquor as a common carrier of bonded goods, and was notified by the bill of lading that they were to be transported in bond, the court held that the defendant was bound to transport the goods in bond, and that the taking them out of bond and the shipping them on an unbonded vessel put upon the carrier the obligation of making good any loss to the goods which arose from the violation of instructions. Mellier et al. vs. St. Louis & New Orleans Transportation Company, decided on the 6th inst. The court said that where goods are tendered to a common carrier as such he cannot, without the knowledge and consent of the shipper, receive them as a mere forwarder.

Where one knowingly permits himself to be held out as a partner in a firm he becomes liable to those who deal with the firm in the belief that he is a partner as fully as if he were in fact a partner. Streeker vs. Conn, decided by the Indiana Supreme Court on the 6th inst. Where one has been so advertised to the world as a partner notice of his withdrawal must be given to the general public, and should not be confined to former customers of the firm. These latter are entitled to actual personal notice. The court further held that the fact that the withdrawal of a partner has become matter of general notoriety will not supply the place of a public notice where there is no visible change in the business, in the title of the firm or in its advertisement, and that the question whether a reasonable notice has been given or not is a question for the jury.

The liability of railroad companies for losses sustained by travelers through robbery while traveling in sleeping cars was considered in the recent case of Gardner vs. The Pullman Palace Car Company, an appeal in which was decided by the Supreme Court of Pennsylvania on the 12th instant. The plaintiff having been robbed of valuables while sleeping in one of the Pullman cars brought suit against the company and recovered a verdict for $300. The judgement of the lower court was affirmed by the Supreme Court, which held that while the company in such an action is liable only as an innkeeper or common carrier, yet a reasonable and proper degree of care is imposed on it; that the object of a passenger in taking passage in such cars is to secure an opportunity to sleep, and that while the passenger is in that helpless condition a duty rests on the company to exercise reasonable care and caution to prevent his valuables from being stolen from his bed or from his clothes or person.

In the case of Massey vs. The Cotton States Life Insurance Company, decided by the Supreme Court of Georgia on the 6th inst., it appeared that the plaintiff obtained from the company an ordinary life policy, the character of which plainly appeared in print, both on the margin and in the body of the policy. He paid the premiums on the policy for ten years, but when called on for the eleventh annual premium he filed a bill against the company to compel the issuance of a paid-up policy, or to rescind the contract and recover the premiums paid by him, on the ground that the agents of the company had represented to him and he believed that his application was for a ten-year paid-up policy, when in fact it was for an ordinary policy. The Supreme Court, affirming the judgment of the court below, held that the bill was properly dismissed; that the plaintiff by the use of reasonable diligence could have had knowledge of the truth, and that equity would not relieve him against the results of his own gross neglect.

One of the conditions in a fire insurance policy was to the effect that the company might, at its option, cancel the policy, which should cease on notice being given to the assured and on tendering a ratable proportion of the premium for the unexpired term. In an action on this policy, for loss by fire, the Supreme Court of Indiana held that the condition was valid, but that the right thereby secured to the company could be exercised only in strict compliance with the condition, and that in the absence of any further agreement the whole ratable proportion of the premium was required to be refunded; the payment of a less sum alone not operating to put an end to the insurance. The Ætna Insurance Company vs. Weisinger, decided on the 7th inst. The court held, however, that where the company, in electing to cancel a policy, refunded a ratable portion on the policy which was less than the full amount that ought to have been refunded, but which the insurer receipted for as being in full of the refunded premium, the cancellation was a valid one.

The decisions of the United States Courts thus far leave the construction of the act excluding Chinese laborers from the United States somewhat in doubt. Some time ago the matter was before the United States Circuit Court in Boston in the case of a person of Chinese parentage, who was born in Hong Kong after its cession by China to Great Britain. Judges Lowell and Nelson decided that the landing of this individual was not a violation of the act of Congress, which was directed against the Chinese not as a race but as a nationality. A short time afterwards precisely the same state of facts was presented in a case before Judge Field, of the United States Supreme Court, sitting as Circuit Judge in California, and he reached a different conclusion, holding that the language of the act was sufficiently broad and comprehensive to embrace Chinese laborers without regard to the country of which they might be subjects, and that any other construction of the law would wholly defeat its purpose. In re Pong Ah Lung, reported in the *Reporter* for November 7.

In the case of Boyce et al. vs. Murphy et al., decided by the Supreme Court of Indiana on the 6th inst., it appeared that the appellees were wholesale dry goods merchants at Indianapolis; that Boyce, one of the appellants, was a manufacturer of considerable wealth at Muncie, and that Galbraith, the other appellant, was a retail merchant at the same place. Galbraith was introduced by Boyce to the appellees, and, as the result of negotiations between the parties, a bill of goods was sold to him (Galbraith) and was charged to Boyce and Galbraith jointly. The goods were shipped to Galbraith, who subsequently bought other bills of goods, which were likewise charged jointly. Galbraith paid part on the whole account. No statement of the account was sent to Boyce, nor was any demand for payment made upon him, nor did he

know that the account or any part of it was charged to him, nor that the appellees looked to him for payment, until the commencement of the action. After the action was begun Galbraith became a bankrupt. The court held that, under the circumstances, Boyce was jointly liable for the goods, and that where, as in this case, the credit was given to both jointly, neither was surety for the other, and that the undertaking to answer for the debt need not be in writing. The statute of frauds, said the court, applies only to promises which are in the nature of guaranties for some original or primary obligation resting on and to be performed by another.

BUSINESS NOTES.

The London financial journal, *Money*, says that the two new cable companies, the Postal Company (Mr. Alderman Hadley's) and the Bennett Company, will unite for the purpose of laying two new cables.

The salt inspected in the Saginaw valley in the year to November 1 was 2,577,946 barrels, against 2,669,700 in 1882, 2,331,331 in 1881 and 2,186,428 in 1880. The price has been 80c. a barrel almost from the opening of the season.

There were 199 failures reported to *Kemp's Mercantile Gazette* for the week ending October 31, against 226 and 238 in like weeks respectively of 1882 and 1881. Of these England and Wales had 169, against 205 and 215; Scotland had 25, against 19 and 18, and Ireland 5, against 2 and 5 in weeks ending October 31 in 1882 and 1881.

The Dominion Millers' Association are to join in the contest before the privy council against the collection of royalties on purifiers claimed under the Smith patent. The matter has been in litigation for some years, and the owners of the patents have secured verdicts in the Supreme Court for their purifier against manufacturers of the machine. The company now proceed against the millers as parties to the infringement in using the machine.

A very ingenious plan was lately disclosed by means of which the importers of sheet iron have been escaping the tariff. Tagger's iron, which is of very light grade, is admitted for 30 per cent. ad valorem, while the tariff on the heavier grade is from 1½ to 2½ cents per pound. Importers have been mixing the two together, and thus combined they have been admitted under the 30 per cent. ad valorem rate. In this manner thousands of tons have been brought to this country.

The First National Bank of Ayer, Mass., has been organized; capital $75,000; Andrew Atwood president; James R. Gray cashier. The Carrollton (Ky.) National Bank has been organized; capital $60,000; Henry M. Winslow president; David N. Vance cashier. Nathaniel Niles has been chosen president of the Tradesmen's National Bank of New York in place of the late R. Berry. The First National Bank of Moravia has elected Terry Emerson president in place of H. H. Tuthill.

The expedition sent out by the *Times-Democrat* to explore the Florida Everglades will endeavor to survey a route for the wires of the Western Union Telegraph Company on the western coast through to Jupiter inlet on the eastern coast. Should this undertaking prove successful, intelligence will readily be received of the safe passage of vessels bound from the West Indies and the Gulf of Mexico to the Atlantic ports, as they all pass Jupiter inlet. The enterprise will be watched with the greatest interest.

The demand for lake fish has greatly increased during the past five years. The bulk of the fish shipped east during the winter is caught the previous fall, and the fish caught now are frozen and stored until called for. Buffalo is one of the largest distributing markets on the lakes. Since the introduction of refrigerating cars it is no longer necessary for fishermen to salt their fish for shipment. Lake Superior white fish sell from $120 to $125 a ton. It is said that Indians are very expert at fishing, and it is no unusual thing for two Indians to catch 1,200 pounds of fish a day.

The Ohio Bureau of Labor Statistics publishes reports from thirty-three points in the state showing the average earnings of workmen, who were heads of families, to have been only $649.15 in 1881, against $656.81 in 1880, while the family expenses increased from $532.96 to $560.79. Thus the cost of living increased about five per cent. Only laborers and not foremen are included in this estimate of earnings, and the assistance of others in the family is counted in. The statistician notices a marked growth of discontent among working people in 1882, and attributes it solely to the rise in the cost of the necessaries of life.

Messrs. Dan Talmage's Sons & Co., in reviewing the Louisiana rice culture, say that the crop for 1882–3 was greatly damaged by the overflow, worms and rains. The total crop was 231,800 barrels, about 8,000 barrels less than the previous year. In quality the crop was a little behind that of the preceding year. The lowest price reached was December, when it was 5¼@5¾c. The speculators, ignoring the condition of foreign competing markets at the beginning of the year, and the ample supplies at home centers, lost very heavily. The outlook for the crop of 1883–4 is not as bright as at first on account of the drouth. The crop is estimated, however, to be about 240,000 barrels, a slight increase over last year. The crop is said to be of very fine quality.

The British labor market, as reported by the London *Labour News* of October 31, was still very unsettled. The South Staffordshire colliers threatened to strike on being refused higher wages, but had not then carried out their threat. The Sunderland strike still continued. The miners of Scotland had decided to fix their wages according to the Scotch market price, and to withdraw from the North of England Board. The iron trade was also disturbed. Work was fairly plentiful in the manufacturing iron districts. Shipbuilding was moderately good. Building continued brisk and marine engineers were comparatively busy. Navvies were still in great demand, as were also workmen. The textile trades generally were not very brisk. Shoe trades remained about the same. Some of the riveters had struck, but had resumed work again on former conditions. Dock labor was still greatly in excess, although work was good. Emigration remained steady.

The cut of lumber in the Saginaw valley the past season has been only 850,000,000 feet, against 1,011,274,905 in 1882. This leaves about 400,000,000 feet of logs on hand, against 65,000,000 feet at the close of the season last year. The supply of the better grades has not been equal to the demand, and some 12,000,000 feet have been contracted for to be cut next season. The shipments of forest products from the valley during the open season to November 1 have been as follows for three years:

	1883.	1882.	1881.
Lumber, feet	713,891,876	781,608,844	750,288,126
Laths	26,198,000	30,163,404	16,915,000
Shingles	143,568,000	155,766,500	135,027,000

Operations in the woods will be on a smaller scale the coming winter, the largest lumbermen having arranged for only about half the usual quantity. All grades of lumber have been higher than last year except the poorest, which have been $1 to $2 lower. The upper grades are $36 to $40, common $17 to $20, and shipping culls $9 to $10.

The Vienna Congress estimates the annual rye crop of Spain for 1883 at from 30,000,000 to 35,908,000 bushels; that of Portugal 12,500,000 to 15,313,721 bushels; that of Greece at from 160,000 to 162,000 bushels, and that of Roumania at from 3,500,000 to 4,212,293 bushels. The following are the averages of the crop in various countries for seven years, excepting Russia, whose average is for nine years:

	Av. crop, bush.	1883. Per ct.	1883. Crop, bush.
Denmark	16,269,423	100	16,269,423
France	69,126,425	85	58,757,401
German Empire	228,830,310	82	187,640,854
United Kingdom	1,980,160	—	1,980,160
Italy	16,206,873	77½	12,560,326
Austria	69,984,580	89	62,286,762
Hungary	31,674,197	86	27,239,809
Russia	606,774,955	78	473,284,465
Holland	7,560,947	90	6,804,762
Belgium	11,068,752	—	11,068,752
Sweden and Norway	509,723	70	356,590
Totals	1,052,986,345	...	858,249,370

The immigration returns to the Secretary of the Treasury for October, from New York city, showed 30,296 arrivals, against 42,167 in October, 1883; Baltimore, 3,466, against 4,290; Boston, 3,922, against 5,880; Detroit, 2,023, against 1,143; Huron, 5,491, against 9,391; Minnesota, 96, against 98; New Orleans, 928, against 784; Passamaquoddy, 421, against 288; Philadelphia, 2,077, against 2,878; and San Francisco, 145, against 1,010 for the same month of 1882. The total arrivals of immigrants per nationality, for October, and for the ten months ending October 31 this year and last, were as follows:

Countries.	October, 1883.	October, 1882.	Ten months ended Oct. 31, 1883.	Ten months ended Oct. 31, 1882.
England and Wales	7,630	9,274	71,962	71,031
Ireland	3,917	5,421	60,630	67,893
Scotland	1,149	1,862	18,560	15,700
Austria	870	1,837	9,369	15,662
Germany	16,834	24,166	158,809	212,246
Italy	1,448	2,138	26,932	26,068
Norway	1,408	2,316	18,858	26,291
Sweden	1,691	3,939	27,072	57,626
Dominion of Canada	8,176	11,340	53,169	78,377
All other countries	5,742	5,936	55,676	97,121
Totals	48,865	67,929	501,037	668,015

THE REVISED TARIFF.

Following is an abstract of a paper read May 30, 1883, before the Seminary of Historical and Political Science of Johns Hopkins University, by Talcott Williams, of Philadelphia:

The revised tariff (act of March 3, 1883) bears the same relation to our economic history which the tariff revisions of 1824 and 1828, and accompanying changes, bore to the industrial development which began with the close of the war of 1812. Any discussion of the tariff history of this country necessarily begins with the close of a struggle in many senses our second war of independence. Before that time, as Benton says, protection had been an incident, since then an object.

Aside from the great change wrought at this period in the trade and commerce of the world by the freedom and peace of the seas, and the consequent growth of shipping, which brought our Atlantic coast nearer Europe than it had ever been before, the United States itself passed through three great changes. Its position as a food-producing nation became clearly defined during the Napoleonic wars. Embargo and war together, its manufactures grew apace under a prohibition of foreign imports for six years, and at the same time they passed through the general change following the introduction of machinery, which substituted factories and powerful manufacturers for the individual, and therefore weak, industries of the domestic loom and forge. Lastly, the revolt of the Spanish American colonies was accompanied by a period of disorder which lessened their commerce and deprived our seaboard of a trade relatively and often absolutely larger early in the century than it has been since, leaving the exchange of food products with Europe the typical characteristic of our commerce.

These changes combined to render the period which began in 1814, and whose tariff legislation commenced with the act of 1816, a period controlled by conditions still current. The act of 1816, whose specific terms and careful schedules make it similar in form to the tariff now in force, many of whose phrases are drawn from it, and differing from any preceding it, was drawn under the influence and direction of manufacturers who found their industries, already in operation, seriously threatened by the large imports of 1815. Here, as elsewhere in our history, protection is obtained after an industry is started.

High duties have rarely been granted in the United States for protective purposes in specific cases until some manufacture asked them. Beginning with relatively high duties and an expanded currency, manufactures had for a brief period apparent prosperity. Serious depression ensued, and as the administration and effect of a tariff had by this time secured public attention, higher duties were demanded in 1820 and subsequently. Pending these demands, and succeeding a remarkable increase in our production of breadstuffs, there came a period of prosperity, of cheap money, in which a portion of the national debt was funded at a low rate, and a remarkable expansion of means of internal communication took place, the Erie canal being opened. This succession of events, which closely resemble the period succeeding the tariff legislation of 1867, led to a demand for revision, and when granted by Congress conflicting opinions resulted in an act satisfactory neither to protectionists nor free-traders.

From the presidential election in 1844, closing this period, when Pennsylvania was carried by the cry of "Polk, Dallas, and the tariff of '42," no great northern state was carried by a tariff issue until 1880, when the Republican party owed its success chiefly to the appeal made, in the closing weeks of the canvass, on this issue. The Congress then elected had a working protectionist majority in the Senate, while the House was overwhelmingly for protection. When it met in December, 1881, no doubt existed that if any changes were made in the tariff they would be in the direction of higher duties. Weeks passed without action, and it was finally decided, in March, to report a bill confining the necessary reduction of revenues to internal taxes. Meanwhile short crops had raised the price of food 15 per cent., decreasing enormously the free share of the national income available for the purchase of manufactures after food and rent are paid. But of our adults at least five-sixths buy their food. The increase in the cost of food decreased the sale of manufactured articles, and raised food imports for 1882 to $47,949,546, exclusive of sugar, spices, tea and coffee. The distress caused by high food and the low sales of manufactures led to a demand for action on the tariff, which took the shape of a commission for investigation in the recess and a report at the next session, a proceeding which practically made the general election of 1882 an appeal to the people on this issue. This appeal was taken at the end of a crop year (1881-82), in which there had been grown, as compared with 1880–81, three-fourths as much wheat, two-thirds as much corn, potatoes and pork, one-seventh less cotton, and everything else in proportion. While the acreage of cereal crops was one-third larger than in 1877, the total cereal crop was smaller, so that 30,000,000 acres were cultivated without increased return. Wool and cotton manufactures were depressed, and the visible supply of print-cloths doubled in six months. Pig iron remained stationary, but steel rails fell from $60 to $45 a ton. Strikes failed to advance prices, and some trades, like rubber, found it wisest to suspend altogether. When the railroad reports came in, it was found that the New York Central had not earned its dividend, the eastward tonnage of the trunk lines for 1882 to September 1 was two-thirds that of 1881, and, as a result of all this, the aggregate fall in stocks from July 1, 1881, to September 1, 1882, was greater than for two years after September, 1873. These causes produced the revised tariff, which, like all other tariffs, was a result and not a cause. When Congress met the blind pressure for a revision had taken shape in an intelligent demand for lower raw materials. The draft act submitted by the Commission enabled both chambers to take up the discussion of a new tariff *pari passu*, and the evidence presented gave a larger body of facts than Congress has ever before had in acting on customs duties. The act, as finally passed, failed to meet the demand for lower raw material on iron ore, in many other respects it did, and in precision it was a great advance on any previous tariff. From a protectionist standpoint, it was notable for its admission that some industries had had enough of protection and could stand a reduction. It is remarkable in our economic history for the resumption of economic influences in our legislation, interrupted by the demands of slavery for solution, non-sectional votes being cast on a tariff question for the first time since 1828. Its political lesson is the promise and prophecy it carries of additional reductions as inevitable in the near future as in 1833.

NATIONAL AID TO EDUCATION.

The *Courier-Journal*, of Louisville, has the following on the scheme for national aid to education:

It is worth while laying these early educational principles to heart in these days of distorted views and gross misconceptions of public education in our own country which have entailed an expense of $100,000,000 a year on the people without making adequate breaches in the citadels of illiteracy; which have reared costly edifices to crystallize the ill-digested fancies of impractical educators; agricultural and mechanical colleges, where agriculture has only a hypothetical existence and mechanics is but a name; high schools where fancy studies and accomplishments are taught to young broods of dudes of both sexes, and ward schools where children mechanically memorize without knowledge, and too often grow up to despise rather than to honor honest labor of the hands. Contrasted with this high-pressure and fancy mind-destroying system, the Connecticut fundamental principle, which is the type of the true system of popular education, stands out like Mount Hood's glittering peak above the darkling hills at its base. It was "barbarism" in 1650 in Connecticut colony to let children grow up without being able to "perfectly read the English tongue;" it is certainly "barbarism" to be guilty of similar neglect in these days when the civilized world is flooded with books and educational appliances, and when throughout our country the ballot is the heritage of every American citizen. There is, to be sure, a great deal that goes for education in this country, but the sham part of it is enormous. We spend $100,000,000 for public education, but what has been the progress against illiteracy? In 1870, 14 per cent. of the whole people could not write, and in 1880 this percentage had only been reduced to 12 per cent. Of the 36,761,000 persons over ten years old, about 5,000,000 cannot read and 6,239,000 cannot write. Of those not able to write 3,019,000 are white and 3,220,000 are colored. Of the whole population, 17 per cent. are illiterate. These are "solemn facts," and they constitute a very small portion of the grand aggregate of statistical solemnity, which bears severely on the ex-slave states, where, during antebellum times, limited attention was given to common school education, although very robust attention was given to seminaries and colleges for the higher education. In these ex-slave states it is especially desirable that the huge illiteracy percentage shall be reduced. While the colored illiterates are in a majority, the white ignoramuses are uncomfortably numerous through the "barbarism" of parents and guardians.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

The market has shown all the symptoms of realization, or attempts to realize, by the party which has been doing the heavy work of advancing prices of late. To find some one to sell the stocks to which have been accumulated in effecting the advance is the difficulty which confronts the bull cliques. The short interest has been eliminated; so completely has it been, or had been up to Thursday, that the loan crowd in the Exchange had quite dwindled away, because there was no borrowing demand. Brokers found the greatest difficulty in getting any to borrow stocks, and therefore had to use their own money to carry them instead of getting some other person's. Since Thursday there has been some short selling done again, in consequence of the evident weakness of the market, but not much, for the principal business of the bull cliques now is to watch the bears, and, whenever they discover short selling being done in a stock, to jump it up suddenly by buying, and so frighten the bears into covering. It is all manipulation either way, and a market absolutely in the hands of a few leading operators is a poor concern, unsatisfactory for any one to trade in. The recent rise is conceded to have been a failure, so far, in bringing in orders to buy from the outside public. With an enormous short interest in it, and stocks concentrated into comparatively few hands, it was not difficult to make such a sudden turn as was seen three weeks or so ago. Having rushed up prices to sustain them about where they had been put was also comparatively easy for a short time, but in the absence of the support of public buying it is not so easy to hold them up for any lengthened period. Besides, it is pretty evident that some of the operators who put up prices have been unloading on their confreres this week, and the Vanderbilt boys, it is said, for whose account it was said the market was advanced with the aid of their father's money, have quite reasonably taken advantage of the situation to get out of a good many of their stocks in advance of anyone else. A very little selling of long stock on a market from which the public is absent would perceptibly affect prices.

One of the largest commission houses in the street, if not the largest, say in their circular letter: "It is evident that large operators have been endeavoring to dispose of some of the stocks which have accumulated on their hands. There has been quite a decided effort to lift prices, perhaps for the purpose of obtaining a market. The public has had little or no sympathy with this movement, which accounts for its lack of success. Large operators can get prices up without difficulty, but the trouble is to find people who will buy at the advance. The great want of the market is the lack of outside business. This complaint is made by all the large commission houses. There is no real public interest in speculation, and but little prospect of any for some time." These remarks were evidently provoked by the very decided symptoms of decline which appeared in the market on Wednesday. It was clear that some one was then attempting to sell stocks. A like attempt had been made the day before, but a break was averted by the clever manipulation of Lackawanna, which was suddenly run up in price, while one or two other active stocks were firmly held. In this way the whole list was sustained; but when the same thing was attempted next day it was a comparative failure, the pressure to sell being too heavy. Yesterday there was seen an extraordinarily clever piece of manipulation, for the whole market was stimulated into a surprising appearance of strength by a bolder advance in Lackawanna than anything done the previous part of the week, while O. T. was also put up. This lasted till the closing hour, when there was a general break in prices. The talk about the steady investment buying sustaining the market, which had been indulged in in some quarters, gave way to a confession that though there was investment buying it was not enough to sustain prices in the absence of clique manipulation. This was a somewhat tardy discovery, as any impartial observer who closely watched the daily transactions must have seen through all the rise of the market that it was purely professional work. In the complete absence of a public, quick rises and quick falls in prices are equally the result, except in very rare instances, of professional operations. It is said that Mr. William H. Hutchinson, the expelled member of the board, has been one of the most active operators in putting up the market, and that he seemed to have command of an unusual amount of ready cash. There has naturally been a great deal of gossip about the matter, and much speculation as to where he obtained so much money.

The report of trouble among the roads in the Iowa pool contributed to depress the market a little, and the adjournment of the meeting of the managers of the roads to next week, ostensibly to await an answer from the St. Paul company, caused a little disquietude, for some people thought it was only a device to gain time before beginning a severe fight. The Iowa pool roads are the roads running to Omaha, and the chief trouble appears to be between the Rock Island and the St. Paul companies. When the latter road built its Iowa extension across that state to Omaha the Rock Island considered that its local territory had been unjustifiably invaded, and there has been ever since a feeling of bitter enmity between the two companies, which once broke out into open war, and after peace was enforced by Mr. Vanderbilt's operations, war has been on the verge of breaking out several times since. Both roads have been cutting rates, and when the other roads in the pool demanded that the excess of revenue thus obtained over the allotted percentages be paid over to them the Rock Island people at once complied. The St. Paul company, however, refused, point blank, claiming that having done the business it should keep the money. The amount is comparatively small, but the stand was made on the principle. Thereupon the Rock Island declared it should withdraw from the pool, which means that it would begin open war. Thus the meeting terminated, but the adjournment was taken to next week, as before said, ostensibly to await a final answer from the St. Paul company. It is quite likely, owing to the precarious position of the stock market, that peace will be patched up again, but the old trouble remains—too many roads for the business to be done.

Were the St. Paul & Manitoba road one of those in the Iowa pool, the sudden decline it had on Wednesday would have created serious alarm, for it would have been accepted as a sure sign that war was coming and the insiders were throwing over their stock in advance of its declaration. As it was, the easy drop of nearly seven points that Manitoba had on Wednesday in about an hour was recognized as the usual experience of a heavily-cliqued stock when some has to sell a few shares. The sale of about 1,000 shares, or less, caused the decline. Manitoba is a stock which belongs to the Canadian-Pacific syndicate, and they have so unmercifully skinned the "lambs" of the street with it in times past that the usual effect has followed—no one would touch the stock one way or the other. Few would buy it, fewer still would sell it, and the clique have it all in their own hands. A stock in this position has only a nominal quotation. It may appear, as it did on Wednesday, at 107 on the tape, that being the quotation made for it by the clique brokers, but any one going in with a thousand shares to sell is liable to an unpleasant experience. He sells his first hundred at 107, the next offer carries the price down 1 per cent. and the last hundred may find no better bid than par. The weakness of Manitoba was supposed to have some connection with the evident weakness of Canadian Pacific, that stock having shown signs this week that the clique are having a hard time finding buyers for it. They have exhausted their good news about the guarantee, and there seems even less willingness on the part of people to buy it now than there was before the grand *coup* was attempted. Two weeks ago one could find people who were buying it, with the precaution of a stop order to provide against a severe tumble in the price, on the expectation that the people working it would be able to sell the stock in London and so put up the price to 67 or possibly 70, that being the figure talked for it. It would be hard to find any now. Such buyers seem to have sold out again, and the clique evidently find that instead o distributing the stock they are getting back what they were able to sell, and there is certainly no evidence in the way the stock acts that it is meeting with favor in the London market. Judging by the comments of some of the London papers which have come over since the guarantee stroke was made, the people over there did not like the look of the thing. There was too much of a stock-jobbing flavor about it, and nothing will more effectually scare the English investor than a suspicion that a government, Canadian or any other, is mixed up in stock-jobbing of any kind. This business will certainly hurt the Canadian government in the English market; as for this market it is killed. Wall street easily saw through all the dust clouds the Canadian Pacific clique raised about their agreement with the Canadian administration, and had no difficulty in seeing that it was a business in which railroad building, politics and stock jobbing were all mixed up. That was enough. No one wants to take a hand in a game where the chances are all against the outsider. He sees that he is the pigeon to be plucked, and gives the concern a wide berth. The hope for the clique now seems to be to so manipulate their stock as to get a large short interest in it. At present the fear of a "squeeze" makes the average speculator keep his fingers off, but by proper manipulation the clique may entrap the more venturesome to sell it short; then they can make a sudden jump in it, force up the price where the shorts would be frightened into covering, and so bag their money. If the thing be done in moderation, and not so severely as were Manitoba in times past, scaring people away from the stock completely, the operation may be repeated more than once. Still, the ultimate end must be the selling of the stock to the public, unless the whole business is to go by the board, and for this object the Canadian Pacific syndicate will doubtless work hard enough, for they are playing for high stakes. There is a deal of money to be made out of the building of that road if they can sell stock. At this juncture, however, the company seems to be desperately in want of funds.

The loan market continues as easy as ever, funds being abundant at 2 to 2½ per cent. Exchange rates dropped half a point last Saturday to $4.82½ and $4.85, and remained there until yesterday, when they again rose half a point, the same as last week. This is above the gold-importing point. The movements of securities between this and the London market are said to be the principal factor in influencing exchange rates now, so nearly balanced are the commercial relations of the two countries, owing to the low ebb of our export trade. The Bank of England rate remains at 3 per cent. Our government bonds are influenced by the expectation, referred to some time ago in these columns, that the tax on bank circulation will be taken off at the next session of Congress. This accounts for their advance in price. The following were the closing quotations yesterday:

	Nov. 9,	Nov. 16,	
	bid.	bid.	asked.
U. S. 4½s 1891, registered	113¼	113⅜	113⅞
U. S. coupon	114⅛	114⅜	114⅞
U. S. 4s 1907, registered	122	122¼	122⅜
U. S. 4s 1907, coupon	122	122¼	122⅜

The bank statement of Saturday showed an increase in the surplus reserve of $1,053,300, bringing it up to $1,740,775. The following are the comparative totals of the statements of November 3 and November 10:

	Nov. 3.	Nov. 10.	Differences.	
Loans	$323,554,600	$321,944,900	Inc.	$1,609,700

COMMERCIAL.

SUMMARY.

The telegraphic advices to BRADSTREET'S this week reveal a continued quiet feeling in general trade, with no special adverse influences. At the west sales are reported up to the usual volume. At Chicago collections are improving, with a large movement of currency to the country. The advent of colder weather has improved the distributing trade in localities. A disposition is everywhere apparent to scan credits closely. It is noted that the nearness of the holiday trade is having a widespread enlivening effect. The tendency of the industrial situation is toward a further cutting down of production. Two thousand five hundred nail machines in the West will remain idle five weeks. The country's rolling-mill capacity is employed to about two-thirds its maximum. The Bessemer steel mills have determined to reduce wages of both skilled and unskilled labor. The iron markets of the country have evinced no improvement on the week. Pittsburgh telegraphs that if there is any change it is not for the better. Trade in domestic sizes of coal has been stimulated by the colder weather. The wheat markets have been influenced by the reported reduction of 354,000 bushels in the visible supply. On the other hand there is an increase in the amount of wheat in passage to the United Kingdom and the continent. The situation is still a waiting one. The visible supply of corn has decreased 701,000 bushels, but there is no improvement in prices. The provisions markets have developed no special features. Spot cotton at New York has declined to 10 7/16c. Receipts of cotton at interior towns in the south for the week were about 12,000 bales below those of the previous week. No improvement is noted in the textile situation at Philadelphia. In ocean freights there is a scarcity of tonnage for grain. The wool trade has continued quiet, but there has been no abatement of confidence among holders. There were 205 failures in the United States reported to BRADSTREET'S during the past week, 14 less than the preceding week, 38 more than the corresponding week of 1882, and 89 more than the same week of 1881. There were three important failures in Chicago, one in Philadelphia and one at New Castle, Pa. Canada had 18 failures, a decrease of 14 from the previous week.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: General trade dull and unsatisfactory; not up to previous week in any department; manufactures languishing and outlook rather discouraging.

From Boston, Mass.: The volume of trade has slightly increased during the week, but the general movement is still comparatively small, and a quiet tone runs through nearly every department. Preparations are being made for the holiday business, which will stir up some animation and run along a few weeks, but we do not look for much of a revival n the regular wholesale traffic until after the close of the year. Perhaps the boot and shoe market should be excepted, as the number of buyers from leading distributing centers is steadily increasing and several large orders for spring goods have been secured. The sales of wool hold up at liberal proportions. The money market is quiet and steady, with most of the bank discounts at from 5½ to 6½ per cent.

From Providence, R I.: The rate of discount on prime commercial paper is 5¼@6 per cent. on the street, and 6 per cent. at bank. The rate of exchange on New York is at par.

From Philadelphia, Pa.: The distributing trade in some lines has been improved by the cold weather, and retail business generally has been more active. The general commercial situation is not unsatisfactory for the time of year and a fairly good feeling prevails.

From Cincinnati, Ohio: General trade of this vicinity continues unchanged in general features. Retail trade are making preparations for Christmas sales, which bid fair to be satisfactory. The disposition to contract lines of credit is manifest. The recent important failure in the leather trade contributes no little to this result. Money matters are unchanged; borrowing liberal, but good; paper promptly taken.

From Cleveland, Ohio: A fairly satisfactory feeling prevails with regard to the trade thus far this fall. The demand has been conservative and steady, and there will probably be no busier times this year, the season being well advanced for the Cleveland market. Money firm at 7 and 8 per cent.

From Evansville, Ind.: The weather for the past week has been cold and clear. There has been quite an increase in sales in woolen goods and boots and shoes; grocers report trade fair. Collections are little better; money matters easier.

From Indianapolis, Ind.: Trade in most lines is only fair and business not up to expectations for the season. In manufacturing business is reported dull and collections slow.

From Chicago, Ill.: Money active at 6@7; demand for time loans above supply; freely offered on call for choice collaterals at 6. Large movement of money to country. Collections improving. Exchange, par; freely offered.

From Peoria, Ill.: Business quiet. Collections slow. Weather good, and will have a favorable tendency on trade.

From Detroit, Mich.: In general lines of merchandise the volume of business has been fair, but trade has not been very spirited. There is an apparent tendency to scan credits closer than usual. Bankers report considerable demand from the interior for money, particularly from lumber regions where considerable stocks are being carried over.

From Louisville, Ky.: Local markets steady and moderately active. The advent of cold weather has stimulated the demand for winter goods, and retailers are having a seasonable trade. Money in good supply and demand 7 per cent.

From St. Louis, Mo.: Excepting a much improved demand for winter specialties, general trade is as quiet as last week. Values usually are steady. Collections are fairly satisfactory. Money is a little easier, at 7 to 8 per cent. The heaviest demand is from the cotton interests. New York exchange is plentiful, at 50c. premium. Prime commercial bills are par.

From Kansas City, Mo.: Increased activity in general trade, owing to colder weather. Collections only fair. Money unchanged.

From Topeka, Kan.: General trade is improving slowly. The demand for money is brisk, though the bank deposits have increased during the last week. Groceries and provisions are steady. Collections are fair.

From Lawrence, Kan.: The trade generally has been in a quiet condition the past week, with no noticeable features. Money is easy and bills are promptly met and indications are favorable in all lines for the winter months.

From Minneapolis, Minn.: The jobbing business is active, especially in clothing and boots and shoes. Collections continue to improve, and are as a rule satisfactory. There is little change in the money market; the receipts from the interior are more liberal, but large amounts are required shipped from the east to keep up the supply. Eastern exchange steady.

From Burlington, Iowa: There is a uniform activity in all lines of trade with no special features. Jobbers have done a good trade so far and anticipate a long season. Money is in fair demand; interest and exchange unchanged.

From Milwaukee, Wis.: Trade generally fair, but not large except in some lines. Collections in the country are fair. Money is easy at 7 to 8 per cent.

From St. Paul, Minn.: General trade is only fair. An improvement is anticipated, as wheat movements are stimulated by cold weather. The lumber cut will be light, and the camps will employ comparatively few men this winter, making local trade dependent mainly on the agricultural districts, and there are few personal buyers in the country. Orders merely for sorting up. Prudent merchants are cautious with credits. Money still close, though there is a supply for good paper. Tendency toward lessened stringency. Country bank balances are slightly increased. City merchants remitting freely, making good demand for exchange, which rules at par to small premium between banks. Mercantile collections generally good. Currency receipts show a surplus over shipments.

From Baltimore, Md.: In most departments of trade business was quiet the past week and the general movement was of limited proportions. But few orders of consequence are coming in, and no great activity is looked for during the present month.

From Norfolk, Va.: Generally business about as usual. The grocery trade is quiet but active. Dry goods jobbers are not as busy as usual. Cotton continues to come in freely. Peanuts are now coming in freely and the market is firm. Bank discount and exchange as last reported. Collections are only moderate. The weather is quite wintry.

From Richmond, Va.: General business quite good. Since the recent election capitalists feel more secure in their investments and the outlook is much more hopeful than for some time past.

From Wilmington, N. C.: General business is dull in most branches, owing to low prices of produce with but few buyers, who purchase cautiously for immediate wants.

From Savannah, Ga.: Trade is depressed and unusual quietness prevails in consequence of continued warm and dry weather. Crops are parched and suffering from drouth.

From Memphis, Tenn.: Business in volume is larger than usual, even at this season of the year, yet certain lines of leading staples are dull. Money 8 per cent. Exchange at par.

From San Francisco, Cal.: Business all around is better than last week. Exchange on New York 20c. premium.

INDUSTRIAL.

The country's rolling mill capacity is engaged to about two-thirds its maximum, and reductions of wages are announced in several mills not subject to the sliding scale. It has been determined to reduce wages of both skilled and unskilled labor in all Bessemer steel rail mills. Reductions have been made at Pennsylvania and Ohio blast furnaces. Arbitration has been agreed to by the coal operators in the third and fourth pools on the Monongahela river. About one-fourth of the striking miners on the Low Grade Division road, western Pennsylvania, have gone elsewhere, and all except 600 of the rest are at work, 400 of these having struck a second time on account of a checkweighman grievance. The reports of the labor committees to eastern and western rail mills are favorable to an acceptance of lower wages. Labor agitations in the Connellsville coke region have subsided. The window-glass workers' strike is unchanged. Stocks are light and demand active. Several glass factories are being erected, and a scarcity of labor is probable when all are manned. Coal operators are interested in the capacity of a new coal-cutter which, it is alleged, can do the work of twenty men. It costs $350 and weighs 950 pounds. Two thousand five hundred nail machines in the west will remain idle five weeks. There are no prospects for greater activity in the iron and steel mills. In textile manufacturing establishments, especially for the finer grades of goods, there is a slight improvement in manufacturing activity. In establishments turning out railway appliances, cars and locomotives, the labor force has been increased at several of the larger works. Skilled shop labor of almost all kinds is in good demand in the south, and mill managers are making requisitions faster than their wants are supplied. The Bay View Fish Plate Mill at Bay View, Wis., and the rolling mill at North Chicago shut down Wednesday night indefinitely, owing to a falling off in orders. The Cleveland Rolling Mills steel works will shut down in two weeks. The Washington Mills at Lawrence, Mass., stopped over one hundred looms this week. The New York daily papers were asked on Thursday night to pay 46c. per thousand ems, and on Friday the proprietors of the evening papers were asked to pay 40c.

INDUSTRIAL FEATURES.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The carpet mill noted in last week's issue as having shut down started up again last Monday after a week's idleness. One or two large concerns in the carpet trade are running full on orders, but the mills generally are not working to their full capacity, as spring orders are rather backward except for the most popular goods, which are selling freely. The cotton goods situation has not improved. A good deal of machinery is idle and many mills are working part time, although as is generally the case there are a number of factories in full blast and not lacking in orders for really desirable goods. There is general complaint, however, of a lack of profit margin in cotton manufactures. The worsted industry continues actively employed, and in addition to the new company noted as having organized a few weeks ago another mill is reported as about starting up, and one Wilmington cotton yarn factory is about turning to worsteds.

BREADSTUFFS ABROAD.

There has been no noticeable change in demand for or prices of American wheat in English markets during the week. In the earlier portion it was quiet and steady, and on Wednesday it was firm. The United Kingdom is still well supplied with breadstuffs, and there is no warrant for belief that the heavy stocks of Indian and Russian and domestic have been materially reduced. Old No. 2 spring wheat, American, at Liverpool, on Wednesday had appreciated 7d. per cental nominally since November 10, but the market was quoted dull, and new wheat of the same variety had nominally declined 2d. per cental, with continued dullness. Notwithstanding the lateness of the season, Russia continued a free shipper of wheat as late as November 1, and there were at that date 898,000 hectoliters of Russian wheat on passage to the United Kingdom, against 308,000 hectoliters at the corresponding time last year. Prices, however, were very low indeed. English millers have apparently been taking advantage of the wheat market, but have not been able to secure any improvement for their finished product. The London *Millers' Gazette* calls attention to a cause for a weak market for foreign wheat in the United Kingdom, owing to the existing liberal supplies of home-grown wheat still in farmers' hands. Even in Great Britain the quantity of wheat held by farmers is much larger than the very heavy stocks in the hands of merchants and dealers, while in France this is the case to an infinitely greater extent, and the difference between the position of importers or holders of foreign and that of farmers is this, that whereas the former require in the ordinary course to dispose of their wheat in a comparatively brief space of time from its arrival or landing, the latter distribute their sales pretty regularly over the whole season, according to their weekly pecuniary requirements. The quantity of wheat on passage to the United Kingdom November 14, as reported by Beerbohm's cable, was as follows:

	Wheat. Qrs.	*Maize. Qrs.*
To the United Kingdom	1,900,000	160,000
To continent	400,000	40,000
Total quarters	2,300,000	200,000
Equal bushels	18,400,000	1,600,000
Compared with the previous week:		
To the United Kingdom	1,825,000	170,000
To continent	430,000	55,000
Total quarters	2,255,000	225,000
Equal bushels	18,040,000	1,800,000
Increase, bushels	360,000	.....
Decrease, bushels	.....	200,000

AMERICAN WHEAT MARKETS.

The general tendency of the domestic markets early in the week was to uphold the advance begun and checked last week. Up to Wednesday night the gain from the preceding Friday had been just 1c. per bushel, the closing quotation for November being $1.11½. as compared with $1.10½ at the close on Friday, November 9. Sales of red wheat on Wednesday were made at $1.11 per bushel, f. o. b. Saturday showed a decline of ⅛@¼c. as compared with November 9. On Monday the stock of wheat at New York was found to be 292,988 bushels smaller than one week preceding, although 3,302,231 bushels larger than one year ago. The market was more active, stocks of No. 2 red at New York having declined 34,479 bushels in the preceding week. Unexpected country orders to buy, the reduction in stocks here, and the slight increase in exports advanced the market 1c. per bushel November 12. There was a good advance on Tuesday, but weak cables, declining takings by exporters, and heavier receipts west brought about a reaction, and prices went off to ⅛c. below the closing quotation on Monday evening. On Wednesday there were heavy sales and very little exertion was apparent on the long side of the market. As noted above foreign cables were firmer, but exporters refused to take cash wheat even at concessions. Expected heavy receipts west rendered the markets in that region very heavy. The decline for the day was ¾@⅞c. per bushel. Thursday's and Friday's markets were without special features.

The exports of wheat from the Atlantic ports for the week ended November 10 amounted to 1,223,405 bushels, against 647,611 bushels November 3.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended November 10 amounted to 1,554,574 bushels, against 1,526,067 bushels in the preceding week, and the shipments to 1,522,681 bushels, against 1,067,192 bushels in the week previous.

The course of prices of wheat at New York and at Chicago (1 P.M.) during the days named was as follows:

	New York.				*Chicago.*	
	Nov.	*Dec.*	*Jan.*	*Feb.*	*Dec.*	*Jan.*
Fri. Nov. 9	$1.10½	$1.11¾	$1.14	$1.16⅛	.97⅜	.98¼
Sat. Nov. 10	1.10⅜	1.11¾	1.13⅞	1.16	.96⅜	.97½
Mon. Nov. 12	1.11⅜	1.12¾	1.14⅜	1.16⅞	.....	.....
Tues. Nov. 13	1.11½	1.12¾	1.14⅞	1.16⅞	.96⅞	.97¾
Wed. Nov. 14	1.10⅜	1.12	1.14	.....	.96⅜	.97⅜

From November 2 to November 14 November wheat advanced in price from $1.08¼ to $1.10⅜, a gain of 2⅜c.

INDIAN CORN.

Prices of Indian corn in this market sustained less inflation during the week to the close of Wednesday's market than did those of wheat. In fact, they had had none at all, prices for No. 2 corn at New York, for November delivery, on the 14th inst., being 59¾c. per bushel, precisely what they were at the close on Friday evening of last week.

The highest figure touched in the meantime was on Monday evening when they left off at 60¼c. Saturday gave no advance and cash corn left off where it was on Friday. Monday revealed that the stock of corn at New York had decreased 298,000 bushels during the week, although it was still 3,821,245 bushels larger than it was one year ago. The market was strong and there was considerable buying by the shorts, which contributed to the advance of ½@¾c. per bushel noted. Exports were only nominal. The weakening in the wheat market on Tuesday was reflected in that for corn. Speculation was very light and quotations fell away ⅛@¼c. Western receipts were large. Wednesday found renewed weakness in spite of decreased western receipts. Cash corn fell away ½@1c. per bushel and the options ¼@⅜c.

The price of November corn has increased from 57c., on November 2, to 59¾c. on the 14th inst., a net gain of 2¾c.

The receipts of Indian corn at Chicago, Milwaukee, St. Louis, Detroit, Indianapolis, Toledo and Peoria, for the week ending November 10, were 1,543,589 bushels, against 1,487,453 bushels in the preceding week, and the shipments were 1,476,420 bushels, against 1,977,908 bushels in the week ending November 10.

The closing prices of Indian corn on the days named at New York and Chicago (at 1 P.M.) were as follows:

	—At New York.—			—At Chicago.—	
	Nov.	Dec.	Jan.	Dec.	Jan.
Friday, Nov. 9	.59¾	.60⅜	.60	.48¾	.47⅞
Saturday, Nov. 10	.59½	.60½	.60¼	.49¼	.48⅛
Monday, Nov. 12	.60¼	.61¼	.61	..	..
Tuesday, Nov. 13	.60	.61	.60¼	.48⅞	.48
Wednesday, Nov. 14	.59¾	.60½	.60⅛	.48¾	.47½

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

* Afloat.

The visible supply of grain, comprising the stocks in granary at the principal points of accumulation at lake and Atlantic ports, and on rail and on the Mississippi river, and afloat on New York canals, destined for tide-water:

	Nov. 10, 1883.	Nov. 3, 1883.	Oct. 27, 1883.	Nov. 4, 1882.
Wheat, bushels	30,775,446	31,129,678	30,616,382	17,742,853
Corn, bushels	9,634,395	10,335,768	10,531,544	4,003,864
Oats, bushels	5,516,281	5,510,990	5,360,341	4,175,772
Barley, bushels	2,456,925	2,366,834	1,894,884	2,572,329
Rye, bushels	2,442,066	2,358,884	2,274,614	1,084,018
Total bushels	50,795,113	51,702,154	50,683,765	29,578,336

The following is the statement of the exports of domestic breadstuffs from the United States during the month of October, 1883, and during the four and ten months ended October 31, 1883, as compared with similar exports from the same customs districts during the corresponding months of the preceding year.

Total for October	1883	$14,651,530
	1882	15,362,682
Total for four months ended October 31	1883	59,933,099
	1882	85,444,272
Total for ten months ended October 31	1883	145,082,034
	1882	150,300,581

PROVISIONS.

The change in prices of hog products during the week were not significant. On Saturday there was a moderate decline, and trading was weak. On Monday there was a noticeable advance, owing to a renewed demand from packers, and prices of hogs, as well as of products, felt the effects. On Tuesday this was continued, but on Wednesday, however, the movement was downward again. There was a great surplus of hogs marketed in the west, and the general demand was not showing any appreciation. Packing from November 1 to November 10 is reported to have increased from 10 to 15 per cent. in quantity as compared with the like period in 1882.

The following shows the export of hog products for the week ending November 10, 1883:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds.
New York	3,345	3,693,208	4,013,180
Boston	474	569,227	337,277
Portland	17	....	200
Montreal	1,324	702,800	18,840
Philadelphia	2	1,090,000	....
Baltimore	....	....	84,570
New Orleans	....	13,800	16,890
Totals	5,162	5,979,035	4,470,957
Previous week	6,530	6,539,132	2,827,209

The total export of hog product from the above-mentioned places from November 1, 1882, to November 10, 1883, was as follows:

	1883, pounds.	1882, pounds.
Pork	2,338,400	1,544,600
Bacon	12,518,167	5,034,936
Lard	7,298,166	9,925,397
Totals	22,154,733	16,504,933

The prices for leading hog products in this market on the days named were as follows:

	Nov. 10.	Nov. 12.	Nov. 13.	Nov. 14.
Lard, west. spot	7.85c.	7.87½c.	7.95c.	7.90c.
Lard, Nov.	7.72	7.75	7.86	7.75
Lard, Dec.	7.70	7.79	7.89	7.75
Pork, mess, spot	$11.87½	$12 00	$12.00	$12.00

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The fluctuations in wheat have been within the range of ½c. to 1c., and the net result of the week's business to date is a slight decline from last week, but the general undertone of the market is strong and there is not much disposition to sell short except for quick turns. Exporters have done little, but there is considerable inquiry at lower prices—2@3c. under current rates. Corn has ruled dull, speculators showing little interest, and the firm holding of cash lots blocking business on foreign orders, of which their have been several on the market this week for prompt shipment. New corn from Kansas arrived Monday and graded steamer; 5,000 bushels were taken as a sample shipment for Liverpool. Flour has been very steady, but demand has been limited to the supply of jobbing wants.

From Cincinnati, Ohio: Flour heavy. Buyers and sellers alike are lethargic. Stocks of fancy are accumulating. Receipts light. There was slight increase in volume of grain transactions. Prices weaker and receipts lighter than last week.

From Louisville, Ky.: Grain dull and nominal. Flour firm.

From Chicago, Ill.: Wheat opened weak, declined ¾c, later recovered loss on free covering by shorts; trading mainly with brokers; no shipping demand of consequence, and few outside speculative orders. Corn firm; May deliveries a shade stronger; cash and near futures quiet; trading mainly in settlements; receipts now increasing; noon steady. Oats quiet; receipts large for season, but fully absorbed by shipments. Rye weak; stocks largest on record.

From Milwaukee, Wis. Cold weather accelerated the grain movement in the northwest and wheat receipts are larger, averaging 50,000 bushels daily, against 35,000 the previous week. The flour movement increased correspondingly; local mills are running steadily, making about 3,500 barrels daily. Only three mills are idle. There are some fears of damage to winter wheat from cold weather, but the large growth of the plant shelters the roots until snow comes.

From Minneapolis, Minn.: A cold wave reached this section on the 11th inst., and the weather continues cold, the mercury being about zero. The wheat movement has been apparently checked, but the roads are in fine condition, and a free movement is looked for as soon as farmers are a little accustomed to the cold. The aggregate receipts have been 700,000 bushels. Millers have purchased at interior points about 1,250,000 bushels. The market has ruled weak and lower, No. 1 hard selling at 97c. to $1. There is in store in the city 2,250,000 bushels. Lake navigation is virtually closed, with 1,000,000 bushels in store at Duluth, and country elevators hold a large amount of wheat. The crop of Minnesota and Dakota will be fully up to the estimates.

From St. Louis, Mo.: Flour is very quiet but not declining; all grains are lower and dull on satisfactory foreign advices.

From Memphis, Tenn.: Flour and cornmeal both easy and inactive. Corn in plentiful supply.

From Wilmington, N. C.: Grain and breadstuffs prices are better and the demand moderate.

From San Francisco, Cal.: Wheat is active at an advance of 5c. per cental over last week.

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Provisions fluctuated, occasioned by warm weather. The demand for green meats has been good. Stocks of cured meats on hand are light.

From Chicago, Ill.: Pork firm and active for futures. Strong, firm buying all offered. Supposed buying mainly for local account; advanced 10. Lard active and advancing; trading largely in future options. Strong local buyers taking all offered. Meats firm, advanced 12; hogs active, advanced 10 on small receipts; estimates for week, 210,000; quality good. Cattle, firm; choice scarce.

From St. Louis, Mo.: Provisions are quiet and easy. Hogs are in fine supply and very active at steady values. Packing is lively with the cold weather. Cattle are in moderate offering, but sell well on a strong market.

From Kansas City, Mo.: The provisions market is quiet, and the jobbing demand good. Cattle market materially unchanged. Hog receipts very heavy; prices reduced 10c.

From Louisville, Ky.: Pork packing actively begun. Hog market firm.

From Memphis, Tenn.: Nothing exciting in prices of meats.

From Savannah, Ga.: Provisions are more even and steady. Bacon is in good demand. Rice firm at quotations and demand more active for good lots.

THE NEW YORK DRY GOODS MARKET.

The commission trade report a very quiet week's business, the demand for cottons and prints especially being very light. Some little business was transacted in dress goods and woolens and such articles as are suitable for the approaching holiday trade. With the importing houses trade is also reported light. Silks, satins and velvets moved slowly. Some business was transacted in heavy dress goods and hosiery. The cold weather prevailing for the week has done much to improve the retail trade, who say business in furs and fur-lined garments has materially increased; all departments, in fact, have been benefited by the change. The jobbing houses are quiet, though some reassortment and holiday trade has set in with those who cater for city and near-by trade.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Since the election there has been a little more trade in dry goods, but no large movements, and both jobbers and agents are selling only in a small way for immediate wants. Jobbers running their stocks as low as possible and will not replenish for some time to come. Agents are not forcing sales, and with some few exceptions hold steady on prices. Prints are rather dull, and a number of the companies have stopped work. Woolens move very slowly, but with colder weather we expect more animation.

From Providence, R. I.: The print cloth market is very quiet and sales are light; 64s are quoted at $3^{9}/_{16}$c. less ½ of 1 per cent., and 56x60s at 3⅜c. There are about 125,000 pieces in the hands of manufacturers.

From Philadelphia, Pa.: Cold weather has quickened the consumption of winter goods and imparted more life to the general jobbing trade. The package movement has also been a little more active.

From Pittsburgh, Pa.: Favorable weather has created an active demand for seasonable dry goods. Collections fair.

From Cleveland, Ohio: Dry goods continues steady.

From Cincinnati, Ohio: Dry goods trade without change.

From Louisville, Ky.: Dry goods jobbing quiet; retail trade brisk.

From Indianapolis, Ind.: In dry goods trade is reported only fair.

From Detroit, Mich.: In dry goods jobbers report a considerable falling off of house trade during the week; travelers' and mail orders have also been less. The advent of sharp, cold weather has, however, quickened the sales of retailers, whose stocks average full.

From Chicago, Ill.: Dry goods is more active on orders. Jobbers report sales satisfactory. Millinery, fancy and furnishing goods more called for on mail orders.

From Peoria, Ill.: Trade in dry goods fair.

From Minneapolis, Minn.: The cold weather has caused increased demand for dry goods, especially heavy fabrics and blankets, and the trade is in good shape in other lines.

From St. Paul, Minn.: Dry goods are quiet. Better demand for hosiery, knit goods and underwear. Buyers make only small bills.

From Burlington, Iowa: Dry goods trade improves with the advance of cold weather.

From Kansas City, Mo.: Dry goods continue in active demand, particularly heavy grades.

From St. Louis, Mo.: Dry goods trade is improving on increased demand for winter goods. Stocks are very complete and values are steady.

From Topeka, Kan.: Dry goods are quite active.

From Baltimore, Md.: The dry goods market presents no features. There is a better feeling manifested, however, and jobbers report a good inquiry for some fabrics, of which stocks have been fairly sold up. The outlook is regarded promising.

From Richmond, Va. Dry goods active and prospects in keeping with other lines.

From Savannah, Ga.: Dry goods more quiet and the week's transactions smaller than usual; no buyers in the market and orders fallen off.

From Memphis, Tenn.: The dry goods jobbers report business keeping up very good, and no falling off is looked for until after the holidays.

From San Francisco, Cal.: There has been a decided improvement in dry goods, but the month's transactions to date do not meet anticipations.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: This is unusually a very quiet month for clothiers, and with the exception of some duplicate orders no business of importance is looked for until the spring trade opens, which may not be until January.

From Cincinnati, Ohio: The clothing trade is reported to have effected an arrangement for more effectually controlling credits and avoiding the pernicious system of dating bills ahead.

From St. Paul, Minn.: In clothing the cold weather is stimulating sales in heavy goods. Bills are small.

From Chicago, Ill.: Heavy clothing rather more active.

COTTON.

The market for spot cotton at New York during the week has been slow but steady, and trading has been very moderate. Quotations dropped a point on Monday, to $10^{7}/_{16}$c., for middling uplands, and have since remained unchanged. The sales have been as follows: For export 277 bales, for consumption 1,877, for speculation 597, and in transit 1,200 bales. Included in the above are 100 bales to arrive. The deliveries on contract amount to 1,400 bales, against 2,395 bales last week. The total sales aggregate 3,951 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	Last week.	Last year.
Ordinary	8 3-16c.	8¼c.	7 15-16c.
Strict ordinary	8⅝	8 11-16	8⅜
Good ordinary	9½	9 9-16	9 3-16
Strict good ordinary	9 13-16	9⅞	9⅝
Low middling	10 1-16	10⅛	10 1-16
Strict low middling	10¼	10 5-16	10 5-16
Middling	10 7-16	10½	10½
Good middling	10 11-16	10¾	10¾
Strict good middling	10 13-16	10⅞	10 15-16
Middling fair	11 5-16	11⅜	11 7-16
Fair	12 1-16	12⅛	12 3-16

STAINS.

	This week.	Last week.	Last year.
Good ordinary	7 5-16	7⅜	7 9-16
Strictly good ordinary	8 9-16	8⅝	8⅜
Low middling	9 3-16	9¼	9 1-16
Middling	10 1-16	10⅛	10

The market for spot cotton closed firm.

The future market has been dull but steady. Business has been very slow. The total sales for the week reaching 454,900 bales against 371,700 last week, and 605,200 for the same week last year. The closing quotations last evening show an advance of 5 points for near months and 3 for later ones. Moderate port receipts, and prices at Liverpool governed the course of the market.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	Last week.	Last year.
November	10.46	10.39	10.57
December	10.55	10.51	10.43
January	10.70	10 67	10.45
February	10.85	10.82	10.56
March	11.00	10.97	10.66
April	11.13	11 09	10 77
May	11.24	11.21	10.88
June	11.36	11.33	10.99
July	11.47	11.44	11.10
August	11.57	11.54	11.19

The market for futures closed easy.

The southern markets have been easy and steady. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	To-day.	Last year.
Galveston	10,883	10	9⅞
New Orleans	61,000	10 1-16	9⅞
Mobile	6,000	9⅞	9¾
Savannah	11,250	10	9 13-16
Charleston	8,500	10¼	10¼
Norfolk*	9,376	10 1-16	10¼
Baltimore	757	10¼	10¼

* Norfolk, 5 days.

The total receipts of cotton at the ports since September 1 are 1,965,503 bales against 1,876,775 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

BRADSTREET'S:

A Journal of Trade, Finance, and Public Economy.

PUBLISHED BY THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

Terms, $5.00 per year in advance, including postage.
SINGLE COPIES, TEN CENTS.
SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.

Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.

The synopses of recent legal decisions constitute an exceedingly valuable feature.

As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle-men.

THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

FINANCIAL.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 24, 1883.

NOTES OF THE WEEK.

The meeting at the Cooper Institute, under the auspices of the New York Free Trade Club, on Thursday evening, was large and enthusiastic. The two speeches of the evening were made by Mr. David A. Wells and Mr. Watterson, the editor of the Louisville *Courier-Journal*. The former dwelt upon the changing sentiment of New England in relation to the tariff. He read letters from Massachusetts shoe manufacturers stating that but for the effect of the tariff they would be able to export boots and shoes largely. At present the shoe factories of the country have a capacity sufficient to supply the needs of the country while working but from six to eight months of the year. The tariff adds from 40 to 60 per cent. to the cost of the raw material of a shoe, which, it is claimed, shuts out the Lynn producer from the foreign market. Mr. Watterson asserted that the west and south demand a reform of the tariff, and the Democratic party must take up the work demanded by the country at this juncture, or, failing in that, it must go out of existence. If Mr. Watterson fairly represents the spirit of the revenue reform wing of the Democratic party as opposed to those who would continue to play fast and loose with the question, then it is plain that the party will have great difficulty in adhering to the no-policy tack.

In this connection it is worth noting that the Nashville *American* of yesterday, in discussing Mr. Watterson's position, goes so far as to say that he is entirely mistaken as to the voice of the south on the tariff. According to this authority, the south does not desire the reopening of the tariff question at this time. Owing to the near approach of the meeting of Congress, when a Democratic Speaker is to be elected, the meeting of Thursday is of unusual interest. Just after the Ohio election we pointed out that the effect of the Democratic victory there would probably be to encourage the Democrats in taking a pronounced position in favor of tariff reduction. This was true, but the drawn political battle in the east has put things back, and an ambiguous policy is as likely now as anything else. The one fact of importance is that the key to the political situation is coming more and more to be held by the independent voters of New York state. In no other state has so determined a spirit of independence been developed. The importance of this as a check on the action of both parties will be appreciated when it is considered that the electoral vote of New York will, in all likelihood, decide the next presidential contest.

The stock market has been more stagnant during the past week than it was last week. The trading is confined to a few stocks, and there is some activity in bonds, which has been interpreted by many as a sign that investment money is returning to Wall street. This money is supposed to be mainly that driven out of government bonds during the year by their cancellation. The two factions of bull and bear continue their respective manipulations in the market, the general public appearing to be entirely uninterested whichever way prices go; but the fluctuations are within very narrow limits. There is great complaint from all the commission houses of want of business.

It is daily becoming more apparent that no considerable advance in stock prices is to be expected until the general industry and trade of the country emerge from the present halting state, or rather period, of recovery which succeeded the speculative activity of 1880 and 1881. With favorable reports of railroad earnings and a relatively greater disparity between imports and exports in favor of the latter, it is not difficult to make up bullish statistical tables. These, however, are of little or no positive consequence so long as the captains of industry continue to curtail production and discharge employés, thereby lessening the purchasing and consuming power of the country. For the week we have to record an increase of failures in the United States, the total number reported being 223, against 171 and 123 in the corresponding weeks of 1882 and 1881 respectively. The average number of failures reported each week during November and December last year was 198. There is always a natural increase of failures to be reported in the closing weeks of the year as compared with midsummer or early autumn, but the increase as compared with the same weeks of last year and 1881 can be accounted for only by assigning a more far-reaching trade and industrial depression as the cause.

An indictment has, it seems, been found against the paying teller of a New York national bank for the violation of the act of Congress in reference to the certification of checks by national banks. The teller is charged with certifying a number of checks the aggregate amount of which exceeded the sum held on deposit by the bank to the credit of the drawers. A heavy penalty is imposed for violations of the provision against over-certification. The Controller of the Currency, it appears, has deferred action under the law for some time in the hope that a stock clearing-house would be established, which would relieve the banks from the necessity of certifying checks for large amounts. Seeing no promise of the establishment of such a clearing house, however, he concluded that it was his duty to report for action violations of the law. The fact that the criminal law of the United States has to be brought into requisition to prevent or remedy abuses of the kind noticed, conveys a severe reflection upon the existing state of organization in our commercial centers. In none of the departments of human activity is thorough and intelligent organization more necessary than in that of commerce, whose relations are constantly becoming wider and more complicated, and in few of these has less been done, upon the whole, to fill the want. The need for some check upon the abuses to which the extended employment of commercial paper opens the way, has frequently been pointed out in these columns, and is, we are glad to notice, becoming more and more generally recognized. The true method for avoiding these particular abuses is to be found, without doubt, in the extension of the clearing-house principle to dealings in commercial paper. The wonder is that a stock clearing-house has not been long ago established. Since it has not been, however, those interested in mercantile progress should take measures looking to the establishment of such institutions in all of the large commercial centers without delay.

The Committee of One Hundred in Philadelphia has concluded that the defeat of its candidate for the City Controllership in no wise cuts short its usefulness. It has been decided, therefore, to continue the work of reform as before. In relation to the future work of the Philadelphia committee—and the point is of value in other cities as well—it should be noted that the need is to give attention to the correction of bad systems and the working out of wise principles. Above all else, the Philadelphia reformers should see to it that a loose credit system does not again obtain a foothold in their city's finances. Already efforts are on foot to borrow money for this or that improvement. Philadelphia has gone far to furnish an invaluable lesson to the country. There is urgent need of its working out to the full the advantages which must accrue to American cities from the abolition of all loose credit systems.

The statements of Professor James E. Thorold Rogers in BRADSTREET'S regarding the diminution in the supply of agricultural labor in England, are borne out by the census returns of 1881 relating to England and Wales. According to the figures given in these returns, the number of persons engaged in agriculture diminished by 31.2 per cent. between 1861 and 1881. While in the former year the agricultural population comprised 20.8 per cent. of the whole, in 1871 it amounted to only 15.7 per cent., and in 1881 it had fallen to 12.4 per cent. The returns also bring into relief many other interesting facts. They show, for example, that the number of persons engaged in the clerical, legal and medical professions has increased more rapidly than the population. The number of artists and teachers shows a great increase, and of engineers and surveyors the number is fully four times as great as it was twenty years ago. The number of government officials engaged in the conduct of national affairs has not grown in anything like the same proportion as the population, though the numbers of those engaged in the local government show a large increase. One striking fact disclosed by the returns is the almost stationary condition of female labor. It seems that, although the whole number of females increased considerably between 1861 and 1881, the number of these returned as engaged in some other occupation than housekeeping shows only a trifling augmentation.

A dispatch from Cairo reports that the army under Hicks Pasha, which was sent out by the Egyptian government in February last to suppress the insurrection in the Soudan, has been destroyed by the forces of El Mahdi, the False Prophet. There are as yet no trustworthy details regarding the event, though there seems to be no reason to doubt that the Egyptian forces have at least met serious defeat and loss at the hands of El Mahdi's followers. The occurrence is likely to complicate the political situation both in England and in Egypt. The evacuation of Egypt by the British troops will doubtless be postponed, and in England the event will probably compel a change in the programme of domestic reform legislation, which was to have been the feature of the next session.

MUNICIPAL GOVERNMENT IN GERMANY.

There is probably no country in the world at the present time in which the cities are more successfully and economically governed than in Germany. This fact has been brought into prominence by the recent municipal elections in Berlin. The Minister of the Interior, Herr von Puttkammer, giving voice to the imperial policy, was desirous of breaking up what Bismarck has been in the habit of calling the anti-monarchical ring of the city council. It is well known that for some years past the general government has been desirous of exerting a stronger influence on the government of the capital city. But the method of accomplishing this change was not apparent. The most striking peculiarity of the German municipal system is its independence of national politics, and any attempt on the part of the general government to interfere directly with the administration of purely local affairs meets with immediate and emphatic opposition. The government, therefore, whenever it finds the condition of city affairs unsatisfactory is obliged to resort to *finesse* in order to bring about the desired change. But even then the imperial policy is not always successful. There has probably never been a more striking instance of failure than that afforded by the recent elections. The rapid growth of the city undoubtedly called for some change in the boundaries of representative districts. Of this fact the general government took advantage to redistrict the city, and, for the first time since 1808, to require a new election for the entire membership of the city council. It was obviously the hope if not the full expectation of the Minister of the Interior that the political complexion of the city government would be essentially changed. Every political consideration was brought to bear on the result. But the election of October 20 shows more perfectly than anything that has ever yet occurred in Germany how firmly the doctrines of local independence have taken root. Of the one hundred and twenty-six members of the city council elected not a single one can be called a representative of the imperial policy. In case of thirteen representatives a majority was not reached, and consequently a new election will have to be held. But of those elected two are social democrats, five belong to the citizens' party, and a hundred and twenty-six are liberals. Whether such unanimity is desirable is certainly open to the gravest doubt, but the fact is an important one, and it may well justify the inquiry as to the nature of a government that will enable the people to accomplish so singular a result. How is it possible that the city could resist so triumphantly the power and the still more persuasive influence of imperial methods? The answer can only be given after a consideration of some of the peculiarities of the German city government.

When the Municipal Reform act of 1808 was under consideration it was thought indispensable to successful government that two prominent objects should be kept in view. In the first place, all persons having what may fairly be considered a permanent interest in the city should be entitled to a voice in the control of its affairs. Accordingly a modified form of universal suffrage, if the expression may be allowed, was adopted. These modifications are of some interest. The principle is proclaimed that every male inhabitant twenty-four years of age shall have a right to vote under certain specified conditions. These conditions are (1) that he shall not be dependent on father or mother, but must have his own household; (2) must have received no alms from the public funds during the past twelve months; (3) must have paid all municipal dues; (4) must either occupy a house or pursue a trade with two employés; (5) must pay either an income tax or a class tax. While these conditions exclude paupers and idlers they admit all industrious persons. During the past ten years the proportion of voters to the entire population has been about one in six and eight-tenths.

But while it was admitted that every independent citizen should have a voice in municipal affairs it was not held that every such citizen is entitled to the same voice as every other citizen. It is not true that all persons entitled to vote have the same amount at stake, nor is it true that all such persons contribute in equal share to the support of the government. It was held to be outrageously unjust that the person with large amounts of property, employing large numbers of persons and contributing large amounts to the city treasury, should have no further voice in the city government than the man whose industrious efforts were barely able to furnish a home and the necessary food for his family. The plan adopted to obviate this injustice was essentially the same as that resorted to for similar reasons in the organization of the Centuriate Assembly in the republic of Rome. The method was this. All persons entitled to vote were divided into three classes. In the first class were enrolled so many of the largest taxpayers as paid one-third of all the taxes assessed; in the second class so many as in the aggregate paid the second third; while the third class consisted of all persons not included in the first and second. Each of these classes is entitled as such to elect one-third of the city council. As the governing body consists of one hundred and twenty-six members each of the three classes elects forty-two. The number enrolled in the several classes is, of course, in its proportions to the entire citizenship somewhat variable. But the working of the law will admit of this illustration. If the first class consists of 5 per cent. of the whole, and the second class of 20 per cent., it would follow that 25 per cent. of the citizens, by right of their paying two-thirds of the taxes, would have the privilege of electing two-thirds of the representative body that was to govern the city. Thus, while the principle of universal representation is preserved on the one hand, the doctrine of proportional representation is introduced on the other.

The experience of nearly three-quarters of a century has amply justified the anticipation of those who framed the law of 1808. It is true that several changes of minor importance have been made, but the principles of the law of 1853, that under which the government is now conducted, are essentially the same as those promulgated by Stein himself. The intelligent people of Berlin govern inasmuch as those who pay two-thirds of the taxes elect two-thirds of members of the governing body. There has never been a time since 1808 when the city council of Berlin has not been conspicuous for the educational and financial standing of its members. The honor conferred by an election more than counterbalances the burden imposed, and the consequence is that the best men in the city do not shrink from accepting the office. For many years Gueist and Virchow, two of the most eminent men living in their respective spheres, have regularly performed their duties as city councilmen. Nor is their example a singular one. It is simply not respectable to decline to accept so respectable an office.

Another peculiarity of the German method is one that can be justified only by the high character of the city council. It is in the fact that that the council exercises far greater power than does a similar body with us. It not only elects the body of magistrates, which consists of no less than thirty-four persons, but it also chooses the chief mayor and the mayor. Half of the magistrates are required to give their whole time to the service of the city, and for this service they receive a fixed salary. The importance of the position is still further indicated by the fact that both mayors and paid magistrates are chosen for twelve years and are entitled to a pension if not re-elected. The unpaid magistrates, like the members of the city council, are chosen for six years, half of the number retiring every three years.

The higher officials in the city offices are in Berlin, as elsewhere in Prussia, appointed for life. The appointments are made by the magistrates and confirmed by the council. Minor offices are filled on grounds of special fitness, determined for the most part by competitive examination. A trial or probation always precedes a permanent appointment, this trial often continuing for two or even three years. In consequence of the permanency of the appointments it is not found necessary or even desirable to pay high salaries. The highest sums annually received by officers in the bureaus of the city treasury are only 6,000 marks, or $1,500, and the secretaries and assistants are reasonably content with from $450 to $1,100, according to their rank and period of service. The chief mayor (Oberbürgermeister) receives a salary of $6,000, and his office is universally considered one of the most honorable in Germany. The present incumbent has been a member of both houses of the Prussian Parliament, as well as member and president of the Imperial Diet.

With a municipal government made up in this way it can hardly be thought singular that Berlin is effectively and economically governed. The city is about the size of New York, but it is far less favorably situated for economical administration. It is in the midst of a low sandy plain, with a sluggish stream of water sprawling through it in rivulets, ready to take all the filth but not having current enough to bear it away. And yet, in spite of these disadvantages, the streets are admirably cleaned, admirably drained, admirably paved and admirably cared for in every way. Most singular of all, the whole is done at an expense that is a mere pittance compared with the sums that are annually paid for going through the motions of a similar service for New York. All manner of improvements have been going on in Berlin, as the city within the last twenty-five years has been rapidly assuming imperial importance. And yet the care of the poor, the provisions for the education of all the children, the cleaning and the lighting of the streets, the constructing of new pavements and the repairing of old ones, the care of the police and fire departments—in short, the total expense of the city, including the interest on city debt, has never in a single year amounted to more than between $6,000,000 and $7,000,000. The total debt of the city has been kept below $61,000,000, and at the present moment is less than one-sixteenth of the debt of New York.

MR. GOSCHEN ON ENGLISH POLITICS.

In a noteworthy speech delivered recently in Edinburgh, Mr. Goschen discussed in an interesting way the present aspect of public affairs in Great Britain, and the new political tendencies which have of late been manifested so unmistakably. He said that the changes of the last ten or fifteen years have almost amounted to a revolution. The attitude of the public towards the central executive has entirely changed; the whole nature of the conservative party has changed; the relative proportion of the different elements composing the liberal party has undergone considerable change. A change is also noticeable in the way in which men discuss public business, in the standards of national duty which have been established, and in the measurements which have been laid down for the length and breadth and height of parliamentary measures. The great change which is involved in the other changes mentioned is distinctly in the direction of democracy. The great waves of democracy, the speaker said, are pouring in with almost irresistible force, and no effective barrier is being opposed to them. The Conservatives do not adhere to conservative principles, fearing that they will be forgotten in the whirl of events if they do not make terms with the new forces. The Liberal party, owing to the dominance of the radical element, has deserted the moderate position which it formerly held, and which rendered it possible for men like Mr. Goschen to be in thorough accord with it, so that the new tendencies are restrained by no effective check. Mr. Goschen sees considerable reason for distrust, if not for alarm, in the measure of parliamentary reform which is now being urged by the leaders of the Liberal party. In his opinion it is a measure which clenches the supremacy of one class at the polls and makes it irrevocably the arbiter of all interests and all classes. The bulk of the voters to be newly enfranchised in town and country belong to the class working for weekly wages. Their enfranchisement, he said, will confirm the ascendancy of the class of wage workers, which is becoming more marked day by day, and if they should abuse their power, as all other classes have done, they can never, like the other classes, be shorn of any portion of their power hereafter. Mr. Goschen also expressed himself as totally opposed to the scheme of equal electoral districts which had been put forward lately—a project which, he said, was distinctly in the interest of democracy.

Proceeding next to the question of state interference, which has been growing more and more into prominence of late, Mr. Goschen said that he could not see how the state was ever going to do the amount of work that it would be obliged to undertake if all the demands made upon it are complied with. Day by day, he said, new cases are heard of where the government is called upon to assume new duties, either sanitary or social, or protective or preventive. There are demands for houses for the poor and for dealing more and more with the relations between the employer and the employed. These are questions, the speaker said, which are attracting public attention and which cannot be passed by. Under the circumstances, he continued, it will become the duty of every statesman to

revise and look to the principles by which he is going to be guided, and not to drift simply to deal with each of these questions as it may appear to him most expedient at the moment at which it turns up. Mr. Goschen then submitted certain principles with which he thought the new movement ought to be met. In the first place, he said, the movement ought to be understood, and no preconceived notions should be allowed to prevent statesmen from dealing frankly with it. In the next place, they should be careful to introduce as little as possible of class feeling on either side. Finally, before the state undertakes to interfere it should hold the individual to a strict performance of his duty.

Mr. Goschen's enunciation of principles must be regarded as disappointing. The first two set forth are merely conditions preliminary to any temperate consideration of questions presented for decision, and in no sense supply a test for the decision of those questions when presented. The last principle mentioned is also preliminary in character, and does not provide for the decision of any question upon its merits. It is of course a measure in the interest of conservatism. But if the holding the individual to a strict performance of his duty should be found ineffective—though that very procedure might imply a considerable degree of state interference—what then? Upon what principles could the question of the adoption or rejection of proposed measures be determined? This is a matter upon which Mr. Goschen's address throws no light. The difficulty, in truth, is one inherent in the subject itself. The most patient and searching inquiry has thus far developed no hard-and-fast rule for determining when the state should interfere and when it should not, and until the political and social experience of the race has been generalized much more thoroughly than it has yet been statesmen and social reformers must be content to decide each particular case on its merits, guiding themselves in so doing by the light of such specific experience relative to the matter in question as has been already had. In other words, the only safe plan for the statesman, so far as can be seen at present, is to hold fast to that very opportunism which Mr. Goschen so summarily rejects.

A NEW INDUSTRY.

Within the last four years the manufacture of vinegar by the alcoholic vaporizing process has developed into a new industry. There are now more than one hundred vinegar manufacturers working under the vaporizing process, located mainly in the western states. They have a capital invested of more than $2,000,000. They claim to have created a revolution in the trade and to be public benefactors. Among other things they declare that the manufacture of vinegar by the alcoholic vaporizing process has benefited the public in these particulars:

1st. It has expelled from the market all spurious, adulterated and impure vinegars, and has replaced them by pure and wholesome vinegar at a reasonable price, becoming thereby a great sanitary measure.

2d. It has saved to the general wealth of the country thousands of dollars which were formerly lost by the use of impure vinegar for pickling purposes.

3d. It has created a new export trade both for the vinegar itself and for pickled meats, which can only be safely preserved and exported by the use of alcoholic vinegar.

There is little doubt that the claims of the vinegar men are in many respects well founded. It is a fact that, prior to the passage of the act of March 1, 1879, which authorized the use of the alcoholic vapor process, there were extensive and dangerous adulterations of vinegar. An examination of five car-loads of vinegar by the Board of Health of the District of Columbia in 1877 showed that the vinegar contained 54.54 grains per gallon of anhydrous sulphuric acid, combined with lime, forming a sulphate of lime equivalent to 117.26 grains per gallon of gypsum, and, besides that, 5 grains of free sulphuric acid. Investigations showed also that large quantities of glucose were used. The authorization of the manufacture of the alcoholic process, however, has so reduced the cost of vinegar made from spirits that pure vinegar of this kind is cheaper than adulterated vinegar. By a simple law of trade, therefore, vinegar is now kept pure. It is also true that the tripe, pigs' feet and other articles in the large packing-houses of the west, which, before the enactment of this law, were either thrown away or sold for a nominal price, like two cents per pound, are now pickled by the use of this vinegar, and are exported in large quantities, so that the price of the offal has increased to five cents a pound.

The industry would develop more rapidly if capitalists could be convinced that the law which authorizes it is stable, and may not be either repealed or greatly modified by any Congress. The law had scarcely gone into operation when efforts were made to repeal it. The opposition is three-fold:

1st. The internal revenue service has never regarded it with favor.

2d. The distillers, who by means of it lose the profit on the tax-paid alcohol which they have formerly sold to the vinegar manufacturers, are opposed to it, while the New York and New England manufacturers of cider vinegar are very earnestly against the law, for the reason that it is a great injury to their business. There have been three separate attempts to repeal the law, although it was only enacted in 1879.

The subject is to be renewed in this Congress. The manufacturers of vinegar by the alcoholic process, who are largely western men, have organized into a national vinegar association. They have appointed a committee to spend the winter in Washington to further the interests of a bill which they propose, the object of which is to establish the business on a firmer basis. They have already visited Washington to induce the Secretary of the Treasury and the Commissioner of Internal Revenue to favor their proposition, with rather indifferent success. The Commissioner of Internal Revenue, in his report, has already stated that this manufacture of vinegar ought to be under a stricter regulation, or the privilege of making it revoked, for the reason that it makes fraud possible, and that the machinery used in the manufacture of vinegar by this process is adapted also to the manufacture of high-proof spirits. An interesting contest over this new industry is, therefore, to be expected. The vinegar association has considerable political influence. It has a great many western senators and representatives enlisted in its behalf, and will make a sturdy fight, not only against any proposition to curtail its privileges, but in behalf of affirmative legislation to establish them on a permanent basis. The bill which they propose is substantially the existing law, with some technical modification, designed to render the illicit distillation of highp-roof spirits less possible, and a provision requiring a government storekeeper to be placed in all vinegar manufactories, so that this industry, like the distillation of whisky, shall be under government supervision. The vinegar association will make a very strong presentation of its case.

The New York and New England cider men, on the other hand, will, undoubtedly, renew their effort to secure the repeal of the law which gives the existing privileges to these manufacturers by the alcoholic process. Senator Warner Miller, of New York, was their champion in the last Congress, and, undoubtedly, will be in this. The cider vinegar men make some very strong points. The tax upon distilled spirits gave a new impetus to the cider industry, and caused investments of thousands of dollars to be made. The old-fashioned hand-press was replaced by extensive machinery, and expensive buildings were erected. There are at least 6,000 cider makers in the country, and some 12,000 men are engaged in the manufacture of cider vinegar. The alcoholic process, it is claimed, is not only a severe blow at the cider vinegar manufacturers, but may ultimately ruin their business, while it opens the door to very extensive frauds. The cider vinegar men make the following assertions:

1st. The cider vinegar interest of the country is one involving many millions of dollars of capital.

2d. It is a widespread and general interest, not limited to a few cities or a few houses.

3d. It has enormously increased the fruit product of the country.

4th. It has supplied a pure cider vinegar to the people, unequaled in healthfulness and flavor.

5th. The deleterious compounds sold as vinegar are made to imitate the cider vinegar in color and flavor, thus acknowledging it as the standard of excellence.

6th. To exempt the manufacture of vinegar from alcoholic vapor is to legislate in favor of a class.

DISEASES OF LIVE STOCK.

The diseases of domestic animals are attracting more than usual attention in various quarters, and the unanimous testimony of experts is that the herds of the country are very inadequately protected against contagion. The Department of Agriculture has made as thorough a study of the subject as its resources would allow, and some valuable additions to the public knowledge have been made under its auspices by Professors Lyman, Law and others. The small area in and around New York city, in New Jersey, Maryland and Pennsylvania, where pleuro-pneumonia has prevailed from time to time in the past few years, has been carefully marked out, the nature of this and other diseases has been discussed in the reports of the department, and a system of quarantine has been adopted. Professor Lyman's trip to England a few years ago was productive of some important results, but fell short of convincing foreigners that we were in earnest in our efforts to prevent the spread of disease.

Recent discoveries in the Chicago stock-yards and the testimony of cattle men from various parts of the country go to show that a great deal of meat from diseased animals goes to the consumer's table without attracting the attention of a veterinarian. At any rate there is a growing conviction among experts and dealers that the measures taken by the government against these diseases are altogether inadequate. Exporters find the feeling abroad against our animals and meats a serious embarrassment to their trade. Measures to secure the attention of the government to this matter have just been taken at a meeting of the National Convention of Stockmen in Chicago. Several scientific men were present and explained the diseases and the measures necessary to combat them.

The obstacles in the way of these reformers are numerous, among them the imperfect knowledge of many of the diseases, the constant and rapid movement of animals over the country and the indifference of Congress to this important subject. As a starting point, a committee of one person from each state and territory was appointed to present a memorial to Congress setting forth the loss from contagious diseases among cattle and swine, and by the restrictions placed on our cattle and meats by foreign governments, and, after conference with the Secretary of the Treasury and the Commissioner of Agriculture, to suggest to Congress points of legislation. Cattle men the country over were requested to join in the movement, and the Commissioner of Agriculture was invited to become chairman of the committee. The resolutions declared measures taken by the states utterly inadequate, and that legislation by Congress was absolutely necessary. If the great ranges of the west should become infected "it would be impossible to stamp out the plague except by the total destruction of the herds, and at a cost of hundreds of millions of dollars." The committee were instructed also to memorialize the authorities of the several states on the importance of establishing a department for the prevention of these diseases.

An address by Professor Law set forth the evils to be combated in alarming language. He said that the lung plague, glanders, scab, lung-worm, foot-rot, trichina and swine plague prevailed in the United States, that our whole southern coast is contaminated with a poison deadly to all bovine animals not inured to it from early life, and that this poison is moving north, though it could not yet be told whether it could survive the winter frosts. Tuberculosis was contagious and common to both man and brute, but the evil was too gigantic to admit the expectation that the government would yet grapple with it, and he recommended that the subject be left for the present to local effort. Examination at the port of embarkation was futile against lung plague or Texas fever, and the only protection of northern herds from the latter was the prohibition of the movement of cattle northward from infected districts except in the winter. Professor Law recalled the loss by England of $500,000,000 by the lung plague, and pointed out the dangers incident to the shipment of thoroughbred cattle from the east to the ranges of the west. The Connecticut cattle commission had stood in the way of the spread of the disease in New England. If it once got a foothold on the plains it would find the same conditions that had perpetuated it for centuries on the steppes of eastern Europe and Asia, and which had caused such havoc in Australia, New Zealand and South Africa. Professor Law advocated the inoculation of healthy animals which are in danger with diseased virus as a preventive.

Dr. Salmon, of the Agricultural Department, believed that rinderpest, sheep-pox and epizootic aptha would sweep America, as they had swept Europe, if they were once fairly introduced among our animals. Texas fever was advancing toward the most heavily-stocked grazing lands of the country, and there was need of immediate action. There had been no pleuro-pneumonia discovered west of the Allegheny mountains, the losses from it did not reach $100,000 a year, and it would not be a great task to free the country from it. Professor Hopkins, of Montana, was opposed to inoculation against pleuro-pneumonia, and Dr. John W. Gadsen, of Philadelphia, calling attention to the fact that none of these diseases are indigenous to this country, advocated the most stringent measures to prevent their importation. The convention adopted a report that hog cholera had been almost entirely eradicated from this country.

The danger of infection from calves affected with pleuro-pneumonia brought from the east has received the attention of stock men for two or three years, and the movement westward has in consequence been greatly reduced. In the year to October 31, 1883, the receipts at the Chicago stock-yards from the east were only 6,788, while in the twelve months to October 31, 1882, they were 11,331, and in the ten months to October 31, 1881, 30,691. It is probable that 60,000 calves were sent to Chicago during the last half of 1880, but many of them were from the infected districts of the east, and it was found necessary to place restrictions on the movement. In taking these precautions much opposition on the part of interested parties was encountered, and, indeed, that is one of the most serious difficulties encountered in the efforts to stamp out these diseases. During the Chicago convention there were outcroppings of this element, and efforts are constantly made to conceal disease. But the authorities and veterinarians, as well as the better class of cattle men, are in earnest, and it will be less easy for these pests to thrive in concealment than formerly.

FRENCH ARTS AND MANUFACTURES.

French politico-economists are apt to be very assertive, avoiding many necessary qualifications to their statements, and not infrequently omitting to demonstrate the positions taken. One of their number, with a reputation to sustain, M. Antonin Proust, has lately issued a brochure affirming the decay of art industries in France, attributable by him to the want of good technical education. This assertion is certainly in opposition to the prevailing impression in this country on the subject, and runs counter to the report of a British government commission appointed to inquire into technical instruction in France, which report has been republished by the Bureau of Education at Washington.

In Paris the apprenticeship school of the Boulevard de Vilette, the Ecoles des Arts et Metiers, and other kindred institutions not only in the capital but in the centers of industry in the departments, continue in full vigor. The customs returns of the exterior commerce of France for the first nine months of this year show but a slight diminishment of exports of objets fabriqués, as compared with the corresponding period of 1882, an amount almost made up by the increase in other descriptions of merchandise. It is pertinent to add that a return lately published in the *Revue des Deux Mondes* of the wages paid to Paris artisans show them to be generally on a high scale. Let M. Proust apply himself to make out his case. It is equally hard to credit the statement of the well known M. Balou in his late communication to the *Intransigeant*, that there is a want of enterprise and energy in French employers, affecting all national industries, due to their disposition to speculate with their profits rather than employ these in their own industries in improving their means of production. We agree with him that "the enormous public debt of $34,000,000,000 which makes everything dear," and the heavy cost of transport to the producer, are recognizable depressing influences. A manufacturer is not to be accused of want of enterprise when overweighted with transit charges and import dues on raw material in face of the growing competition of France and Germany. The late decree of the President of the republic temporarily admitting cotton yarns free of duty is an indication that the duty has operated unfavorably. As to the failure to remodel machinery referred to by the writer as evidence of want of manufacturing enterprise, any large outlay in change of plant so as to introduce latest improvements is not to be looked to in the present perturbed political state of France or without the full assur-

ance of a long future of peace. It certainly receives no encouragement from the effort to extend the area of French trade in the East by force of arms.

OCCASIONAL NOTES.

Thanks to the pressing need for a reduction in the revenue, the relative positions of the great political parties upon the tariff issue bid fair to be much more clearly defined in the immediate future than at any time during the recent past. The tendency toward a further cutting down of production which the industrial situation exhibits, is an additional influence which will doubtless operate in the same direction. This is a fortunate thing for the country, whose business must continue to feel the hurtful influence of uncertainty as long as the most important question of our commercial policy remains unsettled. It is fortunate, also, for the politics of the country, which have too long suffered from the want of an issue, and have become the prey of factions and spoilsmen. That the politicians themselves are beginning to appreciate the importance of the tariff issue may be seen from the lively contest for the speakership now in progress at Washington. The coming session of Congress is the quadrennial "president-making session," and the adherents of revenue reform in the major party in the House, and those interested in opposing a change, are straining every nerve to secure the control of legislation. Much, of course, will depend upon the choice made for the speakership, a speaker opposed to an agitation of the tariff question having it in his power to embarrass and delay the efforts of the reformers. Should a speaker in favor of revenue reform be chosen, on the other hand, it is difficult to see how, in view of all the circumstances, a precipitation of the tariff issue can be avoided.

The experience of the *Evening Post* with its compositors on the occasion of the recent strike was not of a very pleasant character, and it must be confessed that the methods adopted by the strikers when the moment for a trial of strength arrived was, if the account given by the *Post* be correct, not at all calculated to advance the cause of labor organizations, which the strikers and those who support them doubtless profess anxiety to serve. It appears that there had been for some time a dispute between the managers of the journal in question and the compositors, and when it was found that an agreement could not be reached the compositors informed the managers some days in advance that there would be a strike, but that seasonable notice of the same would be given. The compositors assert that they only promised not to leave the office between editions, and that they kept their word. The *Post*, on the other hand, charges that the compositors left the office of the paper, without a word of warning, at an hour when it was thought that the proprietors would be taken at such a disadvantage that they would be obliged to yield to the demands of the strikers. The strike, it appears, was made in deference to the orders of the union to which the strikers belonged. In various ways, fraudulent and intimidatory, agents of the union—not the original strikers—strove to embarrass the managers of the *Post*, some of them even going so far as to obtain employment under false pretenses and then deserting their work and even appropriating the property of the proprietors. It appears now that the strikers who originally left the *Evening Post* regret the turn affairs have taken, and throw the responsibility upon the union. This, while it does not help their case much, makes a very bad showing for the organization. We have heretofore taken occasion to commend the extension of the idea of labor organization, and to point out its necessity, but we cannot too strongly insist that it is not by irregular methods that a permanent and influential organization of labor can be brought about.

The system of organized charity instituted a few years ago in Philadelphia, and of which a description has already been given in this journal, continues to be abundantly justified by results. Under the Philadelphia plan, as will be remembered, the city is divided into districts, each of which is under the charge of a local organization. Through the establishment of local offices all over the city a careful registration of all the poor is obtained and a searching investigation into their circumstances is secured. The poor of each district are cared for, as far as possible, by the local organizations, which, in turn, receive moral support and practical direction from a central body. The ends sought to be secured by this plan are the prevention of duplicate and unnecessary almsgiving, the making employment the basis of relief, and the diagnosis and reduction of pauperism. How well the plan has succeeded may be partly seen from a comparison of the first annual report of the organization mentioned—the "Philadelphia Society for Organizing Charity"—with that just issued. The first report, made in October, 1879, showed the receipt of $31,330 and the expenditure of $29,897. Applications for relief numbered 26,213, of which 19,607 were granted. The receipts for the present year amounted to $17,917.21, and the expenditures were $13,600.82. The total number of applications was 18,276. A census of the beggars, vagrants and petty criminals of the city was taken in March, showing their number to be 10,092, or about one per cent. of the present population. The plan is a great improvement over the old system, under which vast sums of the public money were annually wasted, and it deserves the careful consideration of those who are concerned—as who is not?—in solving the pauper question in our large cities.

A new country is making somewhat too rapid "progress" when there are such abuses in the way of child labor as are reported in Ohio. It appears that the employment of children is much less carefully supervised there than in the older state of Massachusetts, where the law is measurely well executed. There is a law in Ohio, but little attention is apparently paid to it. Commissioner Luskey gives a list of thirteen industries, having some 18,500 hands, in which the percentage of children ranges from 9 in the manufacture of earthenware and of bentwood and wheels to 39 in woolen, cotton and bagging mills. In coal mines the percentage is 23. There is no doubt that the school law is extensively violated in the employment of children under fourteen years of age full hours through the year. There are swarms of children in the cigar factories working ten hours a day, unable to read or write, and subjected to the worst moral and sanitary influences. It is a common thing for coal miners to take their children ten to fourteen years old into the mines with them, and keep them at work all day. The State Superintendent of Schools complains that the law is wholly inoperative, its aim having been defeated through amendments offered by interested parties. The laboring people themselves are making a vigorous demand for reform.

An exhibition of fat stock has been in progress in Chicago this week, the object of which was to encourage the production of superior meat. A thousand or more animals have been on exhibition, some 700 of which were cattle, and the rest sheep, hogs and horses. It has been a remarkably successful affair and has been favorably compared with the Smithfield Fair held in London every year. Indeed, there are those who say that the Chicago exhibition was superior to the English one. It was held under the auspices of the State Board of Agriculture. Perhaps the most notable thing about the exhibition was the number of prizes taken by the Hereford cattle, which have hitherto not been in high favor. The short-horn breeders are correspondingly disappointed. The lead was taken by five Herefords owned by C. M. Culbertson of Chicago. They won the grand prize of the American Hereford Breeders' Association for the best collection, and the steer, Roan Boy, took several first prizes. The Aberdeen-Angus steer, Black Prince, won three first prizes. A goodly number of cattle were sold. Thomas B. Wales, Jr., sold Mercedes III., to Smiths & Powell, of Syracuse, N. Y., for $4,200. There were many meetings of associations representing various breeds of cattle, sheep, hogs and horses, and the National Swine Breeders' Association was formed. It was reported that, up to 1880, 3,806 Percheron stallions had been imported into this country, the first having come here in 1851, and that of all those imported 1,800 had gone to Illinois. The valuation of all live stock in Illinois this year is over $27,000,000. Cattle were the principal feature of the exhibition, of course, but there was a good display of other animals, and a number of horses recently imported from England, Scotland and France attracted attention.

Canada is in a sea of political and financial troubles, and the discontent is great. The utmost distrust prevails in business circles, the cotton mills are closing or asking an extension of time on their obligations, the growing expenses of the government create anxiety, the guarantee of dividends on the Pacific road when the government is unable to borrow money at 4 per cent. provokes angry criticism, and political grievances have led Manitoba to threats of secession. The party now in power, who inaugurated the protectionist policy, have little cause to congratulate themselves on the present state of things. The interests most protected are those that are now suffering most. The policy in Canada was imitative, but it must now be clear that the Dominion could not necessarily be made to prosper under protection simply because the United States have had prosperity under that system. One of the strongest protests against the tariff comes from the Ontario millers, who in a short-crop year find themselves handicapped by the duty on wheat. There is much complaint of excessive taxation. The revenue in the fiscal year 1882–3 amounts to $35,-888,334, against $22,517,382 in 1878–9, and the expenditure to $28,805,229, against $24,455,381.

A remarkable speech was made last week by Mr. Chamberlain, the president of the British Board of Trade, at a banquet given by the Board. He spoke about the recent terrible increase in the loss of life at sea; an increase which, he said, could have been prevented in most instances if the law had been made sufficiently stringent or even if existing laws had been vigorously enforced. He declared that a system of deliberate wreckage for the sake of insurance had grown to the proportions of a frightful crime and a national disgrace. Facts were, he said, daily coming to light which formed in the aggregate a terrible indictment against British ship-owners as a class, and honest men could not afford to sit still in the face of them. If Mr. Plimsoll were to engage in another crusade against these "traders in death" the department of the government over which he presided could, he said, furnish the reformer with an array of facts, officially acquired, which would create a storm of indignation throughout the land. Mr. Chamberlain then announced the intention of the government to establish in every port in the British empire a court of first instance, with power to deal promptly with all questions affecting the safety of ships and of human life at sea, and also to establish at suitable commercial centers courts of appeal for admiralty and maritime causes, armed with the utmost power for the infliction of punishment and the prevention of crime. The government would also, he said, introduce amendments to the existing laws governing marine insurance which, if adopted, would make the future wrecking of ships as unprofitable as it was infamous. These noteworthy utterances go far to explain the high average of disaster exhibited by the Board of Trade's wreck register during recent years.

At the recent quarterly meeting of the Manchester Chamber of Commerce the president said that for some time past the cotton trade had been unprofitable and unsatisfactory. For this state of affairs there were many reasons, of which one very cogent one was the unsettled relations between France and China. Trade with China had been, he said, decreasing rather than increasing of late, and there was now scarcely a staple article which could be sold in China at the cost at which it could be laid down. He hoped, however, that when a readjustment of affairs was brought about between the two governments there would be a commensurate expansion of the consumption. The results of operations in the Indian market had also been disastrous, and at the time he was speaking it was impossible to get a covering price for many goods. As far as other countries were concerned, many of them had by prohibitory tariffs excluded some portion of the trade which would find its way there under other circumstances. Although these countries had closed their doors against England as far as their own consumption was concerned they could not compete with her in other markets The very action of their protective tariffs had disqualified them for such competition.

England had, however, one very keen and important competitor of whom account must be taken, namely, the Indian producer. The growth of the cotton industry in India had been very rapid, and, as far as the home consumption was concerned, the goods produced had been taken off at prices remunerative to the producer. Besides that, there were some coarse goods, including yarns, which could be economically produced from Indian-grown cotton and in which India could compete with Lancashire products. He thought, however, that the industry in India had been extended beyond present requirements. This was shown by the fact that a large amount of goods was held in Bombay because there was no market for them, and that the mill-owners had sent out agents to foreign countries to try to open up agencies for those productions. A limit had, he thought, been reached in the production of Indian cotton, and there was still a very large field in India itself which required long-staple cotton, and in that department, he thought, Lancashire could hold her own. There could be no doubt, he said, that the cotton trade in Lancashire was passing through a period of great depression. There could be, in his opinion, no doubt that for a time the production had overtaken the powers of consumption of the world, and that, in order to bring about a profitable turn in the trade, the relations between production and consumption must be adjusted. A diminution in production must be brought about. One means to secure this diminution, and probably the least disastrous, would be reduced production, or a stoppage of production altogether in certain cases, and that process was to some extent going on. Another way to reduce production would be to put a smaller amount of capital into the trade. In concluding the speaker said that he regarded the present state of trade as not by any means indicating permanent decadence, but merely as one of the ebb periods in the general flow of the tide of prosperity.

The *North American Review* for December is one of considerable interest. The question of the telegraph has the first place in the number, Gardiner G. Hubbard pointing out the advantages to be derived from the proposed "Government Control of the Telegraph," and showing from the experience of several European countries the benefits resulting from the incorporation of the telegraphic with the postal service. Professor J. Laurence Laughlin, of Harvard University, essays to show the "Evils of the Sub-Treasury System," in its absorbing and withholding from circulation the specie that is constantly needed to insure stability in the world of finance. Henry George writes of "Overproduction," an idea which he declares to be preposterous, unless more wealth is produced than is wanted. General W. B. Franklin sets forth the views of naval and military experts as to what is absolutely needed, in the way of organization, forts, ships and war material, to insure the "National Defense." An article on "Railroad and Public Time," by Professor Leonard Waldo, of the Yale College observatory, explains the system of uniform time standards now being introduced into the railroad service of the United States.

SPECIAL CORRESPONDENCE.

AFFAIRS AT BERLIN.

Berlin, October 31.—The transformation of private railways in Prussia into state ones, with the intention of bringing all the German railway lines, comprising 30,000 kilometers, into the hands and under the direction of the empire (a subject I have enlarged upon in my letter of 22d inst.), forms only a link in the chain of Prince Bismarck's manifold projects of national economy, which all arise from the idea of transferring to the management of the empire, either entirely or partially, certain branches of national economy, the cultivation and development of which had hitherto been left to the enterprise and perseverance of some individuals or companies. This socialistic idea of government has called forth the obstinate but as yet strongly contested attempt of the Chancellor to introduce the government monopoly of tobacco in Germany. The same socialistic idea was very distinctly expressed in 1880, when, at the first motion of the bill concerning the compensation of workmen in case of accident in manufactories and mines, not only a considerable government grant was proposed but the intention was openly declared at once to do away with private insurance companies. The motion failed in consequence of these demands, and though the bill, which was again introduced, was somewhat modified, it had still too much of the original bureaucratic and socialistic spirit to make it possible for the Reichstag to accept it, notwithstanding that all parties no less than government have an earnest desire to be just and fair towards workmen. Parliament will probably have to devote their attention in the first place to the same subject during the coming session. Nothing is as yet known how government will resign their former position in the new bill. They are not likely to show much favor to the private insurance companies, considering the inimical disposition the government papers exhibited lately against the fire and hail insurance companies. The general public think the accusations throughout against the companies are unfounded. And who can have a more competent judgment about the height of the premium, about the amount of compensation granted, about the readiness in paying it than the public who have suffered the loss? Who can wonder that there are some discontended people among those insured? But individual complaints, the justifiability of which is unproved, are not sufficient reasons for a general condemnation of respectable and, on the whole, beneficial institutions, and government voices ought to be the last to offer such general reproof. It was, however, on purpose to influence the public mind in favor of a new project; they wanted to know how far the public were disposed to transfer fire and hail insurances from private into government

institutions. This ballon d'essai has as yet, at least, been unsuccessful; the public do not seem to appreciate the new boon in store for them. Even upon life insurance companies covetous glances have been cast. We must, however, state that in this case no direct complaints have been raised against these most respectable institutions. We cannot be astonished that an enterprising, energetic man, seeking for objects to make profitable to the state, should cast an eye upon life insurance companies, considering the high importance of these institutions for national economy and the enormous capitals sunk in them.

The 48 German life insurance companies—35 of which are established in the German empire, 11 in the German-speaking parts of Austria, which formerly belonged to the German crown, and 2 in the German speaking part of Switzerland, had

	Insured persons.	*Insurance money, marks.*
In the beginning of 1882 an amount of....	823,446	2,756,651,847
Increase in the year of 1882.....	101,045	340,287,238

So that there were altogether insured 924,491, with a sum of 3,096,939,085 marks—$774,234,771.

The number was decreased:

	Persons.	*Marks.*
By death.....	14,966	43,775,095
By resigning.....	50,783	140,107,783
Totals.....	65,649	183,882,878
The amount was therefore at end of 1882..	858,742	2,913,056,207
Increase in 1882.....	35,296	156,404,300

Comparing this increase with the amount of insurance in the beginning of 1882 it results that during the year 1882 the number of persons insured has been increased by 4.29 per cent. and the insurance money by 5.67 per cent. With regard to the 50,783 people who retired during their lifetime with the whole amount of 140,107,783 marks, the losses are as follows:

	Marks.	*Per cent. insurance money.*
35 institutions in Germany.....	91,757,315	3.68
11 institutions in the German-speaking parts of Austria.....	43,162,193	8.87
2 institutions in the German-speaking parts of Switzerland.....	5,188,275	4.30
48 German institutions.....	140,107,783	4.52

According to this the number of those who withdrew during their lifetime was, on an average, considerably less in the German institutions than in the Swiss and above all the Austrian ones. By death, the insurance of 14,966 persons, with amount of 43,775,095 marks, came to their natural end. There died in the

	Persons.	*Marks.*	*Per cent. insured capital.*
35 institutions in the German empire.	10,785	34,093,300	1.37
11 institutions in the German-speaking parts of Austria.....	3,720	7,605,674	1.56
2 institutions in the German-speaking parts of Switzerland.....	461	2,076,121	1.75
48 institutions.....	14,966	43,775,095	1.41

The average amount of insurance money comes to 2,925 marks ($731.25) for each of the 14,966 persons who died; whereas, the average sum per head at the close of 1882 was 2,854 ($713.50). Of the whole amount of insurance money at the close of 1882 were in the

	Persons.	*Ins. money, marks.*
35 institutions in the German empire....	665,355	2,366,042,106
11 institutions in the German-speaking parts of Austria.....	169,550	435,961,789
2 institutions in the German-speaking parts of Switzerland.....	23,837	111,052,312
48 German institutions.....	858,742	2,913,056,207

During the last year the insured persons have paid 100,632,579 marks ($25,158,145) toward the establishment of the 3,063,581,416 marks ($765,895,354) insurances mentioned at the beginning, that makes on an average a payment of 3.28 marks for each 100 marks of capital insured. Besides this the statistics about the position of the German life insurance companies, published a short time ago, shows for 33 institutions an income from premiums for annuities, traveling and accident insurances of 3,911,623 marks ($977,905), interests and other sums yielded 27,799,190 marks ($6,949,797), so that the total amounted to 132,343,401 marks ($33,085,850). To this sum contributed

	Marks.
35 institutions in the German empire	104,365,052
11 institutions in the German-speaking parts of Austria.....	23,328,386
2 institutions in the German-speaking parts of Switzerland.....	4,649,963

In comparison to 1881 the total income shows an increase of 6,368,715 marks ($1,592,174) or 5.06 per cent. During the year 1882 inheritances to the amount of 42,340,907 marks ($10,585,126) became due for persons who had insured their lives and died. The expenses for insurances becoming payable shows an increase of 583,500 marks ($145,875), or 1.40 per cent. against 1881. The profits of the whole business are as follows:

	Marks.	*Per cent. premiums income.*
35 institutions in the German empire	17,217,994	20.68
11 institutions in the German-speaking parts of Austria.....	1,290,210	7.30
2 institutions in the German-speaking parts of Switzerland..	412,778	11.38
48 German institutions.....	*18,920,982	18.10

* $4,730,245.

The funds which comprehend the real money engaged in the business by the insurance companies, excluding the capital represented by shares, the funds for the establishment and those sunk in other branches of insurance, amounted in the 48 institutions, at the close of 1882, to 616,461,463 marks ($154,115,365), namely:

	Marks.
25 institutions in the German empire	487,167,762
11 institutions in the German-speaking parts of Austria.....	105,795,966
2 institutions in the German-speaking parts of Switzerland.....	23,497,735

—which shows an increase of the floating capital of 44,330,000 marks ($11,082,500). The floating capital is balanced by liabilities:

	35 institu's German empire, marks.	*11 institu's Austria, marks.*	*2 insitu's Switz'd, marks.*	*48 German institu's, marks.*
1. Premium reserves, includ'g premiums carried over.....	406,472,918	91,335,509	19,774,306	517,582,733
2. Other liabilities...	13,911,960	6,488,925	917,302	21,318,187
Totals	420,384,878	97,821,434	20,691,608	538,900,920
So that the clear profit resulting from the floating capital was	66,782,884	7,971,532	2,806,127	*77,560,543
Or	13.71 p. c.	7.53 p. c.	11.94 p. c.	12.58 p. c.

*$19,390,135.

Besides, the statistics show that in the 30 shareholder and mutual insurance companies a nominal amount of 145,461,634 marks ($36,365,408) is sunk in shares issued and establishment funds, of which 37,403,471 marks ($9,350,868), or nearly 25 per cent., have been paid in ready money. For these payments the shareholders or the founders received for 1882, in the form of interests and dividends, on an average 13.89 per cent. The whole assets of the 48 institutions amount to 753,988,549 marks ($188,497,136), of which 493,662,966 marks, or 65.47 per cent., were sunk in mortgages. When we express the progress of German life insurance business during the past and the four preceding years in a few figures, we see an increase:

	Per cent.				
	1878.	1879.	1880.	1881.	1882.
Number of insured persons....	2.08	2.61	3.11	2.84	4.29
Amount of insurance money...	3.96	4.27	5.00	4.87	5.67
Yearly income.....	5.27	6.92	6.69	8.85	5.06
Inheritance paid for persons who died.....	5.75	6.32	2.35	6.33	1.40
Floating capital...	8.60	7.92	8.89	9.54	7.75

However tempting it might be for several reasons to try the transformation of this highly important branch of the insurance business, the well-founded, successful and satisfactory management of it offers no pretext for government supplanting private enterprises in this profitable industrial field.

The Stock Exchange shows a noticeable change since last week. Prices which, notwithstanding the want of business, were in general firm, or at least little altered, have now begun to fall. Though we cannot speak of a panic, yet some of the leading shares were from 1 to 6 per cent. cheaper, a few even as much as 10 and 12 per cent. Of course there are reasons for this depressed feeling. Some do not like that the Austrian Minister for Foreign Affairs has declared to the delegations now assembled in Vienna that Austria and Russia are on a "normal" understanding. They think this expression too cool, and, displeased thereat, forget that Count Kalnoky at the same time laid stress on the intimate friendship existing with Germany and the good terms entertained with Italy, in which he saw a guarantee for the preservation of peace. Others are startled by the firm, independent demeanor of the Prince of Bulgaria, being fearful that it may cause a conflict with Russia; but they do not take into consideration that the Czar's cousin would never have dared to dismiss his Russian officers and recall the Bulgarians serving in the Russian army if he was not quite sure of remaining unmolested by the Russian "liberators." A third party are exercised in their mind by the bad state of financial affairs in France, whereas this condition—if altogether true—ought to render them easy as far as a procrastination of revenge is necessitated by it. Added to this, during the last few days it became public that an important house for forwarding goods, which, besides their legitimate business, speculated on the Stock Exchange, had stopped payment, of course thereby increasing the general depression. In reality, however, this disposition of some people to look at the dark side of politics exercises no decided or lasting influence; it only indirectly confirms the opinion widely spread that the price of a good many papers, and among them not a few of the leading ones, is too high. Some reports from the Rhenish-Westphalian mining districts made a still more lasting impression, complaining of a decrease of exports, mostly to Russia and America, and it is very sensibly felt that the former American demands for German wire have almost entirely ceased. The complaints of the iron manufacturers in Lorraine are very similar, having no market now in France, where they are suffering from an overproduction too. Raw iron, which in Lorraine was in April 49 marks ($11.25) per ton, is now no more than 34–35 marks ($8.50 to $8.75), and bar iron has fallen from 135 marks ($33.75) to 119 marks ($28.75). Finally it has become known that large iron works have sold rails at a price which can scarcely yield any profit. All this news has of course exercised a depressing influence on all mining shares, and involved many other stocks as well. On the other hand news from the upper Silesian district continues favorable.

Corn business, which here as well as in other German markets has been slack for some time, is now assuming a better aspect, and prices are rising. The large stores of the German market of last season, which, in addition to the low prices in America, made prices here fall too, seems to be pretty well exhausted now. In confirmation of the opinion expressed by me a short time ago that Austria-Hungary will be much less capable of exporting this than in former years, allow me to mention that, according to the statistics just published by this kingdom, the exports were in

	Aug., 1883. Met. cwt.	*Aug., 1882. Met. cwt.*
Wheat.....	222,786	1,030,172
Rye.....	50,496	119,874
Barley	68,228	388,270
But the imports were:		
Wheat.....	103,729	62,083
Rye.....	228,662	12,735
Barley.....	16,006	13,781
Oats.....	18,858	9,802
Indian corn.....	124,614	32,602

The exportation of sugar from Germany amounts for this year, from August 1 to October 15, to 99,117 metric cwt. of refined sugar, instead of 77,153 metric cwt. in the same period of last year, and 362,206 metric cwt. of raw sugar, instead of 315,662 metric cwt. last year. L.

THE ENGLISH POST OFFICE.

London, November 8.—I see that American papers are impressed with the British post office, with its punctuality, its dispatch, and its accuracy. In a country like England, where letters are sent for very considerable distances, not much indeed to the people of the United States, nor perhaps to the inhabitants of the Russian empire, but still great, nothing has aided, after the railways, to which the cheap postal system is the complement, the distribution of labor so much as the penny post. In an old country, where traditions and customs are exceedingly powerful, the difficulty has been to distribute labor from congested to new centers; in a new one, like the United States, if one may say so, and the British colonies, the difficulty is to keep labor from wastefully scattering itself. At present, indeed, there are signs in England that labor is congested in towns. If the changes which have been made and will be made in our land system are effectual, agriculture will recover the hands which it has lost and are now in towns.

The English penny post, which all the civilized world has copied, was the boldest experiment ever made in finance. The adoption of the scheme involved the surrender of a very considerable revenue at a period in which annual deficits had become chronic. The change from high and variable to low and uniform rates was the idea of one man, and that person occupying a comparatively unimportant position in the post office. Rowland Hill succeeded in converting the Whigs to his theory, who were by no means intelligent financiers, and who were presided over by the most procastinating statesman who ever managed affairs in England, for his invariable answer to those who urged changes on him was, can't you let it alone? The ministry was weak and unpopular, and it was no secret that the next general election would result in the triumph of their opponents. The establishment of the penny post was considered to be a rash and desperate effort, and many conceived that it was carried merely to put financial difficulties in the way of Peel, who was the manifest successor of the Whig Prime Minister. Peel evidently thought so himself, and spent his spleen on Rowland Hill, whom he put out of his place, but soon reinstated.

The post office would have brought no gain to the English exchequer had it not been for the fact that the railways cheapened the cost of transit. It took several years, even under the most rigid economy, before the gains of the Treasury under the new system came up to the total which they reached under the old. In many countries, where the people are comparatively few, and the habit of correspondence by letter was not familiar, the adoption of a cheap postal system has been a loss. In England the profit on the business is 50 per cent. of its gross revenue, and the postmaster is instructed to keep this amount up.

The English post office has refused to submit to the liabilities of a bailee, as other common carriers must. In some particulars it has relaxed this rule, and an insurance to a small amount may be effected with the post office. It has a monopoly of carrying written communications, but it will not be responsible for their loss. The reason of this exemption is that it is quite convinced that if it had to defend itself in an action at law it would be prejudiced in the minds of any jury, and would be more likely to be cast than any other defendant. English juries are under the impression that wealthy corporations, the state being the wealthiest, have great indirect powers and practically unlimited resources, and that, therefore, it is only fair to handicap them in a lawsuit. I do not assert that this is said, but I am sure that it is felt and acted on. I am under an impression that a different sentiment prevails in the United States, and that your public bodies in litigation feel fairly confident.

The English postal law prohibits franking. Members of Parliament in either house used to have the privilege. They abused it. There is a story that a member once sent a grand piano to a remote part of Ireland by post at the public charge. I do not believe the story, for I feel sure that the post office, being then, as now, an irresponsible carrier, would have contrived to present that piano at its destination in a greatly damaged condition, if it presented the thing at all. But it extinguished franking altogether. It is a custom with the English people when they get rid of a tax or a privilege to root it utterly out. It may make a compromise for a time, but when it takes a dislike to an institution or a practice it goes on till it makes an end of it, though it sometimes retains respectfully the core or husk of it in the political museum. There are many things in England which seem to be realities, but are mere mummies of defunct realities. The only places where free postage is allowed is at the public offices. But here the charge is debited to the office and is headed in the public accounts on the profit and loss account of the post.

The English post office has undertaken the business of a bank of deposit, though it has restricted its operations to small accounts, owing to the vigilant jealousy of the private bankers, who are by far the most favored inhabitants of the British isles. What would your bankers give for a tithe of their privileges? It has ventured timidly and in dread of these same potentates to do as little as a bank of issue or deposit, the notes running for a limited time only and being granted on a slight payment. I dare say some of your readers know Sir John Lubbock as a careful student of the habits of ants and an authority on the antiquity of man and as a strenuous defender of ancient monuments. But he watches no ants with such attention as he does the English government when it seems likely to undertake banking business or to touch on the advantages which private banking enjoys. He very possibly thinks that the most eminent members of primoral society received deposits of flint-flakes, bones and other valuables and rendered no account of them to any one but the individual depositor. I am sure that he respects no ancient monument so much as he does a private bank, and there is none which he would protect so religiously.

The latest venture of the English post office is the parcel post. In this the central office comes into competition with the railways and menaces the profits which they have hitherto gained from a most lucrative part of their business. I am surprised, considering the strength of the railway interest in the British House of Commons, that this innovation was submitted to pass so easily. But the railway magnates with us have divided interests, and do not possess, except when they all set upon some poor rival, much power of concerted action. They are not over-popular either, and I should not be surprised if any speedy or standing order were carried disabling them from recording their votes whenever they have direct interest in the acceptance and rejection of bills. With us no one can serve on a railway committee if he has any private interest in a bill under discussion, or his constituents have. It might be expedient to extend the disqualification to voting in the House itself.

It does not seem probable that the parcels post will be a financial success, or even that it will be much of a success in any way. The rates are cheap, but the office is not responsible for loss as the railway is, and does not collect parcels as the railway does, but only receives them. The railways, too, are able to compete against the post office, and are already competing, as I am informed, with great success. They have reduced their rates handsomely, and so the post office has done good, for I believe that, as a rule, an English railway director is the stupidest man who has ever been placed in a position of great authority and extensive powers. But he knows enough to see that with his machinery already provided he can make a good fight for profits with the post office.

I have not referred to the telegraphs, which, once entirely in private hands, were purchased by the English government about a dozen years ago. The price paid was enormous, so vast and so exorbitant

that the rate was raised at once in order to pay interest on the outlay, and is only reduced at the end of the present year, when sixpenny telegrams within limited areas will be allowed, though on more disadvantageous terms than were customary before the purchase. It may naturally be asked, why did not the country compete against the existing telegraph companies with their own capital? The answer is that England is a country in which "vested interests" have a sacredness which no other thing, human or divine, possesses. The devotion with which an Egyptian of old worshipped cat or crocodile is nothing to the reverence which is paid to these claimants on the public purse. The history of vested interests would be a most instructive chapter in the annals of human audacity and human superstition. Only a very few interests are vested, and those which are are generally noxious. The cost and loss which the English people endure because they do not feel able to grapple with the expense of compensating a vested interest and so getting rid of a nuisance are incredible. There are persons, however, who believe that when our democracy gets to understand its own powers it will be so irreverent as to deny the sanctity and repudiate the worship of these costly fictions.

The telegraphs were bought, and with them every device which electricity can or shall discover for communicating intelligence; everything, in short, but light and motion. The government, in administering the affairs of private and public bodies through the telegraph wires, has no interest and no passion beyond making a revenue at charges which Parliament examines and approves. Hence it betrays no secrets and lends itself to no jobs. The private trader incurs no risk that his trade secrets sent by wire may be purchased by a rival or an enemy. The communications through the office are entirely confidential, the functions of the clerk being absolutely mechanical. Nor is there any favor shown. A newspaper cannot corner its "esteemed contemporaries," or get a monopoly for mutilated news and modified truths. The English telegraphs have the inestimable advantage of being taken entirely out of the region of speculation, and are delivered from the menagerie of the stock exchange. This is a great convenience to that part of the public which desires truth, however unpalatable, and wishes to exercise its own discretion as to the comment on the truth, which may be undesignedly but mischievously saccharine. The English post office is stinted in many particulars, for the Treasury insists that any charge on capital account it may incur in the year shall be paid out of revenues, and not be a debt on the department. It is reckoned, therefore, that the national property in the British post office represents a capital sum of from £30,000,000 to £50,000,000, and that this is rapidly increasing in amount. ***

NOTES FROM ST. LOUIS.

St. Louis, November 19.—The latter half of last week was devoted by many of our representative citizens to making the acquaintance of and entertaining a party of the leading business men of the city of Chihuahua, Mexico. It was at the direct instance of the "Mexican Commercial Exchange of St. Louis" that the visitors undertook their present tour, which will not extend further than this city.

This exchange is an institution of but a few months' actual operation, though, as a project very desirable to be entered upon as soon as railway connection with Mexico should be fairly established, it has been vigorously pushed upon the consideration of our trade for several years by Mr. John F. Cahill, who has long been consul at St. Louis of the Mexican republic. Most of our leading merchants and many of our manufacturers heartily coöperated with his efforts and the Mexican Exchange seems solidly founded, although the membership tax is only $100 per year. This, however, is ample for present operations, but it is in contemplation to start a building fund and acquire an edifice suitable for the varied and extensive transactions which already appear to be taking shape between the traders of St. Louis and of Mexico.

This exchange has been officially recommended to the Mexican trade by our Merchants' Exchange, Cotton Exchange, City Council, and by the Mexican Legation at Washington. Its rooms are furnished with samples of the goods of members, their catalogues, etc., and also contain exhibits of the chocolate, coffees, sugars, tobaccos, dyestuffs, drugs and other products of Latin America. The institution furnishes extensive information as to dealers in these products, their cost, ways of shipment, etc. It has opened and maintains correspondence with many merchants and planters in Mexico and also in South America, and has placed itself in official communication with the leading trade organizations of those countries. A feature which is especially valuable is that which provides interpreters to accompany Mexican buyers to our jobbing houses and factories. Corresponding to this, in the other direction, is the provision for accrediting the traveling salesmen representing local members to mercantile houses in Mexico. Meanwhile, agents of the exchange are being multiplied in the cities and large towns of Mexico by securing responsible traders there to handle and introduce American goods. These arrangements necessitate facilities (which are freely provided to members) for conducting and translating correspondence.

Another department of the exchange's work is the compiling of a directory of well-established Mexican traders, by means of which our merchants may liberally introduce to their new markets that business literature which has made itself such an indispensable adjunct of modern commerce.

There are other features which are as yet only in experiment, but those above set forth have been tested far enough to earn confidence that they will be permanently valuable. Mexican trade with St. Louis is in positive progress. But our citizens do not flatter themselves that the advantage of geographical position will alone command that trade. Hence this Mexican Commercial Exchange, which is regarded as the best means of hastening business intercourse across the Rio Grande.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

A chattel mortgage of certain neat cattle described one of such cattle as "dark red," when in fact it was dark red with some spots on it, and another as "light red," when in fact it had white spots upon it. The Supreme Court of Kansas held in the case of Griffith vs. Wheeler, et al., decided recently, that the description was sufficient.

Where, after time has been given to the principal by the creditor, the surety, with full knowledge of all the facts, promises to pay the note if the principal does not, he is liable without any new consideration for the promise, according to the opinion of the Ohio Supreme Court Commission in the case of Bramble vs. Ward, decided on the 13th inst.

The Kentucky Superior Court has withdrawn its decision, rendered on the 24th ult., holding that money received as pension from the federal government is exempt from seizure for the pensioner's debts even after it has come into his possession. The court now holds that pension money is not exempt from seizure after it has come into the pensioner's hands. Monley vs. Andrews, decided November 12.

Agreements entered into between creditors for the purpose of releasing an insolvent debtor must be based upon some consideration, such as the agreement of all or of a certain per cent. of the creditors to relinquish their demands, and the acceptance from a debtor of a less sum than is due, or the agreement to accept it, is no bar to an action for the sum due, if there be no other consideration. So held by the Kentucky Superior Court in the case of South vs. Wood, et al., decided on the 14th inst.

A policy of insurance provided that the company should not be liable for any loss or damage under the policy if default should be made in the payment of any installment or premium due by the terms of the installment note. This stipulation was held to be binding on the holder of the policy in the case of Blakesley vs. The Continental Insurance Company, decided by the Kentucky Superior Court on the 12th inst. The court said that any stipulations not in violation of public policy might be inserted in a policy of insurance, and if so inserted would be binding on the parties to the policy.

The case of Morrison vs. Garth, decided by the Missouri Supreme Court in October, was a suit upon a negotiable promissory note payable to the order of S. D. Garth, and signed "Clogden and Garth. S. D. Garth." The name of S. D. Garth had been erased from the face of the note and placed upon the back after the execution and delivery by Garth, at the request of the holders, and without the knowledge and consent of the makers. The Supreme Court held the rule to be firmly established in Missouri that any alteration of a written instrument after delivery without the consent of all the parties, however immaterial in its nature or however innocently made, vitiated the instrument.

After the dissolution of a partnership the statute of limitations does not begin to run in favor of one partner against another until the partnership affairs as to debtors and creditors of the firm have been wound up and settled, or, at least, until a sufficient time has elapsed since the dissolution to raise the presumption that such was the fact, according to the decision of the Supreme Court of Georgia in the case of Prentice vs. Elliot, decided on the 13th inst. The court held that a claim by a partner for advances made for the firm was not an account stated nor an account which by custom bore interest from the end of the year; the amount due not being capable of ascertainment until an accounting was had between the partners.

Where real estate is owned by one member of a partnership, improvements of a permanent nature erected thereupon will, notwithstanding the fact that the property is used as the place of business of the firm, be presumed to be the individual property of such partner until it is proved that the improvements were erected by the firm and paid for out of firm assets or contributed as firm capital by such partner, Goepper vs. Kinsinger, decided by the Ohio Supreme Court on the 13th inst. The court held that in a case where all the facts proved are consistent with the ownership of such partner, and with the theory that the use alone of the property was contributed to the firm during its existence as such, that view should be adopted rather than one that will subject such property to partnership liabilities to the exclusion of individual creditors.

An agent employed to sell property and with whom notes for the purchase money were left for collection failed to collect the same and rescinded the sale without authority. He subsequently sold the same property to another person, receiving land in part payment therefor and a note for the balance. The principal received the land and note and brought suit on the latter for the balance of the purchase money. In an action brought by the principal against the plaintiff for negligence, the Supreme Court of Georgia, held, that although the agent might have violated his duty in failing to collect the notes and in rescinding the first sale without authority, yet, that the principal, by her subsequent conduct, had ratified the conduct of the agent and could not thereafter bring suit against him on account of his conduct in connection with the original transaction. Ingraham vs. Barber, decided on the 13th inst.

The Rumford Chemical Works transferred to plaintiffs intestate, the exclusive right to make, sell, and use in a specified territory for five years, self-raising flour by the use of an acid for the manufacture of which the company had a patent. The grantee died within three months from the date of the grant. The U. S. Supreme Court held in the case of Oliver vs. The Rumford Chemical Works, decided at the October term, that the right acquired under the grant was only that of a licensee; that the grant did not carry such right to any one but him personally; and that such right did not, on his death, pass to his administrator, so as to authorize a suit at law founded on the license to be brought in the name of the grantor for the use of the administrator, to recover damages for an infringement of the patent committed after the death of the grantee by the manufacture and sale of self-raising flour made by the use of such acid in said territory.

In the case of McDonald, et al., vs. Grant, decided recently by the Kansas Supreme Court, it was held that where a creditor purchases of his debtor a stock of merchandise, the value of which he pays in part by the surrender of notes held by him against the debtor and in part in money, and the debtor transfers the merchandise with the direct intention to defraud and delay his other creditors, the purchase by the creditor cannot be upheld if he is cognizant of and privy to the fraud of the debtor. The court held further, that, if in the transaction the creditor had no actual knowledge of the fraud, or notice of the fraudulent design of the debtor, yet if the circumstances surrounding the debtor were such as would put a prudent man upon inquiry, which if prosecuted diligently would have disclosed the fraud, he cannot be deemed a purchaser in good faith.

A life insurance policy required the insured to pay an annual premium of $47.85, by giving his note for $19.14 and $28.71 in cash on or before the 7th day of March, in each and every year, during the continuance of the policy. In addition, the policy contained stipulations providing that if the assured should not pay the interest annually in advance on any outstanding premium notes which might be given for any portion thereof, then, and in every such case, the policy should cease and determine, and the company should not be liable for the payment of the sum insured or any part thereof; and further, that in every case where the policy should cease or become null and void, all payments thereon and all dividend credits accruing therefrom should be forfeited to the company. On March 7, 1875, one year's interest was due upon four of the premium notes, but no part of it was paid or tendered. Shortly afterwards the insured applied for a "paid up" policy, which was refused by the company. The company's action was sustained by the Ohio Supreme Court Commission, which held, in The Continental Life Insurance Company vs. Robinson, decided on the 13th inst., that under the stipulations referred to the policy became null and void on March 7, 1875, and that all payments thereon and all credits accruing therefrom were forfeited to the company.

In the case of Lash vs. Paslen, et al., decided recently by the Supreme Court of Missouri, it appeared that the plaintiff, a dealer in agricultural implements at Linnaeus, Mo., bought a large quantity of such implements from the defendants, who were manufacturers of the same at Canton, Ill. According to an agreement entered into between the parties, the defendants were to deliver the implements on the cars of a railroad at Chillicothe, Mo., where the implements were at the time. The defendants sold the goods to other parties, and plaintiff brought suit for damages for breach of contract. The defendants pleaded the statute of frauds, setting up that there had been no part payment or acceptance, or note or memorandum in writing. A memorandum was read in evidence, signed by the defendants' agent, for a quantity of the implements, naming them and their prices, to be delivered to plaintiff, J. F. Lash. This memorandum was given to a third person to deliver to the plaintiff as evidence of the contract concluded with defendants. The court below held the memorandum void for uncertainty, and excluded parol evidence offered by plaintiff in explanation of the same. This decision was reversed by the Supreme Court, which declared that the memorandum was sufficient, and further held that where a written memorandum of a contract does not purport to be a complete expression of an entire contract, or where only a part thereof is reduced to writing, the matter omitted may be supplied by parol evidence.

BUSINESS NOTES.

The *American Architect* says that until architects learn to use iron in building for the sake of its strength, and not cast to imitate stone and other work, they will not know its real value in building. It is added that iron covered with incombustible material is able to resist fire as well as any other building material except brick.

Salt manufacture is the prominent industry on Turk's Island. The salt pans yield 5,000 to 8,000 bushels per acre during the season, and the total crop averages about 2,000,000 bushels a year. About two-thirds of this quantity is shipped to the United States, the remainder to Nova Scotia, where it is mainly used in the fish-curing industry.

The London *Engineer* condemns the new American steam cruiser the Chicago, because the guns are not protected from machine-gun fire, protection being sacrificed to the power of attack. Also for the use of "beam engines" for twin screws, and of boilers with shells five-eighths of an inch thick; the forms as being inefficient, slow, and the latter as unsafe.

Kemp's Mercantile Gazette (London) reported for the week ending November 7, 196 failures in the United Kingdom (3 less than the preceding week), against 250 and 248 in like weeks respectively of 1882 and 1881. Of these, England and Wales had 167, against 229 and 227, Scotland 25, against 18 and 17, and Ireland 4, against 3 and 4 in like weeks in 1882 and 1881.

Savannah's share of this year's rice crop is reported to be smaller than it has been for a number of years. The *Morning News* says that on one plantation of 100 acres it only averaged twelve bushels to the acre. The supply of white is greatly in advance of gold rice. The estimated receipts of the crop for 1883 in Savannah is 600,000 bushels, against 780,000 in 1882 and 665,000 in 1881.

Three or four Chicago firms who found themselves unable to pay their debts have recently "sold out," that is, transferred their assets to some lawyer who professed to become their successor in the conduct of the business. This method really seems to have become a fashion in the west. But the creditors consider it a device to deprive them of their rights,

and some legal steps have been taken to see if there is no remedy for it.

The *Mexican Financier* commends the perseverance of the American companies working the oil wells of the Tuxpam district, which had been asserted as worthless. It is added that one of the wells yields good illuminating oil, and from another well there is a steady flow of heavy oil. Imported oil pays a duty of 20c. per gallon, and has, of course, no competition. As these are the only wells working in Mexico their progress is watched with considerable interest.

The London *Colliery Guardian* calls attention to the competition of American mechanical and hardware firms with British, and especially in the trade with Australia and New Zealand, where in former years the English had a practical monopoly. The *Guardian* says the British firms will clearly have to do their utmost to produce as cheaply as the American houses, but, if well supported by their employés, the paper named believes they will be able to keep pace with their American competitors.

The report of the Verviers Chamber of Commerce for 1881 on the woolen industry of Belgium speaks of the opening of sales of Australian wool at Antwerp. London had previously monopolized this branch of the trade. Efforts are now making at Verviers to render Belgium independent of other nations for needful supplies of combed wool. The trade in carded wool is very heavy. The deliveries for 1880 were 7,800 tons, and those for 1881 were 9,300 tons. The development of the manufacturing industry of Verviers has been somewhat retarded on account of the scarcity of weavers.

The labor market was reported by the London *Labour News* of November 10 still unsettled. Disputes were frequent in the colliery districts. A heavy strike was anticipated in the northern coal fields. The iron ore miners generally were fairly employed. Ship-builders and marine engineers were kept busy. The Sunderland engineers' strike is still in progress. Building is very active. Workmen were still in great demand on railway and tramway constructions. Work was only moderately plentiful in the manufactured iron and steel trades. The carpet trade was dull, and there was not much activity in the boot and shoe line. There was still an excess of dock labor. Emigration was fairly active.

A French statistician, M. Trasenter, gives the production of metals in Great Britain, United States, Germany, France, Belgium and Austria, in the years named, as follows:

	1872, *tons.*	1876, *tons.*	1879, *tons.*	1882, *tons.*
Pig iron	14,550,000	13,320,000	14,200,000	21,100,000
Zinc	148,000	193,000	217,000	273,000
Lead	287,000	340,000	390,000	440,000
Copper	112,000	127,000	145,000	170,000
Tin	29,000	34,000	37,000	39,000

Taking the production in 1882 to be represented by 100, we obtain the following percentage:

	1872.	1876.	1879.	1882.
Pig iron	69	62	67	100
Zinc	53	70	79	100
Lead	64	76	87	100
Copper	66	77	85	100
Tin	74	87	95	100

Some representatives of the British cattle trade, recently met cattle dealers from Schleswig-Holstein, Germany, Sweden, Holland, Denmark, France, Belgium, America and Canada in convention to discuss the proposed further restriction of importation of live animals on account of the alleged danger of spreading the foot and mouth disease among cattle on the continent. It was shown that out of every 100 animals thus affected 99 recovered, and that the disease had also existed abroad before the importation of live cattle. It was stated that out of the 1,500,000 animals imported during the past year less than 900 were affected by disease. To forbid the importations of foreign cattle it was declared would be to bring on a national calamity.

At the recent meeting of the Grand Trunk Railway shareholders in London, the president, Sir Henry Tyler, said that as regarded the doubling of the line, to which some reference had been made, it had not yet been determined to commence it. A siding was being made in some places to accommodate the passing of trains, and there was a little doubling outside Toronto and at some other points on the line in order to meet the large traffic. The company had no proposal to make for the issuance of capital for any such purpose at the present moment, and there was no intention of issuing any more ordinary stock. The president congratulated the shareholders on the condition of the railway, commending particularly the administration of Mr. Hickson, the general manager in Canada, and of his assistant, Mr. Wainright.

A survey of the coal fields of the Canadian Northwest has been made, and the report is encouraging. The coals are of the tertiary and not of the carboniferous age. The region of the Bow and Belly rivers, running east from the base of the Rocky mountains to the 111th meridian, makes the most satisfactory showing. The coals are highly bituminous, and some of them are suitable for transportation. The coal-bearing area is very great, and the estimates of fuel per square mile in several localities range from 5,000,000 to 9,000,000 tons. These coal-bearing rocks extend far to the north and west, but have not been closely examined in that direction. There appears to be an abundance of lignite on the North Saskatchewan, and thirty miles above Edmondton there is a rich seam eighteen to twenty feet thick. Several other localities are favorably mentioned, some of them in regions that are destitute of wood and in the country traversed by the new railroads.

The following national banks have been organized: The Gallatin Valley National Bank of Bozeman, Mon.; capital $100,000; Nelson Story president; James E. Martin cashier. The First National Bank of Colfax, Wash. T.; capital $50,000; Martin S. Burrell president; John H. Bellinger cashier. The Kinsman National Bank, Kinsman, Ohio; capital $50,000; Allen Jones president; George W. Birrell cashier. The Central National Bank of Topeka, Kan.; capital $100,000; P. I. Bonebrake president; Edwin Knowles cashier. H. Victor Newcomb, president of the United States National Bank of New York, has resigned, and Logan C. Murray succeeds him. Franklin Haven, for many years president of the Merchants National Bank of Boston, has resigned, and his son succeeds him. E. D. Bigelow has been elected president of the First National Bank of Blair, Neb., in place of J. H. Hungate.

The season of iron mining in the Menominee and Marquette (Lake Superior) districts is drawing to a close, the recent cold weather having nearly put a stop to operations. The shipments from the four ports in the week to November 18 were only 38,000 tons, against 68,000 tons the corresponding week last year, and the aggregate thus far in 1883 is only 2,188,258 tons, against 2,751,226 in the corresponding period of 1882. Of this year's shipments 1,385,080 tons were from Escanaba, 682,523 from Marquette, 64,804 from L'Anse, and 55,851 from St. Ignace. The largest producer was the Chapin mine, which has yielded over 262,000 tons, and this is supposed to be due to the lower royalty, its rate being only 40 per cent., while the rates generally run from 50 to 75. There will be a new line of railroad through the Agogebie and Penoken region next season, and, after so dull a trade as the interest has had this year, the expected competition is watched with some concern.

From the circular of Mathews & Webb, of Denver, Col., dated November 14, it is made plain that the decline in the price of lead in that market is promising loss to both producers and dealers. Loud complaints are heard from camps and from brokers in the metal. Prices have dropped steadily. Four cents at New York was thought to be a resting point, but $3.97½ was quoted at the close of the first week in November, and $3.95 soon followed, while at the close of the second week not over $3.90 could be obtained, and it is questionable whether any large stock could be placed at over $3.87½. The large manufacturers confidently expect lead to rule at 3½c., New York, during the winter, and they act accordingly. At St. Louis 250 tons corroding sold as low as $3.75, and common down to $3.70 and $3.65; and at Chicago, with sales of 600 tons, the price has softened to $3.70, and the demand seems pretty well supplied. There are no signs anywhere of improvement for some little time to come.

From advance sheets of the forthcoming report of the Cincinnati Chamber of Commerce, for the year ending August 31, it is gathered that the trade in candles at that city is steadily falling away before other illuminating agencies. The shipments of candles for 1882–83 amounted to 200,494 boxes, against 249,002 boxes the preceding year. The price of candles for 1882–83 was higher than it has been for some years, the average price was 15 cents against 14.86 in 1881–82, 13.1 in 1880–81, 12.47 in 1879–80, 12.07 in 1878–79, 13.5 in 1877–78, 14.8 in 1876–77. The trade in soap is steadily gaining. The shipments from Cincinnati in 1882–83 was 575,157 boxes, against 513,923 boxes the preceding year, and larger than in any previous year. The growth can be best noted when compared with the shipments of 1845, when they were 2,708 boxes. Soap is now being largely made from cottonseed oil. The average price for the best soap was 6.62 cents per pound, against 6.59 cents in 1881–82, 4.87 in 1880–81, 5.21 in 1879–80, 5.3 in 1878–79, 5.65 in 1877–78, 6.12 in 1876–77, 6.9 in 1875–76, and 6.7 in 1874–75.

From a forthcoming report of the Cincinnati Chamber of Commerce, for advance sheets of which this journal is indebted to Col. Sidney Maxwell, superintendent, it is learned that the aggregate production of boots and shoes in Cincinnati in the commercial year 1882-83, was valued at $6,737,324, compared with $6,431,118 in the previous year, $5,654,290 in 1880-81, and with $3,268,502 ten years ago, the production having more than doubled in the last decade. In the late year there were employed in this production 5,690 hands, cash capital aggregating $2,137,800, and real estate valued at $947,000. The growth in the manufacture of men's boots has been marked in the past year. An increased product was turned out, and still larger results are contemplated in the year on which we have entered. The "demand for women's, misses' and children's goods, of Cincinnati manufacture, continues without abatement." The superior styles of shoes produced in Cincinnati have given them a wide reputation, and so desirable are they to the western trade that Cincinnati shoes are said to have been "not infrequently sent east for the purpose of having shoes made like them."

The Richmond (Va.) *Industrial South* takes issue with other southern journals which have alleged the Pennsylvania iron furnaces are selling iron at a good profit at $20 per ton. The journal named quotes Mr. A. S. McCreath, of the Pennsylvania State Geological Survey, that "the actual cost" of making a ton of pig iron in middle Pennsylvania is stated at $18.22, at Harrisburg at $18.35, on the lower Susquehanna at from $18.16 to $19.68, in Lehigh valley at $20.38, and in Pittsburgh at $17.97. Now, "when the cost of transportation to New York and the commissions on sales are added to these amounts, it is not easy to see how money is to be made by selling at $20." Nor can one readily understand why so many furnaces are blowing out and closing business in Pennsylvania, if they are doing the money-making business. As to Virginia furnaces, the Crozer is admitted by its manager to be making pig iron at a cost of $12.60 per ton. In Page county the Milner furnaces turns out pig iron at a cost of $12.55 per ton, the authority for this being the same as that quoted in reference to the Pennsylvania furnaces. The *Industrial South* further asserts that Virginia furnaces are at no noteworthy disadvantage as to rates of transportation for their products when compared with the output of Pennsylvania furnaces, from which it is naturally argued that "Virginia is to-day the most inviting field on the continent for the establishment of iron industries."

"TREASON TO THE TARIFF."

The Pittsburgh *Leader* says:

"It is rather startling in this red-hot tariff center to hear out-and-out free trade talked from some of our manufacturers. Yet such is the case. One of our foremost glass manufacturers speaks out boldly on this point, and tells us that he thinks, after all, it would probably be better for the business interests of this section if the tariff were done away with. This would be bad enough. But when we find he is supported in his views by a prominent iron manufacturer, whose name, unfortunately, is withheld from the public, it makes us wonder what will come next. Will this defection from the ranks of high-tariff advocates in the most solid protection district in the country extend any further? If so, there will be trouble ahead. For if western Pennsylvania shows the white feather in regard to this question, the tariff will surely go, and that right quickly. The argument of these Pittsburgh manufacturers who think free trade would benefit them is that, under the high-tariff laws, wages have become too high. At first this fact made no difference to them, as the competition was not great and they could sell at a high price. But big profits brought many men into the business, and the prices run down until now the profits are very small, the workmen taking most of the money that is made. They think that if they could only have free trade that the wages of the workmen would be bound to go down to what workmen in other countries get, and then the manufacturers would have a larger field in which to sell their products. With workmen's wages at the high figures which they are in this country, they are not able to sell their products in any place except the United States. But with workmen's wages on a level with what they are in England, France and Belgium they would be able to compete with the manufacturers of other countries throughout the whole civilized world, and in many parts of the world they could compete very favorably for the reason that the freight rates would be in their favor. This looks like a very selfish doctrine. If the manufacturers would ask for the abolishment of the tariff on that ground it would be asking that the workmen be made to suffer for their sakes. Can it be possible that hereafter we will have no one to stand up for the tariff except the workmen? Can it be possible that all the fine arguments in favor of protection which our manufacturers have been treating us to for these many years past have all been worked up merely to suit the occasion? And that they were only meant to hold good so long as they (the manufacturers) were benefited by protection? That now that they are beginning to find that they can do better without protection than with protection they will say that their old arguments were fallacious, that they fully believed in them then, but now find they were mistaken. No, we cannot believe this, and we call on the Olivers, Bennetts, Husseys, and other strong protectionists to come to the rescue, and show that protection was not advocated merely for their individual benefit, but because it was a good thing for all the nation."

THE NORTHWESTERN OUTLOOK.

The outlook in the northwest is thus viewed by the San Francisco *Chronicle*:

"Any estimate of the future prospects of the vast and rich region whose produce is to be drained by the Northern Pacific Railway and its branches is heavily discounted by the mistake made by the government in not taking full ownership and control of that road when the Jay Cooke syndicate failed and threw up the job. Had the government built the road on its own par bonds at 3 per cent. for say thirty years, the cost of the work, fully equipped, had been many millions less than the company has made it and the interest account at least $2,000,000 a year less. This $2,000,000, probably $3,000,000, is the premium which the supporters of the road will be taxed by the corporation over and above the rates which the United States, as the owner and operator of the road, would have charged. It is an enormous discount on the resources of the country and the energies of the people. But still the natural resources of Oregon, Washington, Montana and Dakota are so vast—in coal, iron, timber, lumber, capabilities for cereals, and the precious metals—that not even this huge discount set upon them can long retard a mighty development.

"When it is reflected that California now produces fully one-tenth of all the wheat of the country, and more than one-fifth of the wheat exports, that we do this with an area of not more than 3,500,000 acres planted in wheat, that Washington and Oregon have three times as many acres better adapted to wheat than ours, and that within the railway belt of the Northern Pacific, we begin to form an understanding of the future agricultural possibilities of our northern neighbors, whose resources in coal, iron and lumber are even greater than in the cereals. Given a shipping terminus on the deep water of Puget sound, equal in facilities for large ships with those of San Francisco, and it needs no prophetic mind to foresee the creation of a city there which will reach the magnitude of our own in the bulk of its exports and imports at a future time within the present century and the lives of young men now just looking around for active business.

"There is nothing astounding in this hopeful forecast of events, bearing in mind the growth of many other American towns from a trade not as extensive as that which may be reasonably reckoned upon in this North Pacific region. Twenty-five years ago the population of Kansas City was not much over 2,000. It was a dirty little country village. It is now the second shipping port of the Missouri river, with over 80,000 inhabitants. Denver, St. Paul and Minneapolis are similar examples of what enterprise, railways and a good backing from the country can do for a town's growth. None of these places have the shipping advantages which the Puget sound terminus of the Northern Pacific Railway will have. Neither New York nor San Francisco has better. At least one great metropolitan city on the sound is an absolute certainty in the not distant future, with the chances in favor of a second one at the terminus of the Canadian Pacific on Burrard Inlet, for the natural resources of the vast region that will be drained by the western half of that road are also great, and the capital is not wanting both in England and America for their rapid development."

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

The same tiresome manipulation of the market continues. It is about the same story every day—prices weaken, then advance, weaken again; then a rush is made, and a corresponding break follows; some stocks are up a little and some down a little, while the two opposing sides reiterate their speculative creed—the bull cliques that the public will come in and buy if only the market is put up enough; the bear combinations that the public will not come in because the poor state of trade makes it unable to do so. There is a good amount of investment money lying idle in banks and trust companies, the January interest payments will add more to it and the government is driving money out of government bonds, which must be invested in other securities. It is on this that the bull party is keeping its eyes fixed. The other side point to failures, the crop shortages, the deadness of the market abroad, and the low prices at which what we have to export must go off. Mr. Keene has been working one section of the market, and he has been this week reinforced by Mr. Gould, who returned from his western trip proclaiming himself a great bull on—of all things in the world—Wabash. He says he never held so much of the stock before in his life as he holds now, which is doubtless true; and having it nearly all, it was an easy matter to put it up. The price of the common and preferred have both been smartly advanced, but it does not seem with much effect, for Wall street has got into such a hopeless state of feeling in respect to the Wabashes that their advance has perceptibly had far less effect on the market than would have been the case had he put up one or two of his other stocks—like Missouri Pacific or Western Union. Mr. Keene has attended more particularly to the Villard stocks, and has continued his adroit manipulation of Oregon Transcontinental, so that it is higher than it was last week. This stock has been the most active, or rather the only active one in that group. The announcement was made on Wednesday morning that Judge Wallace had vacated all the injunctions restraining the issue of the second mortgage bonds of the Northern Pacific. The effect on the stocks was nothing. No one could have told from the utter stagnation of the market at that time, and the weakness of the stocks affected, that any decision had been rendered. This may, perhaps, be accounted for by the fact that for two days before the lawyers of the company were quoted as predicting with an unusual degree of confidence that the decision would be in favor of the company; and with the Iowa pool troubles hanging over the market it was useless to attempt to thrust up the quotations for the Villard stocks higher than they had already been put, especially as when put up before they had only feebly affected the rest of the market.

The Iowa pool troubles were referred to last week, and since then there has been a wonderful amount of backing and filling over the affair, while the movements of the stocks immediately concerned have been of such a character as to leave the outsider quite puzzled as to what was going to happen. He might equally argue from it that they were being manipulated to sell as much stock as possible before open war was declared, and their prices broke away under it, or he might argue that the insiders, having let them off a few points from previous quotations, were taking all that the bears sold, with the intention of making a twist with a formal announcement that all difficulties had been settled. Such official news as has come from the west has been of the most warlike character; but at the same time the street is filled with rumors that the whole affair is a stock-jobbing trick, and when the directors have carried their stock points a sudden end will be put to it all. Meantime, the movements of the stocks themselves are a complete puzzle.

In times so uncertain, and where such diversity of opinion exists, it will be of interest to quote some published opinions of acknowledged leaders and financiers, whose talk will serve to vary the monotony of the market. One of the leading financiers of the street gives his opinion through a channel which usually conveys only the bull aspect of things, and it is therefore the more interesting from the place where it is found. Said he: "The future of the stock market is always a matter of uncertainty, but seldom more so than at present. The depression has been so great that it is difficult to believe in much further decline. There are many plausible reasons why stocks should rise, but there are some good grounds for considering prices still at dizzy heights. Speculation has so long driven prices upwards that the public has become educated to high figures. The low quotations which prevailed from 1877 to 1879 were forgotten, while the abnormally high figures of 1880 and 1881 are remembered. There is a vast difference, however, between the country of to-day and that of six or seven years ago. The railroads traversing the continent have made great strides forward, and enormous crops have increased wealth beyond belief. The weak point in this matter is that the railroads carry just as heavy debts as they have done at any time. The government has reduced its debt by millions, but the railroads have increased theirs. During the speculative frenzy which captured most of the railway managers as well as the public every road was compelled to do duty in the way of building up fortunes for operators. The result is that Europe has lost confidence in our railroads. European investors have found themselves deluged with trash, and they have been gradually selling out ever since. The effect upon our home public has been similar. There are millions to invest, but capitalists, large and small, are afraid of railway manipulation. Therefore, while prices seem low, there is less supporting demand in the situation than is generally supposed. Great capitalists temporarily force prices up, and in that way furnish a short interest and reduce the cost of carrying their long stock. This, however, can only be temporary in its effect, until the legitimate demand for stocks fully meets the supply. The public will have to retrieve losses before returning to the ways of speculation. To do this a year of good business must dawn upon us. We are just getting through a period of working off overproduction and settling down to actual supply and demand. The business community has not had time to pull its traps together and see whether it has margin or not. It will be well into the winter before business is fully evened up. The remaining question is whether the stock market will hold up and wait for this, or whether it will go lower and get ready for the public to come in on figures below the present level of quotations."

This must strike the average reader as a fairly impartial view of the situation, and its clear presentation of the for and against makes it worthy of careful consideration. On the other hand we have the constantly expressed views of Mr. Gould and Mr. Keene. The former, as usual, says he sees a bull market ahead, and thinks prices will soon be much higher. Mr. Keene's latest utterance is that the market may go a point or two lower, but for his part he prefers to be long of stocks, for there is no knowing how soon a Jersey-Michigan-Central "twist" may come again. This, it will be noted, is the talk of the trader looking only to the manipulation of the market. Mr. D. O. Mills is on the bull side, but he has given no public utterance. Mr. Vanderbilt being counted out, he always talking bull when he talks at all, and never more strongly so than when he is selling out his speculative line of stocks, there remain a half dozen other large operators, who may be counted with certainty on the bear side. They are Henry N. Smith, Mr. Woerishoffer, ex-Surrogate Hutchings (a very heavy trader), Mr. Cammack, and some lesser ones.

A number of specialties have attracted attention of late, some by their advance, others from other circumstances. The Vanderbilt road which gives that system a connection with St. Louis, and is commonly known by its initials of C. C. C. I., marched up from about 60 to 74, from which point it began to go back in much the same style as it went up—both the advance and the decline passing with little comment, which indicates how absolutely the public is out of this market. It was known that some one operator or clique was doing the work, and, the stock being out of the general run of leading stocks, the market seemed quite indifferent to how it went. Manitoba has recovered some of its loss of last week, and knocks about in the neighborhood of par. The Canadian Pacific people have advertised the issue, thirty days from date, of the whole $100,000,000 of the stock of the company, $35,000,000 to be deposited with the Canadian government, to be drawn upon if wanted. The meaning of this is that the stock will continue to be sold as the market here and abroad will take it, and only the people who sell it and the government officials—about the same thing—will know how much of the $100,000,000 is out at any one time. When it is all sold—if it ever should be—the public will probably learn the fact by a proposition to mortgage the property and issue bonds. There is a splendid chance for the work of a parliamentary investigating committee in this job; but as the government has a heavy majority in the House it will doubtless be able to effectually smother inquiry. One stock which has acted as a deadweight on the market this week is Union Pacific. Its constant tendency to go back when the rest of the market was going forward has been the theme of much comment. It is rumored again that the earnings for October show a heavy decrease, as much as did those of September. The September net earnings showed a comparative net loss of nearly $500,000, and this was rumored about the street before they were published. In an evil moment for himself the financial editor of a prominent evening paper undertook to prove that these rumors were malicious bear lies; and did prove it in something less than half a column of argument, entirely to his own satisfaction, just twenty-four hours before the official publication of the earnings, which agreed almost to a dollar with what the bears had declared they were. The Union Pacific Company seems to be having hard luck this year.

Money continues a drug in the market, call loans ruling at 2 to 2½ per cent. Exchange rates show a rising tendency, and the posted rates rose on Tuesday to $4.83½@$4.86. Yesterday, however, they again declined half a point for short and long date. It is explained that the sums of French coin which have been arriving of late are for shipment to Panama to pay for labor, etc., on the canal works there. In the absence of any better explanation this must be accepted, since the coin has been coming when the regular rates of exchange would show a loss on each importation if the importation were an ordinary exchange transaction. Government bonds remain firm at the advanced prices, and the impression is growing that at the next session of Congress the tax on bank circulation will certainly be removed. The following were the closing quotations yesterday:

	Nov. 16, bid.	Nov. 23, bid.	Nov. 23, asked.
U. S. 4½s 1891, registered	113⅝	113¾	114
U. S. coupon	114⅜	114⅞	115⅛
U. S. 4s 1907, registered	122¼	122½	122¾
U. S. 4s 1907, coupon	122¼	122½	122¾

The bank statement of Saturday showed an increase in every item. There was an expansion in the loans, a large gain in specie, a heavy increase of deposits, and an increase in the surplus reserve of $1,932,400, bringing it up to $3,673,175. Commenting on the showing made, one experienced financial writer observes that "considering the season, the statement reflects a stagnation that hardly ever was paralleled." The following are the comparative totals of the statements of November 10 and November 17:

	Nov. 10.	Nov. 17.	Differences.	
Loans	$321,944,900	$323,620,300	Inc.	$1,675,400
Specie	54,195,900	55,926,500	Inc.	1,730,600
Legal-tenders	25,193,300	26,502,100	Inc.	1,308,800
Deposits	310,593,700	315,021,700	Inc.	4,428,000
Circulation	15,400,500	15,447,100	Inc.	37,600

COMMERCIAL.

SUMMARY.

The mild and unseasonable weather which has visited the Atlantic coast during the week has been felt west and south, and has had a noticeably injurious effect on the movement of general merchandise. In a number of instances this is reflected in a falling away in the collection of country accounts, while in others it has so interrupted the demand from merchants at interior points as to lessen the orders from the latter for reassortment lots of goods, which have constituted the bulk of general trade in many lines for some time past. The distribution of dry goods has been very slow in the south. On the north Atlantic coast and at the large centers of the trade the business is mostly of a package order to fill out stocks. It is noteworthy, however, that through Illinois, Minnesota, Wisconsin and in the northern states bordering the west bank of the Mississippi the dry goods trade, for the west, has been from fair to very good indeed. Hats and caps and boots and shoes have been in only moderate request, and general trade on the whole cannot be reported as good as in the preceding week. In lines of seasonable goods, of course, the weather is to some extent responsible for this. Iron is as dull as ever, and those in the trade admit that a shading of current rates for pig is more than likely in the near future. Bar iron is selling at less than 2c. at the mill, which is sufficient explanation of the distressed condition of that industry. Since the cut in steel rail prices to $35 per ton about 150,000 tons have been contracted for. Announcements of shading on present nominal quotations for steel rails are premature. Reliable dealers say none is expected. Stocks of pig are 20 per cent. less than on July 1. Petroleum is still higher and quite active. Reductions of stocks and failures of new wells, added to the steady decline in production, are the bases of the bull movement. Wheat is off from ¾c. to 1¼c. on the week, but corn is from ⅛c. to ⅝c. higher. The fluctuations in these grains for the week have been due mainly to manipulation, no new basis for changes in quotations having appeared. Provisions show a relatively greater gain in prices than wheat or corn. This is legitimate, in that the exports of the first are steadily gaining, as well as the home demand, while the foreign shipments of breadstuffs continue at quite as low an ebb as ever. Some excitement was caused in prices of the latter, owing to rumors of war between France and China, but no special change is noted. Ocean tonnage is scarce and firmly held. Anthracite coal is duller, and prices are shaded more than ever. This has revived agitation for half-time or less at the mines in December. The consumptive demand for wool is moderate but steady, and with light stocks in all the markets values are well maintained. There were 228 failures in the United States reported to BRADSTREET'S during the past week—23 more than the preceding week, 57 more than the corresponding week of 1882, and 113 more than the same week of 1881. Canada had 24, an increase of 6.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Money is in active request at 6 per cent. General trade is dull and featureless.

From Boston, Mass.: The unseasonably warm weather which has prevailed most of the week in this section has a depressing influence on trade, and a tame tone runs through most departments. There is, perhaps, as many goods moving as usual at this late stage of the season, but buyers hold back as much as possible and show lack of confidence, though it is generally admitted that values are on a very low basis. The boot and shoe buyers are ordering a little more freely, but this trade is not as far advanced as at this time last year. There has been more inquiry for wool, and a firmer tone has been developed. Hides are stronger and attracting more attention. Leather is still rather quiet. The money market is easy for borrowers in good standing, and discount rates range principally from 5 to 6 per cent.

From Philadelphia, Pa.: Transactions in most lines have been on a very moderate scale during the past week. There are no new features of special interest in the general situation. The closing down of iron mills and evidences of an unsatisfactory condition of affairs in some branches of the textile and other industries have a disquieting effect, but, in general, merchants regard the outlook hopefully. Values in most departments are well maintained.

From Cleveland, Ohio: Money in good demand and the supply sufficient.

From Cincinnati, Ohio: General trade features have improved but little, although some confidence has been regained. Money matters are easy under a fair borrowing demand. Interest rates have been slightly lowered.

From Columbus, Ohio: Collections generally quoted very fair. Prime paper is 8 per cent. Exchange one-tenth premium. There is no reason to believe the outlook not good for spring. Customers have been a little slow in meeting paper, and the number of renewals asked for has increased. Dry goods continues steady, though trade is not large and hardly up to that of last month.

From Evansville, Ind.: Trade is only fair; not as good as anticipated. Collections are fair; the weather is exceedingly changeable. The heaviest rainfall of the season took place Wednesday night. Some damage to railroads resulted.

From Chicago, Ill.: Money is firm at from 6 to 7 per cent. Exchange is 25@40c. discount. Shipments of money to the country are fair. Collections are scarcely up to last week; attributed to the bad weather.

From Peoria, Ill.: The present unseasonable weather has made retail trade dull, but the jobbing trade is a fair average.

From Detroit, Mich.: General trade only of fair proportions and devoid of any noticeable features. Collections are hardly up to the average.

From Louisville, Ky.: General trade is satisfactory for the season. Money is fairly active at 7 per cent.

From St. Louis, Mo.: There is an unmistakable lull in general trade compared with the October movement, yet enough is selling to prevent any despondency. Money grows easier, and cash reserves are gaining through lack of country demand. The rate is 7 to 8 per cent. New York exchange, 50c. premium. Prime commercial bills, par.

From Kansas City, Mo.: General trade is considerably in excess of the previous week. The cold weather has stimulated the demand for seasonable goods, and the order trade is active. Collections are improving and money is active, and the demand is firm at 10 per cent. for prime commercial paper. New York exchange is $1 premium.

From Minneapolis, Minn.: General trade is satisfactory, as are collections. The receipts of money from the interior are increasing, but not sufficient to obviate large shipments of currency from the east. The money market continues close, but easier than early in the month. Eastern exchange steady at par.

From Lawrence, Kan.: Trade is fairly active, with no marked features. Money is easy; loan rates 8 per cent.; collections are good. Building material and hardware are in brisk demand.

From Topeka, Kan.: General trade is steady and conservative. Money is growing tighter as the season advances.

From San Francisco, Cal.: Heavy shipments from Europe and eastern ports greatly increase the already large stocks of heavy merchandise, and jobbers generally report a dull month compared with November, 1882.

From Baltimore; Md.: The unseasonable weather has had a very depressing effect, and there is no animation in any branch of business. The general movement is light, and this condition appears likely to continue for the remainder of the year.

From Norfolk, Va.: Most lines of trade are doing well. Collections only moderate.

From Wilmington, N. C.: Business in most branches is quiet.

From Savannah, Ga.: The trade situation is unchanged, is without activity, and the impression exists that the season will be short and not as profitable as in the preceding year.

From New Orleans, La.: The demand for money is good; call loans are easier; premiums were 98⅛c. on Tuesday, the highest known. Other securities are strong. The warm, damp weather has quieted general trade.

From Galveston, Tex.: General trade is dull. The weather for the most part during the past two weeks has been warm for the season. Have had one light norther lasting two or three days.

INDUSTRIAL.

Agitations for higher wages are in progress in several localities, notwithstanding the tendency of wages to a lower level. Employers are loth to discharge workmen, and continue production in hope of an early revival in demand. Contradictory reports as to the condition of industries and prospects are circulated. At Pittsburgh one bar mill closed down, but three or four others returned to full output. One department in the Homestead Bessemer Mill will start up. A strike against iron rail prices for steel rails is in progress at the Edgar Thomson. Two rail mills have shut down, two more will follow December 1, and at three reductions have been announced. The window-glass manufacturers and workmen appointed a joint committee of two to report a basis of settlement December 18. The demand is for a reduction of 15 per cent. on single strength glass and 30 per cent. on double strength. Foreign glass, it is given out, has been purchased to supply requirements, and a heavy consignment is looked for in a few days. The arbitration committee appointed by the striking Philadelphia shoemakers are not meeting with encouragement. Late accounts indicate the probability of a settlement of the strike near Florence, Wis., in which 1,500 men are engaged. Twelve hat factories in and about Reading, Pa., which have been running part time, resumed full work this week. The striking printers at New York, Brooklyn, Boston and one or two other places have not all succeeded; some have received concessions asked.

INDUSTRIAL FEATURES

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Although general trade is dull, most of the mills in the manufacturing districts keep their hands employed, and there is no more idleness than is usual at this season. Building operations in this city are fair and mechanics are pretty well engaged. There are no labor troubles to speak of. The compositors on one of the daily newspapers went out on a strike early in the week, but their places were quickly filled and the paper comes out as usual. Most of the boot and shoe factories have secured enough contracts to start with, and they will soon be in full working order. Prices are on a steady basis.

From Philadelphia, Pa.: One or two carpet mills have shut down temporarily for repairs, but in general the industrial situation at this point is about the same as reported last week.

From Norfolk, Va.: The mild weather greatly benefits all mechanical industries.

From Portland, Me.: Manufacturers are depressed.

From Columbus, Ohio: Buggy manufacturers report business about as large as in the previous year, but the fall trade has been hurt some by the September frost and unsatisfactory cotton crops, and dealers have dealt conservatively in the south and west in consequence.

From Louisville, Ky.: Manufacturers are moderately well employed.

BREADSTUFFS ABROAD.

London cables during the week have reported a quiet and at times an easier market for foreign wheat and corn at London and Liverpool. English and French country markets have been steady. At Liverpool the grain market has been of a downward tendency at intervals. The receipts of flour and grain from seven Atlantic ports in the United States in Europe during the week ended November 17 were as follows:

	Flour, barrels.	*Wheat, bushels.*	*Corn, bushels.*
To United Kingdom	102,202	555,992	346,351
To continent	8,502	207,840	132,836
Total week	110,704	763,832	479,187
Previous week	111,545	1,221,446	642,594

And for the four weeks ending November 17:

To United Kingdom	443,355	2,194,846	2,223,904
To continent of Europe	32,651	1,303,776	792,884
Total four weeks	476,006	3,498,622	2,966,788

During October English wheat has declined 6d. per imperial quarter, or about 1¾c. per bushel. The English farmer finds November bringing fair weather, and sowing probably now engages a fair share of his attention. The London *Miller*, in speaking of what it terms "strong telegrams from America," says British millers "with 6,000,000 (48,000,000 bushels of wheat) of stocks in hand will hardly be flurried by such a movement," especially with nearly 32,000,000 bushels visible supply on this side. Meanwhile they (the British millers) "may reflect on how one more 'deficiency' scare has been dissipated, and 'the heavy deficit' on the year's harvests, with which shippers would fain have alarmed the trade, has already ceased to be a cry of the least effect at Liverpool, at Paris, or at Mark Lane." The same journal says there can be little doubt that a large proportion of the Indian wheat recently selling in England was disposed of at a loss. It thinks little if any profit has been realized by the holders of Russian wheat sent to the United Kingdom during the autumn. Referring to American wheat the paper named says it is no longer "cheap wheat." American farmers are "in dependent" and "obstinate holders," and being under no pressure for money, uphold the market even where the odds "may seem against them." The few English firms holding red winter American are declared to "have paid a price for it which compels their asking more money for it than for English red wheat of equal quality and superior weight." Russian wheat is now offering in London, May delivery, at about $1.20 per bushel, which can hardly be said to favor a stronger market at an early date. In France the wheat markets have been firm, but the amount of business small. Antwerp shows a little improvement in the demand. In Austria-Hungary early October wheat sowings are already above ground and looking well. Markets are quiet without depression. India prices are low, and there is little inducement to ship, but grain continues to come to the coast. Either the 1883 crop is larger than was expected, or farmers are clearing out their grain with unusual expedition. The latter is the belief of the Indian trade. The Chilian trade is languishing. Prices are low and freights are cheap, but the demand is weak. Not much business is looked for prior to receipt of the new crop.

Beerbohm's London cable of the 22d inst. reports the quantity of wheat and maize on passage to the United Kingdom:

	Wheat. Qrs.	*Maize. Qrs.*
To the United Kingdom	1,900,000	170,000
To continent	410,000	55,000
Total quarters	2,310,000	225,000
Equal bushels	18,480,000	1,800,000
Compared with the previous week:		
To the United Kingdom	1,900,000	160,000
To continent	400,000	40,000
Total quarters	2,300,000	200,000
Equal bushels	18,400,000	1,600,000
Increase, bushels	80,000	200,000

AMERICAN WHEAT MARKETS.

Between last week Friday and the middle of the present week the speculative price of No. 2 red wheat scored a net decline of about 1¼c. per bushel, dropping from $1.11 to $1.09¾. The influences at work in the market during the period noted were of the technical and hair-splitting variety, which are the only resource of the speculator in a dull or waiting season. On the one side the exports of the preceding week had amounted to 562,000 bushels from New York alone, against 600,000 bushels in the preceding week, an exceptionally heavy week's outgo. There were also telegrams from the west that large sales had been made at Milwaukee and Chicago to Baltimore shippers; unfortunately, this did not receive confirmation. There were statements made concerning some wheat stored here being out of condition, however, and this counted for what it was worth. It was also noted that the stock of wheat here is 225,000 bushels less than a week ago. Most of these points were placed on the bull side of the balance, but did not pull up prices. The statement was current and lacked data for contradiction that the visible supply had grown from 250,000 to 750,000 bushels since the last report. Receipts at the west continued full. The boats in the canal were freed from ice and promise to come through all right. Exporters are not buyers for shipment. Stocks abroad are as heavy as ever, and foreign cables are if anything weaker. Besides this there are the holidays ahead, and with the existing situation in the market they promise a prolongation of a dull or waiting season. Prices therefore fluctuated and sagged off, as given above. Thursday and Friday brought some fluctuations, but no material changes in price or situation.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended November 17 amounted to 1,875,621 bushels, against 1,554,574 bushels in the preceding week, and the shipments to 927,713 bushels, against 522,681 bushels in the week previous.

The receipts of wheat at the seaboard ports for the week ended November 17, 1883, amounted to 1,257,716. The exports from the eastern seaboard ports during the week ended November 17 amounted to 1,141,945 bushels, as compared with 1,223,405 bushels in the preceding week.

The course of prices of wheat options at New York and at Chicago (1 P.M.) during the week has been:

	New York.				*Chicago.*	
	Nov.	*Dec.*	*Jan.*	*Feb.*	*Dec.*	*Jan.*
Thur. Nov. 15.	$1.11⅛	$1.11⅞	$1.13⅞	$1.15⅞	.96⅞	.97⅞
Fri. Nov. 16.	1.11	1.12	1.14	1.16⅛	.96⅜	.97⅜
Sat. Nov. 17.	1.10½	1.11	1.12½	1.14½	.95⅞	.96¾
Mon. Nov. 19.	1.10	1.10¾	1.12¾	1.14⅞	.96	.97
Tues. Nov. 20.	1.10½	1.11⅝	1.13¼	1.15¼	.96¼	.97¼
Wed. Nov. 21.	1.09¾	1.10⅜	1.12¾	....	.96	.97
Thur. Nov. 22.	1.09¾	1.11⅛	1.13¼	1.15¼	.....	.....

INDIAN CORN.

The speculative market for Indian corn at New York during the week has not been noticeable, from the fact that it has not followed meekly in the footsteps of wheat, as has been its custom of late. From Friday until Monday night it declined, partly in sympathy with wheat, but in each instance showed more strength by its partial recovery. The net decline was about ⅝c. within the period noted. The receipts west were moderately large, but stocks here had fallen away some 286,000 bushels. The export demand was light, but the bears were timorous, and at any sudden exhibition of strength would buy smartly, thus serving to hold up quotations. Tuesday and Wednesday wet weather west

and greatly decreased receipts at lake and river receiving centers greatly strengthened the bull side of the market. Exporters, too, were taking with more freedom. This situation cautioned the shorts, who were considerable buyers on outstanding contracts, and the gain in prices on the days noted brought them to within 1c. above the preceding level. On Thursday the market was firmer and moderately active. On Friday there was a slight gain also.

The receipts of Indian corn at Chicago, Milwaukee, St. Louis, Detroit, Indianapolis, Toledo and Peoria, for the week ending November 17, were 1,896,622 bushels, against 1,543,589 bushels in the preceding week, and the shipments were 1,895,388 bushels, against 1,476,420 bushels in the week ending November 10. The receipts at the seaboard ports in the week ending November 17 were 783,871 bushels, and the exports were 623,037 bushels.

The course of prices of Indian corn options at New York and Chicago (at 1 P. M.) during the week has been:

	—At New York.—			—At Chicago.—	
	Nov.	Dec.	Jan.	Dec.	Jan.
Thursday, Nov. 15	.59¾	.60⅜	.00	.48¾	.48
Friday, Nov. 16	.60⅛	.60	.60⅛	.48½	.47⅞
Saturday, Nov. 17	.59½	.59⅝	.59¾	.48¾	.47¼
Monday, Nov. 19	.58½	.59⅛	.59⅝	.47⅝	.47
Tuesday, Nov. 20	.59¾	.60⅛	60¾	.48⅜	.47¾
Wednesday, Nov. 21	.59¼	.60⅛	.60½	.48⅞	.48
Thursday, Nov. 22	.60¼	.60⅜	.61⅛	....	....

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Nov. 16.		Nov. 23.
No. 2 flour	$2.30	@2.75	$2.25 @2.75

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Flour has been dealt in only in small lots for current jobbing wants, and under liberal supplies the market has ruled weak. Slight concessions have been made on some grades. Export trade in grain has continued dull and unsatisfactory, and speculation has been less active. Operators appear to be at sea as to the future of values, and pending some decisive developments are trading cautiously. The net result of the week's business to date is a fractional decline in wheat and a slight advance in corn, the latter having been helped by the wet weather in the west. The drift of feeling is bullish on wheat and much mixed on corn.

From Chicago, Ill.: Wheat is arriving freely. The week's receipts exceed those of the same time last year. The markets are feverish and prices barely supported by other articles feeling bearish. Stocks are accumulating. Trading is confined to loca operators, who scalp each other. Corn is active, and advanced ½@¾c. on buying to cover. The shorts are feeling feverish, and predictions are free of an early decline when the shorts are filled. The week's receipts largely exceed shipments. Oats are active. In speculation the shorts are covering.

From St. Louis, Mo.: All grain receipts are light on a quiet market; no new corn is moving yet. The flour market is stagnant.

From Topeka, Kan.: Offerings of grain, feed and ... been limited during the past week.

... Cleveland, Ohio: The grain trade has ...
